A. See submittal requirements of Section 17400 “Process Instrumentation and Control”.

B. Furnish submittals including shop drawings, product literature and datasheets,

C. Network and communications test plans: Submit a detailed test plan including the following:

1. Media to be verified and test methodology.
2. Test equipment to be used with calibration certificate.
3. Testing Procedures.
4. Network diagrams.

D. Control Systems testing procedure. See Section 17400.

E. The Shop Drawings: The shop drawings shall include a full description of the PLC system, including documentation of operation theory, programming methods, i.e. ladder logic diagram (All contacts, coils, timers, latches and each section of the ladder shall be clearly annotated and defined. The annotation of each of the input contacts representing a field device shall clearly define the status of the device.), data codes and security features, maintenance and trouble-shooting information. Schematics of all cards or units within the system along with point-to-point wiring diagrams shall be furnished after award of contract.

1. The documentation shall, also, provide a sequential flow chart of the logic implemented. The format of the flow chart and the annotation shall be proposed for acceptance by the ENGINEER before implementation.
2. Two sets of the program and documentation shall be forwarded for review and comments at least 30 days before factory test.

3. Control system architecture and interconnection cabling diagrams for the complete system. Include each cable fiber and copper network cable connection.

F. Product Data

1. Manufacturers brochures with proposed materials and options clearly marked.

2. Data sheets, including catalog numbers with code for determining catalog number code. Include data sheets for all cabinet components, instruments, cables, Ethernet switches, firewalls, and cable management.

3. Manufacturer’s installation instructions for equipment proposed.

4. Submit results of an un-witnessed test performed prior to the witnessed test. Any deficiencies found are to be noted and corrected before the witnessed test. Unwitnessed Test Results together with any re-testing, to be signed by Contractor as being correct.

G. Test Report results: Submit a hardcopy report for approval by the Engineer:

H. O&M Manual: Include in the submitted O&M Manual the following as a minimum:

1. Manufacturers network device data sheets and installation instructions.

2. System Network Diagram showing device model numbers and network addresses.

3. Documentation of all final device configuration settings, IP addresses and passwords.

1.5 QUALITY ASSURANCE

A. Training: A manufacturer's representative shall supply 40 hours of on-site training if required, for CITY personnel. The training shall include, but not be restricted to, operation of programming unit, trouble shooting of system hardware, software, and program development.

B. Communications system installer qualifications: The communications system installer shall:

1. Demonstrate direct experience with installation and testing of communications systems on at least two similar recent projects in the last three years.

2. Utilize qualified, experienced personnel, familiar with the design, installation, and configuration of communications systems.

3. Provide special tools and equipment needed for the installation and testing of the communications system, including but not limited to tools for terminating and testing copper/fiber-optic cables, jack stands for cable reels or cable winches, and OTDR testing

1.6 COMMUNICATIONS WITH VENICE PUMP STATION

A. The Contractor to coordinate with the City of LA and the selected Ethernet Private Line (EPL) Service Provider, to install and test the communications link to Venice Pump Station.

B. The Contractor shall install the Service Providers modem and fiber-optic patch panel in the Local Control Panel (LCP-01).

C. The Contractor to coordinate with Honeywell, or equal and the Engineer/ City to provide PLC register data to allow proper configuration of the SCADA screens at Venice Pump Station and testing of the communications link to the station.

D. The City's Information Technology Agency (ITA) is responsible for selecting and contract with the EPL Service provider to establish the communications link.

PART 2 -- PRODUCTS

2.1 PROGRAMMABLE LOGIC CONTROLLER HARDWARE

A. PLC hardware shall be Honeywell, or equal – ControlEdge 900 platform, no equal, and provide the following features:

1. All PLC components, including power supplies, racks, CPUs, memory, I/O modules and cables shall be standardized to minimize the spare parts inventory and maximize interchangeability, and to conform to the City's LAWINS Standards.

2. All I/O modules shall be installed with appropriate type and size of Remote Termination Cables (RTP) and associated RTP module for field wiring terminations.

3. All CPUs shall have 16MBIts non-volatile memory for retention of key programming.

4. Each PLC shall have the ability to provide 4GBits of Dynamic memory capacity (RAM) and 2GBits of Program memory capacity (Flash)

5. Each PLC shall have the ability to operate in redundant or non-redundant modes and shall have the capability of a maximum of thirty-one (31) I/O bases and 372 Slots.

6. Each PLC shall be provided with redundant power supplies and shall be sized as required for I/O and field requirements. Power supplies shall provide a minimum of 5VDC @ 3.0A and 24VDC @ .6A. Power supply shall be Honeywell, or equal, 900P01-0101.

7. Input power: 120VAC, 60Hz

B. PLC Hardware shall be:

Honeywell, or equal, ControlEdge PLC Hardware		
Part Number	**Manufacturer**	**Description**
900CP1-0200	Honeywell or Equal	Control Processor Module (CPM), ControlEdge 900
900SP1-0200	Honeywell or Equal	Expansion Processor Module (EPM), ControlEdge 900
900R12-0200	Honeywell or Equal	12 I/0 Slot Rack
900P01-0301	Honeywell or Equal	120/240 VAC. 60W Rack Power Supply
900G32-0101	Honeywell or Equal	Digital Input, 24 VDC, 32 Channel
900H32-0102	Honeywell or Equal	Digital Output, 24 VDC, 32 Channel
900A16-0103	Honeywell or	Analog Input High Level, 16 Channel

	Equal	
900B01-0301	Honeywell or Equal	Analog Output, 0 to 20 mA, 4 Channel
900TCK-0200	Honeywell or Equal	Digital I /0 - A/I - Terminal Block
900TEK-0200	Honeywell or Equal	Analog Output - Terminal Block
900TNF-0200	Honeywell or Equal	Filler Block Cover, Spare I/0 Slot

1. PLC I/O modules shall be Honeywell, or equal, Universal Input/Output Module (900U01-0100), or equal.

2. Interposing relays shall be provided for all relay outputs

2.2 HUMAN MACHINE INTERFACE HARDWARE (HMI-100)

A. The Where required, panel mounted HMI shall be Honeywell, Model HC 900 family, or equal.

B. The panel mounted HMIs shall have a keypad and touch-screen, including dedicated membrane keyboard to access up to 80 preformatted graphic displays.

C. The display screen shall be a minimum of 10.4” LCD color screen.

D. The HMI shall be capable of communicating with the PLC via an Ethernet TCP/IP or Modbus TCP connection.

E. Input power: 120VAC, 60Hz via 24VDC Power Supply.

2.3 PLC AND HMI PROGRAMMING DEVELOPMENT SOFTWARE

A. The PLC programming software shall be Honeywell, or equal, ControlEdge Builder– Latest Revision

1. The PLC programming software version for the PLCs shall be certified to run on the latest version of Microsoft Windows.

2. The PLC programming software shall comply with the International IEC 61131-3 standard and support Ladder Diagram, Sequential Function Chart and Structured Text programming language formats.

B. The HMI programming software shall be Honeywell MasterLogic ”Station Designer” for HC 900 family, or equal – Latest Revision

1. The HMI programming software version shall be certified to run on the latest Microsoft Windows platform.

2. The HMI programming software shall be capable of directly accessing tag information in the PLC by using the tag name, and not the memory address.

2.4 PLC APPLICATION OF SOFTWARE DESIGN CRITERIA

A. PLC Program Design:

1. CONTRACTOR shall organize the PLC application software into:

a. Sections

1). Contains all sequential control logic for a specific unit of operation

2). Each section consists of a general logic subsections, followed by unit operation subsections.

b. Subsections: Contains all sequential control logic for specific equipment such as a pump, valve or loop.

2. Program Documentation

a. Note and describe start of a new program section.

b. Annotate the PLC program

c. Briefly describe the control objectives.

d. Identify subsections
e. Subsection documentation includes brief description of control objective followed by a description and tag of the equipment being controlled

f. CONTRACTOR shall provide an, internal or external, organizational index for PLC application software that can be used to quickly search and locate a specific section, such as:

1). Flow, pressure and other process variable monitoring

2). Control valve or VFD PID control

3). Unit pump control

4). Unit blower control

5). Alarms

6). Data communications

7). System time-synchronization

8). PLC program initialization

g. The PLC program shall be able to initialize and bring a PLC unit from an inactive condition (e.g., power failure or hardware reset) to a state of operational readiness. Initialization shall include determination of system status prior to start-up of the operating system software and application software. Initialization shall also include the loading of all memory resident software, operator-entered setpoints, timers, counters, queues and all dynamic database values. For example, existing operator-entered setpoints shall not require operator re-entry after a power failure or after the downloading of a new PLC program.

2.5 HMI APPLICATION SOFTWARE DESIGN

A. General:

1. CONTRACTOR shall develop and submit HMI application software in accordance with ASM guidelines and in strict accordance with these requirements.

2. The following items outline the key objectives in designing the HMI graphic displays:

    a. Easily navigated menus

    b. Provide no more than three (3) mouse actions to navigate to any graphic display

    c. Maintain consistency in graphic display and controls design

    d. Maintain consistent and predictable window operations

    e. Accurate representation of the facility and its operation

    f. Represent control options in an easily understood fashion

    g. Wherever possible, design overview displays similar to the physical layout of the facility. The perspective to the physical layout should be from the local main control room.

    h. Provide operator access to process and alarm setpoints, including the following:

        1). Process alarms (High-High, High, Low, and Low-Low)

        2). Control setpoints.

        3). Process timer setpoints

        4). Sequence setpoints for volume, level, time, etc.

        5). Set or correct the time and date of the Real Time Clock for both the PLC and HMI. The time and date of both the PLC and HMI shall be synchronized to the DCS clock once per day.

    i. Provide an alarm/event screen with listing of current and historical alarms and events, e.g., operator login/commands/set-point entry, change in pump/blower/equipment status, including descriptions, times of occurrence, operator acknowledgement and return to normal status.

    j. Configure the HMI to provide four levels of user access security.

        1). Visitor: View screens only

        2). Operator: View screens, enter process setpoints, and select equipment configuration.

        3). Supervisor: All access provided to an Operator, but in addition ability to change alarm setpoints and PID controller parameters.

        4). Administrator: Access to all functions.

B. HMI's graphics screens shall be programmed to comply with City (WINS) latest HMI standards including symbols, colors, layout, navigation. Provide the following:

    1. Overall Facility Layout Operating/Monitoring/Troubleshooting screens.

    2. Log – in screen.

    3. Process status screen (s).

4. Plant configuration screens.

5. Setpoint entry screens.

6. Alarm logs.

7. Event log.

8. Maintenance screen.

9. Communication screen.

10. Trend screen.

11. Report screens.

12. All screens shall have top three lines to display latest alarms, with date and time stamp, with navigational buttons for navigating between screens.

13. Screen graphics presentation to follow the recommendations of ISA-101, and the existing plant SCADA screens symbols, color scheme, and alarming.

14. Provide pop-up windows for: mini-trends.

15. Provide active page connectors for navigation.

C. Provide pre-configured local trend displays of the following historical data with a choice of time ranges of at least 1hr, 4 hrs, 24 hrs and 7 days.

1. Stormwater diversion flow together wetwell and/or basin level.

2. Pump on/off together with pump discharge flow and pump kW.

3. Facility kW (15 minute average) and kW/1000 gallons of pump discharge flow.

D. PLC/HMI I/O DATABASE

1. CONTRACTOR shall segment all I/O and cards to increase the reliability of all systems and limit any single I/O card failure causing an outage.

2. CONTRACTOR shall provide, coordinate, manage and document a PLC Database in accordance with LAWINS tag naming conventions. The Database shall have the following functions:

a. The database shall contain all the fields necessary to configure the various points including the following per point type:

1). Discrete Point configuration: CONTRACTOR shall provide a PLC/HMI Discrete I/O database of all the analog and discrete points. The I/O list includes the following fields:

a). Loop Number

b). Tag number

c). Type

d). Point description

e). Alarm Description 1

f). Alarm Description 2

g). Closed Condition Input: Description of the state of the input parameter of device when the field or internal PLC contacts are in the CLOSED position.

h). Open Condition Input: Description of the state of the input parameter of device when the field or internal PLC contacts are in the OPEN position.

i). Closed Condition Output: Description of the state of the output signal in the CLOSED condition

j). Open Condition Output: Description of the state of the output signal in the OPEN condition.

k). PLC name and/or number

l). PLC network address

2). Analog Point Configuration: CONTRACTOR shall provide a PLC/HMI I/O database of all analog points that are communicated to and from the DCS and the HMI. The analog I/O database shall include, but is not limited to, the following fields:

a). Attributes that further define the function of the points as listed below: Note that the attributes will be used for sorting and development of the I/O driver configuration. Additional attributes shall be developed to meet the software needs:

i Setpoint read
ii Setpoint write
iii Process variable
iv Flow totalizer read
v Equipment run time

b). Point description

c). Alarm description 1

d). Alarm description 2

e). Engineering units

f). Scale range

g). Alarm ranges:
i High-High
ii High
iii Low
iv Low-Low
v Signal fail
vi Rate of Change
vii Other

h). PLC number

i). PLC I/O hardware address

j). PLC I/O memory address

E. System Growth

1. Contractor shall provide twenty (20) percent spare capacity. Spare capacity shall be based on current ‘equipped’ I/O counts

F. Operations and Maintenance Manuals: Furnish to the ENGINEER 10 complete sets of Operation and Maintenance manuals. The manuals shall include data sheets, catalog cuts, approved shop drawings, manufacturer’s technical manuals, information drawings, etc., for the system, subsystems, and all components, and shall include names, addresses and telephone numbers of equipment suppliers, representatives and repair facilities.

1. This shall include a complete description of the recommended operating procedures, maintenance procedures, and spare/replacement parts list for equipment items with catalog data, diagrams, and drawings or cuts describing the equipment..

2. Each set shall include full size assembly and wiring diagrams; drawings showing "as built" conditions shall be furnished to the CITY

2.6 PLC PANEL

A. Refer to Section 17400 “Process Instrumentation and Control”.

B. Provide 316 stainless steel NEMA 4X PLC cabinet with air conditioner. Size conditioner for a maximum ambient of 110 deg F. Provide cabinet thermal calculations with shop drawing submittal.

C. PLC cabinet to exclude motor starters, VFDs and any 480V devices.

2.7 SPARES

A. The following spare parts shall be provided:

1. One of each type of PLC controller module

2. One of each type of communications and remote I/O module.

3. One I/O module for each ten of each type installed, with a minimum of 2 per type

4. One spare PLC power supply.

5. One field termination module of each type for every ten installed, with a minimum of 2 per type.

6. One of each type of preformed interconnection cable

2.8 MANAGED INDUSTRIAL ETHERNET SWITCH WITH INTEGRAL FIREWALL.

A. Furnish industrial managed Ethernet switches with firewall as shown on the drawings and complying with the requirements of this Section, to provide network connectivity between network components.

B. The Ethernet switch manufacturer shall be CISCO, Industrial Security Appliance 3000, no exceptions

C. Provide the switch with the following minimum features:

1. Fan-less metal enclosure. DIN rail or rack mounting. Built for harsh environments.

2. Ports: As required. Minimum of two shielded RJ45 10/100 Mbps Ethernet ports with auto negotiation. One Ethernet RJ console port.

3. Support Small Form-factor Pluggable (SFP) transceivers, selectable for copper and single/ multi-mode fiber networks. Provide a minimum of 2 SFP ports.

4. SFP fiber transceivers as shown on the drawings. Coordinate transceiver model with the requirements of the ESL Service Provider.

5. Ethernet /IP support. Port security and access control.

6. Rapid Spanning Tree Protocol, and bandwidth control.

7. Power supply: 120 VAC

8. Minimum operating temperature range: -40 to 70 deg C (-40 to 158 deg F)

D. Provide threat defense/malware application and 5-year update subscription. License in the name of the City of LA

2.9 UNMANAGED INDUSTRIAL FAST ETHERNET SWITCH

A. Furnish industrial unmanaged Ethernet switch as shown on the drawings and complying with the requirements of this Section, to provide network connectivity between network components.

B. The Ethernet switch manufacturer shall be CISCO, Industrial Security Appliance 2000, Red Lion N-Tron series, Allen Bradley, or equal.

C. Provide the switch with the following minimum features:

1. Compact, fan-less metal enclosure. DIN rail mounting. Built for harsh environments.

2. Copper ports: As required. Minimum of four shielded RJ45 10/100 Mbps full duplex Ethernet ports with auto negotiation. One Ethernet RJ console port.

3. Support Small Form-factor Pluggable (SFP) transceivers, selectable for copper and single/ multi-mode fiber networks. Provide a minimum of 2 SFP ports.

4. SFP fiber transceivers as shown on the drawings. Coordinate transceiver model with the requirements of the ESL Service Provider.

5. Ethernet /IP support. Port security and access control.

6. Rapid Spanning Tree Protocol, and bandwidth control.

7. Power supply: 120 VAC

8. Minimum operating temperature range: -40 to 70 deg C (-40 to 158 deg F)

9. DIN rail mounting kit.

2.10 FIBER OPTIC PATCH PANELS

A. All fiber-optic cable terminations shall be made in optical patch panel assemblies. Patch panel assemblies shall be of the pre-assembled chassis type with associated rack or wall mounting hardware.

B. To facilitate the transition between outside plant cable and the pre-connectorized cable assemblies, the fibers shall be fusion spliced and housed in a splice tray. Splice tray shall be positioned in the optical patch panel assembly per manufactures recommendation. Splice attenuation shall not exceed 0.2 db. Splice shall be covered with a protective sleeve. Splice tray to provide fiber storage.

C. Provide one port for each fiber specified. Terminate all spare fibers within the patch panel.

D. Provide protection and strain relief for cables entering the patch panels.

E. Provide fiber-optic patch cords to connect between the fiber-optic panel and fiber-optic network equipment.

F. Provide machine printed port labels, and cable management items to maintain a greater than minimum cable bending radius.

G. Manufacturer shall be: Corning Cable Systems, Panduit, Commscope, or equal.

2.11 FIBER-OPTIC CABLE

A. Single mode fiber cables:

1. Type: Single mode, loose tube, gel-free, indoor/outdoor rated with water blocking layer.

2. Designed for inter-building and intra-building backbones Flame retardant, low smoke, zero halogen.

3. Core/ clad diameter: 8.2/ 125 micron

4. Number of fibers: As shown on the drawings. Minimum of 12.

5. Maximum attenuation: 0.4 dB/km at 1310 nm, 0.3 db at 1550 nm

6. Maximum connector loss: 0.75 db

7. Maximum splice loss: 0.2 db

B. Multimode fiber cables

1. Loose-tube, gel free, indoor/outdoor rated with water blocking layer. Color coded fibers according to TIA/EIA-598.

2. Designed for inter-building and intra-building backbones Flame retardant, low smoke, zero halogen.

3. Core/ Clad diameter: 50/125 micron

4. Number of fibers: As shown on the drawings. Minimum of 12 fibers.

5. Maximum attenuation: 2.5 dB/km at 850 nm, 0.3 db at 1550 nm

6. Maximum connector loss: 0.75 db

7. Maximum splice loss: 0.2 db

C. Connectors: LC/UPC-90° (TIA/EIA-604-10A) polished connectors unless required otherwise by equipment.

2.12 COPPER NETWORK CABLE

A. Category 5E, 6 network cable.

1. Cable: CAT 5E, 6 UTP, rated indoor/outdoor as required by NEC Article 800

2. Jacket: FEP/PVC

3. Conductors: 4 pair, 23 AWG minimum

4. Manufacturer: Belden, Berk-Tek, General Cable or equal.

PART 3 -- EXECUTION

3.1 INSTALLATION

A. Install communications equipment and cables as recommended by the manufacturer and in accordance with TIA-568-C.0/ C.1, C.2, C.3

B. Ensure maximum pulling tensions of communications cables are not exceeded, and cable bends maintain proper radius

C. Prior to installation, physically inspect cable for damage to the jacket as it is taken from the reel. Do not install damaged cable.

D. D. Install equipment and cables as recommended by the Manufacturer and in accordance with TIA-568-C.0/C.1,C.2, C.3.

E. Provide all device configuration required to implement the full functionality of the networks/ communication system. Document the final configuration parameters, IP addresses, and passwords. Include a copy in the submitted Operations and Maintenance Manuals.

F. Category 5E, 6 Ethernet network cable testing.

1. Test Ethernet cables with cable network test set (Fluke LinkIQ or similar) and record results.

2. Measure values and determine pass/fail result for each parameter. Include:
   a. Continuity and attenuation
   b. Shorts between conductors
   c. Crossed and reversed pairs
   d. Cable length
   e. Bandwidth.

3.2 TESTING - GENERAL

A. All control panels and other control system equipment shall be factory tested to verify all functions and features of the equipment; both the manufacturer’s published specifications and compliance with all requirements of these Contract Specifications.

B. The ENGINEER may witness testing of the units.

C. Solid-state logic systems shall be tested as complete assemblies. Testing of individual components or modules will not be acceptable. All testing shall be witnessed by the representative of the City Engineer. All costs for travel, lodging, transportation, meals, per-diem and other related expense shall be paid by the Contractor as part of the Contract Bid price. See General Requirements, Section 01453: Sampling, Testing and Fabrication Inspection..

D. Seven Day Acceptance Test:

1. After startup has been completed, the System shall undergo a seven (7) day acceptance test. The System must run continuously for seven (7) consecutive days. During this period, all System functions shall be exercised, and any System interruption and accompanying component, subsystem, or program failure shall be logged for cause of failure, as well as time of occurrence and duration of each failure. A failure shall cause termination of the seven (7) day acceptance test. When the cause of a failure has been corrected, a new seven (7) day acceptance test shall be started. Skilled technicians shall respond to all trouble calls by the CITY.

2. The technician responding to a System malfunction, must prepare a report which includes details concerning the nature of the complaint or malfunction and the resulting repair action required and taken, plus time and date of occurrence and correction.

3. The System Malfunction Report form shall be submitted to the ENGINEER for review and approval before the time of re-start of testing. Failure to obtain ENGINEER approval for the Report form shall cause postponement of testing.

3.3 FIBER-OPTIC CABLE TESTING

A. Provide 100% attenuation testing of all cable fibers while on the reel and prior to installation. Document results including cable manufacturer, date of manufacture, shipping date, cable identification, length and fiber identification. Submit results for approval prior to installation

B. Install communications equipment and cables as recommended by the manufacturer and in accordance with TIA-568-C.0/ C.1, C.2, C.3

C. Ensure maximum pulling tensions of communications cables are not exceeded, and cable bends maintain proper radius..

D. Visual inspection for continuity. Connector and loss testing after installation.

1. Fiber Connector Inspection: Use a fiber optics microscope to check the quality of the termination. A well-made connector is smooth, polished, scratch free with no signs of cracks, chips or areas where the fiber is either protruding from the end of the ferrule or pulling back into it. Remake poor connections.

E. After cable installation use a power meter per EIA/TIA 455-78-B and OTDR per ANSI/TIA/EIA-455-8-2000 to perform bi-directional cable testing of each fiber/ connector system from end to end. Match the source type and wavelength (850, 1300, 1550 nm). Calculate the loss using the average of the two bi-directional measurements.

F. Fiber acceptance power loss for cable, connectors and splices:

1. For each mated connector pair, a maximum of 0.7 dB. Typical 0.5 dB.

2. For each splice a maximum of 0.2 dB

3. For fiber: Attenuation as specified by the manufacturer.

4. Maximum allowable link loss:

   Maximum loss = (0.7dB X # of mated pairs of connectors) +(0.2 dB X #of splices) +fiber loss of total length of cable

G. If the measured loss is greater than the allowable maximum loss, take necessary measures to bring the link loss into compliance.

1 INTRODUCTION

In accordance with your request and authorization, we have performed a geotechnical evaluation at Fernangeles Park located at 8851 Laurel Canyon Boulevard in Sun Valley, California as part of the Los Angeles Bureau of Engineering (LABOE) Stormwater Capture Parks Program (Figure 1 [all figures are located at the end of the text of this report]). The purpose of our study was to evaluate the soil and geologic conditions at the site and to provide preliminary geotechnical recommendations for pre-design of proposed Best Management Practices (BMPs) at the site for stormwater infiltration. Our evaluation was performed in general accordance with Task Order Solicitation (TOS) No. 25 (LABOE, 2019a) and our referenced proposal dated May 18, 2020 (Ninyo & Moore, 2020a). This report presents our findings, conclusions, and recommendations for the Fernangeles Park project.

The intent of the Stormwater Capture Parks Program is to capture up to 2,912 acre-feet of stormwater and urban runoff per year that drain from 5,868 acres within a portion of the San Fernando Valley in order to reduce the potential for flooding, improve stormwater quality, increase water supplies through stormwater capture, and provide recreational, social, and economic benefits (LABOE, 2019). The stormwater runoff will be diverted into proposed stormwater capture and infiltration BMPs within nine City of Los Angeles parks generally located along the SR-170 corridor, including the subject Fernangeles Park, for replenishment of the San Fernando Groundwater Basin. According to the Conceptual Study Report (CSR) (Los Angeles Department of Water & Power [LADWP], 2018), the project at Fernangeles Park is anticipated to capture and infiltrate stormwater runoff from a tributary area of approximately 292 acres.

2 SCOPE OF SERVICES

Our scope of services was prepared based on our review and the conceptual design provided in the CSR (LADWP, 2018), an anticipated infiltration invert depth of 16 feet, and discussions with the client, CDM Smith, and included the following:

- Project coordination and planning with subcontractor, CDM Smith, LABOE, and Los Angeles Department of Recreations and Parks (RAP) personnel, and attendance at a project kick-off meeting.
- Review of readily available background materials, including published topographic maps, geologic maps, fault and seismic hazard maps, groundwater data, stereoscopic aerial photographs, project related plans, and in-house geotechnical information.
- Acquisition of a Los Angeles County Environmental Health Department (LACEHD) permit.
- Acquisition of a City of Los Angeles Encroachment permit for drilling within the City right-of-way on Morehart Avenue.

- Field reconnaissance to observe and document the site conditions, mark-out proposed hollow-stem-auger (HSA) boring and cone penetration test (CPT) sounding locations for underground utility clearance by Underground Service Alert, meet with RAP personnel regarding site access and constraints, and meet with the City of Los Angeles inspectors.

- Subsurface exploration consisting of the drilling, sampling, and logging of five HSA borings, ranging in depths from approximately 16 feet to 58 feet, and four CPTs to depths ranging from approximately 13 feet to 24 feet. The purpose of the borings and CPTs was to evaluate the subsurface soil conditions and percolation rates of the on-site soils.

- Field percolation testing in four of the borings in general accordance with the methods presented in the County of Los Angeles Guidelines for Geotechnical Investigation and Reporting Low Impact Development Stormwater Infiltration (COLA, 2017).

- Geotechnical laboratory testing of representative soil samples to evaluate in-situ moisture content and dry density, gradation, percentage of particles finer than the No. 200 sieve, consolidation, direct shear strength, R-value, and soil corrosivity.

- Data compilation and engineering analysis of the information obtained from our background review, subsurface evaluation, infiltration testing, and laboratory testing.

- Preparation of this geotechnical report presenting our findings, conclusions, and preliminary recommendations pertaining to the design and construction of the proposed improvements.

3 SITE DESCRIPTION

Fernangeles Park is a City of Los Angeles park located at 8851 Laurel Canyon Boulevard in the central-eastern side of the San Fernando Valley, approximately 260 feet south of Interstate 5 (I-5) and 1,700 feet east of California State Route (SR) 170 (Figure 1). The park consists of a relatively flat, square-shaped lot bounded by Laurel Canyon Boulevard on the northeast, Allegheny Street on the northwest, Remick Avenue on the southwest, and Vicks Street on the southeast (Figure 2). Residential properties are located on the northwest, southwest, and southeast sides of the park. Residential and commercial properties are located on the northeast of the park. The park generally consists of two baseball diamonds surrounded by grass-covered areas and trees. The northeast side of the park is developed with a recreation center consisting of a community pool, a gymnasium, a basketball court, picnic areas, playground areas, and Portland cement concrete (PCC) walkways and landscaping. Asphalt concrete (AC) parking lots are located on the northwest and southeast sides of the park. The project also includes an approximately 690-foot-long section of Morehart Avenue between Sheldon and Allegheny Streets on the northwest side of the park. Morehart Avenue is paved with AC and bounded on both sides by residential properties.

Based on our review of topographic maps (NavigateLA, 2020), the park slopes gently downward toward the south with site elevations ranging from approximately 858 feet above mean sea level (MSL) at the north corner of the park to approximately 848 feet (MSL) at the south corner.

Morehart Avenue slopes gently downward toward the southeast with site elevations ranging from approximately 860 feet above mean sea level (MSL) at the northwest to approximately 856 feet (MSL) at the southeast.

4 PROJECT DESCRIPTION AND PROPOSED CONSTRUCTION

Based on our review of TOS 25 (LABOE, 2019), the Fernangeles Park project would consist of the installation of an underground infiltration gallery sized to store approximately 703,000 cubic feet of water. In addition, other design elements include catch basins, green street elements, diversion structure(s), bioswales, in-line pretreatment devices, flow measuring devices, supervisory control and data acquisition (SCADA), educational signage, and park restoration/improvements. In addition, we understand that various street improvements to Morehart Street, such as new pavements, sidewalks, curbs and gutters, etc., may be included as part of the project. According to the CSR (LADPW, 2018), which was included as part of TOS 25, the conceptual infiltration gallery would have a footprint of approximately 71,000 square feet (sf) with an inner height of approximately 12 feet (11 feet of storage), and an invert depth of approximately 16 feet below the ground surface (bgs). As indicated our proposed scope of services (2020) was based on our review of the CSR (LADPW, 2018). We understand that the gallery will likely consist of prefabricated, modular concrete vaults with open bottoms underlain by drain rock over a layer of filter fabric. Based on our discussions with CDM Smith, it is our understanding that the gallery may be supported on concrete strip footings. Upon completion of the BMP installation, the BMPs will be buried with compacted fill and the ground surface returned to its existing condition for continued use and additional development as a park.

Subsequent to performing our subsurface exploration, presented herein, we received conceptual plans from our client (CDM Smith, 2020), which include three BMP options (Alternatives 1 through 3) for collecting, treating, and infiltrating stormwater. Each alternative includes the construction of an approximately 58,000 sf underground infiltration gallery within the existing baseball diamonds. The gallery would have an interior height of 14 feet and invert depth of approximately 20½ feet. The three alternatives generally include differing methods of conveying stormwater from the adjacent watershed to the infiltration gallery. Based on our discussions with CDM Smith, we understand that dry wells could potentially be added to the project for stormwater infiltration. We understand that these proposed alternatives are subject to change as further design is performed. The three alternatives are described below.

Alternative 1 – According to CDM Smith (2020), Alternative 1 consists of the installation three catch basins (one at the intersection of Morehart Avenue and Allegheny Street, one on Laurel Canyon Boulevard, and one on Wicks Street), a new trash/debris spreader to intercept discharge

from the California Department of Transportation (Caltrans) pump station surge chamber located near the intersection of Morehart Avenue and Sheldon Street, and bioswales and Green Street improvements on Morehart Avenue. New 18 and 24-inch-diameter pipelines would be installed between the catch basins and the gallery with an in-line pretreatment device on each pipeline. The proposed layout of Alternative 1 is presented on Figure 3.

Alternative 2 – The conveyance system for Alternative 2 is similar to Alternative 1 except that the catch basins on Morehart Avenue and Laurel Canyon Boulevard will be replaced with porous paved swales and a cross-gutter, respectively, that convey stormwater to the park. Stormwater collected from Laurel Canyon Boulevard will be diverted into a 15,700 sf bioswale at the northeast end of the park with a debris interceptor before the gallery. The bioswale is anticipated to be on the order of 5 to 6 feet in width and 2 to 3 feet in depth. A catch basin with an in-line pretreatment device and diversion pipeline will be constructed on Wicks Avenue.

Alternative 3 – The conveyance system for Alternative 3 will include the bioswale/cross gutter from Laurel Boulevard similar to Alternative 2. However, stormwater from the Caltrans pump station surge chamber will be diverted past Morehart Avenue to a second 39,100 sf pre-treatment bioswale along the northwest and southwest sides of the park. In addition, new catch basins will be installed on Remick Avenue and Allegheny Street that will catch and divert stormwater into diversion pipelines that empty into the pre-treatment bioswale. The pretreatment bioswale is anticipated to be on the order of 5 to 6 feet in width and 3 to 4 feet in depth. A new storage facility will be installed at the southern end of the pre-treatment bioswale to store water for on-site irrigation. Debris interceptors would also be installed between Morehart Avenue and an on-site storage facility for irrigation on the southern corner of the park.

5 SUBSURFACE EVALUATION AND LABORATORY TESTING

Our subsurface evaluation was conducted on March 24 through March 31, 2020, and May 28 and May 29, 2020, and consisted of the drilling, logging, and sampling of five HSA borings (B-1 and P-1 through P-4) and four CPT soundings (CPT-1 through CPT-4). The borings were drilled using a truck-mounted drill rig with 8-inch diameter augers. The depths of the borings were based on the conceptual design depths for the infiltration basin presented in the CSR (LADWP, 2018) and on our discussions with CDM Smith regarding the possible use of deeper dry wells. Borings P-1, P-3, and P-4 were drilled to proposed depths of approximately 16, 16, and 51½ feet, respectively. Drilling refusal was encountered in borings B-1 and P-2 at depths of approximately 58 feet and 47 feet (proposed depths of 75 and 50 feet), respectively. The borings were logged in the field by a representative of Ninyo & Moore and representative bulk and relatively undisturbed soil samples were collected from the borings at selected depths for laboratory testing. Percolation testing was

performed in borings P-1 through P-4 as further discussed in Section 8 of this report. The CPT soundings (CPT-1 through CPT-4) were performed using a 30-ton CPT rig with a 15 square centimeter cone to depths of approximately 19.2, 50.1, 12.4, and 31.2 feet, respectively. Since the proposed depths of the CPT soundings were 50 feet, and relatively shallow refusal was encountered in CPT-1, CPT-3, and CPT-4, these three CPTs were repeated as CPT-1A, CPT-3A, and CPT-4A within approximately 5 feet of each previous CPT. The repeated CPTs also encountered refusal at depths of approximately 34.9, 47.7, and 39.2 feet, respectively. Continuous soil profiles, including cone tip resistance and sleeve friction, were recorded during the sounding. A representative of Ninyo & Moore was on site to observe the CPT soundings. Logs of the exploratory borings and CPT soundings are provided in Appendices A and B, respectively. The approximate locations of the borings and CPTs are presented on Figures 2 and 3. The borings and CPTs were backfilled with cement-bentonite grout upon completion of the drilling and percolation testing in general accordance with the requirements of LACEHD.

Geotechnical laboratory testing of representative soil samples included tests to evaluate in-situ moisture content and dry density, gradation, percentage of particles finer than the No. 200 sieve consolidation, direct shear strength, R-value, and soil corrosivity. Moisture and density test results are presented on the boring logs in Appendix A. The remaining test results are presented in Appendix C.

Soil cuttings from the borings and CPT were placed in 55-gallon drums, and composite soil samples of the drummed soil were collected in 8-ounce jars for waste characterization. The samples were stored in a chilled cooler and delivered to SunStar Laboratories, Inc. for analytical testing under chain-of-custody protocol. The samples were tested for total petroleum hydrocarbons (TPH) (gas and diesel range) per United Stated Environmental Protection Agency (EPA) Test Method 8015B, Title 22 metals per EPA Test Methods 6010B/7470/7471, and volatile organic compounds per EPA Test Method 8260B. Based on the characterization test results, the drums were disposed at an approved landfill (Soil Safe in Adelanto, California) by a licensed transportation subcontractor (Belshire) as non-hazardous. The test results and a copy of the transportation manifest are provided in Appendix D.

6 GEOLOGIC AND SUBSURFACE CONDITIONS

The project site is within the San Fernando Valley, which is generally bounded by the Santa Monica Mountains on the south, Verdugo Mountains on the east, Santa Susana Mountains on the north, and Chatsworth Hills on the west. The valley along with these bounding mountain ranges are part of the Transverse Ranges Geomorphic Province. The province encompasses an approximately 40- to 60-mile-wide area (north to south) that extends approximately 320 miles

(west to east) from Point Arguello and San Miguel Island to the Eagle and Pinto Mountains of the Mojave Desert (Norris and Webb, 1990). The province generally consists of a region of east to west-trending mountain ranges considered atypical to the predominant northwest to southeast structural fabric of California. The atypical trend of the Province is the result of a restraining bend ("the Big Bend") on the San Andreas Fault that has rotated and compressed the region to its current configuration. The compression has resulted in folding and reverse/thrust faulting with similar east to west trends, and regional uplift. The Santa Monica Mountains are the southernmost of the east to west trending ranges of the province and the San Fernando Valley is a synclinal valley infilled with relatively thick deposits of sedimentary rock overlain by alluvial deposits (Norris and Webb, 1980).

Review of regional geologic maps indicate that the locations of the proposed project improvements, including the buried concrete structure, catch basins, pipelines, and park BMPs, are underlain by Holocene to Pleistocene-age alluvial fan deposits consisting of unconsolidated gravel, sand, and silt of the Pacoima/Tujunga alluvial fan (Campbell et al., 2014) (Figure 4). The California Department of Conservation, Division of Mines and Geology (CDMG, 1997) has also mapped the site as being underlain by alluvial fan deposits consisting of loose to medium dense, silty sand and sand with minor clay.

Materials encountered during our subsurface exploration generally consisted of undocumented fill underlain by alluvium. AC pavement was encountered at the ground surface in boring P-4 on Morehart Avenue. The pavement section consisted of approximately 6 inches of AC with no aggregate base. Undocumented fill was encountered in our borings to depths ranging from approximately 1½ to 2 feet below the ground surface. The undocumented fill generally consisted of brown, moist, loose to medium dense, clayey sand and silty sand with variable amounts of organic material, gravel, and cobbles. Documentation regarding the limits of fill or the placement and compaction of the fill soils was not available for our review. Alluvium was encountered beneath the undocumented fill to the total depth explored of up to approximately 58 feet. The alluvium generally consisted of granular deposits of light brown and brown, moist, medium dense to very dense, poorly graded sand, poorly graded sand with silt, well-graded sand, silty sand, poorly graded gravel, and sandy silt with variable amounts of gravel and cobbles. Boulders may also be present. More detailed descriptions of the subsurface materials are presented on the boring logs and CPT soundings in Appendices A and B, respectively.

7 GROUNDWATER

Seepage and/or groundwater was not encountered in our borings or CPTs to the total depth explored of up to approximately 58 feet. CDMG (1997) indicates that the historic high depth to

groundwater at the project site is between 150 to 160 feet below the ground surface. The depth to groundwater in a Los Angeles County groundwater monitoring well (Well ID 4897A) located 800 feet southwest of the site was approximately 337 feet in 2007 (the latest posted measurement) (COLA, 2020). The depth to groundwater in this well ranged from approximately 220 and 349 feet between 1964 and 2007. It is anticipated that similar depths to groundwater are present at the park site. Fluctuations in the level of groundwater will occur due to variations in ground surface topography, subsurface stratification, rainfall, irrigation practices, groundwater pumping, and other factors that were not evident at the time of our field evaluation.

8 FIELD PERCOLATION TESTING

Percolation testing was performed in percolation borings P-1 through P-4 in general accordance with the County of Los Angeles Guidelines for Geotechnical Investigation and Reporting Low Impact Development Stormwater Infiltration (COLA, 2017). The testing was performed to evaluate the infiltration rate of the on-site soils for use in design of the BMPs by CDM Smith. The approximate locations of the percolation test borings are shown on Figures 2 and 3.

Borings P-1 through P-4 were drilled to depths ranging from 16 to 51½ feet. Preparation of each boring for percolation testing included the installation of a 2-inch-diameter polyvinyl chloride (PVC) pipe in the borings, the lowest 15 feet of which was slotted, and backfilling the bottom approximately 15 feet of annular space between the borehole wall and pipe with clean gravel. The infiltration zones were pre-soaked with water for at least one hour prior to performing percolation testing. After the borings were pre-soaked, constant-head percolation testing was performed in borings P-1 through P-3 and falling-head percolation testing was performed in boring P-4.

The constant-head testing was performed by placing clean water in the PVC pipe at a constant flow rate to establish a stabilized head. The flow rate was measured using a digital flow meter. Once a stabilized head was established in the borings, the constant-head test was initiated and the flow was maintained for a period of approximately 2 hours. The field percolation rate was calculated by measuring the total volume of water infiltrated during the total duration of the test and dividing by the surface area of the tested zone of the boring. The measured field percolation rates are presented in Table 1.

The falling-head test method involved placing clean water into the PVC pipe to establish a head of water and measuring the rate at which the water level dropped in the pipe at consecutive time intervals (approximately 10 minutes). The test was repeated until three consecutive tests provided similar results and a stabilized rate was obtained. The field percolation rate was calculated by measuring the total volume of water infiltrated during the time interval and dividing by the surface

area of the tested zone of the boring. The measured field percolation rates are presented in Table 1.

The County of Los Angeles guidelines (COLA, 2017) indicate that the measured field percolation rates should be reduced to account for the long-term performance of the proposed BMPs by dividing the rates by the "Total Reduction Factor (RF)." They define the RF as the product of the "test-specific" reduction factor (RF_t), the "site variability" reduction factor (RF_v), and the "long-term siltation, plugging, and maintenance" reduction factor (RF_s) (i.e., RF = RF_t x RF_v x RF_s).

The guidelines (COLA, 2017) indicate that the RF_t is applied to account for variations in the direction of flow during the test and the reliability of the different test methods. The guidelines provide RF_t values to be used in the equation that vary based on the test method performed. Values of 2 and 3 are specified for the falling-head and constant-head percolation tests, respectively, and were applied to the RF equation accordingly. The RF_v value is applied to account for site variability, number of tests, and thoroughness of the subsurface investigation and ranges from 1 to 3. For the subject park, it is our opinion that an RF_v value of 1.2 should be used due to the variability of the on-site soils and field percolations rates. The long-term siltation, plugging, and maintenance value (RF_s) also ranges from 1 to 3 and will generally vary on the level of pre-treatment performed prior to infiltration and the level of future maintenance of the system. Based on our discussions with the BMP designers, an RFs value of 1 has been applied since pre-treatment systems will be used to remove silt prior to water entering the infiltration gallery/deep wells. The actual RF_s value and resulting RF to be used for the project should be adjusted by the BMP designer as needed. The RF_t, RF_v, RF_s, and resulting RF values used in our analysis are presented in Table 1. The adjusted percolation rates and average adjusted percolation rate based on these values are also presented in Table 1.

Table 1 – Percolation Test Results

Test Boring	Test Type	Approximate Depth of Tested Zone (feet)	Field Percolation Rate (inches/hour)	Reduction Factor				Adjusted Percolation Rate (inches/hour)
				RF_t	RF_v	RF_s	RF	
P-1	Constant Head	5 – 16	3.3	3	1.2	1	3.6	0.9
P-2	Constant Head	36 – 47	18.1	3	1.2	1	3.6	5.0
P-3	Constant Head	5 – 16	7.6	3	1.2	1	3.6	2.1
P-4	Falling Head	43 – 51½	9.4	2	1.2	1	2.4	3.9
Average Adjusted Percolation Rate (inches/hour)								**3**

Notes:
RF_t – Test Specific Reduction Factor
RF_v – Site Variability Reduction Factor
RF_s – Long-Term Siltation, Plugging, and Maintenance Reduction Factor (To be adjusted by the BMP designer)
RF – Total Reduction Factor

Based on our evaluation, we recommend that the average adjusted percolation rate of 3 inches per hour, following adjustments by the BMP designer for RF_s, be used for design at Fernangeles Park for both shallow and deep infiltration.

In addition, we recommend the new or existing buildings be set-back from the proposed infiltration gallery a minimum of 15 feet or a distance where the bottom of the lowest foundation element of the structure is 10 feet or more (horizontally) outside of an imaginary 1:1 (horizontal:vertical) plane projected downward and outward from the top of the gallery. Where basement levels are proposed that extend beneath the top of the infiltration gallery elevation, additional evaluation should be performed to confirm the appropriate set-back.

9 FLOOD HAZARDS

Based on our review of flood insurance rate maps for the project area (Federal Emergency Management Agency [FEMA], 2020), the project site is not located in the 100-year Flood Hazard Zone, A99. Zone A99 includes areas to be protected from a 100-year flood by the Federal Flood Protection System under construction at the time of publication of the FEMA map; no base flood elevations are given. The site is located within Other Flood Areas – Zone X, which includes areas of 500-year floods and areas of 100-year floods with average depths of less than one foot and areas protected by levees from 100-year floods.

10 FAULTING AND SEISMICITY

The site is in a seismically active area, as is the majority of southern California, and the potential for strong ground motion in the project area is considered significant during the design life of the proposed project. Figure 5 shows the approximate site location relative to the known major faults in the region. The site is not located within a State of California EFZ (formerly known as an Alquist-Priolo Special Studies Zone) (Hart and Bryant, 2018). The nearest mapped active fault to the site is the Verdugo fault located approximately 1.1 miles northeast of the site (United States Geological Survey [USGS], 2008).

The principal seismic hazards evaluated at the subject site are surface fault rupture, ground motion, and liquefaction. A brief description of these principal seismic hazards are discussed in the following sections.

10.1 Surface Fault Rupture

Surface fault rupture is the offset or rupturing of the ground surface by relative displacement across a fault during an earthquake. Based on our review of referenced geologic and fault hazard data, the project site is not transected by known active faults. Therefore, the potential for surface

rupture is relatively low. However, lurching or cracking of the ground surface as a result of nearby seismic events is possible.

10.2 Site-Specific Ground Motion

Considering the proximity of the site to active faults capable of producing a M_{max} of 6.0 or more, the project area has a high potential for experiencing strong ground motion. The 2019 CBC specifies that the risk-targeted maximum considered earthquake (MCE_R) ground motion response accelerations be used to evaluate seismic loads for design of buildings and other structures.

In accordance with Chapter 20 of the American Society of Civil Engineers (ASCE) Publication 7-16 Minimum Design Loads and Associated Criteria for Building and Other Structures (2016), the Site Class should be classified based on the average shear wave velocity (V_S) in the upper 100 feet (i.e., 30 meters) (V_{S30}), the average field standard penetration resistance in the upper 100 feet (blow counts, N), or the average undrained shear strength in the upper 100 feet (S_u). After reviewing the blow counts obtained from our borings and correlations from our CPTs, the field penetration blow counts in the upper 100 feet are within the range of 15 to 50 blows per foot. Additionally, we estimated that the V_{S30} at the site is 918 feet per second (ft/s) (i.e., 280 meters per second [m/s) (CGS/Willis Site Classification Map) using the Open Seismic Hazard Analysis software developed by USGS (USGS, 2019). ASCE 7-16 defines a site as Site Class D (stiff soil) if the V_{S30} ranges from 600 to 1,200 ft/s (180 to 370 m/s) and if the blow counts in the upper 100 feet range from 15 to 50 blows per foot. Accordingly, the site is classified as Site Class D.

Per the 2019 CBC, a site-specific ground motion hazard analysis shall be performed for structures on Site Class D with a mapped MCE_R, 5 percent damped, spectral response acceleration parameter at a period of 1 second (S_1) greater than or equal to 0.2g in accordance with Sections 21.2 and 21.3 of ASCE 7-16. We calculated that the S_1 for the site is equal to 0.699g using the 2020 Applied Technology Council [ATC] seismic design tool (web-based)]; therefore, a site-specific ground motion hazard analysis was performed for the project area.

The site-specific ground motion hazard analysis consisted of the review of available seismologic information for nearby faults and performance of probabilistic seismic hazard analysis (PSHA) and deterministic seismic hazard analysis (DSHA) to develop acceleration response spectrum (ARS) curves corresponding to the MCE_R for 5 percent damping. Prior to the site-specific ground motion hazard analysis, we obtained the mapped seismic ground motion values and developed the general MCE_R response spectrum for 5 percent damping in accordance with Section 11.4 of ASCE 7-16 (ATC, 2020). The V_{S30} is assumed to be 918 ft/s (i.e., 280 m/s) (CGS/Willis Site Classification Map) and the depths to V_S = 3,281 ft/s (i.e., 1,000 m/s) and V_S = 8,202 ft/s (i.e.,

2,500 m/s) are assumed to be 1,148 feet (i.e., 350 meters) and 6,299 feet (i.e., 1,920 meters), respectively (Southern California Earthquake Center [SCEC] Velocity Model Version 4, Iteration 26, Basin Depth). These values were evaluated using the Open Seismic Hazard Analysis software developed by USGS (USGS, 2019).

The 2014 next generation attenuation (NGA) West-2 relationships were used to evaluate the site-specific ground motions. The NGA relationships that we used for developing the probabilistic and deterministic response spectra are by Chiou and Youngs (2014), Campbell and Bozorgnia (2014), Boore, Stewart, Seyhan, and Atkinson (2014), and Abrahamson, Silva, and Kamai (2014). The Open Seismic Hazard Analysis software developed by USGS (USGS, 2019) was used for performing the PSHA. The Calculation of Weighted Average 2014 NGA Models spreadsheet by the Pacific Earthquake Engineering Research Center was used for performing the DSHA (Seyhan, 2014).

PSHA was performed for earthquake hazards having a 2 percent chance of being exceeded in 50 years multiplied by the risk coefficients per ASCE 7-16. The maximum rotated components of ground motions were considered in PSHA with 5 percent damping. For the DSHA, we analyzed accelerations from characteristic earthquakes on active faults within the region using the Caltrans ARS (Caltrans, 2020c) seismic design tool (web-based) and the hazard curves and deaggregation plots at the site using the USGS Unified Hazard Tool application (USGS, 2020a). A magnitude 7.5 event on the Verdugo fault with a distance of 1.1 miles (i.e., 1.8 kilometers) from the site is the controlling earthquake. Hence, the DSHA was performed for the site using this event and corrections were made to the spectral accelerations for the 84th percentile of the maximum rotated component of ground motion with 5 percent damping. The results of our site-specific seismic hazard analysis are presented in Appendix E.

The site-specific MCE_R response spectrum was taken as the lesser of the spectral response acceleration at any period from the PSHA and DSHA, and the site-specific general response spectrum was determined by taking two-thirds of the MCE_R response spectrum with some conditions in accordance with Section 21.3 of ASCE 7-16. Figure 6 presents the site-specific MCE_R response spectrum and the site-specific design response spectrum. The general mapped design response spectrum calculated in accordance with Section 11.4 of ASCE 7-16 is also presented on Figure 6 for comparison. The site-specific spectral response acceleration parameters, consistent with the 2019 CBC, are provided in Section 12.3 of this report for the evaluation of seismic loads on buildings and other structures. The site-specific maximum considered earthquake geometric mean (MCE_G) peak ground acceleration, PGA_M, was calculated as 0.881g.

10.3 Liquefaction

Liquefaction is the phenomenon in which loosely deposited granular soils with silt and clay contents of less than approximately 35 percent and non-plastic silts located below the water table undergo rapid loss of shear strength when subjected to strong earthquake-induced ground shaking. Ground shaking of sufficient duration results in the loss of grain-to-grain contact due to a rapid rise in pore water pressure and causes the soil to behave as a fluid for a short period of time. Liquefaction is known generally to occur in saturated or near saturated cohesionless soils at depths shallower than 50 feet below the ground surface. Factors known to influence liquefaction potential include composition and thickness of soil layers, grain size, relative density, groundwater level, degree of saturation, and both intensity and duration of ground shaking.

The State of California Hazard Zones map (CDMG, 1998) indicates that the subject site is not located within a mapped area that is considered susceptible to seismically induced liquefaction (Figure 7). Based on the historic high groundwater depth of approximately 150 to 160 feet below the ground surface and the presence of dense sands with scattered gravel, it is our opinion that liquefaction and liquefaction-related seismic hazards (e.g., dynamic settlement, ground subsidence, and/or lateral spreading) are not design considerations for the project.

11 CONCLUSIONS

Based on the results of our evaluation, it is our opinion that the proposed BMPs at Fernangeles Park are feasible from a geotechnical standpoint, provided the recommendations presented in this report are incorporated into the design and construction of the project. In general, the following conclusions were made:

- The subject site is underlain by up to approximately 2 feet of undocumented fill underlain by granular alluvial materials. The fill and alluvium generally consisted of moist, loose to very dense, poorly graded sand, poorly graded sand with silt, well-graded sand, silty sand, poorly graded gravel, and sandy silt. Variable amounts of gravel and cobbles (and possible boulders) were encountered in the fill and alluvium.
- Our four percolation tests performed in borings P-1 through P-4 indicate that the on-site soils tested at depths ranging from approximately 16 to 51½ feet have adjusted percolation rates ranging from approximately 1.1 to 6.0 inches per hour. For design purposes, we recommend using a percolation rate of 3 inches per hour for both shallow (gallery) and deep (dry well) infiltration systems. However, this rate should be adjusted as needed in accordance with COLA 2017 guidelines.
- In general, excavations and drilling in the existing fill soil and alluvium should be feasible with earthmoving equipment in good working condition. However, difficult excavating and drilling conditions should be anticipated by the contractor where excavations encounter cobbles/boulders in the alluvium. Oversized materials should be anticipated in the undocumented fill and alluvium by the contractor.

- We anticipate that the on-site excavated materials should be suitable for re-use as engineered fill and trench backfill provided they are free of trash, debris, roots, contamination, deleterious materials, and cobbles or hard lumps of material in excess of 4 inches in diameter. Processing of the materials to bring them near the laboratory optimum moisture content (i.e., drying and/or wetting) prior to use as fill should be planned by the contractor.

- The on-site soils are generally granular and will be prone to caving during excavation. The on-site soils should be considered as Type C soils in accordance with United States Department of Labor Occupational Safety Health Administration (OSHA) regulations. Accordingly, temporary excavations deeper than 4 feet in depth should be laid back at inclinations of 1½ to 1 (horizontal to vertical) or flatter.

- Where excavations cannot be laid back, temporary shoring is anticipated. Shoring should be designed by the contractor to support the excavation sidewalls and to reduce the potential for settlement of adjacent structures, roadways and other site improvements. Shoring should be designed in accordance with OSHA regulations.

- Groundwater was not encountered in our exploratory borings to the total depth explored of approximately 58 feet. Historical high groundwater levels are approximately 150 to 160 feet below the ground surface. A groundwater monitoring well located approximately 800 feet southwest of the site indicates that the depth to groundwater is on the order of 337 feet (COLA, 2020). Fluctuations in the level of groundwater will occur due to variations in ground surface topography, subsurface stratification, rainfall, irrigation practices, groundwater pumping, and other factors that were not evident at the time of our field evaluation

- The site is not located within a mapped Seismic Hazards Zone considered susceptible to liquefaction (CDMG, 1998).

- The site is not located within an Earthquake Fault Zone with the potential for fault rupture as defined by the Alquist-Priolo Earthquake Fault Zoning Act (Hart and Bryant, 2018).

- Hydro-collapse is not considered a design issue given the proposed depth of the infiltration gallery (approximately 20½ feet [CDM Smith, 2020]) and the results of our laboratory testing.

- The site is not located within a designated flood inundation zone from failure of a dam or the 100-year and 500-year flood events (FEMA, 2020).

- Based on our laboratory corrosion testing, the on-site soil can be classified as non-corrosive based on the Caltrans Corrosion Guidelines (Caltrans, 2018).

12 PRELIMINARY RECOMMENDATIONS

The following sections present our preliminary geotechnical recommendations for design and construction of the project. This project is in preliminary design phase and some aspects of the design will be subject to change. Detailed plans regarding the design of the BMPs have not been developed yet. Accordingly, the following recommendations should be considered preliminary. Ninyo & Moore should review the final plans and develop additional geotechnical recommendations as appropriate. These recommendations are based on our evaluation of the site geotechnical conditions, our understanding of the planned construction, and experience in the vicinity of the project. The work should be performed in conformance with the

recommendations presented in this report, project specifications, and appropriate agency standards.

12.1 Earthwork

We anticipate that earthwork at the site will consist of cuts and fills associated with excavations to install the proposed BMP improvements, including the gallery, catch basins, in-line pretreatment devices, pipelines, debris interceptors, and manholes. Based on the preliminary plans (CDM Smith, 2020), excavations for the proposed BMP improvements are anticipated to be up to 20½ feet in depth. Earthwork may also include preparation of subgrade and installation of new porous pavement on Morehart Avenue, placement of bioswales, and finish grading for establishment of site drainage. Earthwork operations should be performed in accordance with the requirements of applicable governing agencies and the recommendations presented in the following sections.

12.1.1 Pre-Construction Conference

We recommend that grading and foundation plans be submitted to Ninyo & Moore for review to check for conformance to the recommendations provided in this report. We further recommend that a pre-construction conference be held to discuss the grading recommendations presented in this report. The owner and/or their representative, the governing agencies' representatives, the civil engineer, Ninyo & Moore, and the contractor should be in attendance to discuss the work plan, project schedule, and earthwork requirements.

12.1.2 Clearing and Site Preparation

Prior to excavating or other earthwork, the proposed area of improvements should be cleared of surface obstructions, debris, pavement, abandoned utilities, and other deleterious materials. Obstructions that extend below finish grade, if any, should be removed and the resulting holes filled with compacted soils. Materials generated from the clearing operations should be removed from the project site and disposed at a legal dump site.

12.1.3 Excavation Characteristics

We anticipate that excavations in the undocumented fill and alluvium should be feasible with earthmoving equipment in good working order. The undocumented fill and alluvial materials generally consisted of moist, loose to very dense, poorly graded sand, poorly graded sand with silt, well-graded sand, silty sand, poorly graded gravel, and sandy silt with variable amounts of organic material, gravel, and cobbles. Cobbles and possible boulders were encountered in our subsurface exploration and should be anticipated in the excavations. These oversized materials may lead to difficult excavating and/or drilling, where encountered.

Processing of the excavated materials to bring them near the laboratory optimum moisture content (i.e., drying and/or wetting) prior to use as fill should be planned by the contractor.

12.1.4 Subgrade Preparation for the Infiltration Gallery

Based on our exploratory borings, test pits, and CPTs, alluvium is anticipated at the bottom of the planned infiltration gallery that should be suitable for support of the gallery and overlying compacted fill. The excavation bottom should be evaluated by our representative during the excavation work. In the event that unsuitable material is encountered along the bottom of the excavation, including undocumented fill and/or waste, the unsuitable material encountered at the bottom of the gallery excavation should be removed and replaced with loosely-packed clean sand or gravel, such as additional drainage rock. The actual recommendations for removal and replacement should be based on our field observations. suitable on-site material. We recommend that minimal compaction be performed on the exposed subgrade, materials used to replace unsuitable materials (if needed), and and/or rock blanket placed beneath the gallery. We recommend that the rock blanket consist of open-graded gravel of ¾-inch to 1½-inch diameter rock underlain by filter fabric consisting of Mirafi 140N or equivalent. Compaction of the subgrade could potentially reduce the infiltration rate of the gallery. If the subgrade of the infiltration gallery is compacted, we recommend that additional percolation testing be performed.

If foundations are to be installed along the bottom of the gallery, such as strip footings, the upper approximately 8-inches of subgrade, only beneath the foundations, should be scarified, moisture-conditioned to near optimum moisture content, and recompacted to a relative compaction of 90 percent as evaluated by ASTM D 1557. If unsuitable materials, including undocumented fill, waste, loose/soft, and/or wet materials, are encountered along the excavation bottom that extend beneath proposed footings, specific recommendations for removal and replacement of these materials, if warranted, will be provided by our firm based on field observations. If loose, soft, and/or wet materials are encountered beneath the foundations, removal and recompaction of the materials may be warranted. The excavation bottoms should be evaluated by our representative during the excavation work.

12.1.5 Subgrade Preparation for the Other Buried Structures and At-Grade Structures

In order to provide suitable support for proposed buried and/or at-grade structures, including, the catch basins, in-line pretreatment devices, debris interceptors, and manholes, we recommend that the existing undocumented fill and upper loose alluvial deposits be removed from beneath the structures. In addition, the structure foundations should be founded on 2

feet or more of newly compacted fill material. The overexcavation should remove undocumented fill and expose relatively dense alluvial deposits. Additional over-excavation of loose, soft, and/or wet areas may be appropriate. The excavation bottom should be evaluated by our representative during the excavation work and additional recommendations, if needed, be based on field observations. The limits of removal should extend approximately 2 feet beyond the footprint of the foundations. If drainage rock is placed beneath the foundations, this can be considered part of the 2-foot thick layer of compacted fill beneath the foundations. Prior to placing compacted fill and/or drainage rock, the upper approximately 8 inches of the exposed bottom should be scarified, moisture-conditioned to near optimum moisture content, and recompacted to a relative compaction of 90 percent as evaluated by ASTM D 1557.

12.1.6 Temporary Excavations and Shoring

We recommend that excavations be designed and constructed in accordance with OSHA regulations. These regulations provide shoring design parameters for excavations and trenches up to 20 feet deep based on the soil types encountered. Trenches over 20 feet deep should be designed by the contractor's engineer based on site-specific geotechnical analyses. For planning purposes, we recommend that fill and alluvium be considered as OSHA Type C soil. For trench or other excavations, OSHA requirements regarding personnel safety should be met by using appropriate shoring or by laying back the slopes no steeper than 1½:1 (horizontal to vertical) in the site fill and alluvium. Temporary excavations that encounter seepage may need shoring or may be mitigated by placing sandbags or gravel along the base of the seepage zone. Excavations encountering seepage should be evaluated on a case-by-case basis.

Based on our review of the project drawings, we anticipate that site excavations will be laid-back using temporary slopes (CDM Smith, 2020). Where slopes cannot be laid back, shoring may be appropriate. If shoring systems are used for site excavations, they should be designed for the anticipated soil conditions using the lateral earth pressure values shown on Figures 8 through 9 for braced and cantilevered excavations, respectively. The recommended design pressures are based on the assumption that the shoring system is constructed without raising the ground surface elevation behind the shored sidewalls of the excavation, that there are no surcharge loads, such as soil stockpiles and construction materials, and that no loads act above a 1:1 (horizontal to vertical) plane ascending from the base of the shoring system. For a shoring system subjected to the above-mentioned surcharge loads, the contractor should include the effect of these loads on the lateral earth pressures acting on the shored walls.

We anticipate that settlement of the ground surface will occur behind the shored excavations. The amount of settlement depends heavily on the type of shoring system, the contractor's workmanship, and soil conditions. To reduce the potential for distress to adjacent improvements, we recommend that the shoring system be designed to limit the ground settlement behind the shoring system to ½ inch or less. Possible causes of settlement that should be addressed include settlement during installation of the shoring elements, excavation for structure construction, construction vibrations, and removal of the support system. We recommend that shoring installation be evaluated carefully by the contractor prior to construction and that ground vibration and settlement monitoring be performed during construction.

The contractor should retain a qualified and experienced engineer to design the shoring system. The shoring parameters presented in this report are minimum requirements, and the contractor should evaluate the adequacy of these parameters and make the appropriate modifications for their design. We recommend that the contractor take appropriate measures to protect workers. OSHA requirements pertaining to worker safety should be observed.

12.1.7 Fill Material

In general, the on-site soils should be suitable for reuse as fill materials, provided they are free of trash, debris, oversize material, or other deleterious materials. Fill should generally be free of rocks or lumps of material in excess of 4 inches in diameter. Rocks or hard lumps larger than approximately 4 inches in diameter should be broken into smaller pieces or should be removed from the site.

Imported fill material, if used, should also consist of clean, granular material with a low expansion potential, corresponding to an expansion index of 50 or less. The soil should also be tested for corrosive properties prior to importing. We recommend that the imported materials satisfy the Caltrans (2018) criteria for non-corrosive soils (i.e., soils having a chloride concentration of 500 parts per million [ppm] or less, a soluble sulfate content of approximately 0.15 percent (1,500 ppm) or less, a pH value of 5.5 or higher, or an electrical resistivity of 1,100 ohm-centimeters or more). Materials for use as fill should be evaluated by Ninyo & Moore prior to importing. The contractor should be responsible for the uniformity of import material brought to the site.

12.1.8 Fill Placement and Compaction

In general, fill material, including retaining wall, trench backfill, fill placed beneath gallery footings, and other, should be moisture-conditioned and compacted in horizontal lifts to a

relative compaction of 90 percent or more as evaluated by ASTM D 1557. Fill material with less than 5 percent fines (passing No. 200 sieve) should be compacted to 95 percent relative compaction in accordance with City of Los Angeles guidelines as evaluated by ASTM D 1557. The rock blanket and granular materials placed as fill along the bottom of the gallery excavation, with the exception of fill placed beneath footings, should generally not be compacted. Fill material should be moisture-conditioned to slightly above the laboratory optimum moisture content. The lift thickness for fill soils will depend on the type of compaction equipment used but generally should not exceed 8 inches in loose thickness. Special care should be exercised to avoid damaging pipes during compaction of trench backfill. Placement and compaction of the fill soils should be in general accordance with local grading ordinances and good construction practice.

12.2 Underground Utilities

We anticipate that underground pipelines will be supported on native alluvial deposits. Based on the preliminary plans, pipeline inverts may be on the order of 15 feet in depth.

12.2.1 Pipe Bedding

We recommend that pipes be supported on 6 inches or more of granular bedding material, such as sand, with a sand equivalent value of 30 or more. Bedding material should be placed around the pipe and 12 inches or more above the top of the pipe in accordance with the current “Greenbook” Standard Specifications for Public Works. Special care should be taken not to allow voids beneath the pipe. Compaction of the bedding material and backfill should proceed up both sides of the pipe. Trench backfill, including bedding material, should be placed in accordance with the recommendations presented in Section 12.1.

12.2.2 Modulus of Soil Reaction for Pipe Design

The modulus of soil reaction is used to characterize the stiffness of soil backfill placed along the sides of buried flexible pipelines for the purpose of evaluating deflection caused by the weight of the backfill above the pipe. We recommend that a modulus of soil reaction of 1,000 pounds per square inch be used for design, provided that granular bedding material is placed adjacent to the pipe, as recommended in the previous section.

12.3 Site-Specific Seismic Design Considerations

Design of the proposed improvements should be performed in accordance with the requirements of governing jurisdictions and applicable building codes. Table 2 presents the site-specific spectral response acceleration parameters in accordance with the CBC (2019) guidelines.

Table 2 – 2019 California Building Code Seismic Design Criteria	
Site Coefficients and Spectral Response Acceleration Parameters	**Values**
Site Class	D
Mapped Spectral Response Acceleration at 0.2-second Period, S_s	2.042g
Mapped Spectral Response Acceleration at 1.0-second Period, S_1	0.699g
Site-Specific Spectral Response Acceleration at 0.2-second Period, S_{MS}	2.204g
Site-Specific Spectral Response Acceleration at 1.0-second Period, S_{M1}	1.802g
Site-Specific Design Spectral Response Acceleration at 0.2-second Period, S_{DS}	1.469g
Site-Specific Design Spectral Response Acceleration at 1.0-second Period, S_{D1}	1.201g
Site-Specific Maximum Considered Earthquake Geometric Mean (MCE_G) Peak Ground Acceleration, PGA_M	0.881g

12.4 Foundations

It is our opinion that the proposed infiltration gallery may be supported on strip-type foundations and that other underground structures (i.e., catch basins, in-line pretreatment devices, etc.) may be supported by mat foundations. Spread foundations may also be used to support other at-grade structures, if planned. The following are our recommendations for project foundations:

12.4.1 Spread Footings for Infiltration Gallery and At-Grade Structures

Spread footings for the infiltration gallery (i.e., strip footings) should be placed directly on low expansion alluvial materials and/or compacted fill in accordance with the recommendations presented in the Earthwork section of this report. Spread footings for at-grade structures bearing on low expansion compacted fill in accordance with the recommendations presented in the Earthwork section of this report should extend 18 inches or more below the lowest adjacent finished grade. Continuous and isolated footings should have a width of 24 inches or more. Continuous footings should be reinforced with two No. 4 steel reinforcing bars, one placed near the top and one placed near the bottom of the footings, and further detailed in accordance with the recommendations of the structural engineer.

Footings, as described above and bearing on alluvial materials and compacted fill, may be designed using a net allowable bearing capacity of 2,500 pounds per square foot (psf). Total and differential settlements for footings designed in accordance with the above recommendations are estimated to be less than approximately 1 inch and ½ inch over a horizontal span of 40 feet, respectively.

Footings bearing on alluvial materials and compacted fill may be designed using a coefficient of friction of 0.35, where the total frictional resistance equals the coefficient of friction times the dead load. Footings may be designed using a passive resistance value of 300 psf per foot of depth, with a maximum value of 3,000 psf. The allowable lateral resistance can be taken as the sum of the frictional resistance and passive resistance, provided the passive

resistance does not exceed one-half of the total allowable resistance. The passive resistance (including the maximum value) may be increased by one-third when considering loads of short duration such as wind or seismic forces.

12.4.2 Mat Foundations

Mat foundations for other underground structures (i.e., catch basins, in-line pretreatment devices, etc.) may be supported on alluvial materials and/or compacted fill in accordance with the recommendations presented in the Earthwork section of this report. Foundations should be designed in accordance with structural considerations and the following recommendations. In addition, requirements of the appropriate governing jurisdictions and applicable building codes should be considered in the design of the structures.

The mat foundations may be designed using a net allowable bearing capacity of 4,000 psf. The total and differential settlement corresponding to this allowable bearing load are estimated to be less than approximately 1 inch and ½ inch over a horizontal span of 40 feet, respectively.

Mat foundations typically experience some deflection due to loads placed on the mat and the reaction of the soils directly underlying the mat. A design modulus of subgrade reaction (K) of 50 tons per cubic foot (tcf) may be used for the subgrade soils in evaluating such deflections.

12.5 Lateral Earth Pressures for Below-Grade Structures

Walls for below-grade structures when constructed as recommended above may be designed for lateral pressures represented by the pressure diagram on Figure 10. To reduce the potential for pipe-to-wall differential settlement, which could cause pipe shearing, we recommend that a flexible pipe joint be located close to the exterior of the wall. The type of joint should be such that minor relative movement can be accommodated without distress. The pipe connections should be sufficiently flexible to withstand differential settlement of approximately ¾ inch.

12.6 Lateral Earth Pressures for Thrust Blocks

Thrust restraint for buried pipelines may be achieved by transferring the thrust force to the soil outside the pipe through a thrust block. Thrust blocks may be designed using the passive lateral earth pressures presented on Figure 11. Excavations for construction of thrust blocks should be backfilled with granular backfill material and compacted following the recommendations presented in this report.

12.7 Exterior Flatwork

We recommend that new exterior concrete sidewalks and flatwork (hardscape) have a thickness of 4 inches and be reinforced with No. 3 steel reinforcing bars placed 24 inches on-center (each way) near the mid-height of the slab. The hardscape should be underlain by 4 inches of clean sand and installed with crack-control joints at an appropriate spacing as designed by the structural engineer to reduce the potential for shrinkage cracking. Positive drainage should be established and maintained adjacent to flatwork. To reduce the potential for differential offset, joints between the new hardscape and adjacent curbs, existing hardscape, building walls, and/or other structures, and between sections of new hardscape, should be doweled.

12.8 Pavement Construction

We understand that street improvements may be performed along Morehart Avenue that may include the installation of new pavement. We considered full-depth AC, AC over aggregate base, and Portland Cement Concrete (PCC). We also understand that permeable pavement is being considered on Morehart Avenue as one of the alternatives. New pavement sections were designed based on the subgrade soil conditions and our laboratory testing. In general, the subgrade soils encountered at the project site consisted primarily of coarse-grained soils with variable amounts of silt. Laboratory testing was performed on a representative subgrade soil sample and indicated an R-value of approximately 76. Due to the variability of the on-site soils, an R-value of 60 was used for the pavement design. We evaluated the structural pavement sections assuming a traffic index (TI) of 5 for light-duty pavements and a TI of 6 for medium-duty pavements. A TI of 5 is generally associated with light automobile traffic (passenger cars) and commercial automobile traffic and a TI of 6 is generally associated with periodic heavy truck traffic.

Our AC pavement analysis was performed using the methodology outlined by the Highway Design Manual (Caltrans, 2020a). For the design of PCC pavement, we used the methodology present in the Navy Pavement Design Manual (1979) assuming a 28-day compressive strength of concrete of 3,000 psi. The pavement analysis assumes an approximately 20-year design life for new pavement. Based on the design R-value and TIs, our recommended pavement structural sections are provided in Table 3.

Table 3 – Preliminary Pavement Structural Sections

Traffic Index	Recommended Pavement Sections		
	Flexible Pavement		Rigid Pavement
	AC/AB (inches)	Full Depth AC (inches)	PCC (inches)
5.0	3.0 over 4½	4.0	5½
6.0	3.0 over 4½	4½	6.0

Notes:
AC – Asphalt Concrete
AB – Class II Aggregate Base
PCC – Portland Cement Concrete

For the design of pervious pavements (pervious concrete and permeable interlocking concrete pavement), we used the methodology presented in the Pervious Pavement Design Guidance (Caltrans, 2013). We evaluated the structural pavement sections based on three categories of traffic conditions representing low to moderate vehicular loading. The thickness of the reservoir layer is based on the higher value of the thickness required to handle the 85th percentile 24-hour storm event and the minimum thickness recommended in the pavement design structural requirements section. Our preliminary permeable pavement sections presented in Table 4 below are based on the minimum pavement structures to provide structural adequacy and constructability for the various loading. Thicker class 4 aggregate base may be appropriate in areas that require a high hydraulic storage requirement.

Table 4 – Preliminary Permeable Pavement Structural Sections

Category	PCP over AB (inches)	PICP over PM over AB (inches)
A (Pedestrian and bike pathways, landscaped areas, sidewalks) – No vehicular loads	4½ over 3½	$2^{3}/_{8}$ over 4½ over 1½
B (Parking lots, park and ride areas, maintenance access roads) – Few heavy loads at low speed	5½ over 6.0	$3^{1}/_{8}$ over 4½ over 9½
C (Parking lots, rest areas, maintenance stations) – Moderate heavy loads at low speed	8½ over 8½	$3^{1}/_{8}$ over 4½ over 17½

Notes:
PCP – Pervious Concrete Pavement
PICP – Permeable Interlocking Concrete Pavement
AB – Caltrans Class 4 Aggregate Base
PM – Caltrans Class 3 Permeable Material

Prior to placement of the new structural pavement sections, the subgrade soils should be prepared appropriately. The upper approximately 8 inches of the subgrade beneath new pavements should be scarified, moisture conditioned, and re-compacted to a relative compaction of 90 percent as evaluated by ASTM D 1557. If full-depth AC pavement is used, we recommend that the subgrade soils be recompacted to a relative compaction of 95 percent. The subgrade compaction should also result in a non-yielding condition to allow for pavement construction.

Aggregate base material should conform to the latest specifications in Section 200-2.2 for crushed aggregate base or Section 200-2.4 for crushed miscellaneous base of the Greenbook and should be compacted to a relative compaction of 95 percent in accordance with ASTM D 1557. AC should conform to Section 203-6 of the Greenbook and should be compacted to a relative compaction of 95 percent in accordance with ASTM D 1560 or California Test Method (CT) 304. Permeable material should conform to Section 68-2.02 (F) of the Caltrans Standard Specifications (2020b). It is also recommended that a 2-inch-thick bedding sand be placed between the Class 3 permeable material and permeable interlocking concrete pavement.

Pavement sections should be selected based on actual anticipated traffic loading conditions and evaluation of the subgrade materials at the time of construction. We recommend that the paving

operations be observed and tested by Ninyo & Moore. We further recommend that mix designs for the various pavements be made by an engineering company specialized in this type of work.

12.9 Corrosivity

Laboratory testing was performed on a representative sample of near-surface soil to evaluate soil pH, electrical resistivity, water-soluble chloride content, and water-soluble sulfate content. The soil pH and electrical resistivity tests were performed in general accordance with California Test Method (CT) 643. Chloride content tests were performed in general accordance with CT 422. Sulfate testing was performed in general accordance with CT 417. The laboratory test results are presented in Appendix C.

The soil pH of the sample tested was measured to be 6.8 and the electrical resistivity was measured to be 6,708 ohm-centimeters. The chloride content of the sample was measured to be 10 ppm. The sulfate content of the sample was measured to be 0.001 to percent by weight (i.e., 10 ppm). Based on the laboratory test results and Caltrans criteria (2018), the project site can be classified as a non-corrosive site, which is defined as having earth materials with a pH of more than 5.5, an electrical resistivity of more than 1,100 ohm-centimeters, chloride concentrations of less than 500 ppm, and less than 0.15 percent sulfates (i.e., 1,500 ppm).

12.10 Concrete Placement

Concrete in contact with soil or water that contains high concentrations of water-soluble sulfates can be subject to premature chemical and/or physical deterioration. Based on the CBC (2019), the potential for sulfate attack is negligible for water-soluble sulfate contents in soil ranging from 0.00 to 0.10 percent by weight, moderate for water-soluble sulfate contents ranging from 0.10 to 0.20 percent by weight, severe for water-soluble sulfate contents ranging from 0.20 to 2.00 percent by weight, and very severe for water-soluble sulfate contents over 2.00 percent by weight. The soil sample tested for this evaluation, using CT 417, indicates a water-soluble sulfate content of approximately 0.001 percent by weight (i.e., 10 ppm). Accordingly, the on-site soils are considered to have a negligible potential for sulfate attack. However, due to the potential variability of the on-site soils, consideration should be given to using Type II/V cement for the project.

To reduce the potential for shrinkage cracks in the concrete during curing, we recommend that the concrete for the proposed improvements, if applicable, be placed with a slump of 4 inches based on ASTM C 143. The slump should be checked periodically at the site prior to concrete placement. We further recommend that concrete cover over reinforcing steel for foundations be provided in accordance with CBC (2019). The structural engineer should be consulted for additional concrete specifications.

12.11 Stormwater Infiltration Gallery

Based on our subsurface evaluation, the park is generally underlain by granular alluvial deposits consisting of poorly graded sand, poorly graded sand with silt, well-graded sand, silty sand, poorly graded gravel, and sandy silt with variable amounts of gravel and cobbles. The wide range of adjusted infiltration rates (0.9 to 5.0 inches per hour) is likely due to lateral and vertical variations in material types, including silt content of alluvial interbeds and lenses. Due to site variability and the number of percolation tests performed, we recommend that an infiltration rate of 3 inches per hour, following adjustments by the BMP designer for RF_s, be used for design at Fernangeles Park for both shallow and deep infiltration based on our review of our boring logs and laboratory test results. We recommend that the bottoms of the infiltration BMPs be further evaluated during construction. Additional recommendations may be provided at that time if fine-grained materials are present along the bottom of the basin, such as removing the fine-grained material and replacing it with granular material.

Based on our evaluation, the potential for hydro-collapse settlement associated with infiltration is generally low due to the proposed depth of infiltration. However, we generally recommend a setback of 15 feet or more between settlement sensitive structures and proposed infiltration areas.

12.12 Drainage

Proper surface drainage is imperative for satisfactory site performance. Positive drainage should be provided and maintained to direct surface water away from existing foundations. Positive drainage is defined as a slope of 2 percent or more for a distance of 5 feet or more away from foundations and tops of slopes. Surface waters should not be allowed to pond adjacent to footings. We recommend that above-ground structures, if constructed, have roof drains and downspouts installed to collect runoff.

12.13 Landscaping

Project landscaping should consist of drought tolerant plants. Landscape irrigation should be kept to a level just sufficient to maintain plant vigor. Overwatering should not be permitted

13 CONSTRUCTION OBSERVATION

The recommendations provided in this report are based on our understanding of the proposed project and our evaluation of the data collected based on subsurface conditions disclosed by widely spaced exploratory borings and CPTs. It is imperative that the geotechnical consultant checks the interpolated subsurface conditions during construction. We recommend that Ninyo & Moore review the project plans and specifications prior to construction. It should be noted that,

upon review of these documents, some recommendations presented in this report may be revised or modified.

During construction, we recommend that the duties of the geotechnical consultant include, but not be limited to:

- Observing site clearing, grubbing, and removals.
- Observing excavation bottoms, and the placement and compaction of fill, including trench backfill.
- Evaluating imported materials prior to their use as fill (if used).
- Performing field tests to evaluate fill compaction.
- Observing foundation excavations for bearing materials and cleaning prior to placement of reinforcing steel or concrete.
- Performing material testing services including concrete compressive strength and steel tensile strength tests and inspections.

The recommendations provided in this report assume that Ninyo & Moore will be retained as the geotechnical consultant during the construction phase of this project. If another geotechnical consultant is selected, we request that the selected consultant indicate to the owner and to our firm in writing that our recommendations are understood and that they are in full agreement with our recommendations.

14 LIMITATIONS

The field evaluation, laboratory testing, and geotechnical analysis presented in this geotechnical report have been conducted in general accordance with current practice and the standard of care exercised by geotechnical consultants performing similar tasks in the project area. No warranty, expressed or implied, is made regarding the conclusions, recommendations, and opinions presented in this report. There is no evaluation detailed enough to reveal every subsurface condition. Variations may exist and conditions not observed or described in this report may be encountered during construction. Uncertainties relative to subsurface conditions can be reduced through additional subsurface exploration. Additional subsurface evaluation will be performed upon request. Please also note that our evaluation was limited to assessment of the geotechnical aspects of the project, and did not include evaluation of structural issues, environmental concerns, or the presence of hazardous materials.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore

should be contacted if the reader requires additional information or has questions regarding the content, interpretations presented, or completeness of this document.

This report is intended for design purposes only. It does not provide sufficient data to prepare an accurate bid by contractors. It is suggested that the bidders and their geotechnical consultant perform an independent evaluation of the subsurface conditions in the project areas. The independent evaluations may include, but not be limited to, review of other geotechnical reports prepared for the adjacent areas, site reconnaissance, and additional exploration and laboratory testing.

Our conclusions, recommendations, and opinions are based on an analysis of the observed site conditions. If geotechnical conditions different from those described in this report are encountered, our office should be notified, and additional recommendations, if warranted, will be provided upon request. It should be understood that the conditions of a site could change with time as a result of natural processes or the activities of man at the subject site or nearby sites. In addition, changes to the applicable laws, regulations, codes, and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

This report is intended exclusively for use by the client. Any use or reuse of the findings, conclusions, and/or recommendations of this report by parties other than the client is undertaken at said parties' sole risk.

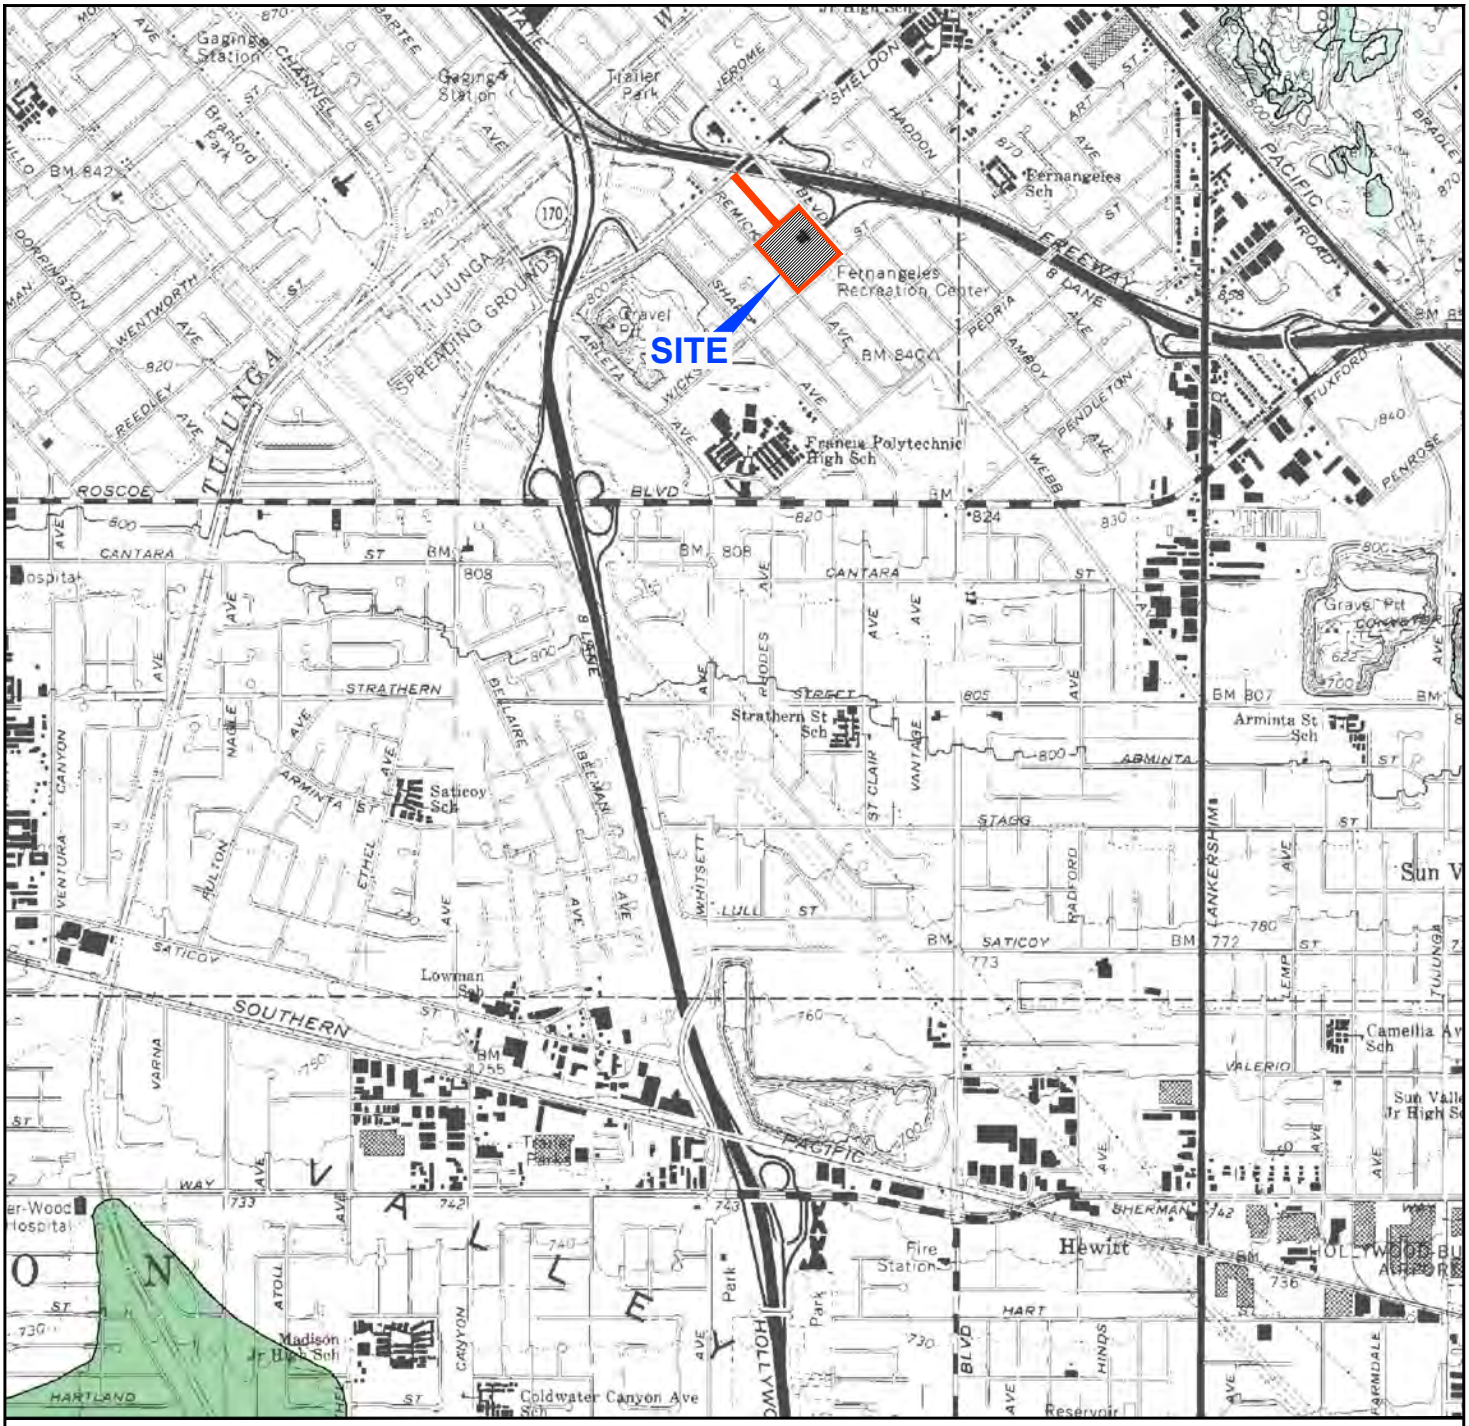
NOTES:

1 The probabilistic ground motion spectral response accelerations are based on the risk-targeted Maximum Considered Earthquake (MCE_R) having a 2% probability of exceedance in 50 years in the maximum direction using the Chiou & Youngs (2014), Campbell & Bozorgnia (2014), Boore et al. (2014), and Abrahamson et al. (2014) attenuation relationships and the risk coefficients.

2 The deterministic ground motion spectral response accelerations are for the 84th percentile of the geometric mean values in the maximum direction using the Chiou & Youngs (2014), Campbell & Bozorgnia (2014), Boore et al. (2014), and Abrahamson et al. (2014) attenuation relationships for deep soil sites considering a Mw 7.5 event on the Verdugo fault zone located 1.84 kilometers from the site. It conforms with the lower bound limit per ASCE 7-16 Section 21.2.2.

3 The Site-Specific MCE_R Response Spectrum is the lesser of spectral ordinates of deterministic and probabilistic accelerations at each period per ASCE 7-16 Section 21.2.3. The Site-Specific Design Response Spectrum conforms with lower bound limit per ASCE 7-16 Section 21.3.



4 The Mapped Design MCE_R Response Spectrum is computed from mapped spectral ordinates modified for Site Class D (stiff soil profile) per ASCE 7-16 Section 11.4. It is presented for the sake of comparison.

APPENDIX A

Boring Logs

APPENDIX A

BORING LOGS

Field Procedure for the Collection of Disturbed Samples

Disturbed soil samples were obtained in the field using the following method.

Bulk Samples

Bulk samples of representative earth materials were obtained from the exploratory borings. The samples were bagged and transported to the laboratory for testing.

The Standard Penetration Test (SPT) Sampler

Disturbed drive samples of earth materials were obtained by means of a Standard Penetration Test sampler. The sampler is composed of a split barrel with an external diameter of 2 inches and an unlined internal diameter of 1-3/8 inches. The sampler was driven into the ground 12 to 18 inches with a 140-pound hammer free-falling from a height of 30 inches in general accordance with ASTM D 1586. The blow counts were recorded for every 6 inches of penetration; the blow counts reported on the logs are those for the last 12 inches of penetration. Soil samples were observed and removed from the sampler, bagged, sealed and transported to the laboratory for testing.

Field Procedure for the Collection of Relatively Undisturbed Samples

Relatively undisturbed soil samples were obtained in the field using the following method.

The Modified Split-Barrel Drive Sampler

The sampler, with an external diameter of 3 inches, was lined with 1-inch-long, thin brass rings with inside diameters of approximately 2.4 inches. The sample barrel was driven into the ground with the weight of a hammer in general accordance with ASTM D 3550. The driving weight was permitted to fall freely. The approximate length of the fall, the weight of the hammer, and the number of blows per foot of driving are presented on the boring logs as an index to the relative resistance of the materials sampled. The samples were removed from the sample barrel in the brass rings, sealed, and transported to the laboratory for testing.

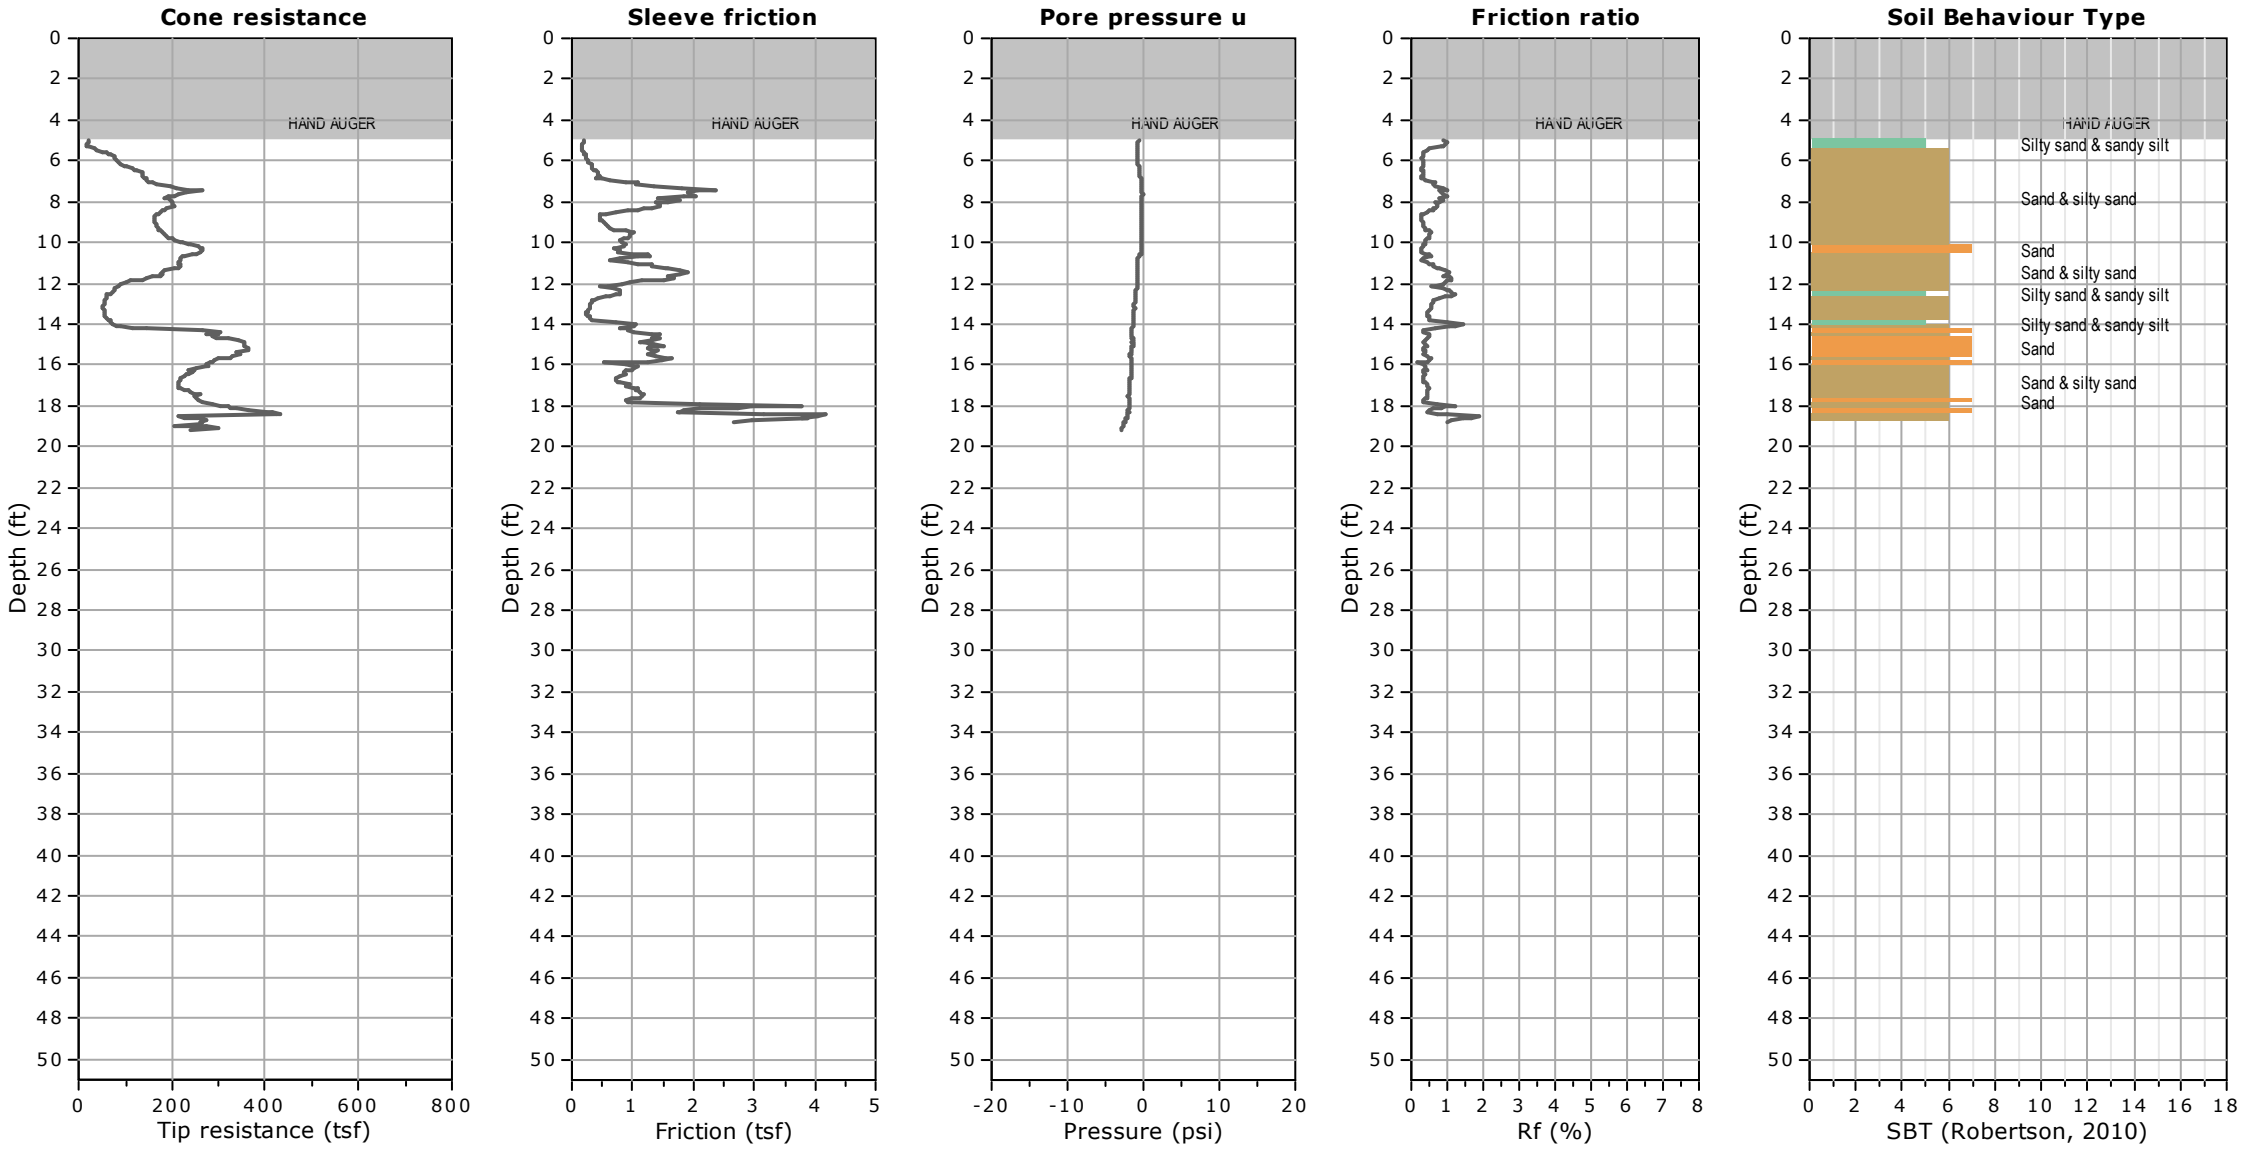
CPT SOUNDINGS



Field Procedure for Cone Penetration Testing

The cone penetration testing (CPT) described in this report was conducted by Kehoe Testing and Engineering in general accordance with ASTM D 5778. The cone penetrometer assembly used for this project consisted of a conical tip and a cylindrical friction sleeve. The conical tip had an apex angle of 60 degrees and a cross-section area of approximately 15 square centimeters. The interior of the CPT probe was instrumented with strain gauges that allowed simultaneous measurement of cone tip resistance and friction sleeve resistance during penetration. The cone hydraulically pushed into the soil using the reaction mass of a specially designed 30-ton truck at a constant rate while the cone tip resistance and sleeve friction were recorded at an approximately 1-inch interval and stored in digital form. The computer generated logs presented in the following pages include cone resistance, sleeve friction, pore pressure, and soil behavior type.

APPENDIX C

Geotechnical Laboratory Testing

APPENDIX C

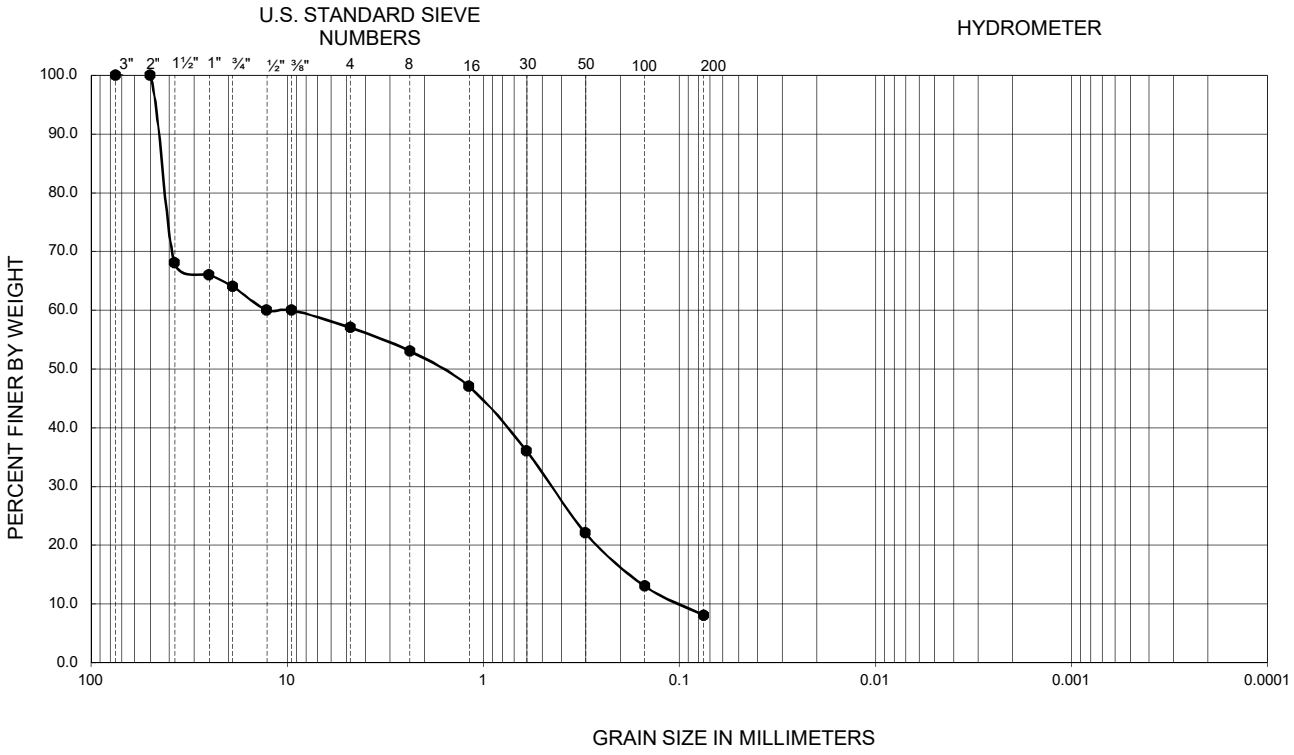
GEOTECHNICAL LABORATORY TESTING

Classification
Soils were visually and texturally classified in accordance with the Unified Soil Classification System (USCS) in general accordance with ASTM D 2488. Soil classifications are indicated on the logs of the exploratory borings in Appendix B.

In-Place Moisture and Density Tests
The moisture content and dry density of relatively undisturbed samples obtained from the exploratory borings were evaluated in general accordance with ASTM D 2937. The test results are presented on the logs of the exploratory borings in Appendix B.

Gradation Analysis
Gradation analysis tests were performed on selected representative soil samples in general accordance with ASTM D 422. The grain-size distribution curves are shown on Figures C-1 through C-6. These test results were utilized in evaluating the soil classifications in accordance with the USCS.

200 Wash
An evaluation of the percentage of particles finer than the No. 200 sieve in selected soil samples was performed in general accordance with ASTM D 1140. The results of the tests are presented on Figure C-7.



Consolidation Test
Consolidation testing was performed on selected relatively undisturbed soil samples in general accordance with ASTM D 2435. The samples were inundated during testing to represent adverse field conditions. The percent of consolidation for each load cycle was recorded as a ratio of the amount of vertical compression to the original height of the sample. The results of the tests are summarized on Figures C-8 and C-9.

Direct Shear Tests
Direct shear tests were performed on relatively undisturbed samples in general accordance with ASTM D 3080 to evaluate the shear strength characteristics of selected materials. The samples were inundated during shearing to represent adverse field conditions. The results are shown on Figures C-10 and C-11.

Soil Corrosivity Tests
Soil pH and resistivity tests were performed on a representative sample in general accordance with California Test (CT) 643. The soluble sulfate and chloride content of the selected sample were evaluated in general accordance with CT 417 and CT 422, respectively. The test results are presented on Figure C-12.

R-Value
The resistance value, or R-value, for site soils was evaluated in general accordance with California Test (CT) 301. The soil sample was prepared and evaluated for exudation pressure and expansion pressure. The equilibrium R-value is reported as the lesser or more conservative of the two calculated results. The test results are shown on Figure C-13.

Notes and Definitions

S-13	Surrogate recovery outside of established control limits. The data was accepted based on valid recovery of surrogates in client samples and remaining QC including CCV.
QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
B-ND	The analyte is found in the method blank at a level greater than the reporting limit but the associated samples are ND. There is no impact on data.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

Notes and Definitions

QM-05	The spike recovery was outside acceptance limits for the MS and/or MSD due to possible matrix interference. The LCS was within acceptance criteria. The data is acceptable as no negative impact on data is expected.
DET	Analyte DETECTED
ND	Analyte NOT DETECTED at or above the reporting limit
NR	Not Reported
dry	Sample results reported on a dry weight basis
RPD	Relative Percent Difference

METHANE GAS SURVEY FOR FERNANGELES PARK

Ninyo & Moore
Geotechnical & Environmental Sciences Consultants

June 3, 2020
Project No. 211294005

Mr. Scott Dellinger
Vice President
CDM Smith
600 Wilshire Blvd., Suite 750
Los Angeles, California 90017

Subject: Methane Gas Survey for Fernangeles Park
City of Los Angeles, Bureau of Engineering
Stormwater Capture Parks Program Project (TOS 25)
Los Angeles, California

References: City of Los Angeles, Department of Building and Safety, 2014, Site Testing Standards for Methane, Bulletin P/BC 2014-101.

City of Los Angeles, Department of Public Works, 2004, Methane and Methane Buffer Zones, City of Los Angeles, dated March 31.

Ninyo & Moore, 2020, Proposal for Methane Surveys, Valley Plaza Park North and North Hollywood Park, Stormwater Capture Parks Program, Los Angeles Bureau of Engineering Task Order Solicitation (TOS No. 25, Los Angeles, California, dated February 5.

Dear Mr. Dellinger:

In accordance with your request, Ninyo & Moore performed a methane survey during the Pre-Design phase of the Stormwater Capture Parks Program project (TOS 25) at the City of Los Angeles Fernangeles Park (site) located at 8851 Laurel Canyon Blvd., Sun Valley, California (Figure 1). Our services were performed in general accordance with our referenced proposal dated February 5, 2020, and included methane site testing within the footprint of the proposed Fernangeles Park infiltration gallery. The methane survey was performed in order to evaluate for the presence of methane gas at the location of the proposed structure in general accordance with Bulletin P/BC 2014-101 (City of Los Angeles, Department of Building and Safety [LADBS], 2014), and to list mitigation requirements as indicated in the City of Los Angeles, Municipal Ordinance No. 175790. Our findings, conclusions, and recommendations regarding our methane survey of the proposed location of the Fernangeles Park infiltration gallery are provided herein.

Based on our review of the referenced map (City of Los Angeles, 2004), we understand that the proposed project is located in an area of Los Angeles that is mapped as being within a Methane Buffer Zone. According to Bulletin P/BC 2014-101 (LADBS, 2014), methane surveys are required in construction sites located within LADBS jurisdiction and within Methane and Methane Buffer Zones.

Due to the potential hazards associated with methane gases, we have been requested to perform the subject methane survey in general accordance with the LADBS requirements. Ninyo & Moore is certified by LADBS to perform methane field testing (License #10087).

METHANE GAS SURVEY

As part of the methane survey, Ninyo & Moore performed a shallow soil gas test and a gas probe test at the site in general accordance with Bulletin P/BC 2014-101 (LADBS, 2014). The methane survey was conducted between May 11 through May 14, 2020.

Shallow Soil Gas Test

The shallow soil gas test was conducted by installing 7 shallow soil gas probes (MS-1 through MS-7) within the proposed infiltration gallery. The number of shallow soil gas wells installed were based on anticipated infiltration gallery total footprint of approximately 70,000 square-feet (SF) and a rate of one shallow soil gas sample per 10,000 SF of site area, per LADBS P/BC 2014-101. The approximate location of the proposed infiltration gallery and shallow soil gas tests are shown on Figure 2. A gas probe was installed in each test location at a depth of approximately 5 feet below ground surface (bgs) by our drilling subcontractor, Strongarm Environmental Field Services, Inc. (Strongarm) of Fullerton, California. Soil borings were advanced to total depth using a stainless steel hand auger drill kit. Each probe was placed within an approximately 1-foot-thick zone of sand filter pack at the bottom of the well. The portion of the well above the sand was filled/sealed with hydrated granular bentonite. The probe was connected to the ground surface with a ¼-inch-diameter nylon tube that extended through the sandy soil with an open/close polycarbonate stopcock valve at the surface. After a minimum of two hours after the installation of the soil gas probes, methane concentrations were measured at each shallow soil gas test location using a calibrated RKI Eagle II combustible gas analyzer. The shallow methane concentrations were recorded on field logs and are provided in the LADBS P/BC 2014-101 Form 1, Certificate of Compliance for Methane Test Data, which is included in Attachment A.

Gas Probe Test

After the shallow soil gas test, triple-nested soil gas probe test wells were installed in select shallow test locations that exhibited the highest recorded methane concentrations. Since methane was not detected in the shallow soil gas probes, the gas probe test well locations were selected to be well-distributed across the site. The gas probe test wells were installed by Strongarm using a GeoProbe 6620 DT track-mounted direct-push drill rig. In general, each deep well included the placement of gas probes at depths of approximately 5, 10, and 20 feet below the anticipated bottom depths of the infiltration gallery. Based on our understanding of the project, the proposed infiltration gallery invert

elevation is 16 feet. Based on a rate of one gas probe test location per 20,000 SF of site area per LADBS P/BC 2014-101, four triple-nested soil gas probe test wells (MD-1 through MD-4) with gas probes placed at depths of approximately 21, 26, and 36 feet bgs were installed at the site.

Initial gas probe test methane concentrations and soil gas pressure readings were measured from each gas probe after allowing the probe to equilibrate for a minimum of two hours after installation. Methane concentrations were measured using a calibrated RKI Eagle II combustible gas analyzer. Soil gas pressures were measured using a magnehelic gauge with a range of 0.00 to 2.50 inches of water column. Readings were recorded on the field logs and are provided in the attached Certificate of Compliance for Methane Test Data, Form 1 (Attachment A). A second round of methane and soil gas pressure field readings was measured at least 24 hours or more after the first round of gas probe test readings. The gas probe test readings are provided on Form 1 in Attachment A.

RESULTS

As requested, Ninyo & Moore performed methane surveys of the proposed infiltration gallery location in general accordance with the requirements of LADBS (2014). The City of Los Angeles, Municipal Ordinance No. 175790, indicates various levels of methane mitigation design for structures based on methane concentrations and gas pressures observed during the methane survey.

Methane concentrations and soil gas pressures detected at the site correspond to Municipal Ordinance No. 175790 methane mitigation design levels for planned structures in City of Los Angeles Methane Zones and Methane Buffer Zones. The Design Methane Concentration, Design Soil Gas Pressure, and associated Methane Design Level are as follows:

Location	Design Maximum Methane Concentration (ppm)	Percent of Lower Explosive Limit (LEL)	Design Soil Gas Pressure (inches of water column)	Ord #175790 Site Methane Design Level
MD-1	105	0%	0.00	Level II

Notes:
ppm – parts per million
LEL – methane = 50,000 ppm
% – percent

Based on results of this methane gas survey, in accordance with the LADBS Municipal Ordinance No. 175790 requirements, the Site Design Level for the proposed construction at Fernangeles Park is a Site Design Level II with 0.0 inches of water column soil gas pressure. Per Section 91.7104.3.6 of the City of Los Angeles Municipal Code Ordnance No. 175790, buildings located in a Methane Buffer Zone, shall not be required to provide any methane mitigation system if the Design Pressure is less than or equal to two inches of water column and qualifies as a Site Design Level I or II. Since this site is in a Methane Buffer Zone and is Site Design Level II with soil gas pressure less than two

inches of water column, no methane mitigation system is required for the proposed infiltration gallery footprint at Fernangeles Park.

Ninyo & Moore appreciates the opportunity to provide services on this project.

Sincerely,
NINYO & MOORE

Certificate of Compliance for Methane Test Data, Form 1

FORM 1 - CERTIFICATE OF COMPLIANCE FOR METHANE TEST DATA

Part 1: Certification Sheet

Site Address: 8851 Laurel Canyon Boulevard, Sun Valley, California 91352
Legal Description: Tract: TR 1582 Lot: FR 23 & FR 24 Block: None
Building Use: Subsurface Stormwater Infiltration

Architect's, Engineer's or Geologist's Stamp:

Name of Architect, Engineer, or Geologist:
Travis Coburn, PE
Mailing Address:
475 Goddard, Suite 200
Irvine, CA 92618
Telephone: 949-753-7070

Name of Testing Laboratory:
Ninyo & Moore
City Test Lab License #:10087
Telephone:949-753-7070

I hereby certify that I have tested the above site for the purpose of methane mitigation and that all procedures were conducted by a City of Los Angeles licensed testing agency in conformity with the requirements of the LADBS Information Bulletin P/BC 2014-101. Where the inspection and testing of all or part of the work above is delegated, full responsibility shall be assumed by the architect, engineer or geologist whose signature is affixed thereon.

Signed: _____ date _6/3/20_____

Required Data:

- Project is in the (Methane Zone) or (Methane Buffer Zone).
- Depth of ground water observed during testing: N/A feet below the Impervious Membrane.
- Depth of Historical High Ground Water Table Elevation*: 330 feet below the Impervious Membrane.
- Design Methane Concentration**: 105 parts per million in volume (ppmv).
- Design Methane Pressure***: 0.00 inches of water column.
- Site Design Level: (Level I, Level II, Level III, Level IV, Level V) with 0.00 inches of water column.

De-watering:

- De-watering (is) (is not) required per Section 7104.3.7.
- Pump discharge rate _____N/A___ cubic feet per minute per reference geology or soil report: _____ dated _____.

Additional Investigation:

- Additional investigation (was) (was not) conducted.

Latest Grading on Site:

- Date of last grading on site (was) (was not) more than 30 days before Site Testing.
- See Attached explanation of the effect on soil gas survey results by grading operations.

Notes:

* Historical High Ground Water Table Elevation shall mean the highest recorded elevation of ground water table based on historical records and field investigations as determined by the engineer for the methane mitigation system.

** Design Methane Concentration shall mean the highest recorded measured methane concentration from either Shallow Soil Gas Test or any Gas Probe Set on the site.

*** Design Methane Pressure shall mean the highest total pressure measured from any Gas Probe Set on the site.

1.0 PURPOSE

This Storm Water Pollution Prevention Plan (SWPPP) lists and describes Best Management Practices (BMPs) that will be used during this construction project to minimize the potential for pollutants to leave the site during construction activities. Construction BMPs can include structural devices, material storage methods, and operational procedures used to prevent, control, and treat storm water pollution emanating from the site. Construction activities can disturb large areas that result in erosion and transportation of related particulates such as sediments and dust to nearby waterways. In excess amounts, these particulates can increase water turbidity and consequently impair aquatic life and beneficial uses of the water.

Pollutants such as hydrocarbons, metals, nutrients, toxic substances, trash, and other debris can be generated from a variety of construction activities and can travel with eroded sediments. Potential pollutants traveling with the sediments may include the organic components in the top soil, plant residues, nutrient elements, organic material, deposited atmospheric pollutants, and other liquid and solid wastes.

The amended federal Clean Water Act of 1987 (CWA) added a requirement to address construction site storm water pollution. In California, construction activities consisting of one acre or more of soil are subject to the National Pollutant Discharge Elimination System (NPDES) General Permit for Discharges of Storm Water Runoff Associated with Construction Activity (General Permit). This permit requires all dischargers (i.e. landowners or developers) to prepare and implement a Storm Water Pollution Prevention Plan (SWPPP) prior to disturbing a site. This (SWPPP) is designed to meet the requirements of the General Permit. This SWPPP must also be implemented at the appropriate level to protect water quality at all times throughout the entire construction project, including both dry and wet weather. BMPs must be implemented and maintained to control erosion, sediment, other construction pollutants, and non-storm water discharges year-round. Other requirements of this SWPPP include employee training, site inspections, and proper maintenance of BMPs as necessary. Los Angeles Department of Water and Power (LADWP) construction crews and personnel, as well as its contractors and subcontractors, are required to follow the guidelines and BMPs outlined in this SWPPP. They are also required to ensure proper implementation and maintenance of such BMPs for the entire duration of this project.

A copy of this SWPPP must be maintained at the construction site. This SWPPP must be modified as necessary to reflect any changes in personnel or construction site conditions.

Amendments to this SWPPP must be documented using the forms provided in Appendix G**.**

2.0 OBJECTIVES

A. The SWPPP shall be designed to address the following objectives:

1. All pollutants and their sources, including sources of sediment associated with construction, construction site erosion and all other activities associated with construction activity are controlled;

2. Where not otherwise required to be under a Regional Water Board permit, all non-storm water discharges are identified and either eliminated, controlled, or treated;

3. Site BMPs are effective and result in the reduction or elimination of pollutants in storm water discharges and authorized non-storm water discharges from construction activity to the BAT/BCT standard;

4. Calculations and design details as well as BMP controls for site run-on are complete and correct, and

5. Stabilization BMPs installed to reduce or eliminate pollutants after construction are completed.

B. To demonstrate compliance with requirements of this General Permit, the QSD shall include information in the SWPPP that supports the conclusions, selections, use, and maintenance of BMPs.

C. The discharger shall make the SWPPP available at the construction site during working hours while construction is occurring and shall be made available upon request by a State or Municipal inspector. When the original SWPPP is retained by a crewmember in a construction vehicle and is not currently at the construction site, current copies of the BMPs and map/drawing will be left with the field crew and the original SWPPP shall be made available via a request by radio/telephone. -

2.1 TRAINING QUALIFICATIONS AND CERTIFICATION REQUIREMENTS

A. General

The discharger shall ensure that all persons responsible for implementing requirements of this General Permit shall be appropriately trained in accordance with this section 2.1.(See Section *5.5 (a) Employee Training Program* for more details). Training should be both formal and informal, occur on an ongoing basis, and should include training offered by recognized governmental agencies or professional organizations. Those responsible for preparing and amending SWPPPs shall comply with the requirements in this section.

The discharger shall provide documentation of all training for persons responsible for implementing the requirements of this General Permit in the Annual Reports.

B. SWPPP Certification Requirements

1. Qualified SWPPP Developer: The discharger shall ensure that SWPPPs are written, amended and certified by a Qualified SWPPP Developer (QSD). A QSD shall have one of the following registrations or certifications, and appropriate experience, as required for:

   a. A California registered professional civil engineer;

   b. A California registered professional geologist or engineering geologist;

   c. A California registered landscape architect;

   d. A professional hydrologist registered through the American Institute of Hydrology;

   e. A Certified Professional in Erosion and Sediment Control (CPESC) ™ registered through Enviro Cert International, Inc.;

   f. A Certified Professional in Storm Water Quality (CPSWQ) ™ registered through Enviro Cert International, Inc.; or

   g. A professional in erosion and sediment control registered through the National Institute for Certification in Engineering Technologies (NICET);

   Effective two years after the adoption date of this General Permit, a QSD shall have attended a State Water Board-sponsored or approved QSD training course.

2. The discharger shall list the name and telephone number of the currently designated Qualified SWPPP Developer(s) in the SWPPP.

3. Qualified SWPPP Practitioner: The discharger shall ensure that all BMPs required by this General Permit are implemented by a Qualified SWPPP Practitioner (QSP). A QSP is a person responsible for non-storm water and storm water visual observations, sampling and analysis. Effective two years from the date of adoption of this General Permit, a QSP shall be either a QSD or have one of the following certifications:

   a. A certified erosion, sediment and storm water inspector registered through Enviro Cert International, Inc.; or

   b. A certified inspector of sediment and erosion control registered through Certified Inspector of Sediment and Erosion Control, Inc. Effective two years

after the adoption date of this General Permit, a QSP shall have attended a State Water Board-sponsored or approved QSP training course.

4. The LRP shall list in the SWPPP, the name of any Approved Signatory, and provide a copy of the written agreement or other mechanism that provides this authority from the LRP in the SWPPP.

5. The discharger shall include, in the SWPPP, a list of names of all contractors, subcontractors, and individuals who will be directed by the Qualified SWPPP Practitioner. This list shall include telephone numbers and work addresses. Specific areas of responsibility of each subcontractor and emergency contact numbers shall also be included.

6. The discharger shall ensure that the SWPPP and each amendment will be signed by the Qualified SWPPP Developer. The discharger shall include a listing of the date of initial preparation and the date of each amendment in the SWPPP.

3.0 List of Contractors and Subcontractors

The tables below list the contractors and subcontractors conducting work at the site.

4.0 PROJECT INFORMATION

4.1 Project Description

As part of the Stormwater Capture Parks Program with Los Angeles Department of Public Works Bureau of Engineering (LABOE) and the Los Angeles Department of Water and Power (LADWP), the Fernangeles Park Stormwater Capture Project includes the construction of a subsurface infiltration gallery, storm drain diversion structure and piping, and improved park facilities. The project will divert and infiltrate stormwater to replenish the San Fernando Groundwater Basin in order to increase local water supply; alleviate localized flooding; improve water quality; and improve park amenities, and recreational and environmental education opportunities for the local community. The stormwater capture facilities are sized to ensure full capture of the entire 85th percentile, 24-hour storm event for the tributary areas upstream of the site. The total project site area is approximately 475,000 SF, with 175,000 SF having land disturbing activities. Approximately 145,000 sf of the site is impervious surface. The proposed ground cover post construction will be the same as the existing condition, except for the 12 ft wide access road and walkways around the baseball field (<2% of total ground coverage).

Site grading would be limited to the existing baseball field area where the desilting basin and infiltration gallery would be installed. The finished grade would be raised by approximately 2 feet over the existing grade with smooth transition to adjacent existing grade to ensure stormwater would drain away from the base of the infiltration gallery. Stormwater runoff from the elevated baseball field will be captured by the surface flow path and local depressed areas locate along the west perimeter of the baseball field. Existing site drainage pattern which mainly slopes southeasterly toward the intersection of Remick Avenue and Wicks Street will remain undisturbed. Surface flow collected by existing drainage swale will be diverted to the infiltration gallery with a proposed 24-inch by 24-inch drop inlet and a 12-inch RCP pipe.

4.2 Project Location

Fernangeles Park is a park owned by the City of Los Angeles Department of Recreation and Parks (RAP) in the Sun Valley neighborhood of the City of Los Angeles. The site is located south of the Interstate-5 (I-5) freeway and State Route-170 (SR-170) freeway interchange. The park is bordered by Allegheny Street to the west, Laurel Canyon Boulevard to the north, Wicks Street to the east, and Remick Avenue to the south. The park is predominantly surrounded by single and multi-family residential homes. Remick Avenue and Wicks Street are entirely residential streets while Allegheny Street is a residential street which also has commercial buildings with shops and food establishments near the intersection with Laurel Canyon Boulevard. Single family homes, a multi-family residential home, Tempco Engineering Building, and the on-ramp and off-ramp for southbound I-5 are across from the park on Laurel Canyon Boulevard.

4.3 Project Schedule

A condensed list of significant construction milestones can be found in the table below.

CONSTRUCTION PHASE	ESTIMATED COMPLETION DATE
Initial Construction Support Activities	06/17/2022
Infiltration Gallery	03/31/2023
Influent Facilities	02/03/2023
Site Work and Amenities	09/08/2023
Startup and Testing	11/03/2023

4.4 Existing Site Conditions

Fernangeles Park is approximately 380,000 square feet (sf), or 8.72 acres. Approximately 85,000 sf of the park is impervious surface. The site features amenities such as baseball fields, soccer field, football field, basketball courts, outdoor gym, picnic tables, horseshoe pits, playground, and a community center building that houses an indoor basketball court, indoor volleyball court, kitchen, stage, and classrooms. Most of these facilities are located in the northern half of the park along Laurel Canyon Boulevard. Two baseball diamonds and a football/soccer field make up the southwestern half of the park and are surrounded by open field and trees. The recreation center slopes generally from north to south, the ball field area slopes from an approximate elevation of 855 feet to 847 feet towards Wicks Street.

The upstream tributary areas and streets surrounding and downstream of the Fernangeles Park lack catch basins and storm drainage conveyance system. In addition, Morehart Avenue, Allegheny Street and Remick Avenue lack curb and gutter to protect the private properties from surface flow. Freeway runoff collected by the drainage system in the sump at Caltrans' Sheldon Street Pump Station is diverted by two pumps with two 14-inch pump discharge pipes to a surge chamber that drains by a combination of gravity and pressure flow to the intersection of Sheldon Street and Morehart Avenue. The majority of the diverted Caltrans pump station flow runs across Morehart Avenue, along the east side of Sheldon Street to Remick Avenue, and then south along Allegheny Street to a series of catch basins and a 39-inch storm drain at the intersection of Wicks Street and Sharp Avenue. Surface runoff from the upper tributary Area 2 runs along a 9-inch high curb on both sides of Laurel Canyon Boulevard across an I-5 freeway overpass. Flow on the south side of the street turns southerly to the west side of Allegheny Street, then follows the natural street slope approximately 2000 feet downstream to the catch basins at Sharp Avenue. Flows on the north side of Laurel Canyon Boulevard turn into Wicks Street, then makes its way south into the catch basins on Wicks Street/Sharp Avenue. Flat topography and lack of catch basins cause runoff to accumulate and spread into travel lanes throughout the area. The existing site is approximately 1-2 ft above the adjacent streets. The potential for stormwater to run on to the construction site from surrounding areas is unlikely.

The subject site is underlain by up to approximately 2 feet of undocumented fill underlain by granular alluvial materials. The fill and alluvium generally consisted of moist, loose to very dense, poorly graded sand, poorly graded sand with silt, well-graded sand, silty sand, poorly graded gravel, and sandy silt. Variable amounts of

gravel and cobbles (and possible boulders) were encountered in the fill and alluvium. Groundwater was not encountered in the exploratory borings to the total depth explored of approximately 58 feet. Historical high groundwater levels are approximately 150 to 160 feet below the ground surface.

5.0 EFFLUENT LIMITS, POLLUTANT SOURCES, AND BMP IDENTIFICATION

5.1 Introduction

The General Permit requirements must be met on a year-round basis, not just during the wet season. Therefore, this SWPPP, and prescribed Best Management Practices must be implemented at the appropriate level and in a proactive manner during all seasons until the construction project is complete. Post-construction BMPs will be implemented after the project is complete as required by the General Permit (refer to Section 9.0 POST-CONSTRUCTION STANDARDS of this Plan).

BMPs are defined as "any program, technology, process, siting criteria, operational methods or measures, or engineered systems, that when implemented, prevent, control, remove or reduce pollution."

5.2 *Effluent Standards: Numeric and Narrative Limitations*

A. Numeric – There is no Numeric Effluent Limitation (NEL) for pH or Turbidity.

B. Narrative – Risk Level 2 dischargers shall comply with the Narrative Action Levels as follows:

1. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

2. Dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

3. The Numeric Action Level (NAL) for pH is 6.5 – 8.5. The test method is a field test with a calibrated portable instrument.

4. The NAL for turbidity is 250 NTU. The test method is EPA 180.1 and/or field test with a calibrated portable instrument.

5.3 Unauthorized Non-Storm Water Discharges

Elimination or reduction of "unauthorized non-storm water discharges" to the storm drain system or receiving waters is a major goal of the General Permit. Most non-storm water discharges are prohibited. Unauthorized non-storm water discharges can be generated from a variety of sources. Examples include, but are not limited to: waters from the rinsing or washing of vehicles, equipment, buildings and pavement; materials that have

been improperly disposed of or dumped and spilled, and leaked materials. Such discharges should be eliminated or reduced to the maximum extent practicable.

5.3 (a) Non-Storm Water Management

A. Dischargers shall implement measures to control all non-storm water discharges during construction.

B. Dischargers shall wash vehicles in such a manner as to prevent non-storm water discharges to surface waters or MS4 drainage systems.

C. Dischargers shall clean streets in such a manner as to prevent unauthorized non-storm water discharges from reaching surface water or MS4 drainage systems.

5.4 Authorized Non-Storm Water Discharges

The General Permit authorizes certain non-storm water discharges that may be necessary for the completion of construction projects. Such discharges include, but are not limited to: irrigation of vegetative erosion control measures; fire hydrant flushing; potable water sources related to the operation and maintenance of potable water systems; drinking fountain water; atmospheric condensates including refrigeration, air conditioning, and compressor condensate; irrigation drainage; springs; ground water; and foundation or footing drainage. These discharges are allowed provided they are: 1) not relied upon to clean up failed or inadequate construction or post construction BMPs designed to keep materials on site; 2) infeasible to eliminate; 3) include BMPs described herein; and 4) do not cause or contribute to a violation of water quality standards. The General Permit prohibits the discharge of sediment-laden water offsite without prior treatment (detention or filtering).

5.5 Best Management Practices

The BMPs described in this document will be implemented to minimize the potential for pollutants to leave the project area and enter the storm drain system to the maximum extent practicable. The BMPs listed below are designed to minimize non-storm water discharges, minimize pollutants in storm water drainage and minimize the release of pollutants that can eventually be carried off by runoff, wind, or tracked out into the storm drain system. BMPs also include planning and preparing for rainfall. The site should be stabilized before a storm and BMPs should be checked for correct implementation prior to storm events. Appendix H lists sources for weather forecasts. Through proactive BMP implementation and good housekeeping measures, the construction site will pose a minimum threat of polluting local waterways through storm water runoff.

BMPs must be implemented to prevent or reduce the contact of non-storm water discharges with potential pollutant sources (i.e. waste storage areas, soil piles) and minimize to the extent practicable the flow or volume of non-storm water discharges.

Detailed descriptions of various types of BMPs for construction projects are located in Appendix M.

5.5 (a) Employee Training Program

All employees working on the site shall receive a general briefing about the importance of preventing storm water pollution, potential sources of storm water pollution, and the BMPs to be implemented at the site. New employees shall be briefed prior to work. Storm water pollution control training may be integrated with other training sessions, such as those conducted for worker safety, spill prevention, or hazardous materials management. Employees are encouraged to provide suggestions/feedback to improve training sessions and implementation of control practices.

Employees responsible for implementing, inspecting, maintaining, or repairing storm water pollution control practices should receive copies of relevant portions of this SWPPP and become familiar with their responsibilities. When such responsibilities shift from one employee to another, the outgoing employee shall pass on all necessary information to ensure the continuing effectiveness of the BMPs and SWPPP compliance, including copies of this SWPPP and inspection checklists. The table provided in Section 3.0 List of Contractors and Subcontractors, may be used to identify employees and their respective SWPPP responsibilities.

For projects that start during the dry season, refresher sessions on storm water pollution control must be conducted prior to the wet season. Additional training will be provided as necessary, based on site inspections and evidence of storm water quality problems.

Documentation of training will be maintained as part of this plan. Training documentation forms are located in Appendix F. Completed training records must be kept with this SWPPP.

5.5(b) Good Site Management "Housekeeping"

A. Documentation of BMPs in SWPPP
   Dischargers shall document all housekeeping BMPs in the SWPPP and in the REAP (See Section 6.0 Rain Event Action Plan (REAP)) in accordance with the nature and phase of the construction project. Construction phases at traditional land development projects include Grading and Land Development Phase, Streets and Utilities, or Vertical Construction for traditional land development projects.

B. Housekeeping
   Dischargers shall implement good site management (i.e., "housekeeping") measures for construction materials that could potentially be a threat to water quality if discharged. At a minimum, Dischargers shall implement the following good housekeeping measures:

1. Conduct an inventory of the products used and/or expected to be used and the end products that are produced and/or expected to be produced. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e., poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).
2. Cover and berm loose stockpiled construction materials that are not actively being used (i.e. soil, spoils, aggregate, fly-ash, stucco, hydrated lime, etc.).
3. Store chemicals in watertight containers (with appropriate secondary containment to prevent any spillage or leakage) or in a storage shed (completely enclosed)
4. Minimize exposure of construction materials to precipitation. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks. etc.).
5. Implement BMPs to prevent the off-site tracking of loose construction and landscape materials.

C. Waste Management

Dischargers shall implement good housekeeping measures for waste management, which, at a minimum, shall consist of the following:

1. Prevent disposal of any rinse or wash waters or materials on impervious or pervious site surfaces or into the storm drain system.
2. Ensure the containment of sanitation facilities (e.g., portable toilets) to prevent discharges of pollutants to the storm water drainage system or receiving water.
3. Clean or replace sanitation facilities and inspecting them regularly for leaks and spills.
4. Cover waste disposal containers at the end of every business day and during a rain event.
5. Prevent discharges from waste disposal containers to the storm water drainage system or receiving water.
6. Contain and securely protect stockpiled waste material from wind and rain at all times unless actively being used.
7. Implement procedures that effectively address hazardous and non-hazardous spills.
8. Develop a spill response and implementation element of the SWPPP prior to commencement of construction activities. The SWPPP shall require:
   a. Equipment and materials for cleanup of spills shall be available on site and that spills and leaks shall be cleaned up immediately and disposed of properly.
   b. Appropriate spill response personnel are assigned and trained.
   c. LADWP has spill notification phone numbers (Bulletin 2010-38), which must be included as a part of spill response training.

9. Ensure the containment of concrete washout areas and other washout areas that may contain additional pollutants so there is no discharge into the underlying soil and onto the surrounding areas.

D. Vehicle Storage and Maintenance
Dischargers shall implement good housekeeping for vehicle storage and maintenance, which, at a minimum, shall consist of the following:

Vehicles and equipment may pose a threat to storm water quality if their fluids come into contact with storm water runoff. When stored, place drip pans under vehicles or equipment. Vehicles and equipment will be inspected regularly to minimize leaks and drips. Equipment with chronic leakage problems will be returned to the yard for repair prior to continuing its use at the site. Refueling and vehicle maintenance at the construction site will be conducted only when absolutely necessary. When maintenance and repair of vehicles or equipment is required, every effort will be made to prevent any motor related fluids or wastes from leaving the designated repair area, which shall be located in designated areas away from storm drains and drainage areas. When vehicles or equipment are immobilized and need repair, drip pans and oil-absorbing mats should be placed beneath the vehicle in order to capture spilled fluids. Absorbent materials and other wastes (used oil filters, oily rags, etc.) must be disposed of properly with other hazardous wastes from the site (See Section 5.5 Best Management Practices). Vehicle washing will not be conducted onsite.

1. Prevent oil, grease, or fuel to leak into the ground, storm drains or surface waters.
2. Place all equipment or vehicles, which are to be fueled, maintained and stored in a designated area fitted with appropriate BMPs.
3. Clean leaks immediately and disposing of leaked materials properly.

E. Landscape Materials
Dischargers shall implement good housekeeping for landscape materials, which, at a minimum, shall consist of the following:

1. Contain stockpiled materials such as mulches and topsoil when they are not actively being used.
2. Contain all fertilizers and other landscape materials when they are not actively being used.
3. Discontinue the application of any erodible landscape material within 2 days before a forecasted rain event or during periods of precipitation.
4. Apply erodible landscape material at quantities and application rates according to manufacture recommendations or based on written specifications by knowledgeable and experienced field personnel.
5. Stack erodible landscape material on pallets and covering or storing such materials when not being used or applied.

F. Potential Pollutant Sources

Dischargers shall conduct an assessment and create a list of potential pollutant sources and identify any areas of the site where additional BMPs are necessary to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. This potential pollutant list shall be kept with the SWPPP and shall identify all non-visible pollutants which are known, or should be known, to occur on the construction site. At a minimum, when developing BMPs, Risk Level 2 dischargers shall do the following:

a. Consider the quantity, physical characteristics (e.g., liquid, powder, solid), and locations of each potential pollutant source handled, produced, stored, recycled, or disposed of at the site.
b. Consider the degree to which pollutants associated with those materials may be exposed to and mobilized by contact with storm water.
c. Consider the direct and indirect pathways that pollutants may be exposed to storm water or authorized non-storm water discharges. This shall include an assessment of past spills or leaks, non-storm water discharges, and discharges from adjoining areas.
d. Ensure retention of sampling, visual observation, and inspection records.
e. Ensure effectiveness of existing BMPs to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges.

G. Aerial Deposition

Dischargers shall implement good housekeeping measures on the construction site to control the air deposition of site materials and from site operations. Such particulates can include, but are not limited to, sediment, nutrients, trash, metals, bacteria, oil and grease and organics.

5.5 (c) Non-Storm Water Management

A. Dischargers shall implement measures to control all non-storm water discharges during construction. This includes groundwater, water used for dust control, water used for washing or rinsing, water leaks, chemical leaks, solid and liquid chemicals that are exposed to the elements.

B. Vehicle washing shall be done in a manner as to prevent non-storm water discharges to surface waters or MS4 drainage systems.

5.5 (d) Erosion Control

Construction activities that include grading and soil disturbance require a concentrated effort to prevent and minimize the transport of sediments into nearby storm drain inlets. Sediment can flow into nearby storm drain inlets through storm water runoff and non-storm water runoff. When the use of water is required, every effort should be made to

contain that water and allow it to evaporate in a bermed area. Remaining sediment and debris must be swept and removed from the street.

A. Dischargers shall implement effective wind erosion control (CASQA BMP WE-1).

B. Dischargers shall provide effective soil cover for inactive[1] areas and all finished slopes, open space, utility backfill, and completed lots. One or more of the following temporary soil stabilization measures may be applied to disturbed areas that will be inactive for extended periods. These measures may be used in conjunction with temporary linear sediment barriers.

- Hydraulic Mulch (CASQA BMP EC-3)
- Hydroseeding (CASQA BMP EC-4)
- Soil binders (CASQA BMP EC-5)
- Straw mulch (CASQA BMP EC-6)
- Geotextiles and mats (CASQA BMP EC-7)
- Wood mulching (CASQA BMP EC-8)

C. Dischargers shall limit the use of plastic materials when more sustainable, environmentally friendly alternatives exist. Where plastic materials are deemed necessary, the discharger shall consider the use of plastic materials resistant to solar degradation.

5.5 (e) Sediment Control

A. Dischargers shall establish and maintain effective perimeter controls and stabilize all construction entrances and exits to sufficiently control erosion and sediment discharges from the site.

B. On sites where sediment basins are to be used, Dischargers shall, at minimum, design sediment basins according to the method provided in CASQA's Construction BMP Guidance Handbook (CASQA BMP SE-2).

C. Dischargers shall implement appropriate erosion control BMPs (runoff control and soil stabilization) in conjunction with sediment control BMPs for areas under active[2] construction.

D. Dischargers shall apply linear sediment controls along the toe of the slope, face of the slope, and at the grade breaks of exposed slopes to comply with sheet flow lengths[3] in accordance with Table 3.

[1] Inactive areas of construction are areas of construction activity that have been disturbed and area not scheduled to be re-disturbed for at least 14 days

[2] Active areas of construction are areas undergoing land surface disturbance. This includes construction activity during the preliminary stage, mass grading stage, streets and utilities stage and the vertical construction stage.

[3] Sheet flow length is the length that shallow, low velocity flow travels across a site.

Table 3. Critical Slope/Sheet Flow Length Combinations

Slope Percentage	Sheet flow length not to exceed
0-25%	20 feet
25-50%	15 feet
Over 50%	10 feet

One or more of the following sediment barriers will be used around disturbed areas that will be inactive for extended periods. These measures may be used in conjunction with temporary soil stabilization measures.

- Silt fence (CASQA BMP SE-1)
- Fiber rolls (CASQA BMP SE-5)
- Gravel bag berm (CASQA BMP SE-6)
- Sandbag barrier (CASQA BMP SE-8)
- Straw bale barrier (CASQA BMP SE-9)
- Drainage ditch

E. Dischargers shall ensure that construction activity traffic to and from the project is limited to entrances and exits that employ effective controls to prevent offsite tracking of sediment.

F. Dischargers shall ensure that all storm drain inlets and perimeter controls, runoff control BMPs, and pollutant controls at entrances and exits (e.g. tire wash off locations) are maintained and protected from activities that reduce their effectiveness.

G. Dischargers shall inspect on a daily basis all immediate access roads daily. At a minimum daily (when necessary) and prior to any rain event, the discharger shall remove any sediment or other construction activity related materials that are deposited on the roads (by vacuuming or sweeping).

5.5 (f) Run-on and Run-off Controls

Dischargers shall effectively manage all run-on, all runoff within the site and all runoff that discharges off the site. Run-on from off-site shall be directed away from all disturbed areas or shall collectively be in compliance with the effluent limitations in this General Permit.

5.5 (g) Inspection, Maintenance and Repair

A. Dischargers shall ensure that all inspection, maintenance repair and sampling activities at the project location shall be performed or supervised by a Qualified SWPPP Practitioner (QSP) representing the discharger. The QSP may delegate any or all of these activities to an employee appropriately trained to do the task(s).

B. Dischargers shall perform weekly inspections and observations, and at least once each 24-hour period during extended storm events, to identify and record BMPs that need maintenance to operate effectively, that have failed, or that could fail to operate as intended. Inspectors shall be the QSP or be trained by the QSP.

C. Upon identifying failures or other shortcomings, as directed by the QSP, Dischargers shall begin implementing repairs or design changes to BMPs within 72 hours of identification and complete the changes as soon as possible.

D. For each inspection required, Dischargers shall complete an inspection checklist, using a form provided by the State Water Board or Regional Water Board or in an alternative format.

E. Dischargers shall ensure that checklists shall remain onsite with the SWPPP and at a minimum, shall include:

1. Inspection date and date the inspection report was written.
2. Weather information, including presence or absence of precipitation, estimate of beginning of qualifying storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall in inches.
3. Site information, including stage of construction, activities completed, and approximate area of the site exposed.
4. A description of any BMPs evaluated and any deficiencies noted.
5. If the construction site is safely accessible during inclement weather, list the observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list the results of visual inspections at all relevant outfalls, discharge points, downstream locations and any projected maintenance activities.
6. Report the presence of noticeable odors or of any visible sheen on the surface of any discharges.
7. Any corrective actions required, including any necessary changes to the SWPPP and the associated implementation dates.
8. Photographs taken during the inspection, if any.
9. Inspector’s name, title, and signature.

5.5(h) Hazardous Waste Management and Disposal

Hazardous waste will be stored and handled in separate collection and containment areas in accordance with state and federal standards. Hazardous waste can be generated from equipment maintenance and refueling activities (e.g., anti-freeze, hydraulic fluids, gasoline, diesel fuel, waste oil). Other hazardous wastes include: pesticides, paints, cleaners, epoxies and sandblast grit. Hazardous waste will be stored in covered, labeled containers and secondary containment will be provided for liquid hazardous wastes. Different types of hazardous wastes will not be mixed so as to promote recycling and prevent undesirable chemical reactions.

5.5(i) Spill Prevention and Control

Leaks and spills from construction machinery generally contain petroleum products and heavy metals. Drip pans or some type of impermeable material will be placed under equipment that has been known to leak when such equipment is stored outdoors and not in use. Spills of any type will be cleaned up immediately. Drip pans will be cleaned as necessary to maintain their effectiveness. If absorbent is used for spills, it must be removed promptly and in a proper manner.

5.5(j) Materials Handling and Storage

The primary goal of BMPs for on-site storage of potential pollutants is to minimize the opportunity for them to come into contact with storm water. Hazardous materials, plasters, solvents, paints and other compounds must be properly handled and stored in order to reduce the risk of pollution or contamination. There will be a designated area for all hazardous materials storage, and for any filling or dispensing activity. This area must be located away from drainage paths and should not be directly on the ground (i.e. use plastic liners or containment pallets). This storage area will be covered, or at a minimum, the hazardous materials will be covered in some fashion, either by a tarp, within a covered construction tool bin, or within a storage container. The storage area should be surrounded by berms to prevent any materials from leaving the area should a spill or leak occur. Consideration should be paid to keeping only the minimum amount of hazardous materials on site. Follow manufacturer's instructions regarding storage and use of materials. If any product should come into contact with the soil, that soil will be removed immediately and properly disposed of as hazardous waste.

5.5 (k) Stockpile Management

Stockpile Management procedures and practices are designed to reduce or eliminate air and stormwater pollution from stockpiles of soil, paving materials such as Portland cement, concrete rubble, asphalt concrete, aggregate base, asphalt minder and pressure treated wood.

1. Locate stockpiles a minimum of 50 ft away from concentrated flows of stormwater, draining courses, and inlets.

2. Protect all stockpiles from stormwater runoff using a temporary perimeter sediment barrier such as berms, dikes, fiber rolls, silt fences, sandbag, gravel bags, or straw bale barriers

3. Contain stockpiled materials such as mulches and topsoil when they are not actively being used.

4. Contain fertilizers and other landscape materials when they are not actively being used.

5. Discontinue the application of any erodible landscape material within 2 days before a forecasted rain event or during periods of precipitation.

6. Apply erodible landscape material at quantities and application rates according to manufacture recommendations or based on written specifications by knowledgeable and experienced field personnel.

7. Stack erodible landscape material on pallets and cover such materials when not being used or applied.

5.5 (l) Scheduling

Work will not be conducted during storm events. Prior to finishing work before a storm event, the work area will be stabilized to reduce the potential for pollutants to leave the area and enter the storm drain system.

5.5 (m) Vehicle ingress and egress

Vehicles and equipment shall pass over metal shaker plates to loosen and remediate soil and debris from ingress/egress access points. Inspect ingress/egress access points daily and sweep tracked sediment as needed.

5.5(n) Concrete Truck Washing Waste

Concrete truck wash out will only be conducted over the open trench so that all concrete waste is captured and buried in the trench. When that is not feasible and the truck must be washed out in the work area, a containment area will be created to capture the wash water. When dry, concrete waste and residue will be swept and removed. Only as much concrete as needed will be mixed or brought on site in order to reduce the amount of concrete waste. If concrete truck rinsing must occur, it will be done in a contained area. Concrete rinse water must not enter the storm drain system. The concrete containment area must be cleaned out and maintained periodically to minimize the potential of storm water contamination.

6.0 RAIN EVENT ACTION PLAN (REAP)

Dischargers shall document all housekeeping BMPs in the SWPPP in accordance with the nature and phase of the construction project. Construction phases at traditional land development projects include Grading and Land Development Phase, Streets and Utilities, or Vertical Construction for traditional land development projects.

A. The discharger shall ensure that a Qualified SWPPP Practitioner (QSP) develops a Rain Event Action Plan (REAP) 48 hours prior to any likely precipitation event. A likely precipitation event is any weather pattern that is forecast to have a 50% or greater probability of producing precipitation in the project area. The discharger shall

ensure a QSP obtain a printed copy of precipitation forecast information from the National Weather Service Forecast Office (e.g., by entering the zip code of the project's location at http://www.srh.noaa.gov/forecast).

B. The discharger shall ensure that a QSP develops the REAPs for all phases of construction (i.e., Grading and Land Development, Streets and Utilities, Vertical Construction, Final Landscaping and Site Stabilization).

C. The discharger shall ensure that the QSP ensures that the REAP include, at a minimum, the following site information:

1. Site Address
2. Calculated Risk Level 2
3. Site Storm Water Manager Information including the name, company, and 24-hour emergency telephone number
4. Erosion and Sediment Control Provider information including the name, company, and 24-hour emergency telephone number
5. Storm Water Sampling Agent information including the name, company, and 24-hour emergency telephone number

D. The discharger shall ensure a QSP includes in the REAP, at a minimum, the following project phase information:

1. Activities associated with each construction phase
2. Trades active on the construction site during each construction phase
3. Trade contractor information
4. Suggested actions for each project phase

E. The discharger shall ensure a QSP develops additional REAPs for project sites where construction activities are indefinitely halted or postponed (Inactive Construction). At a minimum, Inactive Construction REAPs must include:

1. Site Address
2. Calculated Risk Level 2
3. Site Storm Water Manager Information including the name, company, and 24-hour emergency telephone number
4. Erosion and Sediment Control Provider information including the name, company, and 24-hour emergency telephone number
5. Storm Water Sampling Agent information including the name, company, and 24-hour emergency telephone number
6. Trades active on site during Inactive Construction
7. Trade contractor information
8. Suggested actions for inactive construction sites

F. The discharger shall ensure a QSP begins implementation and make the REAP available onsite no later than 24 hours prior to the likely precipitation event.

G. The discharger shall ensure a QSP maintains onsite a paper copy of each REAP onsite in compliance with the record retention requirements of the Special Provisions in this General Permit.

7.0 MONITORING AND REPORTING REQUIREMENTS

7.1 Introduction

This chapter addresses maintenance, inspection, and repair procedures for all construction-related BMPs to ensure that all graded surfaces, walls, berms, drainage structures, vegetation, erosion and sediment control measures, etc., are maintained in effective condition and are promptly repaired or restored. A properly trained person must be assigned the responsibility to conduct inspections. All completed inspection/ maintenance forms must be kept with this SWPPP. A written site- specific Construction Site Monitoring Program (CSMP) shall be developed and implemented prior to the commencement of construction activities, and revised as necessary to reflect project revisions. The CSMP shall include all monitoring procedures and instructions, location maps, forms, and checklists as required. Inspection forms are included in Appendix C.

The goals of the inspection program are:

1. To demonstrate that the site is in compliance with the Discharge Prohibitions;

2. To determine whether non-visible pollutants are present at the construction site and are causing or contributing to exceedances of water quality objectives;

3. To determine whether immediate corrective actions, additional BMP or SWPPP revisions are necessary to reduce pollutants in storm water discharges and authorized non-storm water discharges; and

4. To determine whether BMPs included in the SWPPP are effective in preventing or reducing pollutants in storm water discharges and authorized non-storm water discharges.

The inspector should keep in mind that construction activity that cause or contribute to an exceedance of water quality standards must be corrected immediately. If storm water runoff is visibly oily or greasy, turbid, has a strong odor, or if it is known to contain pollutants such as pesticides, debris, sediment, settleable material or suspended material (i.e. trash), then it has potentially exceeded water quality standards.

If a violation of water quality standards is suspected, or if additional guidance or information is necessary, call the LADWP Wastewater Quality and Compliance Group (WQG) as soon as possible at (213) 367-0436.

7.2 Monitoring and Reporting Requirements

Table 4. Summary of Monitoring Requirements

Risk Level	Visual Inspections					Sample Collection	
	Quarterly Non-storm water Discharge	Pre-storm Event		Daily Storm BMP	Post Storm	Storm Water Discharge	Receiving Water
		Baseline	REAP				
2	X	X	X	X	X	X	

7.2 (a) Construction Site Monitoring Program (CSMP) Requirements

A. Dischargers shall be prepared to collect samples and conduct visual observation (inspections) until the minimum requirements of Table 4 - Summary of Monitoring Requirements, are completed.

B. Pursuant to Water Code Sections 13383 and 13267, all dischargers subject to this General Permit shall develop and implement a written site-specific Construction Site Monitoring Program (CSMP) in accordance with the requirements of this Section. The CSMP shall include all monitoring procedures and instructions, location maps, forms, and checklists as required in this section. The CSMP shall be developed prior to the commencement of construction activities, and revised as necessary to reflect project revisions. The CSMP shall be a part of this Storm Water Pollution Prevention Plan (SWPPP), included in **.**

C. As stated in Section *5.5(b) Good Site Management "Housekeeping"*, Risk Level 2 dischargers shall conduct an assessment and create a list of potential pollutant sources and a potential pollutant list. The list shall be kept with the SWPPP in the CSMP and shall identify all non-visible pollutants which are known, or should be known, to occur at the construction site.

D. Existing dischargers registered under the State Water Board Order No. 99-08-DWQ shall make and implement necessary revisions to their Monitoring Program to reflect the changes in this General Permit in a timely manner. Existing dischargers shall continue to implement their existing Monitoring Programs in compliance with State Water Board Order No. 99-08-DWQ.

E. When a change of ownership occurs for all or any portion of the construction site prior to completion or final stabilization, the new discharger shall comply with these requirements as of the date the ownership change occurs.

7.2 (b) CSMP Monitoring Description

Dischargers shall include a description of the following items in the CSMP:

1. Visual observation locations, visual observation procedures, and visual observation follow-up and tracking procedures.

2. Sampling locations, and sample collection and handling procedures. This shall include detailed procedures for sample collection, storage, preservation, and shipping to the testing lab to assure that consistent quality control and quality assurance is maintained. Dischargers shall attach to the monitoring program an example Chain of Custody form used when handling and shipping samples. **Note: the pH test must be performed immediately in the field. Turbidity test may be performed in the field or shipped to a lab provided the test is performed on the same day.**

3. Identification of the analytical methods and related method detection limits (if applicable) for each parameter required in Table 5.

Table 5. Risk Level 2 Test Methods, Detection Limits, Reporting Units and Applicable NALs/NELs

Parameter	Test Method / Protocol	Discharge Type	Min. Detection Limit	Reporting Units	Numeric Action Level
pH	Field test with calibrated portable instrument	Risk Level 2 Discharges	0.2	pH units	lower NAL = 6.5 upper NAL = 8.5
Turbidity	EPA 0180.1 and/or field test with calibrated portable instrument	Risk Level 2 Discharges other than ATS	1	NTU	250 NTU
		For ATS discharges	1	NTU	N/A
Any other pollutants identified for non-visible pollutant monitoring – see CSMP					

ATS = Active Treatment System

7.2 (c) Objectives

The CSMP shall be developed and implemented to address the following objectives:

1. To demonstrate that the site is in compliance with the Discharge Prohibitions and applicable Numeric Action Levels (NALs)/Numeric Effluent Limitations (NELs) of this General Permit.

2. To determine whether non-visible pollutants are present at the construction site and are causing or contributing to exceedances of water quality objectives.

3. To determine whether immediate corrective actions, additional Best Management Practice (BMP) implementation, or SWPPP revisions are necessary to reduce pollutants in storm water discharges and authorized non-storm water discharges.

4. To determine whether BMPs included in the SWPPP/Rain Event Action Plan (REAP) are effective in preventing or reducing pollutants in storm water discharges and authorized non-storm water discharges.

7.2 (d) Visual Observation and Sample Collection Exemptions

Dischargers are not required to physically collect samples or conduct visual observation (inspections) under the following conditions:

1. During dangerous weather conditions such as flooding and electrical storms.

2. Outside of scheduled site business hours.

If no required samples or visual observation (inspections) are collected due to these exceptions, Risk Level 2 dischargers shall include an explanation in their SWPPP and in the Annual Report documenting why the sampling or visual observation (inspections) were not conducted.

7.3 Visual Monitoring (Inspection) Requirements for Qualifying Rain Events

Use form in

A. Dischargers shall visually observe (inspect) storm water discharges at all discharge locations within two business days (48 hours) after each qualifying rain event.

B. Dischargers shall visually observe (inspect) the discharge of stored or contained storm water that is derived from and discharged subsequent to a qualifying rain event producing precipitation of ½ inch or more at the time of discharge. Stored or contained storm water that will likely discharge after operating hours due to anticipated precipitation shall be observed prior to the discharge during operating hours.

C. Dischargers shall conduct visual observations (inspections) during business hours only.

D. Dischargers shall record the time, date and rain gauge reading of all qualifying rain events.

E. Within 2 business days (48 hours) prior to each qualifying rain event, Dischargers shall visually observe (inspect):

1. all storm water drainage areas to identify any spills, leaks, or uncontrolled pollutant sources. If needed, the discharger shall implement appropriate corrective actions.
2. all BMPs to identify whether they have been properly implemented in accordance with the SWPPP and REAP. If needed, the discharger shall implement appropriate corrective actions.

3. any storm water storage and containment areas to detect leaks and ensure maintenance of adequate freeboard.

F. For the visual observations (inspections) described in this Section, dischargers shall observe the presence or absence of floating and suspended materials, a sheen on the surface, discolorations, turbidity, odors, and source(s) of any observed pollutants.

G. Within two business days (48 hours) after each qualifying rain event, Dischargers shall conduct post rain event visual observations (inspections) to (1) identify whether BMPs were adequately designed, implemented, and effective, and (2) identify additional BMPs and revise the SWPPP accordingly.

H. Dischargers shall maintain on-site records of all visual observations (inspections), personnel performing the observations, observation dates, weather conditions, locations observed, and corrective actions taken in response to the observations.

7.4 Water Quality Sampling and Analysis

Dischargers shall collect storm water grab samples from sampling locations, as defined in Section 7.4 (d) Effluent Sampling Locations. The storm water grab sample(s) obtained shall be representative of the flow and characteristics of the discharge.

7.4 (a) Effluent Analysis Requirements

A. Dischargers shall analyze their effluent samples for:

1. pH and turbidity.

7.4 (b)Effluent Sampling Schedule

Dischargers shall ensure that the grab samples collected of stored or contained storm water are from discharges subsequent to a qualifying rain event (producing precipitation of ½ inch or more at the time of discharge).

7.4 (c) Number of Effluent Samples

At minimum, Dischargers shall collect **3 samples per day** of the qualifying event (1/2 inch or more of rain causing the discharge).

7.4 (d) Effluent Sampling Locations

A. Dischargers shall collect storm water grab samples from sampling locations found in Table 6. The storm water grab sample(s) obtained shall be representative of the flow and characteristics of the discharge.

B. Dischargers shall perform sampling and analysis of storm water discharges to characterize discharges associated with construction activity from the entire project disturbed area.

C. Dischargers shall collect effluent samples at all discharge points where storm water is discharged off-site.

Table 6. Sample Locations.[4]

Location ID:		
Location Description		
Coordinates	Lat:	Long:
Location ID:		
Location Description		
Coordinates	Lat:	Long:
Location ID:		
Location Description		
Coordinates	Lat:	Long:

D. Dischargers shall ensure that storm water discharge collected and observed represents[5] the effluent in each drainage area based on visual observation of the water and upstream conditions.

E. Dischargers shall monitor and report site run-on from surrounding areas if there is reason to believe run-on may contribute to an exceedance of NALs or NELs.

F. Dischargers who deploy an Active Treatment System (ATS) on their site, or a portion on their site, shall collect ATS effluent samples and measurements from the discharge pipe or another location representative of the nature of the discharge.

7.4 (e) Storm Water Sample Collection and Handling Instructions

A. Dischargers shall refer to Table 5 above for test methods, detection limits, and reporting units.

B. Dischargers shall ensure that testing laboratories will receive samples within 48 hours of the physical sampling (unless otherwise required by the laboratory), and shall use only the sample containers provided by the laboratory to collect and store samples.

[4] To be determined.

[5] For example, if there has been concrete work recently in an area, or drywall scrap is exposed to the rain, a pH sample shall be taken of drainage from the relevant work area. Similarly, if sediment laden water is flowing through some parts of a silt fence, samples shall be taken of the sediment-laden water even if most water flowing through the fence is clear.

C. Dischargers shall designate and train personnel to collect, maintain, and ship samples in accordance with the Surface Water Ambient Monitoring Program's (SWAMP) 2008 Quality Assurance Program Plan (QAPrP)[6].

7.4 (f)– Monitoring Methods

A. Dischargers shall include a description of the following items in the CSMP:

1. Visual observation locations, visual observation procedures, and visual observation follow-up and tracking procedures.

2. Sampling locations, and sample collection and handling procedures. This shall include detailed procedures for sample collection, storage, preservation, and shipping to the testing lab to assure that consistent quality control and quality assurance is maintained. Dischargers shall attach to the monitoring program an example Chain of Custody form used when handling and shipping samples.

3. Identification of the analytical methods and related method detection limits (if applicable) for each parameter required in Table 5 above.

B. Dischargers shall ensure that all sampling and sample preservation are in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a discharger's own field instruments for measuring pH and turbidity) should be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. Dischargers shall ensure that all laboratory analyses are conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. With the exception of field analysis conducted by the discharger for turbidity and pH, all analyses should be sent to and conducted at a laboratory certified for such analyses by the State Department of Health Services. Dischargers shall conduct their own field analysis of pH and may conduct their own field analysis of turbidity if the discharger has sufficient capability (qualified and trained employees, properly calibrated and maintained field instruments, etc.) to adequately perform the field analysis.

7.4 (g) Analytical Methods

A. Dischargers shall select analytical test methods from the list provided in Table 5 above for test methods, detection limits, and reporting units.

---

[6] Additional information regarding SWAMP's QAPrP and QAMP can be found at http://www.waterboards.ca.gov/water_issues/programs/swamp/.
QAPrP:http://www.waterboards.ca.gov/water_issues/programs/swamp/docs/qapp/swamp_qapp_master090108a.pdf.
QAMP:http://www.waterboards.ca.gov/water_issues/programs/swamp/qamp.shtml.

B. pH: Dischargers shall perform pH analysis on-site with a calibrated pH meter or a pH test kit. Risk Level 2 dischargers shall record pH monitoring results on paper and retain these records in accordance with Section 7.6 – Records below.

C. Turbidity: Dischargers shall perform turbidity analysis using a calibrated turbidity meter (turbidimeter), either on-site or at an accredited lab. Acceptable test methods include Standard Method 2130 or USEPA Method 180.1. The results will be recorded in the site log book in Nephelometric Turbidity Units (NTU).

7.4 (h) Non-Storm Water Discharge Monitoring Requirements

Visual Monitoring Requirements:

A. Dischargers shall visually observe (inspect) each drainage area for the presence of (or indications of prior) unauthorized and authorized non-storm water discharges and their sources.

B. Dischargers shall conduct one visual observation (inspection) quarterly in each of the following periods: January-March, April-June, July-September, and October-December. Visual observation (inspections) are only required during daylight hours (sunrise to sunset).

C. Dischargers shall ensure that visual observations (inspections) document the presence or evidence of any non-storm water discharge (authorized or unauthorized), pollutant characteristics (floating and suspended material, sheen, discoloration, turbidity, odor, etc.), and source. Risk Level 2 dischargers shall maintain on-site records indicating the personnel performing the visual observation (inspections), the dates and approximate time each drainage area and non-storm water discharge was observed, and the response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.

Effluent Sampling Locations:

A. Dischargers shall sample effluent at all discharge points where non-storm water and/or authorized non-storm water is discharged off-site.

B. Dischargers shall send all non-storm water sample analyses to a laboratory certified for such analyses by the State Department of Health Services.

C. Dischargers shall monitor and report run-on from surrounding areas if there is reason to believe run-on may contribute to an exceedance of NALs.

7.4 (i) Non-Visible Pollutant Monitoring Requirements

A. Dischargers shall collect one or more samples during any breach, malfunction, leakage, or spill observed during a visual inspection which could result in the discharge of pollutants to surface waters that would not be visually detectable in storm water.

B. Dischargers shall ensure that water samples are large enough to characterize the site conditions.

C Dischargers shall collect samples at all discharge locations that can be safely accessed.

D. Dischargers shall collect samples during the first two hours of discharge from rain events that occur during business hours and which generate runoff.

E. Dischargers shall analyze samples for all non-visible pollutant parameters listed in the CSMP (if applicable) - parameters indicating the presence of pollutants identified in the pollutant source assessment required (Risk Level 2 dischargers shall modify their CSMPs to address these additional parameters in accordance with any updated SWPPP pollutant source assessment).

F. Dischargers shall collect a sample of storm water that has not come in contact with the disturbed soil or the materials stored or used on-site (uncontaminated sample) for comparison with the discharge sample.

G. Dischargers shall compare the uncontaminated sample to the samples of discharge using field analysis or through laboratory analysis.[6]

[6] For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field discharge samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices

H. Dischargers shall keep all field /or analytical data in the SWPPP document.

7.4 (j)– Watershed Monitoring Option

Dischargers who are part of a qualified regional watershed-based monitoring program may be eligible for relief from the requirements in *7.4 (d) Effluent Sampling Locations* (Section I.5 of Attachment D of the Permit). The Regional Water Board may approve proposals to substitute an acceptable watershed-based monitoring program by determining if the watershed-based monitoring program will provide substantially similar monitoring information in evaluating discharger compliance with the requirements of this General Permit.

7.5 Particle Size Analysis for Project Risk Justification

Dischargers justifying an alternative project risk shall report a soil particle size analysis used to determine the RUSLE K-Factor. ASTM D-422 (Standard Test Method for Particle-Size Analysis of Soils), as revised, shall be used to determine the percentages of sand, very fine sand, silt, and clay on the site.

7.6 – Records

Dischargers shall retain records of all storm water monitoring information and copies of all reports (including Annual Reports) for a period of at least three years. Dischargers shall retain all records on-site while construction is ongoing. These records include:

1. The date, place, time of facility inspections, sampling, visual observation (inspections), and/or measurements, including precipitation.

2. The individual(s) who performed the facility inspections, sampling, visual observation (inspections), and or measurements.

3. The date and approximate time of analyses.

4. The individual(s) who performed the analyses.

5. A summary of all analytical results from the last three years, the method detection limits and reporting units, the analytical techniques or methods used, and the chain of custody forms.

6 Rain gauge readings from site inspections;

7. Quality assurance/quality control records and results.

8. Non-storm water discharge inspections and visual observation (inspections) and storm water discharge visual observation records (see Sections 7.4 (h) Non-

Storm Water Discharge Monitoring Requirements and 7.4 (i) Non-Visible Pollutant Monitoring Requirements above).

9. Visual observation and sample collection exception records (see Section 7.2 (d) above).

10. The records of any corrective actions and follow-up activities that resulted from analytical results, visual observation (inspections), or inspections.

7.7 NAL Exceedance Report

A. In the event that any effluent sample exceeds an applicable NAL, Dischargers shall electronically submit all storm event sampling results to the State Water Board no later than 10 days after the conclusion of the storm event. The Regional Boards have the authority to require the submittal of an NAL Exceedance Report.

B. Dischargers shall certify each NAL Exceedance Report in accordance with the Special Provisions for Construction Activity.

C. Dischargers shall retain an electronic or paper copy of each NAL Exceedance Report for a minimum of three years after the date the annual report is filed.

D. Dischargers shall include in the NAL Exceedance Report:

1. The analytical method(s), method reporting unit(s), and method detection limit(s) of each analytical parameter (analytical results that are less than the method detection limit shall be reported as “less than the method detection limit”).

2. The date, place, time of sampling, visual observation (inspections), and/or measurements, including precipitation.

3. A description of the current BMPs associated with the effluent sample that exceeded the NAL and the proposed corrective actions taken.

8.0 GENERAL REQUIREMENTS

8.1 SWPPP Certification

This SWPPP must be certified in accordance with the signatory requirements described below. Use the Compliance Certification Form provided at the end of this section, and make additional copies as needed.

8.2 Annual Site Compliance Evaluation and Certification

This SWPPP must be certified annually to ensure that construction activities comply with the requirements of the General Construction Permit. The certification should be based upon the results of required site inspections. This certification must be completed by July 1 of each year until the construction project is completed and a Notice of Termination (NOT) has been submitted to the State Water Resources Control Board.

8.3 SWPPP Amendments

This SWPPP will be amended whenever:

A. There is a change in construction or operations which may affect the discharge of pollutants to surface waters, ground waters, or the municipal storm drain system (e.g. Additional soils will be stored onsite, or excavation outside of the project area will be necessary);

B. There is a violation of any condition of the General Permit; or

C. The SWPPP has not achieved the general objective of reducing or eliminating pollutants in storm water discharges.

Use Appendix G to document all changes made to the SWPPP. Make additional copies of Appendix G as needed. Each amendment should be signed by the site construction manager or site supervisor and include the date of initial preparation and the date of each amendment. All amendments should be directly attached to this SWPPP.

8.4 SWPPP Availability

This SWPPP must be kept on the site while the site is under construction, beginning with the initial mobilization and ending with the termination of coverage under the permit. It should be available to site employees at all times and provided upon request to the Los Angeles Regional Water Quality Control Board or local storm water agency.

9.0 POST-CONSTRUCTION STANDARDS

A. All dischargers shall comply with the following runoff reduction requirements unless they are located within an area subject to post construction standards of an active Phase I or II municipal separate storm sewer system (MS4) permit that has an approved Storm Water Management Plan.

   1. This provision shall take effect three years from the adoption date of this permit, or later at the discretion of the Executive Officer of the Regional Board.

   2. The discharger shall demonstrate compliance with the requirements of this section by submitting with their NOI a map and worksheets in accordance with the instructions in Appendix 2 of Order No. 2009-0009-DWQ.The discharger shall use non-structural controls unless the discharger demonstrates that non-structural controls are infeasible or that structural controls will produce greater reduction in water quality impacts.

   3. The discharger shall, through the use of non-structural and structural measures as described in Appendix 2, of Order No. 2009-0009-DWQ replicate the pre-project water balance (for this permit, defined as the volume of rainfall that ends up as runoff) for the smallest storms up to the 85th percentile storm event (or the smallest storm event that generates runoff, whichever is larger). Dischargers shall inform Regional Water Board staff at least 30 days prior to the use of any structural control measure used to comply with this requirement. Volume that cannot be addressed using nonstructural practices shall be captured in structural practices and approved by the Regional Water Board. When seeking Regional Board approval for the use of structural practices, dischargers shall document the infeasibility of using non-structural practices on the project site, or document that there will be fewer water quality impacts

   4. For sites whose disturbed area exceeds two acres, the discharger shall preserve the pre-construction drainage density (miles of stream length per square mile of drainage area) for all drainage areas within the area serving a first order stream[14] or larger stream and ensure that post project time of runoff concentration is equal or greater than pre-project time of concentration.

B. All dischargers shall implement BMPs to reduce pollutants in storm water discharges that are reasonably foreseeable after all construction phases have been completed at the site (Post-construction BMPs).

.

10.0 CERTIFICATION STATEMENT

This SWPPP must be evaluated and re-certified using this form annually by July 1 until the construction project is complete and a Notice of Termination has been submitted to the Regional Board. Use this form for the initial certification, annual re-certification, and re-certification following revisions. Additional blank forms can be made by copying the form included in Appendix J.

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is, true, accurate, and complete. I am aware that there are significant penalties for submitting false information including the possibility of fine and imprisonment for knowing violations."

YES	NO	
		Are the BMPs called for in the SWPPP installed in the proper location according to the specifications for the SWPPP?
		Are all operational storm drain inlets protected from sediment inflow?
		Do any structural BMPs require repair or clean out to maintain adequate function? If yes, indicate which ones:
		Is there evidence of equipment leakage/ spillage of equipment/vehicle maintenance fluids?
		Are construction on-site traffic routes, parking, and storage of equipment and supplies restricted to areas specifically designated for those uses?
		Do any seeded or landscaped areas require maintenance, irrigation, and fertilization, seeding or mulching?
		Is there any evidence that sediment is leaving the site?

BMP and Drainage Area Inspection Form for Haskell Switching Station observed on _____, continued

Yes	No	
		Is there any evidence of floating and suspended material, sheen, discoloration, turbidity, or odor?
		Is there any evidence of sediment, debris, or mud on public roads at intersections with site access roads?
		Is there any evidence of incorrect waste disposal (paints, concrete, solid wastes)?
		Is the overall housekeeping sufficiently maintained?
		Is the vehicle/ equipment maintenance and cleaning areas clean and free of oil, grease or potential pollutants?
		Is the construction area access point stabilized? Has potential for mud/ dirt tracking from the site been minimized?
		Are liquid transfer areas (equipment fueling) clean and protected from rain?
		Are there any visible non-storm water discharges? Is there evidence that non-storm water discharges occurred in the past? If so, describe the non-storm water discharge:
		Are trashcans covered?
		Are sanitary waste facilities in working order and not leaking?

Describe Corrective Actions Taken or Recommended:
Describe any necessary revisions to the SWPPP or REAP

Fill out as many forms as necessary to cover all observation locations in the entire project area.

Construction Site Monitoring Plan

Construction Site Monitoring Program

1. Purpose

This Construction Site Monitoring Program was developed to address the following objectives:

1. To demonstrate that the site is in compliance with the Discharge Prohibitions and Numeric Action Levels (NALs) of the Construction General Permit;
2. To determine whether non-visible pollutants are present at the construction site and are causing or contributing to exceedances of water quality objectives;
3. To determine whether immediate corrective actions, additional Best Management Practices (BMP) implementation, or SWPPP revisions are necessary to reduce pollutants in stormwater discharges and authorized non-stormwater discharges;
4. To determine whether BMPs included in the SWPPP and REAP are effective in preventing or reducing pollutants in stormwater discharges and authorized non-stormwater discharges.

2. Applicability of Permit Requirements

This project has been determined to be a Risk Level 2 project. The General Permit identifies the following types of monitoring as being applicable for a Risk Level 2 project.

Risk Level 2

- Visual inspections of BMPs;
- Visual monitoring of the site related to qualifying storm events;
- Visual monitoring of the site for non-stormwater discharges;
- Sampling and analysis of construction site runoff for pH and turbidity;
- Sampling and analysis of construction site runoff for non-visible pollutants when applicable; and
- Sampling and analysis of non-stormwater discharges when applicable.

3. Weather and Rain Event Tracking

Visual monitoring and inspections requirements of the General Permit are triggered by a qualifying rain event. The General Permit defines a qualifying rain event as any event that produces ½ inch of precipitation. A minimum of 48 hours of dry weather will be used to distinguish between separate qualifying storm events.

Visual monitoring, inspections, and sampling requirements of the General Permit are triggered by a qualifying rain event. The General Permit defines a qualifying rain event as any event that produces ½ inch of precipitation. A minimum of 48 hours of dry weather will be used to distinguish between separate qualifying storm events.

For the purposes of assessing exceptions to the Receiving Water Monitoring Triggers the General Permit establishes the compliance storm event at the 5-year, 24-hour event. Based on the Western Regional Climate Center, the 5-year, 24-hour event for this project is 4.5 inches.

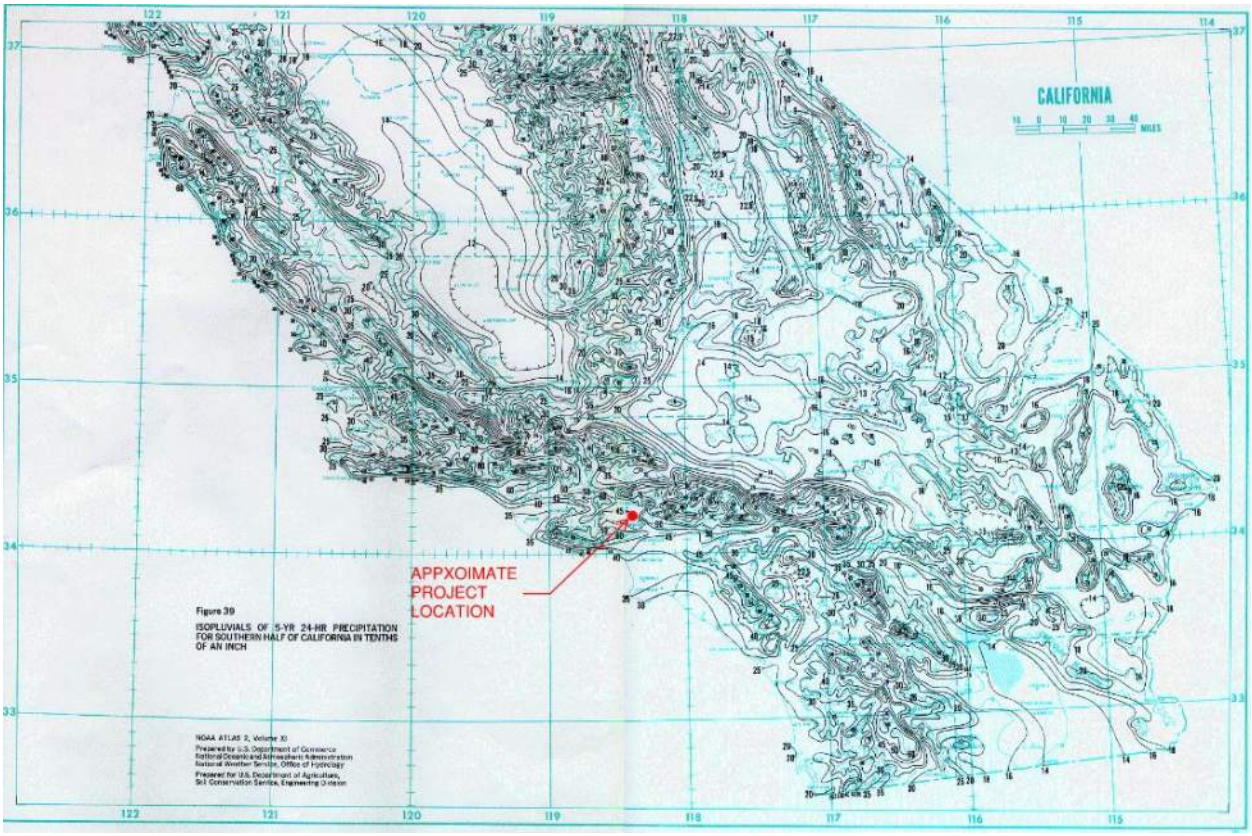

Figure 3.1 Western US Precipitation Frequency Map, Southern California

3.1. Weather Tracking

The QSP should daily consult the National Oceanographic and Atmospheric Administration (NOAA) for the Forecast Weather Table Interface. These forecasts can be obtained at http://forecast.weather.gov . Weather reports should be printed and maintained with the SWPPP in Appendix H "Weather Reports".

3.2. Rain Gauges

The QSP shall install 1 rain gauge on the project site. Locate the gauge in an open area away from obstructions such as trees or overhangs. Mount the gauge on a post at a height of 3 to 5 feet with the gauge extending several inches beyond the post. Make sure that the top of the gauge is level. Make sure the post is not in an area where rainwater can indirectly splash from sheds, equipment, trailers, etc.

The rain gauge(s) shall be read daily during normal site scheduled hours. The rain gauge should be read at approximately the same time every day and the date and time of each reading recorded. Log rain gauge readings in Appendix H "Weather Records". Follow the rain gauge instructions to obtain accurate measurements.

Once the rain gauge reading has been recorded, accumulated rain shall be emptied, and the gauge reset. Alternatively, include instructions for an automated recording rain gauge if used.

For comparison with the site rain gauge, the nearest appropriate governmental rain gauge(s) is located at Tujunga Spreading Grounds (https://dpw.lacounty.gov/wrd/rainfall/).

4. Monitoring Locations

Monitoring locations are shown on the Site Maps in Appendix B. Monitoring locations are described in the Sections 6 and 7.

Whenever changes in the construction site might affect the appropriateness of sampling locations, the sampling locations shall be revised accordingly. All such revisions shall be implemented as soon as feasible and the SWPPP amended. Temporary changes that result in a one-time additional sampling location do not require a SWPPP amendment.

5. Safety and Monitoring Exemptions

Safety practices for sample collection will be in accordance with the [ENTER TITLE AND PUBLICATION DATE OF CONTRACTOR'S HEALTH AND SAFETY PLAN FOR THE PROJECT OR PROVIDE SPECIFIC REQUIREMENTS IN THIS SECTION]. A summary of the safety requirements that apply to sampling personnel is provided below.

-
-
-
-

This project is not required to collect samples or conduct visual observations (inspections) under the following conditions:

- During dangerous weather conditions such as flooding and electrical storms.
- Outside of scheduled site business hours.

Scheduled site business hours are: [SPECIFY SITE BUSINESS DAYS AND HOURS].

If monitoring (visual monitoring or sample collection) of the site is unsafe because of the dangerous conditions noted above, then the QSP shall document the conditions for why an exception to performing the monitoring was necessary. The exemption documentation shall be filed in Appendix N "Monitoring Records".

6. Visual Monitoring

Visual monitoring includes observations and inspections. Inspections of BMPs are required to identify and record BMPs that need maintenance to operate effectively, that have failed, or that could fail to operate as intended. Visual observations of the site are required to observe storm water drainage areas to identify any spills, leaks, or uncontrolled pollutant sources.

Table 6.1 identifies the required frequency of visual observations and inspections. Inspections and observations will be conducted at the locations identified in Section 6.3.

Table 6.1 Summary of Visual Monitoring and Inspections

Type of Inspection	Frequency
Routine Inspections	
BMP Inspections	Weekly[1]
BMP Inspections – Tracking Control	Daily
[add rows for other BMPs as needed]	[Enter Frequency]

Table 6.1 Summary of Visual Monitoring and Inspections

Type of Inspection	Frequency
Non-Stormwater Discharge Observations	Quarterly during daylight hours
Rain Event Triggered Inspections	
Site Inspections Prior to a Qualifying Event	Within 48 hours of a qualifying event [2]
BMP Inspections During an Extended Storm Event	Every 24-hour period of a rain event[3]
Site Inspections Following a Qualifying Event	Within 48 hours of a qualifying event[2]

[1] Most BMPs must be inspected weekly; those identified below must be inspected more frequently.

[2] Inspections are required during scheduled site operating hours.

[3] Inspections are required during scheduled site operating hours regardless of the amount of precipitation on any given day.

6.1. Routine Observations and Inspections

Routine site inspections and visual monitoring are necessary to ensure that the project is in compliance with the requirements of the Construction General Permit.

6.1.1. Routine BMP Inspections

Inspections of BMPs are conducted to identify and record:

- BMPs that are properly installed;
- BMPs that need maintenance to operate effectively;
- BMPs that have failed; or
- BMPs that could fail to operate as intended.

6.1.2. Non-Stormwater Discharge Observations

Each drainage area will be inspected for the presence of or indications of prior unauthorized and authorized non-stormwater discharges. Inspections will record:

- Presence or evidence of any non-stormwater discharge (authorized or unauthorized);
- Pollutant characteristics (floating and suspended material, sheen, discoloration, turbidity, odor, etc.); and
- Source of discharge.

6.2. Rain-Event Triggered Observations and Inspections

Visual observations of the site and inspections of BMPs are required prior to a qualifying rain event; following a qualifying rain event, and every 24-hour period during a qualifying rain event. Pre-rain inspections will be conducted after consulting NOAA and determining that a precipitation event with a 50 percent or greater probability of precipitation has been predicted on the Forecast Weather Table Interface.

6.2.1. Visual Observations Prior to a Forecasted Qualifying Rain Event

Within 48 hours prior to a qualifying event, a stormwater visual monitoring site inspection will include observations of the following locations:

- Stormwater drainage areas to identify any spills, leaks, or uncontrolled pollutant sources;
- BMPs to identify if they have been properly implemented;
- Any stormwater storage and containment areas to detect leaks and ensure maintenance of adequate freeboard.

BMP inspections and visual monitoring will be triggered by a NOAA prediction of rain in the project area.

6.2.2. BMP Inspections During an Extended Storm Event

During an extended rain event BMP inspection will be conducted to identify and record:

- BMPs that are properly installed;
- BMPs that need maintenance to operate effectively;
- BMPs that have failed; or
- BMPs that could fail to operate as intended.

If the construction site is not accessible during the rain event, the visual inspections shall be performed at all relevant outfalls, discharge points, downstream locations. The inspections should record any projected maintenance activities.

6.2.3. Visual Observations Following a Qualifying Rain Event

Within 48 hours following a qualifying rain event (0.5 inches of rain), a stormwater visual monitoring site inspection is required to observe:

- Stormwater drainage areas to identify any spills, leaks, or uncontrolled pollutant sources;
- BMPs to identify if they have been properly designed, implemented, and effective;
- Need for additional BMPs;
- Any stormwater storage and containment areas to detect leaks and ensure maintenance of adequate freeboard; and
- Discharge of stored or contained rain water.

6.3. Visual Monitoring Procedures

Visual monitoring shall be conducted by the QSP or staff trained by and under the supervision of the QSP.

The name(s) and contact number(s) of the site visual monitoring personnel are listed below and their training qualifications are provided in Appendix F.

Assigned inspector: NAME OF INSPECTOR Contact phone: TELEPHONE NUMBER

Alternate inspector: NAME OF INSPECTOR Contact phone: TELEPHONE NUMBER

Stormwater observations shall be documented on the *Visual Inspection Field Log Sheet* (see Appendix O "Example Forms"). BMP inspections shall be documented on the site-specific BMP inspection checklist. Any photographs used to document observations will be referenced on stormwater site inspection report and maintained with the Monitoring Records in Appendix N.

The QSP shall within [Enter Number] days of the inspection submit copies of the completed inspection report to [Name].

The completed reports will be kept in Appendix N "Monitoring Records".

6.4. Visual Monitoring Follow-Up and Reporting

Correction of deficiencies identified by the observations or inspections, including required repairs or maintenance of BMPs, shall be initiated and completed as soon as possible.

If identified deficiencies require design changes, including additional BMPs, the implementation of changes will be initiated within 72 hours of identification and be completed as soon as possible. When design changes to BMPs are required, the SWPPP shall be amended to reflect the changes.

Deficiencies identified in site inspection reports and correction of deficiencies will be tracked on the *Inspection Field Log Sheet* or *BMP Inspection Report* and shall be submitted to the QSP and shall be kept in Appendix N "Monitoring Records".

The QSP shall within [Enter Number] days of the inspection submit copies of the completed *Inspection Field Log Sheet* or *BMP Inspection Report* with the corrective actions to [Name].

Results of visual monitoring must be summarized and reported in the Annual Report.

6.5. Visual Monitoring Locations

The inspections and observations identified in Sections 6.1 and 6.2 will be conducted at the locations identified in this section.

BMP locations are shown on the Site Maps in SWPPP Appendix B.

There are 3 drainage area(s) on the project site and the contractor's yard, staging areas, and storage areas. Drainage area(s) are shown on the Site Maps in Appendix B and Table 6.2 identifies each drainage area by location.

Table 6.2 Site Drainage Areas

7. Water Quality Sampling and Analysis

7.1. Sampling and Analysis Plan for Non-Visible Pollutants in Stormwater Runoff Discharges

This Sampling and Analysis Plan for Non-Visible Pollutants describes the sampling and analysis strategy and schedule for monitoring non-visible pollutants in stormwater runoff discharges from the project site.

Sampling for non-visible pollutants will be conducted when (1) a breach, leakage, malfunction, or spill is observed; and (2) the leak or spill has not been cleaned up prior to the rain event; and (3) there is the potential for discharge of non-visible pollutants to surface waters or drainage system.

The following construction materials, wastes, or activities, as identified in Section 2.6, are potential sources of non-visible pollutants to stormwater discharges from the project. Storage, use, and operational locations are shown on the Site Maps in Appendix B.

- [LIST or State NONE]
- [LIST or State NONE]

The following existing site features, as identified in Section 2.6, are potential sources of non-visible pollutants to stormwater discharges from the project. Locations of existing site features contaminated with non-visible pollutants are shown on the Site Maps in Appendix B.

- NONE

The following soil amendments have the potential to change the chemical properties, engineering properties, or erosion resistance of the soil and will be used on the project site. Locations of soil amendment application are shown on the Site Maps in Appendix B.

- NONE

The project has the potential to receive stormwater run-on from the following locations with the potential to contribute non-visible pollutants to stormwater discharges from the project. Locations of such run-on to the project site are shown on the Site Maps in Appendix B.

- Caltrans Stormwater Pump Station

7.1.1. Sampling Schedule

Samples for the potential non-visible pollutant(s) and a sufficiently large unaffected background sample shall be collected during the first two hours of discharge from rain events that result in a sufficient discharge for sample collection. Samples shall be collected during the site's scheduled hours and shall be collected regardless of the time of year and phase of the construction.

Collection of discharge samples for non-visible pollutant monitoring will be triggered when any of the following conditions are observed during site inspections conducted prior to or during a rain event.

- Materials or wastes containing potential non-visible pollutants are not stored under watertight conditions. Watertight conditions are defined as (1) storage in a watertight container, (2) storage under a watertight roof or within a building, or (3) protected by temporary cover and containment that prevents stormwater contact and runoff from the storage area.
- Materials or wastes containing potential non-visible pollutants are stored under watertight conditions, but (1) a breach, malfunction, leakage, or spill is observed, (2) the leak or spill is not cleaned up prior to the rain event, and (3) there is the potential for discharge of non-visible pollutants to surface waters or a storm drain system.
- A construction activity, including but not limited to those in Section 2.6, with the potential to contribute non-visible pollutants (1) was occurring during or within 24 hours prior to the rain event, (2) BMPs were observed to be breached, malfunctioning, or improperly implemented, and (3) there is the potential for discharge of non-visible pollutants to surface waters or a storm drain system.
- Soil amendments that have the potential to change the chemical properties, engineering properties, or erosion resistance of the soil have been applied, and there is the potential for discharge of non-visible pollutants to surface waters or a storm drain system.
- Stormwater runoff from an area contaminated by historical usage of the site has been observed to combine with stormwater runoff from the site, and there is the potential for discharge of non-visible pollutants to surface waters or a storm drain system.

7.1.2. Sampling Locations

Sampling locations are based on proximity to planned non-visible pollutant storage, occurrence or use, accessibility for sampling, and personnel safety. Planned non-visible pollutant sampling locations are shown on the Site Maps in Appendix B and include the locations identified in Tables 7.5 through 7.9.

Three sampling location(s) on the project site and the contractor's yard have been identified for the collection of samples of runoff from planned material and waste storage areas and areas where non-visible pollutant producing construction activities are planned.

Table 7.5 Non-Visible Pollutant Sample Locations – Project Site

Sample Location Number	Sample Location Description	Sample Location Latitude and Longitude
2	NE corner of Alleghney Street and Remick Avenue	N 1906096.97 E 6439663.04
3	Swale outlet on Wicks Avenue	N 1905806.95 E 6440353.45
4	NW corner of Wicks Avenue and Remick Ave	N 1905578.50 E 6440107.14

[Enter number of locations] sampling locations have been identified for the collection of samples of runoff from drainage areas where soil amendments will be applied that have the potential to affect water quality.

Table 7.6 Non-Visible Pollutant Sample Locations – Soil Amendment Areas

Sample Location Number	Sample Location	Sample Location Latitude and Longitude (Decimal Degrees)
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]

[Enter number of locations] sampling locations have been identified for the collection of samples of runoff from drainage areas contaminated by historical usage of the site.

Table 7.7 Non-Visible Pollutant Sample Locations – Areas of Historical Contamination

Sample Location Number	Sample Location	Sample Location Latitude and Longitude (Decimal Degrees)
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]

One sampling location(s) has been identified for the collection of an uncontaminated sample of runoff as a background sample for comparison with the samples being analyzed for non-visible pollutants. This location(s) was selected such that the sample will not have come in contact with the operations, activities, or areas identified in Section 7.1 or with disturbed soils areas.

Table 7.8 Non-Visible Pollutant Sample Locations – Background (Unaffected Sample)

Sample Location Number	Sample Location	Sample Location Latitude and Longitude (Decimal Degrees)
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]

One sampling location has been identified for the collection of samples of run-on to the project site. Run-on from these locations has the potential to combine with discharges from the site being sampled for non-visible pollutants. These samples are intended to identify potential sources of non-visible pollutants that originate off the project site.

Table 7.9 Non-Visible Pollutant Sample Locations – Site Run-On

Sample Location Number	Sample Location	Sample Location Latitude and Longitude (Decimal Degrees)
1	SE corner of Alleghany Street and Laurel Canyon Boulevard	N 1906449.70 E 6440066.63

If a stormwater visual monitoring site inspection conducted prior to or during a storm event identifies the presence of a material storage, waste storage, operations area with spills, or the potential for the discharge of non-visible pollutants to surface waters or a storm drain system that is at a location not listed above and has not been identified on the Site Maps, sampling locations will be selected by the QSP using the same rationale as that used to identify planned locations. Non-visible pollutant sampling locations shall be identified by the QSP on the pre-rain event inspection form and/or Rain Event Action Plan prior to a forecasted qualifying rain event.

7.1.3. Monitoring Preparation

Non-visible pollutant samples will be collected by:

Contractor ☐ Yes ☐ No

Consultant ☐ Yes ☐ No

Laboratory ☐ Yes ☐ No

Samples on the project site will be collected by the following contractor sampling personnel:

Name/Telephone Number:

Alternate(s)/Telephone Number:

An adequate stock of monitoring supplies and equipment for monitoring non-visible pollutants will be available on the project site prior to a sampling event. Monitoring supplies and equipment will be stored in a cool temperature environment that will not come into contact with rain or direct sunlight. Sampling personnel will be available to collect samples in accordance with the sampling schedule. Supplies maintained at the project site will include, but are not limited to, clean powder-free nitrile gloves, sample collection equipment, coolers, appropriate

number and volume of sample bottles, identification labels, re-sealable storage bags, paper towels, personal rain gear, ice, and *Effluent Sampling Field Log Sheets* and Chain of Custody (CoC) forms, which are provided in Appendix O "Example Forms".

Samples on the project site will be collected by the following [specify laboratory or environmental consultant]:

Company Name:	TBD
Street Address:	
City, State Zip:	
Telephone Number:	
Point of Contact:	
Name of Sampler(s):	
Name of Alternate(s):	

The QSP or his/her designee will contact [specify name of laboratory or environmental consultant] 24 hours prior to a predicted rain event or for an unpredicted event, as soon as a rain event begins if one of the triggering conditions is identified during an inspection to ensure that adequate sample collection personnel and supplies for monitoring non-visible pollutants are available and will be mobilized to collect samples on the project site in accordance with the sampling schedule.

7.1.4. Analytical Constituents

Table 7.10 lists the specific sources and types of potential non-visible pollutants on the project site and the water quality indicator constituent(s) for that pollutant.

Table 7.10 Potential Non-Visible Pollutants and Water Quality Indicator Constituents

Pollutant Source	Pollutant	Water Quality Indicator Constituent
Asphalt Work	VOC	VOC
Concrete Work	pH	pH
Landscape Work	Pesticides/Herbicides	Product dependent, see label and check with laboratory

7.1.5. Sample Collection

Samples of discharge shall be collected at the designated non-visible pollutant sampling locations shown on the Site Maps in Appendix B or in the locations determined by observed breaches, malfunctions, leakages, spills, operational areas, soil amendment application areas, and historical site usage areas that triggered the sampling event.

Grab samples shall be collected and preserved in accordance with the methods identified in the Table 7.11, "Sample Collection, Preservation and Analysis for Monitoring Non-Visible Pollutants" provided in Section 7.1.6. Only the QSP, or personnel trained in water quality sampling under the direction of the QSP shall collect samples.

Sample collection and handling requirements are described in Section 7.7.

7.1.6. Sample Analysis

Samples shall be analyzed using the analytical methods identified in the Table 7.11.

Samples will be analyzed by:

Laboratory Name:	TBD
Street Address:	
City, State Zip:	
Telephone Number:	
Point of Contact:	
ELAP Certification Number:	

Samples will be delivered to the laboratory by:

Driven by Contractor	☐ Yes	☐ No
Picked up by Laboratory Courier	☐ Yes	☐ No
Shipped	☐ Yes	☐ No

7.1.7. Data Evaluation and Reporting

The QSP shall complete an evaluation of the water quality sample analytical results.

Runoff/downgradient results shall be compared with the associated upgradient/unaffected results and any associated run-on results. Should the runoff/downgradient sample show an increased level of the tested analyte relative to the unaffected background sample, which cannot be explained by run-on results, the BMPs, site conditions, and surrounding influences shall be assessed to determine the probable cause for the increase.

As determined by the site and data evaluation, appropriate BMPs shall be repaired or modified to mitigate discharges of non-visible pollutant concentrations. Any revisions to the BMPs shall be recorded as an amendment to the SWPPP.

Table 7.11 Sample Collection, Preservation and Analysis for Monitoring Non-Visible Pollutants

Constituent	Analytical Method	Minimum Sample Volume	Sample Containers	Sample Preservation	Reporting Limit	Maximum Holding Time
Notes:						

The General Permit prohibits the storm water discharges that contain hazardous substances equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4. The results of any non-stormwater discharge results that indicate the presence of a hazardous substance in excess of established reportable quantities shall be immediately reported to the Regional Water Board and other agencies as required by 40 C.F.R. §§ 117.3 and 302.4.

Results of non-visible pollutant monitoring shall be reported in the Annual Report.

7.2. Sampling and Analysis Plan for pH and Turbidity in Stormwater Runoff Discharges

Sampling and analysis of runoff for pH and turbidity is required for this project. This Sampling and Analysis Plan describes the strategy for monitoring turbidity and pH levels of stormwater runoff discharges from the project site and run-on that may contribute to an exceedance of a Numeric Action Level (NAL) or the exceedance of a Receiving Water Monitoring Trigger.

Samples for pH and turbidity will be collected at all discharge points where stormwater is discharged off-site.

7.2.1. Sampling Schedule

Stormwater runoff samples shall be collected for pH and turbidity from each day of a qualifying rain event that results in a discharge from the project site. A minimum of three samples will be collected per day of discharge during a qualifying event. Samples should be representative of the total discharge from the project each day of discharge during the qualifying event. Typically, representative samples will be spaced in time throughout the daily discharge event.

Stored or collected water from a qualifying storm event when discharged shall be tested for turbidity and pH. Stored or collected water from a qualifying event may be sampled at the point it is released from the storage or containment area or at the site discharge location.

Run-on samples shall be collected whenever the QSP identifies that run-on has the potential to contribute to an exceedance of a NAL or the exceedance of a Receiving Water Monitoring Trigger.

7.2.2. Sampling Locations

Sampling locations are based on the site runoff discharge locations and locations where run-on enters the site, accessibility for sampling, and personnel safety. Planned pH and turbidity sampling locations are shown on the Site Maps in Appendix B and include the locations identified in Table 7.13 and Table 7-14.

[Enter Number] sampling location(s) on the project site and the contractor's yard have been identified for the collection of runoff samples. Table 7.12 also provides an estimate of the site's area that drains to each location.

Table 7.12 Turbidity and pH Runoff Sample Locations

Sample Location Number	Sample Location	Estimate of Site [Factor] (%)
3	Swale outlet on Wicks Avenue	25
4	NW corner of Wicks Avenue and Remick Ave	75

[Enter number of locations] sampling locations have been identified for the collection of run-on samples where the run-on has the potential to contribute to an exceedance of an NAL or a Receiving Water Monitoring Trigger. Table 7.13 identifies the run-on sample locations.

Table 7.13 Turbidity and pH Run-On Sample Locations

Sample Location Number	Sample Location	Sample Location Latitude and Longitude (Decimal Degrees)
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]
[Enter Number]	[Enter Location]	[Enter Latitude] [Enter Longitude]

The project does not receive run-on with the potential to exceed NALs or Receiving Water Monitoring Triggers.

7.2.3. Monitoring Preparation

Turbidity and pH samples will be collected and analyzed by:

Contractor ☐ Yes ☐ No

Consultant ☐ Yes ☐ No

Laboratory ☐ Yes ☐ No

Samples on the project site will be collected by the following contractor sampling personnel:

Name/Telephone Number:

Alternate(s)/Telephone Number:

An adequate stock of monitoring supplies and equipment for monitoring turbidity and will be available on the project site prior to a sampling event. Monitoring supplies and equipment will be stored in a cool temperature environment that will not come into contact with rain or direct sunlight. Sampling personnel will be available to collect samples in accordance with the sampling schedule. Supplies maintained at the project site will include, but are not limited to, field meters, extra batteries, clean powder-free nitrile gloves, sample collection equipment, appropriate sample containers, paper towels, personal rain gear, and *Effluent Sampling Field Log Sheets* and CoC forms provided in Appendix O "Example Forms".

The contractor will obtain and maintain the field-testing instruments, as identified in Section 7.2.6, for analyzing samples in the field by contractor sampling personnel.

Samples on the project site will be collected by the following [specify laboratory or environmental consultant]:

Company Name:

Street Address:

City, State, Zip:

Telephone Number:

Point of Contact:

Name of Sampler(s):

Name of Alternate(s):

The QSP or his/her designee will contact [specify name of laboratory or environmental consultant] 24 hours prior to a predicted rain event or for an unpredicted event, as soon as a rain event begins to ensure that adequate sample collection personnel, supplies for monitoring pH and turbidity are available and will be mobilized to collect samples on the project site in accordance with the sampling schedule.

7.2.4. Field Parameters

Samples shall be analyzed for the constituents indicated in the Table 7.14.

Table 7.14 Sample Collection and Analysis for Monitoring Turbidity and pH

Parameter	Test Method	Minimum Sample Volume [1]	Sample Collection Container Type	Detection Limit (minimum)
Turbidity	Field meter/probe with calibrated portable instrument	500 mL	Polypropylene or glass (Do not collect in meter sample cells)	1 NTU
pH	Field meter/probe with calibrated portable instrument or calibrated pH test kit	100 mL	Polypropylene	0.2 pH units

Notes: [1] Minimum sample volume recommended. Specific volume requirements will vary by instrument; check instrument manufacturer instructions.

L – Liter
mL – Milliliter
NTU – Nephelometric Turbidity Unit

7.2.5. Sample Collection

Samples of discharge shall be collected at the designated runoff and run-on sampling locations shown on the Site Maps in Appendix B. Run-on samples shall be collected within close proximity of the point of run-on to the project.

Only personnel trained in water quality sampling and field measurements working under the direction of the QSP shall collect samples.

Sample collection and handling requirements are described in Section 7.7.

7.2.6. Field Measurements

Samples collected for field analysis, collection, analysis and equipment calibration shall be in accordance with the field instrument manufacturer's specifications.

Immediately following collection, samples for field analysis shall be tested in accordance with the field instrument manufacturer's instructions and results recorded on the *Effluent Sampling Field Log Sheet*.

The field instrument(s) listed in Table 7.15 will be used to analyze the following constituents:

Table 7.15 Field Instruments

Field Instrument (Manufacturer and Model)	Constituent
	pH
	Turbidity

The manufacturers' instructions are included in Appendix P "Field Meter Instructions". Field sampling staff shall review the instructions prior to each sampling event and follow the instructions in completing measurement of the samples.

- The instrument(s) shall be maintained in accordance with manufacturer's instructions.
- The instrument(s) shall be calibrated before each sampling and analysis event.
- Maintenance and calibration records shall be maintained with the SWPPP.

The QSP may authorize alternate equipment provided that the equipment meets the Construction General Permit's requirements and the manufacturers' instructions for calibration and use are added to Appendix P "Field Meter Instructions".

7.2.7. Data Evaluation and Reporting

Immediately upon completing the measurements for the sampling event, provide the *Effluent Sampling Field Log Sheets* to the QSP for evaluation.

Numeric Action Levels

This project is subject to NALs for pH and turbidity (Table 7.16). Compliance with the NAL for pH and turbidity is based on a weighted daily average. Upon receiving the field log sheets, the QSP shall immediately calculate the weighted arithmetic average of the turbidity samples, and the weighted logarithmic average of the pH samples to determine if the NALs, shown in the table below, have been exceeded.

Table 7.16 Numeric Action Levels

Parameter	Unit	Daily Average
pH	pH units	Lower NAL = 6.5 Upper NAL = 8.5
Turbidity	NTU	250 NTU

The QSP shall within [Enter Number] days of the sample collection submit copies of the completed *Effluent Sampling Field Log Sheets* to LADWP representative.

In the event that the pH or turbidity NAL is exceeded, the QSP shall immediately notify LADWP and investigate the cause of the exceedance and identify corrective actions.

Exceedances of NALs shall be electronically reported to the State Water Board by LADWP through the SMARTs system within 10 days of the conclusion of the storm event. If requested by the Regional Board, a NAL Exceedance report will be submitted. The NAL Exceedance Report must contain the following information:

- Analytical method(s), method reporting unit(s), and MDL(s) of each parameter;
- Date, place, time of sampling, visual observation, and/or measurements, including precipitation; and
- Description of the current BMPs associated with the sample that exceeded the NAL and the proposed corrective actions taken.

Receiving Water Monitoring Triggers

This project is not subject to Receiving Water Monitoring Triggers because it does not have a direct discharge to the receiving water.

7.3. Sampling and Analysis Plan for pH, Turbidity, and SSC in Receiving Water

This project is not subject to Receiving Water Monitoring.

7.4. Sampling and Analysis Plan for Non-Stormwater Discharges

The Regional Water Board has not specified monitoring for additional pollutants.

7.5. Training of Sampling Personnel

Sampling personnel shall be trained to collect, maintain, and ship samples in accordance with the Surface Water Ambient Monitoring program (SWAMP) 2008 Quality Assurance Program Plan (QAPrP). Training records of designated contractor sampling personnel are provided in Appendix F.

The stormwater sampler(s) and alternate(s) have received the following stormwater sampling training:

Name	Training
	INSERT LIST OF TRAINING COURSES
	INSERT LIST OF TRAINING COURSES

The stormwater sampler(s) and alternates have the following stormwater sampling experience:

Name	Experience
	INSERT LIST OF STORMWATER SAMPLING EXPERIENCE
	INSERT LIST OF STORMWATER SAMPLING EXPERIENCE

7.6. Sample Collection and Handling

7.6.1. Sample Collection

Samples shall be collected at the designated sampling locations shown on the Site Maps and listed in the preceding sections. Samples shall be collected, maintained and shipped in accordance with the SWAMP 2008 Quality Assurance Program Plan (QAPrP).

Grab samples shall be collected and preserved in accordance with the methods identified in preceding sections.

To maintain sample integrity and prevent cross-contamination, sample collection personnel shall follow the protocols below.

- Collect samples (for laboratory analysis) only in analytical laboratory-provided sample containers;
- Wear clean, powder-free nitrile gloves when collecting samples;
- Change gloves whenever something not known to be clean has been touched;
- Change gloves between sites;
- Decontaminate all equipment (e.g., bucket, tubing) prior to sample collection using a trisodium phosphate water wash, distilled water rinse, and final rinse with distilled water. (Dispose of wash and rinse water appropriately [i.e., do not discharge to storm drain or receiving water]). Do not decontaminate laboratory provided sample containers;
- Do not smoke during sampling events;
- Never sample near a running vehicle;
- Do not park vehicles in the immediate sample collection area (even non-running vehicles);
- Do not eat or drink during sample collection; and
- Do not breathe, sneeze, or cough in the direction of an open sample container.

The most important aspect of grab sampling is to collect a sample that represents the entire runoff stream. Typically, samples are collected by dipping the collection container in the runoff flow paths and streams as noted below.

i. For small streams and flow paths, simply dip the bottle facing upstream until full.
ii. For larger stream that can be safely accessed, collect a sample in the middle of the flow stream by directly dipping the mouth of the bottle. Once again making sure that the opening of the bottle is facing upstream as to avoid any contamination by the sampler.
iii. For larger streams that cannot be safely waded, pole-samplers may be needed to safely access the representative flow.
iv. Avoid collecting samples from ponded, sluggish or stagnant water.
v. Avoid collecting samples directly downstream from a bridge as the samples can be affected by the bridge structure or runoff from the road surface.

Note, that depending upon the specific analytical test, some containers may contain preservatives. These containers should **never** be dipped into the stream but filled indirectly from the collection container.

SSC samples should be taken as a normal grab sample, where the bottle is submerged facing upstream and filled. SSC samples need to be collected in a separate bottle because the analysis requires the entire volume of the bottle. Do not collect in a larger container and partition into the laboratory sample container.

7.6.2. Sample Handling

Turbidity and pH measurements must be conducted immediately. Do not store turbidity or pH samples for later measurement.

Samples for laboratory analysis must be handled as follows. Immediately following sample collection:

- Cap sample containers;
- Complete sample container labels;
- Sealed containers in a re-sealable storage bag;
- Place sample containers into an ice-chilled cooler;

- Document sample information on the *Effluent Sampling Field Log Sheet*; and
- Complete the CoC.

All samples for laboratory analysis must be maintained between 0-6 degrees Celsius during delivery to the laboratory. Samples must be kept on ice, or refrigerated, from sample collection through delivery to the laboratory. Place samples to be shipped inside coolers with ice. Make sure the sample bottles are well packaged to prevent breakage and secure cooler lids with packaging tape.

Ship samples that will be laboratory analyzed to the analytical laboratory right away. Hold times are measured from the time the sample is collected to the time the sample is analyzed. The General Permit requires that samples be received by the analytical laboratory within 48 hours of the physical sampling (unless required sooner by the analytical laboratory).

Laboratory Name:	
Address:	
City, State Zip:	
Telephone Number:	
Point of Contact:	

7.6.3. Sample Documentation Procedures

All original data documented on sample bottle identification labels, *Effluent Sampling Field Log Sheet*, and CoCs shall be recorded using waterproof ink. These shall be considered accountable documents. If an error is made on an accountable document, the individual shall make corrections by lining through the error and entering the correct information. The erroneous information shall not be obliterated. All corrections shall be initialed and dated.

Duplicate samples shall be identified consistent with the numbering system for other samples to prevent the laboratory from identifying duplicate samples. Duplicate samples shall be identified in the Effluent Sampling Field Log Sheet.

Sample documentation procedures include the following:

Sample Bottle Identification Labels: Sampling personnel shall attach an identification label to each sample bottle. Sample identification shall uniquely identify each sample location.

Field Log Sheets: Sampling personnel shall complete the *Effluent Sampling Field Log Sheet* and *Receiving Water Sampling Field Log Sheet* for each sampling event, as appropriate.

Chain of Custody: Sampling personnel shall complete the CoC for each sampling event for which samples are collected for laboratory analysis. The sampler will sign the CoC when the sample(s) is turned over to the testing laboratory or courier.

8. Active Treatment System Monitoring

An Active Treatment System (ATS) will be deployed on the site?

☐ Yes ☒ No

This project does not require a project specific Sampling and Analysis Plan for an ATS because deployment of an ATS is not planned.

9. Bioassessment Monitoring

This project is not subject to bioassessment monitoring because it is not a Risk Level 3 project.

This project is Risk Level 3	☐ Yes	☒ No
This project will disturb more than 30 acres	☐ Yes	☒ No
This project directly discharges runoff to a freshwater wadable stream (or streams) that is either:	☐ Yes	☒ No
a) Listed by the State Water Board or EPA as impaired due to sediment or is tributary to any downstream waterbody that is listed for sediment impairments	☐	
or		
b) Has the beneficial uses of SPAWN and COLD and MIGRATORY	☐	

This project is not subject to bioassessment monitoring because it does not meet both of the permit specified trigger requirements.

10. Watershed Monitoring Option

This project is not participating in a watershed monitoring option.

11. Quality Assurance and Quality Control

An effective Quality Assurance and Quality Control (QA/QC) plan shall be implemented as part of the CSMP to ensure that analytical data can be used with confidence. QA/QC procedures to be initiated include the following:

- Field logs;
- Clean sampling techniques;
- CoCs;
- QA/QC Samples; and
- Data verification.

Each of these procedures is discussed in more detail in the following sections.

11.1. Field Logs

The purpose of field logs is to record sampling information and field observations during monitoring that may explain any uncharacteristic analytical results. Sampling information to be included in the field log include the date and time of water quality sample collection, sampling personnel, sample container identification numbers, and types of samples that were collected. Field observations should be noted in the field log for any abnormalities at the sampling location (color, odor, BMPs, etc.). Field measurements for pH and turbidity should also be recorded in the field log. A Visual Inspection Field Log and an Effluent Sampling Field Log Sheet are included in Appendix O “Example Forms”.

11.2. Clean Sampling Techniques

Clean sampling techniques involve the use of certified clean containers for sample collection and clean powder-free nitrile gloves during sample collection and handling. As discussed in Section 7.7, adoption of a clean sampling approach will minimize the chance of field contamination and questionable data results.

11.3. Chain of Custody

The sample CoC is an important documentation step that tracks samples from collection through analysis to ensure the validity of the sample. Sample CoC procedures include the following:

- Proper labeling of samples;
- Use of CoC forms for all samples; and
- Prompt sample delivery to the analytical laboratory.

Analytical laboratories usually provide CoC forms to be filled out for sample containers. An example CoC is included in Appendix O "Example Forms".

11.4. QA/QC Samples

QA/QC samples provide an indication of the accuracy and precision of the sample collection; sample handling; field measurements; and analytical laboratory methods. The following types of QA/QC will be conducted for this project:

☒ Field Duplicates at a frequency of 5 percent or 1 duplicate minimum per sampling event (Required for all sampling plans with field measurements or laboratory analysis)

☐ Equipment Blanks at a frequency of 1 minimum per sampling event
(Only needed if equipment used to collect samples could add the pollutants to sample)

☐ Field Blanks at a frequency of 1 minimum per sampling event (Only required if sampling method calls for field blanks)

☐ Travel Blanks at a frequency of 1 minimum per sampling event
(Required for sampling plans that include VOC laboratory analysis)

11.4.1. Field Duplicates

Field duplicates provide verification of laboratory or field analysis and sample collection. Duplicate samples shall be collected, handled, and analyzed using the same protocols as primary samples. The sample location where field duplicates are collected shall be randomly selected from the discharge locations. Duplicate samples shall be collected immediately after the primary sample has been collected. Duplicate samples must be collected in the same manner and as close in time as possible to the original sample. Duplicate samples shall not influence any evaluations or conclusion.

11.4.2. Equipment Blanks

Equipment blanks provide verification that equipment has not introduced a pollutant into the sample. Equipment blanks are typically collected when:

- New equipment is used;
- Equipment that has been cleaned after use at a contaminated site;
- Equipment that is not dedicated for surface water sampling is used; or
- Whenever a new lot of filters is used when sampling metals.

11.4.3. Field Blanks

Field blanks assess potential sample contamination levels that occur during field sampling activities. De-ionized water field blanks are taken to the field, transferred to the appropriate container, and treated the same as the corresponding sample type during the course of a sampling event.

11.4.4. Travel Blanks

Travel blanks assess the potential for cross-contamination of volatile constituents between sample containers during shipment from the field to the laboratory. De-ionized water blanks are taken along for the trip and held unopened in the same cooler with the VOC samples.

11.5. Data Verification

After results are received from the analytical laboratory, the QSP shall verify the data to ensure that it is complete, accurate, and the appropriate QA/QC requirements were met. Data must be verified as soon as the data reports are received. Data verification shall include:

- Check the CoC and laboratory reports.
  Make sure all requested analyses were performed and all samples are accounted for in the reports.
- Check laboratory reports to make sure hold times were met and that the reporting levels meet or are lower than the reporting levels agreed to in the contract.
- Check data for outlier values and follow up with the laboratory.
  Occasionally typographical errors, unit reporting errors, or incomplete results are reported and should be easily detected. These errors need to be identified, clarified, and corrected quickly by the laboratory. The QSP should especially note data that is an order of magnitude or more different than similar locations or is inconsistent with previous data from the same location.
- Check laboratory QA/QC results.
  EPA establishes QA/QC checks and acceptable criteria for laboratory analyses. These data are typically reported along with the sample results. The QSP shall evaluate the reported QA/QC data to check for contamination (method, field, and equipment blanks), precision (laboratory matrix spike duplicates), and accuracy (matrix spikes and laboratory control samples). When QA/QC checks are outside acceptable ranges, the laboratory must flag the data, and usually provides an explanation of the potential impact to the sample results.
- Check the data set for outlier values and, accordingly, confirm results and re-analyze samples where appropriate.
  Sample re-analysis should only be undertaken when it appears that some part of the QA/QC resulted in a value out of the accepted range. Sample results may not be discounted unless the analytical laboratory identifies the required QA/QC criteria were not met and confirms this in writing.

Field data including inspections and observations must be verified as soon as the field logs are received, typically at the end of the sampling event. Field data verification shall include:

- Check field logs to make sure all required measurements were completed and appropriately documented;
- Check reported values that appear out of the typical range or inconsistent;
  Follow-up immediately to identify potential reporting or equipment problems, if appropriate, recalibrate equipment after sampling;
- Verify equipment calibrations;

- Review observations noted on the field logs; and
- Review notations of any errors and actions taken to correct the equipment or recording errors.

12. Records Retention

All records of stormwater monitoring information and copies of reports (including Annual Reports) must be retained for a period of at least three years from date of submittal or longer if required by the Regional Water Board.

Results of visual monitoring, field measurements, and laboratory analyses must be kept in the SWPPP along with CoCs, and other documentation related to the monitoring.

Records are to be kept onsite while construction is ongoing. Records to be retained include:

- The date, place, and time of inspections, sampling, visual observations, and/or measurements, including precipitation;
- The individual(s) who performed the inspections, sampling, visual observation, and/or field measurements;
- The date and approximate time of field measurements and laboratory analyses;
- The individual(s) who performed the laboratory analyses;
- A summary of all analytical results, the method detection limits and reporting limits, and the analytical techniques or methods used;
- Rain gauge readings from site inspections;
- QA/QC records and results;
- Calibration records;
- Visual observation and sample collection exemption records;
- The records of any corrective actions and follow-up activities that resulted from analytical results, visual observations, or inspections; and
    - NAL Exceedance Reports.

Predicted Rain Event-Triggered Actions

Below is a list of suggested actions and items to review for this project. Each active Trade should check all material storage areas, stockpiles, waste management areas, vehicle and equipment storage and maintenance, areas of active soil disturbance, and areas of active work to ensure the proper implementation of BMPs. Project-wide BMPs should be checked and cross-referenced to the BMP progress map.

Trade or Activity	Suggested action(s) to perform / item(s) to review prior to rain event
☐ Information & Scheduling	☐ Inform trade supervisors of predicted rain
	☐ Check scheduled activities and reschedule as needed
	☐ Alert erosion/sediment control provider
	☐ Alert sample collection contractor (if applicable)
	☐ Schedule staff for extended rain inspections
	☐ Check Erosion and Sediment Control (ESC) material stock
	☐ Review BMP progress map
	☐ Hours of operation verified for upcoming storm event
	☐ Other:
☐ Material storage areas	☐ Material under cover or in sheds (e.g., treated woods and metals)
	☐ Perimeter control around stockpiles
	☐ Stockpiles covered (as applicable)
	☐ Other:
☐ Waste management areas	☐ Dumpsters closed and drain holes plugged
	☐ Recycling bins covered
	☐ Portable restrooms have secondary containment and protected from tipping over

REAP (Continued)

Trade or Activity, Continued	Suggested action(s) to perform / item(s) to review prior to rain event
☐ Trade operations	☐ Exterior operations shut down for event (e.g., no concrete pours or paving)
	☐ Soil treatments (e.g., fertilizer, soil binder) ceased within 24 hours of event
	☐ Materials and equipment (e.g., tools) properly stored and covered
	☐ Waste and debris disposed in covered dumpsters or removed from site
	☐ Trenches and excavations protected
	☐ Perimeter controls around disturbed areas
	☐ Fueling and repair areas covered and bermed
	☐ Other:
☐ Site ESC BMPs	☐ Adequate capacity in sediment basins and traps
	☐ Site perimeter and slope controls in place
	☐ Catch basin and drop inlet protection in place and cleaned
	☐ Temporary erosion controls deployed
	☐ Roads swept; site ingress and egress points stabilized
	☐ Temporary perimeter controls deployed around disturbed areas and stockpiles
	☐ Other:
☐ Concrete rinse out area	☐ Adequate capacity for rain
	☐ Wash-out bins covered
	☐ Other:

Risk Determination

	A	B	C
1	**Sediment Risk Factor Worksheet**		**Entry**
2	**A) R Factor**		
3	Analyses of data indicated that when factors other than rainfall are held constant, soil loss is directly proportional to a rainfall factor composed of total storm kinetic energy (E) times the maximum 30-min intensity (I30) (Wischmeier and Smith, 1958). The numerical value of R is the average annual sum of EI30 for storm events during a rainfall record of at least 22 years. "Isoerodent" maps were developed based on R values calculated for more than 1000 locations in the Western U.S. Refer to the link below to determine the R factor for the project site.		
4	http://cfpub.epa.gov/npdes/stormwater/LEW/lewCalculator.cfm		
5	**R Factor Value**		56
6	**B) K Factor (weighted average, by area, for all site soils)**		
7	The soil-erodibility factor K represents: (1) susceptibility of soil or surface material to erosion, (2) transportability of the sediment, and (3) the amount and rate of runoff given a particular rainfall input, as measured under a standard condition. Fine-textured soils that are high in clay have low K values (about 0.05 to 0.15) because the particles are resistant to detachment. Coarse-textured soils, such as sandy soils, also have low K values (about 0.05 to 0.2) because of high infiltration resulting in low runoff even though these particles are easily detached. Medium-textured soils, such as a silt loam, have moderate K values (about 0.25 to 0.45) because they are moderately susceptible to particle detachment and they produce runoff at moderate rates. Soils having a high silt content are especially susceptible to erosion and have high K values, which can exceed 0.45 and can be as large as 0.65. Silt-size particles are easily detached and tend to crust, producing high rates and large volumes of runoff. Use Site-specific data must be submitted.		
8	Site-specific K factor guidance		
9	**K Factor Value**		0.12
10	**C) LS Factor (weighted average, by area, for all slopes)**		
11	The effect of topography on erosion is accounted for by the LS factor, which combines the effects of a hillslope-length factor, L, and a hillslope-gradient factor, S. Generally speaking, as hillslope length and/or hillslope gradient increase, soil loss increases. As hillslope length increases, total soil loss and soil loss per unit area increase due to the progressive accumulation of runoff in the downslope direction. As the hillslope gradient increases, the velocity and erosivity of runoff increases. Use the LS table located in separate tab of this spreadsheet to determine LS factors. Estimate the weighted LS for the site prior to construction.		
12	LS Table		
13	**LS Factor Value**		0.27
14			
15	**Watershed Erosion Estimate (=RxKxLS) in tons/acre**		1.8144
16	**Site Sediment Risk Factor**		**Low**
17	Low Sediment Risk: < 15 tons/acre		
18	Medium Sediment Risk: >=15 and <75 tons/acre		
19	High Sediment Risk: >= 75 tons/acre

Project Combined Risk:	**Level 1**

Soil Erodibility Factor (K)

The K factor can be determined by using the nomograph method, which requires that a particle size analysis (ASTM D-422) be done to determine the percentages of sand, very fine sand, silt and clay. Use the figure below to determine appropriate K value.

Erickson triangular nomograph used to estimate soil erodibility (K) factor.
The figure above is the USDA nomograph used to determine the K factor for a soil, based on its texture (% silt plus very fine sand, % sand, % organic matter, soil structure, and permeability). *Nomograph from Erickson 1977 as referenced in Goldman et. al., 1986.*

LS Factors for Construction Sites. *Table from Renard et. al., 1997.*

Appendix L
Glossary and Acronyms

Best Management Practices (BMPs):	**Any program, technology, process, siting criteria, operational methods or measures, or engineered systems, that when implemented, prevent, control, remove or reduce pollution.**
Clean Water Act:	**The Federal Water Pollution Control Act enacted by Public Law 92-500 as amended by 95-217, 95-576, 96-483, and 97-117; 33 USC. 1251 et seq. Enacted in 1977, the CWA gave EPA the authority to control point-source storm water discharges that convey pollutants to the waters of the United States. Congress amended the CWA in 1987 to create a new section devoted to storm water permitting. In accordance with the 1987 revisions, the EPA adopted regulations in 1990 that established requirements for National Pollutant Discharge Elimination System (NPDES) permits for discharge of storm water from industries and municipalities.**
Contamination:	**"An impairment of the quality of the waters of the state by waste to a degree which creates a hazard to the public health through poisoning or through the spread of disease...including any equivalent effect resulting from the disposal of waste, whether or not waters of the state are affected." [California Water Code Section 13050(k)].**
General Permit:	**The National Pollutant Discharge Elimination System General Permit for Storm Water Discharges Associated with Construction Activities, issued by the State of California Water Resources Control Board (Water Quality Order 99-08-DWQ, adopted August 1999).**
Good Housekeeping Practices:	**The act of maintaining clean, orderly site areas to prevent potential pollutants from contacting storm water.**
National Pollutant Discharge Elimination System (NPDES):	**A permitting process established pursuant to the Clean Water Act that regulates the release of pollutants to waters of the United States.**
Non-Storm Water Discharge:	**Any discharge to surface waters, to a storm drain, or to any other storm water drainage facility that is not composed entirely of storm water or landscape irrigation runoff.**
Notice of Intent (NOI):	**The NOI is the application form used to obtain the General Construction Permit. The NOI indicates the facility's intent to comply with the terms of the permit.**
Nuisance:	**"Anything which meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to**

	interfere with the comfortable enjoyment of life and property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; (3) occurs during or as a result of the treatment or disposal of wastes." [California Water Code Section 13050(m)].
Pollution:	**The "man-made or man-induced alternation of the chemical, physical, biological, and radiological integrity of water." [Clean Water Act Section 502 (19)]. Pollution also means "an alternation of the quality of the waters of the state by waste to a degree which unreasonably affects either...the waters for beneficial uses...or facilities which serve these beneficial uses." [California Water Code Section 13050(l)].**
Regional Water Quality Control Board:	**State agency responsible for administration and enforcement of the municipal and industrial NPDES storm water permits.**
Sanitary Sewer System:	**A network of pipelines carrying sewage to a wastewater treatment facility. Storm drains are separate pipeline and are not connected to sanitary sewers.**
Significant Materials:	**Includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under Section 101(14) of Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); any chemical the facility is required to report pursuant to Section 313 of Title III of Superfund Amendments and Reauthorization Act (SARA); fertilizers; pesticides; and waste products such as ashes, slag, and sludge that have the potential to be released with storm water discharges.**
Significant Quantities:	**The volume, concentrations, or mass of a pollutant in storm water discharges that can cause or threaten to cause pollution, contamination, or nuisance; adversely impact human health or the environment; and cause or contribute to a violation of any applicable water quality standards for the receiving water.**
Storm Water:	**Storm water runoff, and surface runoff and drainage. It excludes infiltration and runoff from agricultural land.**
Storm Water Discharge:	**Storm water at the point where it runs off private property onto adjacent property, the street, canals, creeks, the river, or into the municipal storm drain system.**
Storm Water Pollution Prevention Plan (SWPPP):	**The SWPPP is a document that identifies sources and activities at a particular construction site that may contribute pollutants to storm water, and commits the property owner**

	to implement specific control measures to prevent or treat such pollutants.
U.S. Environmental Protection Agency (EPA):	**The federal agency with authority for enacting and enforcing many environmental laws, including the Clean Water Act.**

Scheduling EC-1

Description and Purpose

Scheduling is the development of a written plan that includes sequencing of construction activities and the implementation of BMPs such as erosion control and sediment control while taking local climate (rainfall, wind, etc.) into consideration. The purpose is to reduce the amount and duration of soil exposed to erosion by wind, rain, runoff, and vehicle tracking, and to perform the construction activities and control practices in accordance with the planned schedule.

Suitable Applications

Proper sequencing of construction activities to reduce erosion potential should be incorporated into the schedule of every construction project especially during rainy season. Use of other, more costly yet less effective, erosion and sediment control BMPs may often be reduced through proper construction sequencing.

Limitations

- Environmental constraints such as nesting season prohibitions reduce the full capabilities of this BMP.

Implementation

- Avoid rainy periods. Schedule major grading operations during dry months when practical. Allow enough time before rainfall begins to stabilize the soil with vegetation or physical means or to install sediment trapping devices.
- Plan the project and develop a schedule showing each phase of construction. Clearly show how the rainy season relates

to soil disturbing and re-stabilization activities. Incorporate the construction schedule into the SWPPP.

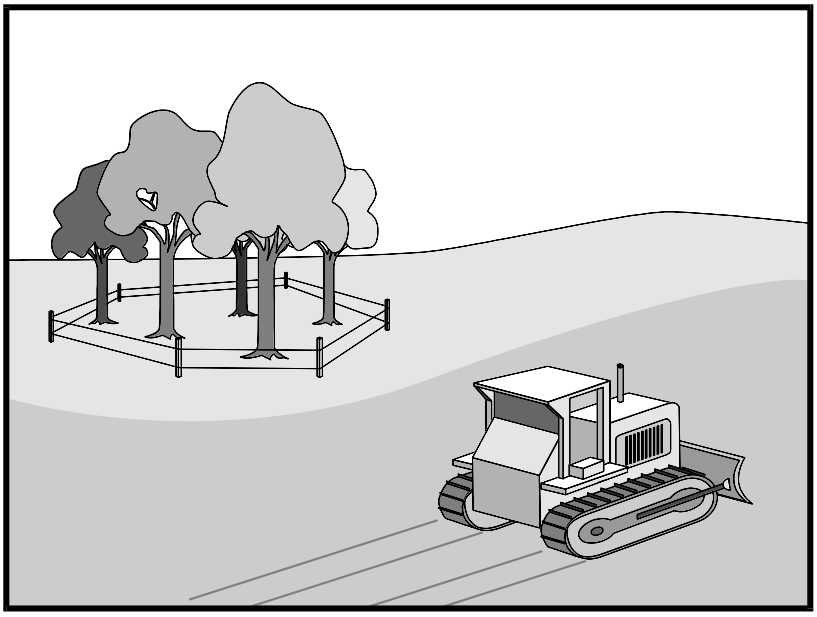
- Include on the schedule, details on the rainy season implementation and deployment of:
  - Erosion control BMPs
  - Sediment control BMPs
  - Tracking control BMPs
  - Wind erosion control BMPs
  - Non-stormwater BMPs
  - Waste management and materials pollution control BMPs
- Include dates for activities that may require non-stormwater discharges such as dewatering, sawcutting, grinding, drilling, boring, crushing, blasting, painting, hydro-demolition, mortar mixing, pavement cleaning, etc.
- Work out the sequencing and timetable for the start and completion of each item such as site clearing and grubbing, grading, excavation, paving, foundation pouring utilities installation, etc., to minimize the active construction area during the rainy season.
  - Sequence trenching activities so that most open portions are closed before new trenching begins.
  - Incorporate staged seeding and re-vegetation of graded slopes as work progresses.
  - Schedule establishment of permanent vegetation during appropriate planting time for specified vegetation.
- Non-active areas should be stabilized as soon as practical after the cessation of soil disturbing activities or one day prior to the onset of precipitation.
- Monitor the weather forecast for rainfall.
- When rainfall is predicted, adjust the construction schedule to allow the implementation of soil stabilization and sediment treatment controls on all disturbed areas prior to the onset of rain.
- Be prepared year-round to deploy erosion control and sediment control BMPs. Erosion may be caused during dry seasons by un-seasonal rainfall, wind, and vehicle tracking. Keep the site stabilized year-round and retain and maintain rainy season sediment trapping devices in operational condition.
- Apply permanent erosion control to areas deemed substantially complete during the project's defined seeding window.
- Avoid soil disturbance during periods with high wind velocities.

Costs

Construction scheduling to reduce erosion may increase other construction costs due to reduced economies of scale in performing site grading. The cost effectiveness of scheduling techniques

should be compared with the other less effective erosion and sedimentation controls to achieve a cost-effective balance.

Inspection and Maintenance



- Verify that work is progressing in accordance with the schedule. If progress deviates, take corrective actions.
- Amend the schedule when changes are warranted.
- Amend the schedule prior to the rainy season to show updated information on the deployment and implementation of construction site BMPs.

Potential Alternatives

None

Description and Purpose

Carefully planned preservation of existing vegetation minimizes the potential of removing or injuring existing trees, vines, shrubs, and grasses that protect soil from erosion.

Suitable Applications

Preservation of existing vegetation is suitable for use on most projects. Large project sites often provide the greatest opportunity for use of this BMP. Suitable applications include the following:

- Areas within the site where no construction activity occurs or occurs at a later date. This BMP is especially suitable to multi year projects where grading can be phased.
- Areas where natural vegetation exists and is designated for preservation. Such areas often include steep slopes, watercourse, and building sites in wooded areas.
- Areas where local, state, and federal government require preservation, such as vernal pools, wetlands, marshes, certain oak trees, etc. These areas are usually designated on the plans, or in the specifications, permits, or environmental documents.
- Where vegetation designated for ultimate removal can be temporarily preserved and be utilized for erosion control and sediment control.
- Protecting existing vegetation buffers and swales.

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Limitations

- Requires forward planning by the owner/developer, contractor, and design staff.
- Limited opportunities for use when project plans do not incorporate existing vegetation into the site design.
- For sites with diverse topography, it is often difficult and expensive to save existing trees while grading the site satisfactory for the planned development.

Implementation

The best way to prevent erosion is to not disturb the land. In order to reduce the impacts of new development and redevelopment, projects may be designed to avoid disturbing land in sensitive areas of the site (e.g., natural watercourses, steep slopes), and to incorporate unique or desirable existing vegetation into the site's landscaping plan. Clearly marking and leaving a buffer area around these unique areas during construction will help to preserve these areas as well as take advantage of natural erosion prevention and sediment trapping.

Existing vegetation to be preserved on the site must be protected from mechanical and other injury while the land is being developed. The purpose of protecting existing vegetation is to ensure the survival of desirable vegetation for shade, beautification, and erosion control. Mature vegetation has extensive root systems that help to hold soil in place, thus reducing erosion. In addition, vegetation helps keep soil from drying rapidly and becoming susceptible to erosion. To effectively save existing vegetation, no disturbances of any kind should be allowed within a defined area around the vegetation. For trees, no construction activity should occur within the drip line of the tree.

Timing

- Provide for preservation of existing vegetation prior to the commencement of clearing and grubbing operations or other soil disturbing activities in areas where no construction activity is planned or will occur at a later date.

Design and Layout

- Mark areas to be preserved with temporary fencing. Include sufficient setback to protect roots.
  - Orange colored plastic mesh fencing works well.
  - Use appropriate fence posts and adequate post spacing and depth to completely support the fence in an upright position.
- Locate temporary roadways, stockpiles, and layout areas to avoid stands of trees, shrubs, and grass.
- Consider the impact of grade changes to existing vegetation and the root zone.
- Maintain existing irrigation systems where feasible. Temporary irrigation may be required.
- Instruct employees and subcontractors to honor protective devices. Prohibit heavy equipment, vehicular traffic, or storage of construction materials within the protected area.

- Consider pruning or mowing vegetation instead of removing it to allow for regrowth.
- If possible, retain vegetation buffer around the site and adjacent waterways.

Costs

There is little cost associated with preserving existing vegetation if properly planned during the project design, and these costs may be offset by aesthetic benefits that enhance property values. During construction, the cost for preserving existing vegetation will likely be less than the cost of applying erosion and sediment controls to the disturbed area. Replacing vegetation inadvertently destroyed during construction can be extremely expensive, sometimes in excess of $10,000 per tree.

Inspection and Maintenance

During construction, the limits of disturbance should remain clearly marked at all times. Irrigation or maintenance of existing vegetation should be described in the landscaping plan. If damage to protected trees still occurs, maintenance guidelines described below should be followed:

- Verify that protective measures remain in place. Restore damaged protection measures immediately.
- Serious tree injuries shall be attended to by an arborist.
- Damage to the crown, trunk, or root system of a retained tree shall be repaired immediately.
- Trench as far from tree trunks as possible, usually outside of the tree drip line or canopy. Curve trenches around trees to avoid large roots or root concentrations. If roots are encountered, consider tunneling under them. When trenching or tunneling near or under trees to be retained, place tunnels at least 18 in. below the ground surface, and not below the tree center to minimize impact on the roots.
- Do not leave tree roots exposed to air. Cover exposed roots with soil as soon as possible. If soil covering is not practical, protect exposed roots with wet burlap or peat moss until the tunnel or trench is ready for backfill.
- Cleanly remove the ends of damaged roots with a smooth cut.
- Fill trenches and tunnels as soon as possible. Careful filling and tamping will eliminate air spaces in the soil, which can damage roots.
- If bark damage occurs, cut back all loosened bark into the undamaged area, with the cut tapered at the top and bottom and drainage provided at the base of the wood. Limit cutting the undamaged area as much as possible.
- Aerate soil that has been compacted over a trees root zone by punching holes 12 in. deep with an iron bar and moving the bar back and forth until the soil is loosened. Place holes 18 in. apart throughout the area of compacted soil under the tree crown.
- Fertilization:

- Fertilize trees in the late fall or early spring. Although to note, many native species do not require fertilization.

- Apply fertilizer to the soil over the feeder roots and in accordance with label instructions, but never closer than 3 ft to the trunk. Increase the fertilized area by one-fourth of the crown area for conifers that have extended root systems.

- Retain protective measures until all other construction activity is complete to avoid damage during site cleanup and stabilization.

Check Dams SE-4

Description and Purpose

A check dam is a small barrier constructed of rock, gravel bags, sandbags, fiber rolls, or other proprietary products, placed across a constructed swale or drainage ditch. Check dams reduce the effective slope of the channel, thereby reducing scour and channel erosion by reducing flow velocity and increasing residence time within the channel, allowing sediment to settle.

Suitable Applications

Check dams may be appropriate in the following situations:

- To promote sedimentation behind the dam.
- To prevent erosion by reducing the velocity of channel flow in small intermittent channels and temporary swales.
- In small open channels that drain 10 acres or less.
- In steep channels where stormwater runoff velocities exceed 5 ft/s.
- During the establishment of grass linings in drainage ditches or channels.
- In temporary ditches where the short length of service does not warrant establishment of erosion-resistant linings.
- To act as a grade control structure.

SE-8 Sandbag Barrier

SE-12 Manufactured Linear Sediment Controls

SE-14 Biofilter Bags

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Limitations

- Not to be used in live streams or in channels with extended base flows.
- Not appropriate in channels that drain areas greater than 10 acres.
- Not appropriate in channels that are already grass-lined unless erosion potential or sediment-laden flow is expected, as installation may damage vegetation.
- Require extensive maintenance following high velocity flows.
- Promotes sediment trapping which can be re-suspended during subsequent storms or removal of the check dam.
- Do not construct check dams with straw bales or silt fence.
- Water suitable for mosquito production may stand behind check dams, particularly if subjected to daily non-stormwater discharges.

Implementation

General

Check dams reduce the effective slope and create small pools in swales and ditches that drain 10 acres or less. Using check dams to reduce channel slope reduces the velocity of stormwater flows, thus reducing erosion of the swale or ditch and promoting sedimentation. Thus, check dams are dual-purpose and serve an important role as erosion controls as well as sediment controls. Note that use of 1-2 isolated check dams for sedimentation will likely result in little net removal of sediment because of the small detention time and probable scour during longer storms. Using a series of check dams will generally increase their effectiveness. A sediment trap (SE-3) may be placed immediately upstream of the check dam to increase sediment removal efficiency.

Design and Layout

Check dams work by decreasing the effective slope in ditches and swales. An important consequence of the reduced slope is a reduction in capacity of the ditch or swale. This reduction in capacity should be considered when using this BMP, as reduced capacity can result in overtopping of the ditch or swale and resultant consequences. In some cases, such as a "permanent" ditch or swale being constructed early and used as a "temporary" conveyance for construction flows, the ditch or swale may have sufficient capacity such that the temporary reduction in capacity due to check dams is acceptable. When check dams reduce capacities beyond acceptable limits, either:

- Don't use check dams. Consider alternative BMPs, or.
- Increase the size of the ditch or swale to restore capacity.

Maximum slope and velocity reduction is achieved when the toe of the upstream dam is at the same elevation as the top of the downstream dam (see "Spacing Between Check Dams" detail at the end of this fact sheet). The center section of the dam should be lower than the edge sections (at least 6 inches), acting as a spillway, so that the check dam will direct flows to the center of

the ditch or swale (see "Typical Rock Check Dam" detail at the end of this fact sheet). Bypass or side-cutting can occur if a sufficient spillway is not provided in the center of the dam.

Check dams are usually constructed of rock, gravel bags, sandbags, and fiber rolls. A number of products can also be used as check dams (e.g. HDPE check dams, temporary silt dikes (SE-12)), and some of these products can be removed and reused. Check dams can also be constructed of logs or lumber and have the advantage of a longer lifespan when compared to gravel bags, sandbags, and fiber rolls. Check dams should not be constructed from straw bales or silt fences, since concentrated flows quickly wash out these materials.

Rock check dams are usually constructed of 8 to 12 in. rock. The rock is placed either by hand or mechanically, but never just dumped into the channel. The dam should completely span the ditch or swale to prevent washout. The rock used should be large enough to stay in place given the expected design flow through the channel. It is recommended that abutments be extended 18 in. into the channel bank. Rock can be graded such that smaller diameter rock (e.g. 2-4 in) is located on the upstream side of larger rock (holding the smaller rock in place); increasing residence time.

Log check dams are usually constructed of 4 to 6 in. diameter logs, installed vertically. The logs should be embedded into the soil at least 18 in. Logs can be bolted or wired to vertical support logs that have been driven or buried into the soil.

See fiber rolls, SE-5, for installation of fiber roll check dams.

Gravel bag and sand bag check dams are constructed by stacking bags across the ditch or swale, shaped as shown in the drawings at the end of this fact sheet (see "Gravel Bag Check Dam" detail at the end of this fact sheet).

Manufactured products, such as temporary silt dikes (SE-12), should be installed in accordance with the manufacturer's instructions. Installation typically requires anchoring or trenching of products, as well as regular maintenance to remove accumulated sediment and debris.

If grass is planted to stabilize the ditch or swale, the check dam should be removed when the grass has matured (unless the slope of the swales is greater than 4%).

The following guidance should be followed for the design and layout of check dams:

- Install the first check dam approximately 16 ft from the outfall device and at regular intervals based on slope gradient and soil type.
- Check dams should be placed at a distance and height to allow small pools to form between each check dam.
- For multiple check dam installation, backwater from a downstream check dam should reach the toes of the upstream check dam.
- A sediment trap provided immediately upstream of the check dam will help capture sediment. Due to the potential for this sediment to be resuspended in subsequent storms, the sediment trap should be cleaned following each storm event.

- High flows (typically a 2-year storm or larger) should safely flow over the check dam without an increase in upstream flooding or damage to the check dam.
- Where grass is used to line ditches, check dams should be removed when grass has matured sufficiently to protect the ditch or swale.

Materials

- Rock used for check dams should typically be 8-12 in rock and be sufficiently sized to stay in place given expected design flows in the channel. Smaller diameter rock (e.g. 2 to 4 in) can be placed on the upstream side of larger rock to increase residence time.
- Gravel bags used for check dams should conform to the requirements of SE-6, Gravel Bag Berms.
- Sandbags used for check dams should conform to SE-8, Sandbag Barrier.
- Fiber rolls used for check dams should conform to SE-5, Fiber Rolls.
- Temporary silt dikes used for check dams should conform to SE-12, Temporary Silt Dikes.

Installation

- Rock should be placed individually by hand or by mechanical methods (no dumping of rock) to achieve complete ditch or swale coverage.
- Tightly abut bags and stack according to detail shown in the figure at the end of this section (pyramid approach). Gravel bags and sandbags should not be stacked any higher than 3 ft.
- Upper rows or gravel and sand bags shall overlap joints in lower rows.
- Fiber rolls should be trenched in, backfilled, and firmly staked in place.
- Install along a level contour.
- HDPE check dams, temporary silt dikes, and other manufactured products should be used and installed per manufacturer specifications.

Costs

Cost consists of labor costs if materials are readily available (such as gravel on-site). If material must be imported, costs will increase. For other material and installation costs, see SE-5, SE-6, SE-8, SE-12, and SE-14.

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Replace missing rock, bags, rolls, etc. Replace bags or rolls that have degraded or have become damaged.

- If the check dam is used as a sediment capture device, sediment that accumulates behind the BMP should be periodically removed in order to maintain BMP effectiveness. Sediment should be removed when the sediment accumulation reaches one-third of the barrier height.
- If the check dam is used as a grade control structure, sediment removal is not required as long as the system continues to control the grade.
- Inspect areas behind check dams for pools of standing water, especially if subjected to daily non-stormwater discharges.
- Remove accumulated sediment prior to permanent seeding or soil stabilization.
- Remove check dam and accumulated sediment when check dams are no longer needed.

Description and Purpose

A fiber roll (also known as wattles or logs) consists of straw, coir, curled wood fiber, or other biodegradable materials bound into a tight tubular roll wrapped by plastic netting, which can be photodegradable, or natural fiber, such as jute, cotton, or sisal. Additionally, gravel core fiber rolls are available, which contain an imbedded ballast material such as gravel or sand for additional weight when staking the rolls are not feasible (such as use as inlet protection). When fiber rolls are placed at the toe and on the face of slopes along the contours, they intercept runoff, reduce its flow velocity, release the runoff as sheet flow, and provide removal of sediment from the runoff (through sedimentation). By interrupting the length of a slope, fiber rolls can also reduce sheet and rill erosion until vegetation is established.

Suitable Applications

Fiber rolls may be suitable:

- Along the toe, top, face, and at grade breaks of exposed and erodible slopes to shorten slope length and spread runoff as sheet flow.
- At the end of a downward slope where it transitions to a steeper slope.
- Along the perimeter of a project.
- As check dams in unlined ditches with minimal grade.
- Down-slope of exposed soil areas.

SE-14 Biofilter Bags

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

- At operational storm drains as a form of inlet protection.
- Around temporary stockpiles.

Limitations

- Fiber rolls should be used in conjunction with erosion control, such as hydroseed, RECPs, etc.
- Only biodegradable fiber rolls containing no plastic can remain on a site applying for a Notice of Termination due to plastic pollution and wildlife concerns (State Water Board, 2016). Fiber rolls containing plastic that are used on a site must be disposed of for final stabilization.
- Fiber rolls are not effective unless trenched in and staked. If not properly staked and trenched in, fiber rolls will not work as intended and could be transported by high flows.
- Not intended for use in high flow situations (i.e., for concentrated flows).
- Difficult to move once saturated.
- Fiber rolls have a limited sediment capture zone.
- Fiber rolls should not be used on slopes subject to creep, slumping, or landslide.
- Rolls typically function for 12-24 months, depending upon local conditions and roll material.

Implementation

Fiber Roll Materials

- Fiber rolls should be prefabricated.
- Fiber rolls may come manufactured containing polyacrylamide (PAM), a flocculating agent within the roll. Fiber rolls impregnated with PAM provide additional sediment removal capabilities and should be used in areas with fine, clayey or silty soils to provide additional sediment removal capabilities. Monitoring may be required for these installations.
- Fiber rolls are made from weed-free rice straw, flax, curled wood fiber, or coir bound into a tight tubular roll by netting or natural fiber (see *Limitations* above regarding plastic netting).
- Typical fiber rolls vary in diameter from 6 in. to 20 in. Larger diameter rolls are available as well. The larger the roll, the higher the sediment retention capacity.
- Typical fiber rolls lengths are 4, 10, 20 and 25 ft., although other lengths are likely available.

Installation

- Locate fiber rolls on level contours spaced as follows:
  - Slope inclination of 4:1 (H:V) or flatter: Fiber rolls should be placed at a maximum interval of 20 ft.

  - Slope inclination between 4:1 and 2:1 (H:V): Fiber Rolls should be placed at a maximum interval of 15 ft. (a closer spacing is more effective).

  - Slope inclination 2:1 (H:V) or greater: Fiber Rolls should be placed at a maximum interval of 10 ft. (a closer spacing is more effective).

- Prepare the slope before beginning installation.

- Dig small trenches across the slope on the contour. The trench depth should be ¼ to 1/3 of the thickness of the roll, and the width should equal the roll diameter, in order to provide area to backfill the trench.

- It is critical that rolls are installed perpendicular to water movement, and parallel to the slope contour.

- Start building trenches and installing rolls from the bottom of the slope and work up.

- It is recommended that pilot holes be driven through the fiber roll. Use a straight bar to drive holes through the roll and into the soil for the wooden stakes.

- Turn the ends of the fiber roll up slope to prevent runoff from going around the roll.

- Stake fiber rolls into the trench.

  - Drive stakes at the end of each fiber roll and spaced 4 ft maximum on center.

  - Use wood stakes with a nominal classification of 0.75 by 0.75 in. and minimum length of 24 in.

- If more than one fiber roll is placed in a row, the rolls should be overlapped, not abutted.

- See typical fiber roll installation details at the end of this fact sheet.

Removal

- Fiber rolls can be left in place or removed depending on the type of fiber roll and application (temporary vs. permanent installation). Fiber rolls encased with plastic netting or containing any plastic material will need to be removed from the site for final stabilization. Fiber rolls used in a permanent application are to be encased with a non-plastic material and are left in place. Removal of a fiber roll used in a permanent application can result in greater disturbance; therefore, during the BMP planning phase, the areas where fiber rolls will be used on final slopes, only fiber rolls wrapped in non-plastic material should be selected.

- Temporary installations should only be removed when up gradient areas are stabilized per General Permit requirements, and/or pollutant sources no longer present a hazard. But they should also be removed before vegetation becomes too mature so that the removal process does not disturb more soil and vegetation than is necessary.

Costs

Material costs for straw fiber rolls range from $26 - $38 per 25-ft. roll[1] and curled wood fiber rolls range from $30 - $40 per roll[2].

Material costs for PAM impregnated fiber rolls range between $9.00-$12.00 per linear foot, based upon vendor research[1] .

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Repair or replace split, torn, unraveling, or slumping fiber rolls.
- If the fiber roll is used as a sediment capture device, or as an erosion control device to maintain sheet flows, sediment that accumulates in the BMP should be periodically removed in order to maintain BMP effectiveness. Sediment should be removed when sediment accumulation reaches one-third the designated sediment storage depth.
- If fiber rolls are used for erosion control, such as in a check dam, sediment removal should not be required as long as the system continues to control the grade. Sediment control BMPs will likely be required in conjunction with this type of application.
- Repair any rills or gullies promptly.

Gravel Bag Berm SE-6

Description and Purpose

A gravel bag berm is a series of gravel-filled bags placed on a level contour to intercept sheet flows. Gravel bags pond sheet flow runoff, allowing sediment to settle out, and release runoff slowly as sheet flow, preventing erosion.

Suitable Applications

Gravel bag berms may be suitable:

- As a linear sediment control measure:
  - Below the toe of slopes and erodible slopes
  - As sediment traps at culvert/pipe outlets
  - Below other small cleared areas
  - Along the perimeter of a site
  - Down slope of exposed soil areas
  - Around temporary stockpiles and spoil areas
  - Parallel to a roadway to keep sediment off paved areas
  - Along streams and channels
- As a linear erosion control measure:
  - Along the face and at grade breaks of exposed and erodible slopes to shorten slope length and spread runoff as sheet flow.

SE-14 Biofilter Bags

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

- At the top of slopes to divert runoff away from disturbed slopes.
- As chevrons (small check dams) across mildly sloped construction roads. For use check dam use in channels, see SE-4, Check Dams.

Limitations

- Gravel berms may be difficult to remove.
- Removal problems limit their usefulness in landscaped areas.
- Gravel bag berm may not be appropriate for drainage areas greater than 5 acres.
- Runoff will pond upstream of the berm, possibly causing flooding if sufficient space does not exist.
- Degraded gravel bags may rupture when removed, spilling contents.
- Installation can be labor intensive.
- Durability of gravel bags is somewhat limited, and bags may need to be replaced when installation is required for longer than 6 months.
- Easily damaged by construction equipment.
- When used to detain concentrated flows, maintenance requirements increase.

Implementation

General

A gravel bag berm consists of a row of open graded gravel-filled bags placed on a level contour. When appropriately placed, a gravel bag berm intercepts and slows sheet flow runoff, causing temporary ponding. The temporary ponding allows sediment to settle. The open graded gravel in the bags is porous, which allows the ponded runoff to flow slowly through the bags, releasing the runoff as sheet flows. Gravel bag berms also interrupt the slope length and thereby reduce erosion by reducing the tendency of sheet flows to concentrate into rivulets, which erode rills, and ultimately gullies, into disturbed, sloped soils. Gravel bag berms are similar to sand bag barriers but are more porous. Generally, gravel bag berms should be used in conjunction with temporary soil stabilization controls up slope to provide effective erosion and sediment control.

Design and Layout

- Locate gravel bag berms on level contours.
- When used for slope interruption, the following slope/sheet flow length combinations apply:
  - Slope inclination of 4:1 (H:V) or flatter: Gravel bags should be placed at a maximum interval of 20 ft, with the first row near the slope toe.
  - Slope inclination between 4:1 and 2:1 (H:V): Gravel bags should be placed at a maximum interval of 15 ft. (a closer spacing is more effective), with the first row near the slope toe.

Slope inclination 2:1 (H:V) or greater: Gravel bags should be placed at a maximum interval of 10 ft. (a closer spacing is more effective), with the first row near the slope toe.

- Turn the ends of the gravel bag barriers up slope to prevent runoff from going around the berm.
- Allow sufficient space up slope from the gravel bag berm to allow ponding, and to provide room for sediment storage.
- For installation near the toe of the slope, gravel bag barriers should be set back from the slope toe to facilitate cleaning. Where specific site conditions do not allow for a set-back, the gravel bag barrier may be constructed on the toe of the slope. To prevent flows behind the barrier, bags can be placed perpendicular to a berm to serve as cross barriers.
- Drainage area should not exceed 5 acres.
- In Non-Traffic Areas:
  - Height = 18 in. maximum
  - Top width = 24 in. minimum for three or more-layer construction
  - Top width = 12 in. minimum for one- or two-layer construction
  - Side slopes = 2:1 (H:V) or flatter
- In Construction Traffic Areas:
  - Height = 12 in. maximum
  - Top width = 24 in. minimum for three or more-layer construction.
  - Top width = 12 in. minimum for one- or two-layer construction.
  - Side slopes = 2:1 (H:V) or flatter.
- Butt ends of bags tightly.
- On multiple row, or multiple layer construction, overlap butt joints of adjacent row and row beneath.
- Use a pyramid approach when stacking bags.

Materials

- ***Bag Material:*** Bags should be woven polypropylene, polyethylene or polyamide fabric or burlap, minimum unit weight of 4 ounces/yd^2, Mullen burst strength exceeding 300 lb/in^2 in conformance with the requirements in ASTM designation D3786, and ultraviolet stability exceeding 70% in conformance with the requirements in ASTM designation D4355.

- ***Bag Size:*** Each gravel-filled bag should have a length of 18 in., width of 12 in., thickness of 3 in., and mass of approximately 33 lbs. Bag dimensions are nominal and may vary based on locally available materials.

- ***Fill Material:*** Fill material should be 0.5 to 1 in. Crushed rock, clean and free from clay, organic matter, and other deleterious material, or other suitable open graded, non-cohesive, porous gravel.

Costs

Material costs for gravel bags are average and are dependent upon material availability. $3.20-$3.80 per filled gravel bag is standard based upon vendor research (Adjusted for inflation, 2016 dollars, by Tetra Tech, Inc.).

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.

- Gravel bags exposed to sunlight will need to be replaced every two to three months due to degrading of the bags.

- Reshape or replace gravel bags as needed.

- Repair washouts or other damage as needed.

- Sediment that accumulates in the BMP should be periodically removed in order to maintain BMP effectiveness. Sediment should be removed when the sediment accumulation reaches one-third of the barrier height.

- Remove gravel bag berms when no longer needed and recycle gravel fill whenever possible and properly dispose of bag material. Remove sediment accumulation and clean, re-grade, and stabilize the area.

Organics	

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Street sweeping and vacuuming includes use of self-propelled and walk-behind equipment to remove sediment from streets and roadways and to clean paved surfaces in preparation for final paving. Sweeping and vacuuming prevents sediment from the project site from entering storm drains or receiving waters.

Suitable Applications

Sweeping and vacuuming are suitable anywhere sediment is tracked from the project site onto public or private paved streets and roads, typically at points of egress. Sweeping and vacuuming are also applicable during preparation of paved surfaces for final paving.

Limitations

- Sweeping and vacuuming may not be effective when sediment is wet or when tracked soil is caked (caked soil may need to be scraped loose).
- Sweeping may be less effective for fine particle soils (i.e., clay).

Implementation

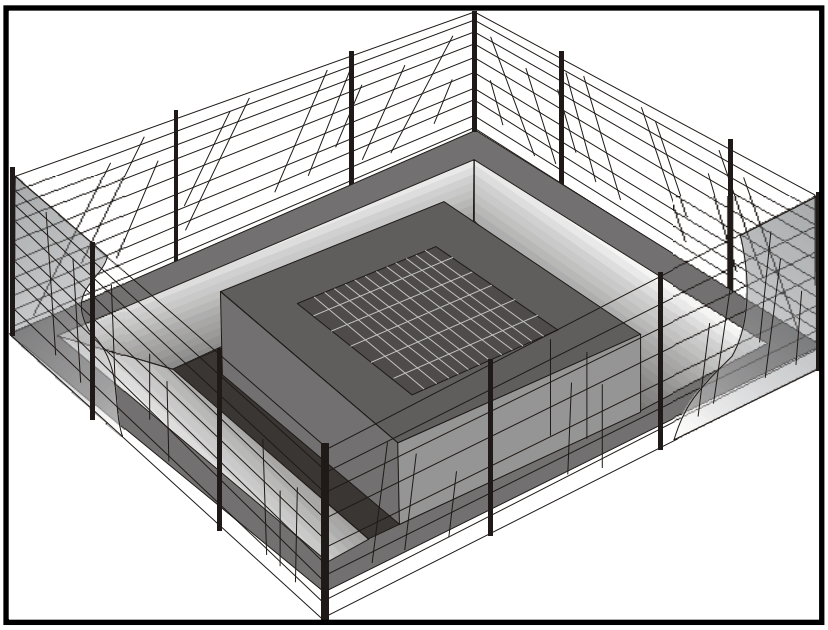
- Controlling the number of points where vehicles can leave the site will allow sweeping and vacuuming efforts to be focused and perhaps save money.
- Inspect potential sediment tracking locations daily.

- Visible sediment tracking should be swept or vacuumed on a daily basis.
- Do not use kick brooms or sweeper attachments. These tend to spread the dirt rather than remove it.
- If not mixed with debris or trash, consider incorporating the removed sediment back into the project

Costs

Rental rates for self-propelled sweepers vary depending on hopper size and duration of rental. Expect rental rates from $ 650/day to $2,500/day[1], plus operator costs. Hourly production rates vary with the amount of area to be swept and amount of sediment. Match the hopper size to the area and expect sediment load to minimize time spent dumping.

Inspection and Maintenance



- Inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- When actively in use, points of ingress and egress must be inspected daily.
- When tracked or spilled sediment is observed outside the construction limits, it must be removed at least daily. More frequent removal, even continuous removal, may be required in some jurisdictions.
- Be careful not to sweep up any unknown substance or any object that may be potentially hazardous.
- Adjust brooms frequently; maximize efficiency of sweeping operations.
- After sweeping is finished, properly dispose of sweeper wastes at an approved dumpsite.

[1] Based on contractor query conducted by Tetra Tech, Inc. November 2016.

Storm Drain Inlet Protection SE-10

Description and Purpose

Storm drain inlet protection consists of a sediment filter or an impounding area in, around or upstream of a storm drain, drop inlet, or curb inlet. Storm drain inlet protection measures temporarily pond runoff before it enters the storm drain, allowing sediment to settle. Some filter configurations also remove sediment by filtering, but usually the ponding action results in the greatest sediment reduction. Temporary geotextile storm drain inserts attach underneath storm drain grates to capture and filter storm water.

Suitable Applications

- Every storm drain inlet receiving runoff from unstabilized or otherwise active work areas should be protected. Inlet protection should be used in conjunction with other erosion and sediment controls to prevent sediment-laden stormwater and non-stormwater discharges from entering the storm drain system.

Limitations

- Drainage area should not exceed 1 acre.
- In general straw bales should not be used as inlet protection.
- Requires an adequate area for water to pond without encroaching into portions of the roadway subject to traffic.
- Sediment removal may be inadequate to prevent sediment discharges in high flow conditions or if runoff is heavily sediment laden. If high flow conditions are expected, use

SE-13 Compost Socks and Berms

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

other onsite sediment trapping techniques in conjunction with inlet protection.

- Frequent maintenance is required.
- Limit drainage area to 1 acre maximum. For drainage areas larger than 1 acre, runoff should be routed to a sediment-trapping device designed for larger flows. See BMPs SE-2, Sediment Basin, and SE-3, Sediment Traps.
- Excavated drop inlet sediment traps are appropriate where relatively heavy flows are expected, and overflow capability is needed.

Implementation

General

Inlet control measures presented in this handbook should not be used for inlets draining more than one acre. Runoff from larger disturbed areas should be first routed through SE-2, Sediment Basin or SE-3, Sediment Trap and/or used in conjunction with other drainage control, erosion control, and sediment control BMPs to protect the site. Different types of inlet protection are appropriate for different applications depending on site conditions and the type of inlet. Alternative methods are available in addition to the methods described/shown herein such as prefabricated inlet insert devices, or gutter protection devices.

Design and Layout

Identify existing and planned storm drain inlets that have the potential to receive sediment-laden surface runoff. Determine if storm drain inlet protection is needed and which method to use.

- The key to successful and safe use of storm drain inlet protection devices is to know where runoff that is directed toward the inlet to be protected will pond or be diverted as a result of installing the protection device.
  - Determine the acceptable location and extent of ponding in the vicinity of the drain inlet. The acceptable location and extent of ponding will influence the type and design of the storm drain inlet protection device.
  - Determine the extent of potential runoff diversion caused by the storm drain inlet protection device. Runoff ponded by inlet protection devices may flow around the device and towards the next downstream inlet. In some cases, this is acceptable; in other cases, serious erosion or downstream property damage can be caused by these diversions. The possibility of runoff diversions will influence whether or not storm drain inlet protection is suitable; and, if suitable, the type and design of the device.
- The location and extent of ponding, and the extent of diversion, can usually be controlled through appropriate placement of the inlet protection device. In some cases, moving the inlet protection device a short distance upstream of the actual inlet can provide more efficient sediment control, limit ponding to desired areas, and prevent or control diversions.
- Seven types of inlet protection are presented below. However, it is recognized that other effective methods and proprietary devices exist and may be selected.

- Silt Fence: Appropriate for drainage basins with less than a 5% slope, sheet flows, and flows under 0.5 cfs.

- Excavated Drop Inlet Sediment Trap: An excavated area around the inlet to trap sediment (SE-3).

- Gravel bag barrier: Used to create a small sediment trap upstream of inlets on sloped, paved streets. Appropriate for sheet flow or when concentrated flow may exceed 0.5 cfs, and where overtopping is required to prevent flooding.

- Block and Gravel Filter: Appropriate for flows greater than 0.5 cfs.

- Temporary Geotextile Storm drain Inserts: Different products provide different features. Refer to manufacturer details for targeted pollutants and additional features.

- Biofilter Bag Barrier: Used to create a small retention area upstream of inlets and can be located on pavement or soil. Biofilter bags slowly filter runoff allowing sediment to settle out. Appropriate for flows under 0.5 cfs.

- Compost Socks: Allow filtered run-off to pass through the compost while retaining sediment and potentially other pollutants (SE-13). Appropriate for flows under 1.0 cfs.

- Select the appropriate type of inlet protection and design as referred to or as described in this fact sheet.

- Provide area around the inlet for water to pond without flooding structures and property.

- Grates and spaces around all inlets should be sealed to prevent seepage of sediment-laden water.

- Excavate sediment sumps (where needed) 1 to 2 ft with 2:1 side slopes around the inlet.

Installation

- ***DI Protection Type 1 - Silt Fence -*** Similar to constructing a silt fence; see BMP SE-1, Silt Fence. Do not place fabric underneath the inlet grate since the collected sediment may fall into the drain inlet when the fabric is removed or replaced and water flow through the grate will be blocked resulting in flooding. See typical Type 1 installation details at the end of this fact sheet.

  1. Excavate a trench approximately 6 in. wide and 6 in. deep along the line of the silt fence inlet protection device.

  2. Place 2 in. by 2 in. wooden stakes around the perimeter of the inlet a maximum of 3 ft apart and drive them at least 18 in. into the ground or 12 in. below the bottom of the trench. The stakes should be at least 48 in.

  3. Lay fabric along bottom of trench, up side of trench, and then up stakes. See SE-1, Silt Fence, for details. The maximum silt fence height around the inlet is 24 in.

  4. Staple the filter fabric (for materials and specifications, see SE-1, Silt Fence) to wooden stakes. Use heavy-duty wire staples at least 1 in. in length.

5. Backfill the trench with gravel or compacted earth all the way around.

- ***DI Protection Type 2 - Excavated Drop Inlet Sediment Trap -*** Install filter fabric fence in accordance with DI Protection Type 1. Size excavated trap to provide a minimum storage capacity calculated at the rate 67 yd^3/acre of drainage area. See typical Type 2 installation details at the end of this fact sheet.

- ***DI Protection Type 3 - Gravel bag -*** Flow from a severe storm should not overtop the curb. In areas of high clay and silts, use filter fabric and gravel as additional filter media. Construct gravel bags in accordance with SE-6, Gravel Bag Berm. Gravel bags should be used due to their high permeability. See typical Type 3 installation details at the end of this fact sheet.

  1. Construct on gently sloping street.

  2. Leave room upstream of barrier for water to pond and sediment to settle.

  3. Place several layers of gravel bags – overlapping the bags and packing them tightly together.

  4. Leave gap of one bag on the top row to serve as a spillway. Flow from a severe storm (e.g., 10-year storm) should not overtop the curb.

- ***DI Protection Type 4 – Block and Gravel Filter -*** Block and gravel filters are suitable for curb inlets commonly used in residential, commercial, and industrial construction. See typical Type 4 installation details at the end of this fact sheet.

  1. Place hardware cloth or comparable wire mesh with 0.5 in. openings over the drop inlet so that the wire extends a minimum of 1 ft beyond each side of the inlet structure. If more than one strip is necessary, overlap the strips. Place woven geotextile over the wire mesh.

  2. Place concrete blocks lengthwise on their sides in a single row around the perimeter of the inlet, so that the open ends face outward, not upward. The ends of adjacent blocks should abut. The height of the barrier can be varied, depending on design needs, by stacking combinations of blocks that are 4 in., 8 in., and 12 in. wide. The row of blocks should be at least 12 in. but no greater than 24 in. high.

  3. Place wire mesh over the outside vertical face (open end) of the concrete blocks to prevent stone from being washed through the blocks. Use hardware cloth or comparable wire mesh with 0.5 in. opening.

  4. Pile washed stone against the wire mesh to the top of the blocks. Use 0.75 to 3 in.

- ***DI Protection Type 5 – Temporary Geotextile Insert (proprietary) –*** Many types of temporary inserts are available. Most inserts fit underneath the grate of a drop inlet or inside of a curb inlet and are fastened to the outside of the grate or curb. These inserts are removable, and many can be cleaned and reused. Installation of these inserts differs between manufacturers. Please refer to manufacturer instruction for installation of proprietary devices.

- ***DI Protection Type 6 - Biofilter bags*** – Biofilter bags may be used as a substitute for gravel bags in low-flow situations. Biofilter bags should conform to specifications detailed in SE-14, Biofilter bags.

    1. Construct in a gently sloping area.
    2. Biofilter bags should be placed around inlets to intercept runoff flows.
    3. All bag joints should overlap by 6 in.
    4. Leave room upstream for water to pond and for sediment to settle out.
    5. Stake bags to the ground as described in the following detail. Stakes may be omitted if bags are placed on a paved surface.

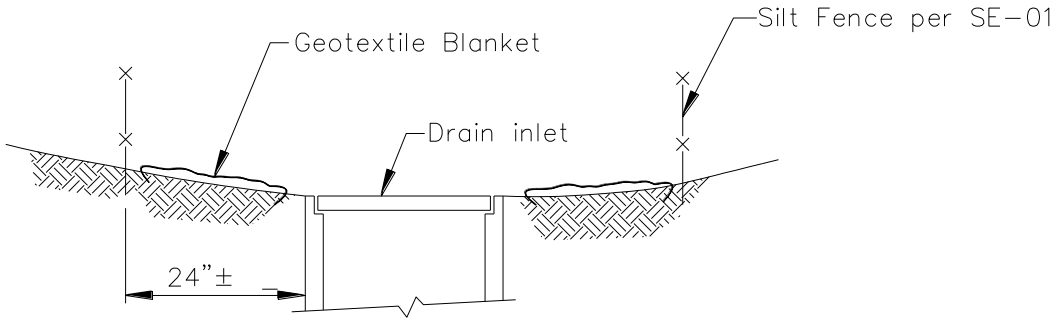
- ***DI Protection Type 7 – Compost Socks*** – A compost sock can be assembled on site by filling a mesh sock (e.g., with a pneumatic blower). Compost socks do not require special trenching compared to other sediment control methods (e.g., silt fence). Compost socks should conform to specification detailed in SE-13, Compost Socks and Berms.

Costs

- Average annual cost for installation and maintenance of DI Type 1-4 and 6 (one-year useful life) is $200 per inlet.
- Temporary geotextile inserts are proprietary, and cost varies by region. These inserts can often be reused and may have greater than 1 year of use if maintained and kept undamaged. Average cost per insert ranges from $50-75 plus installation, but costs can exceed $100. This cost does not include maintenance.
- See SE-13 for Compost Sock cost information.

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Silt Fences. If the fabric becomes clogged, torn, or degrades, it should be replaced. Make sure the stakes are securely driven in the ground and are in good shape (i.e., not bent, cracked, or splintered, and are reasonably perpendicular to the ground). Replace damaged stakes. At a minimum, remove the sediment behind the fabric fence when accumulation reaches one-third the height of the fence or barrier height.
- Gravel Filters. If the gravel becomes clogged with sediment, it should be carefully removed from the inlet and either cleaned or replaced. Since cleaning gravel at a construction site may be difficult, consider using the sediment-laden stone as fill material and put fresh stone around the inlet. Inspect bags for holes, gashes, and snags, and replace bags as needed. Check gravel bags for proper arrangement and displacement.



- Sediment that accumulates in the BMP should be periodically removed in order to maintain BMP effectiveness. Sediment should be removed when the sediment accumulation reaches one-third of the barrier height.
- Inspect and maintain temporary geotextile insert devices according to manufacturer's specifications.
- Remove storm drain inlet protection once the drainage area is stabilized.
    - Clean and regrade area around the inlet and clean the inside of the storm drain inlet, as it should be free of sediment and debris at the time of final inspection.

EC-5 Soil Binders

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Wind erosion or dust control consists of applying water or other chemical dust suppressants as necessary to prevent or alleviate dust nuisance generated by construction activities. Covering small stockpiles or areas is an alternative to applying water or other dust palliatives.

California's Mediterranean climate, with a short "wet" season and a typically long, hot "dry" season, allows the soils to thoroughly dry out. During the dry season, construction activities are at their peak, and disturbed and exposed areas are increasingly subject to wind erosion, sediment tracking, and dust generated by construction equipment. Site conditions and climate can make dust control more of an erosion problem than water-based erosion. Additionally, many local agencies, including Air Quality Management Districts, require dust control and/or dust control permits in order to comply with local nuisance laws, opacity laws (visibility impairment) and the requirements of the Clean Air Act. Wind erosion control is required to be implemented at all construction sites greater than 1 acre by the General Permit.

Suitable Applications

Most BMPs that provide protection against water-based erosion will also protect against wind-based erosion and dust control requirements required by other agencies will generally meet wind erosion control requirements for water quality protection. Wind erosion control BMPs are suitable during the following construction activities:

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Construction vehicle traffic on unpaved roads
- Drilling and blasting activities
- Soils and debris storage piles
- Batch drop from front-end loaders
- Areas with unstabilized soil
- Final grading/site stabilization

Limitations

- Watering prevents dust only for a short period (generally less than a few hours) and should be applied daily (or more often) to be effective.
- Over watering may cause erosion and track-out.
- Oil or oil-treated subgrade should not be used for dust control because the oil may migrate into drainageways and/or seep into the soil.
- Chemical dust suppression agents may have potential environmental impacts. Selected chemical dust control agents should be environmentally benign.
- Effectiveness of controls depends on soil, temperature, humidity, wind velocity and traffic.
- Chemical dust suppression agents should not be used within 100 feet of wetlands or water bodies.
- Chemically treated subgrades may make the soil water repellant, interfering with long-term infiltration and the vegetation/re-vegetation of the site. Some chemical dust suppressants may be subject to freezing and may contain solvents and should be handled properly.
- In compacted areas, watering and other liquid dust control measures may wash sediment or other constituents into the drainage system.
- If the soil surface has minimal natural moisture, the affected area may need to be pre-wetted so that chemical dust control agents can uniformly penetrate the soil surface.

Implementation

Dust Control Practices

Dust control BMPs generally stabilize exposed surfaces and minimize activities that suspend or track dust particles. The following table presents dust control practices that can be applied to varying site conditions that could potentially cause dust. For heavily traveled and disturbed areas, wet suppression (watering), chemical dust suppression, gravel asphalt surfacing, temporary gravel construction entrances, equipment wash-out areas, and haul truck covers can be employed as dust control applications. Permanent or temporary vegetation and mulching can be employed for areas of occasional or no construction traffic. Preventive measures include minimizing surface areas to be disturbed, limiting onsite vehicle traffic to 15 mph or less, and controlling the number and activity of vehicles on a site at any given time.

Chemical dust suppressants include: mulch and fiber based dust palliatives (e.g. paper mulch with gypsum binder), salts and brines (e.g. calcium chloride, magnesium chloride), non-petroleum based organics (e.g. vegetable oil, lignosulfonate), petroleum based organics (e.g. asphalt emulsion, dust oils, petroleum resins), synthetic polymers (e.g. polyvinyl acetate, vinyl, acrylic), clay additives (e.g. bentonite, montmorillonite) and electrochemical products (e.g. enzymes, ionic products).

Site Condition	Dust Control Practices							
	Permanent Vegetation	Mulching	Wet Suppression (Watering)	Chemical Dust Suppression	Gravel or Asphalt	Temporary Gravel Construction Entrances/Equipment Wash Down	Synthetic Covers	Minimize Extent of Disturbed Area
Disturbed Areas not Subject to Traffic	x	x	x	x	x			x
Disturbed Areas Subject to Traffic			x	x	x	x		x
Material Stockpiles		x	x	x			x	x
Demolition			x			x	x	
Clearing/ Excavation			x	x				x
Truck Traffic on Unpaved Roads			x	x	x	x	x	
Tracking					x	x		

Additional preventive measures include:

- Schedule construction activities to minimize exposed area (see EC-1, Scheduling).
- Quickly treat exposed soils using water, mulching, chemical dust suppressants, or stone/gravel layering.
- Identify and stabilize key access points prior to commencement of construction.
- Minimize the impact of dust by anticipating the direction of prevailing winds.
- Restrict construction traffic to stabilized roadways within the project site, as practicable.
- Water should be applied by means of pressure-type distributors or pipelines equipped with a spray system or hoses and nozzles that will ensure even distribution.
- All distribution equipment should be equipped with a positive means of shutoff.
- Unless water is applied by means of pipelines, at least one mobile unit should be available at all times to apply water or dust palliative to the project.
- If reclaimed waste water is used, the sources and discharge must meet California Department of Health Services water reclamation criteria and the Regional Water Quality

Control Board (RWQCB) requirements. Non-potable water should not be conveyed in tanks or drain pipes that will be used to convey potable water and there should be no connection between potable and non-potable supplies. Non-potable tanks, pipes, and other conveyances should be marked, "NON-POTABLE WATER - DO NOT DRINK."

- Pave or chemically stabilize access points where unpaved traffic surfaces adjoin paved roads.
- Provide covers for haul trucks transporting materials that contribute to dust.
- Provide for rapid clean up of sediments deposited on paved roads. Furnish stabilized construction road entrances and wheel wash areas.
- Stabilize inactive areas of construction sites using temporary vegetation or chemical stabilization methods.

For chemical stabilization, there are many products available for chemically stabilizing gravel roadways and stockpiles. If chemical stabilization is used, the chemicals should not create any adverse effects on stormwater, plant life, or groundwater and should meet all applicable regulatory requirements.

Costs

Installation costs for water and chemical dust suppression vary based on the method used and the length of effectiveness. Annual costs may be high since some of these measures are effective for only a few hours to a few days.

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities.
- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Check areas protected to ensure coverage.
- Most water-based dust control measures require frequent application, often daily or even multiple times per day. Obtain vendor or independent information on longevity of chemical dust suppressants.

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

A stabilized construction access is defined by a point of entrance/exit to a construction site that is stabilized to reduce the tracking of mud and dirt onto public roads by construction vehicles.

Suitable Applications

Use at construction sites:

- Where dirt or mud can be tracked onto public roads.
- Adjacent to water bodies.
- Where poor soils are encountered.
- Where dust is a problem during dry weather conditions.

Limitations

- Entrances and exits require periodic top dressing with additional stones.
- This BMP should be used in conjunction with street sweeping on adjacent public right of way.
- Entrances and exits should be constructed on level ground only.
- Stabilized construction entrances are rather expensive to construct and when a wash rack is included, a sediment trap of some kind must also be provided to collect wash water runoff.

Implementation

General

A stabilized construction entrance is a pad of aggregate underlain with filter cloth located at any point where traffic will be entering or leaving a construction site to or from a public right of way, street, alley, sidewalk, or parking area. The purpose of a stabilized construction entrance is to reduce or eliminate the tracking of sediment onto public rights of way or streets. Reducing tracking of sediments and other pollutants onto paved roads helps prevent deposition of sediments into local storm drains and production of airborne dust.

Where traffic will be entering or leaving the construction site, a stabilized construction entrance should be used. NPDES permits require that appropriate measures be implemented to prevent tracking of sediments onto paved roadways, where a significant source of sediments is derived from mud and dirt carried out from unpaved roads and construction sites.

Stabilized construction entrances are moderately effective in removing sediment from equipment leaving a construction site. The entrance should be built on level ground. Advantages of the Stabilized Construction Entrance/Exit is that it does remove some sediment from equipment and serves to channel construction traffic in and out of the site at specified locations. Efficiency is greatly increased when a washing rack is included as part of a stabilized construction entrance/exit.

Design and Layout

- Construct on level ground where possible.
- Select 3 to 6 in. diameter stones.
- Use minimum depth of stones of 12 in. or as recommended by soils engineer.
- Construct length of 50 ft or maximum site will allow, and 10 ft minimum width or to accommodate traffic.
- Rumble racks constructed of steel panels with ridges and installed in the stabilized entrance/exit will help remove additional sediment and to keep adjacent streets clean.
- Provide ample turning radii as part of the entrance.
- Limit the points of entrance/exit to the construction site.
- Limit speed of vehicles to control dust.
- Properly grade each construction entrance/exit to prevent runoff from leaving the construction site.
- Route runoff from stabilized entrances/exits through a sediment trapping device before discharge.
- Design stabilized entrance/exit to support heaviest vehicles and equipment that will use it.

Stabilized Construction Entrance/Exit TC-1

- Select construction access stabilization (aggregate, asphaltic concrete, concrete) based on longevity, required performance, and site conditions. Do not use asphalt concrete (AC) grindings for stabilized construction access/roadway.
- If aggregate is selected, place crushed aggregate over geotextile fabric to at least 12 in. depth, or place aggregate to a depth recommended by a geotechnical engineer. A crushed aggregate greater than 3 in. but smaller than 6 in. should be used.
- Designate combination or single purpose entrances and exits to the construction site.
- Require that all employees, subcontractors, and suppliers utilize the stabilized construction access.
- Implement SE-7, Street Sweeping and Vacuuming, as needed.
- All exit locations intended to be used for more than a two-week period should have stabilized construction entrance/exit BMPs.

Inspection and Maintenance

- Inspect and verify that activity–based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMPs are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect local roads adjacent to the site daily. Sweep or vacuum to remove visible accumulated sediment.
- Remove aggregate, separate and dispose of sediment if construction entrance/exit is clogged with sediment.
- Keep all temporary roadway ditches clear.
- Check for damage and repair as needed.
- Replace gravel material when surface voids are visible.
- Remove all sediment deposited on paved roadways within 24 hours.
- Remove gravel and filter fabric at completion of construction

Costs

Average annual cost for installation and maintenance may vary from $1,500 to $6,100 each, averaging $3,100 per entrance. Costs will increase with addition of washing rack and sediment trap. With wash rack, costs range from $1,500 - $7,700 each, averaging $4,600 per entrance (All costs adjusted for inflation, 2016 dollars, by Tetra Tech Inc.

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Water conservation practices are activities that use water during the construction of a project in a manner that avoids causing erosion and the transport of pollutants offsite. These practices can reduce or eliminate non-stormwater discharges.

Suitable Applications

Water conservation practices are suitable for all construction sites where water is used, including piped water, metered water, trucked water, and water from a reservoir.

Limitations

- None identified.

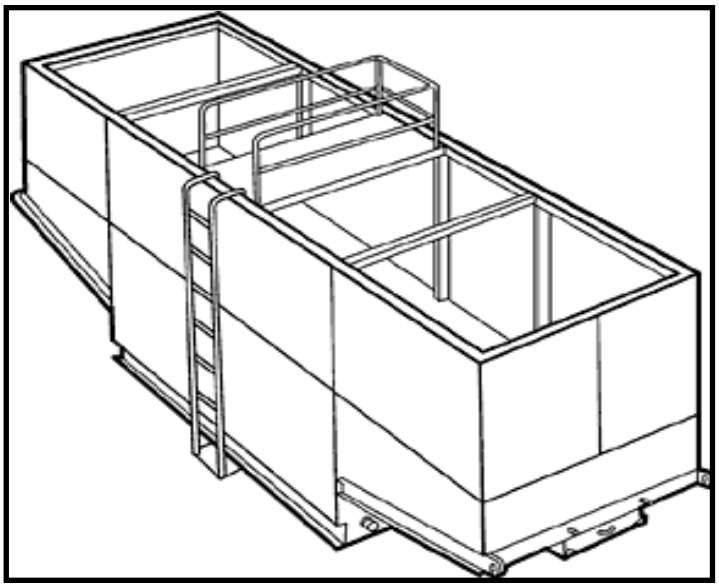
Implementation

- Keep water equipment in good working condition.
- Stabilize water truck filling area.
- Repair water leaks promptly.
- Washing of vehicles and equipment on the construction site is discouraged.
- Avoid using water to clean construction areas. If water must be used for cleaning or surface preparation, surface should be swept and vacuumed first to remove dirt. This will minimize amount of water required.

- Direct construction water runoff to areas where it can soak into the ground or be collected and used.
- Authorized non-stormwater discharges to the storm drain system, channels, or receiving waters are acceptable with the implementation of appropriate BMPs.
- Lock water tank valves to prevent unauthorized use.

Costs

The cost is small to none compared to the benefits of conserving water.



Inspection and Maintenance

- Inspect and verify that activity based BMPs are in place prior to the commencement of authorized non-stormwater discharges.
- Inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharges daily while non-stormwater discharges are occuring.
- Repair water equipment as needed to prevent unintended discharges.
  - Water trucks
  - Water reservoirs (water buffalos)
  - Irrigation systems
  - Hydrant connections

Potential Alternatives

SE-5: Fiber Roll

SE-6: Gravel Bag Berm

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Dewatering operations are practices that manage the discharge of pollutants when non-stormwater and accumulated precipitation (stormwater) must be removed from a work location to proceed with construction work or to provide vector control.

The General Permit incorporates Numeric Action Levels (NAL) for turbidity (see Section 2 of this handbook to determine your project's risk level and if you are subject to these requirements).

Discharges from dewatering operations can contain high levels of fine sediment that, if not properly treated, could lead to exceedances of the General Permit requirements or Basin Plan standards.

The dewatering operations described in this fact sheet are not Active Treatment Systems (ATS) and do not include the use of chemical coagulations, chemical flocculation or electrocoagulation.

Suitable Applications

These practices are implemented for discharges of non-stormwater from construction sites. Non-stormwaters include, but are not limited to, groundwater, water from cofferdams, water diversions, and waters used during construction activities that must be removed from a work area to facilitate construction.

Practices identified in this section are also appropriate for implementation when managing the removal of accumulated

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

precipitation (stormwater) from depressed areas at a construction site.

Stormwater mixed with non-stormwater should be managed as non-stormwater.

Limitations

- Dewatering operations will require and should comply with applicable local and project-specific permits and regulations. In some areas, all dewatering activities, regardless of the discharge volume, require a dewatering permit.
- Site conditions will dictate design and use of dewatering operations.
- The controls discussed in this fact sheet primarily address sediment. Other secondary pollutant removal benefits are discussed where applicable.
- The controls detailed in this fact sheet only allow for minimal settling time for sediment particles. Use only when site conditions restrict the use of the other control methods.
- Avoid dewatering discharges where possible by using the water for dust control.

Implementation

- A Construction Site Monitoring Plan (CSMP) should be included in the project Stormwater Pollution Prevention Plan (SWPPP).
- Regional Water Quality Control Board (RWQCB) Regions may require notification and approval prior to any discharge of water from construction sites.
- The destination of discharge from dewatering activities will typically determine the type of permit required for the discharge. For example, when discharging to a water of the U.S., a dewatering permit may be required through the site's governing RWQCB. When discharging to a sanitary sewer or Municipal Separate Storm Sewer System (MS4), a permit may need to be obtained from the owner of the sanitary sewer or MS4 in addition to obtaining an RWQCB dewatering permit. Additional permits or permissions from other agencies may be required for dewatering cofferdams or diversions.
- Dewatering discharges should not cause erosion at the discharge point. Appropriate BMPs should be implemented to maintain compliance with all applicable permits.
- Maintain dewatering records in accordance with all local and project-specific permits and regulations.

Sediment Treatment

A variety of methods can be used to treat water during dewatering operations. Several devices are presented below and provide options to achieve sediment removal. The sediment particle size and permit or receiving water limitations on sediment or turbidity are key considerations for selecting sediment treatment option(s); in some cases, the use of multiple devices may be appropriate. Use of other enhanced treatment methods (i.e., introduction of chemicals or electric current to enhance flocculation and removal of sediment) must comply with: 1) for storm drain or surface water discharges, the requirements for Active Treatment Systems (see SE-11); or 2) for sanitary sewer discharges, the requirements of applicable sanitary sewer discharge permits.

Sediment Basin (see also SE-2)

Description:

- A sediment basin is a temporary basin with a controlled release structure that is formed by excavation or construction of an embankment to detain sediment-laden runoff and allow sediment to settle out before discharging. Sediment basins are generally larger than Sediment Traps (SE-3) and have a designed outlet structure.

Appropriate Applications:

- Effective for the removal of trash, gravel, sand, silt, some metals that settle out with the sediment.

Implementation:

- Excavation and construction of related facilities is required.
- Temporary sediment basins should be fenced if safety is a concern.
- Outlet protection is required to prevent erosion at the outfall location.

Maintenance:

- Maintenance is required for safety fencing, vegetation, embankment, inlet and outlet, as well as other features.
- Removal of sediment is required when the storage volume is reduced by one-third.

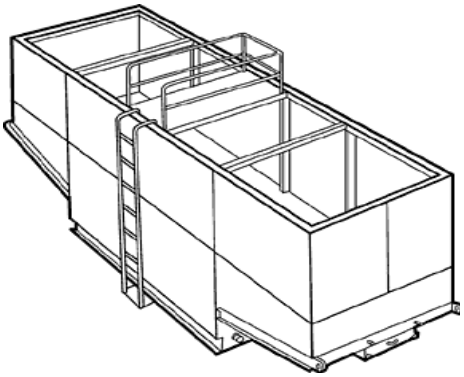
Sediment Trap (See also SE-3)

Description:

- A sediment trap is a temporary basin formed by excavation and/or construction of an earthen embankment across a waterway or low drainage area to detain sediment-laden runoff and allow sediment to settle out before discharging. Sediment traps are generally smaller than Sediment Basins (SE-2) and do not have a designed outlet (but do have a spillway or overflow).

Appropriate Applications:

Effective for the removal of large and medium sized particles (sand and gravel) and some metals that settle out with the sediment.



Implementation:

- Excavation and construction of related facilities is required.
- Trap inlets should be located to maximize the travel distance to the trap outlet.
- Use rock or vegetation to protect the trap outlets against erosion.

Maintenance:

- Maintenance is required for vegetation, embankment, inlet and outfall structures, as well as other features.
- Removal of sediment is required when the storage volume is reduced by one-third.

Weir Tanks

Description:

- A weir tank separates water and waste by using weirs. The configuration of the weirs (over and under weirs) maximizes the residence time in the tank and determines the waste to be removed from the water, such as oil, grease, and sediments.

Appropriate Applications:

- The tank removes trash, some settleable solids (gravel, sand, and silt), some visible oil and grease, and some metals (removed with sediment). To achieve high levels of flow, multiple tanks can be used in parallel. If additional treatment is desired, the tanks can be placed in series or as pre-treatment for other methods.

Implementation:

- Tanks are delivered to the site by the vendor, who can provide assistance with set-up and operation.
- Tank size will depend on flow volume, constituents of concern, and residency period required. Vendors should be consulted to appropriately size tank.
- Treatment capacity (i.e., volume and number of tanks) should provide at a minimum the required volume for discrete particle settling for treatment design flows.

Maintenance:

- Periodic cleaning is required based on visual inspection or reduced flow.
- Oil and grease disposal should be conducted by a licensed waste disposal company.

Dewatering Tanks

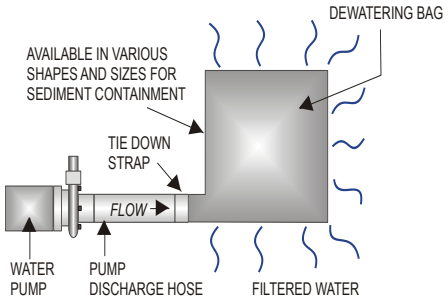
Description:

- A dewatering tank removes debris and sediment. Flow enters the tank through the top, passes through a fabric filter, and is discharged through the bottom of the tank. The filter separates the solids from the liquids.

Appropriate Applications:

- The tank removes trash, gravel, sand, and silt, some visible oil and grease, and some metals (removed with sediment). To achieve high levels of flow, multiple tanks can be used in parallel. If additional treatment is desired, the tanks can be placed in series or as pre-treatment for other methods.

Implementation:



- Tanks are delivered to the site by the vendor, who can provide assistance with set-up and operation.
- Tank size will depend on flow volume, constituents of concern, and residency period required. Vendors should be consulted to appropriately size tank.

Maintenance:

- Periodic cleaning is required based on visual inspection or reduced flow.
- Oil and grease disposal should be conducted by licensed waste disposal company.

Gravity Bag Filter

Description:

- A gravity bag filter, also referred to as a dewatering bag, is a square or rectangular bag made of non-woven geotextile fabric that collects gravel, sand, silt, and fines.

Appropriate Applications:

- Effective for the removal of sediments (gravel, sand, silt, and fines). Some metals are removed with the sediment.

Implementation:

- Water is pumped into one side of the bag and seeps through the top, bottom, and sides of the bag.
- Place filter bag on pavement or a gravel bed or paved surface. Avoid placing a dewatering bag on unprotected bare soil. If placing the bag on bare soil is unavoidable, a secondary barrier should be used, such as a rock filter bed placed beneath and beyond the edges of the bag to, prevent erosion and capture sediments that escape the bag.
- Perimeter control around the downstream end of the bag should be implemented. Secondary sediment controls are important especially in the initial stages of discharge, which tend to allow fines to pass through the bag.

Maintenance:

- Inspection of the flow conditions, bag condition, bag capacity, and the secondary barrier (as applicable) is required.
- Replace the bag when it no longer filters sediment or passes water at a reasonable rate.
- Caution should be taken when removing and disposing of the bag, to prevent the release of captured sediment
- Properly dispose of the bag offsite. If sediment is removed from the bag prior to disposal (bags can potentially be reused depending upon their condition), dispose of sediment in accordance with the general maintenance procedures described at the end of this BMP Fact Sheet.

Sand Media Particulate Filter

Description:

- Water is treated by passing it through canisters filled with sand media. Generally, sand filters provide a final level of treatment. They are often used as a secondary or higher level of treatment after a significant amount of sediment and other pollutants have been removed using other methods.

Appropriate Applications:

- Effective for the removal of trash, gravel, sand, and silt and some metals, as well as the reduction of biochemical oxygen demand (BOD) and turbidity.
- Sand filters can be used for stand-alone treatment or in conjunction with bag and cartridge filtration if further treatment is required.
- Sand filters can also be used to provide additional treatment to water treated via settling or basic filtration.

Implementation:

- The filters require delivery to the site and initial set up. The vendor can provide assistance with installation and operation.

Maintenance:

- The filters require regular service to monitor and maintain the level of the sand media. If subjected to high loading rates, filters can plug quickly.
- Venders generally provide data on maximum head loss through the filter. The filter should be monitored daily while in use and cleaned when head loss reaches target levels.
- If cleaned by backwashing, the backwash water may need to be hauled away for disposal or returned to the upper end of the treatment train for another pass through the series of dewatering BMPs.

Pressurized Bag Filter

Description:

- A pressurized bag filter is a unit composed of single filter bags made from polyester felt material. The water filters through the unit and is discharged through a header. Vendors provide bag filters in a variety of configurations. Some units include a combination of bag filters and cartridge filters for enhanced contaminant removal.

Appropriate Applications:

- Effective for the removal of sediment (sand and silt) and some metals, as well as the reduction of BOD, turbidity, and hydrocarbons. Oil absorbent bags are available for hydrocarbon removal.

- Filters can be used to provide secondary treatment to water treated via settling or basic filtration.

Implementation:

- The filters require delivery to the site and initial set up. The vendor can provide assistance with installation and operation.

Maintenance:

- The filter bags require replacement when the pressure differential equals or exceeds the manufacturer's recommendation.

Cartridge Filter

Description:

- Cartridge filters provide a high degree of pollutant removal by utilizing a number of individual cartridges as part of a larger filtering unit. They are often used as a secondary or higher (polishing) level of treatment after a significant amount of sediment and other pollutants are removed. Units come with various cartridge configurations (for use in series with bag filters) or with a larger single cartridge filtration unit (with multiple filters within).

Appropriate Applications:

- Effective for the removal of sediment (sand, silt, and some clays) and metals, as well as the reduction of BOD, turbidity, and hydrocarbons. Hydrocarbons can effectively be removed with special resin cartridges.

- Filters can be used to provide secondary treatment to water treated via settling or basic filtration.

Implementation:

- The filters require delivery to the site and initial set up. The vendor can provide assistance.

Maintenance:

- The cartridges require replacement when the pressure differential equals or exceeds the manufacturer's recommendation.

Costs

- Sediment control costs vary considerably depending on the dewatering and sediment treatment system that is selected. Pressurized filters tend to be more expensive than gravity settling but are often more effective. Simple tanks are generally rented on a long-term basis (one or more months) and can range from $460 per month for a 1,000-gallon tank to $3,400 per month for a 10,000-gallon tank (adjusted for inflation, 2016 dollars, by Tetra Tech Inc.). Mobilization and demobilization costs vary considerably.

Inspection and Maintenance

- Inspect and verify that dewatering BMPs are in place and functioning prior to the commencement of activities requiring dewatering.

- Inspect dewatering BMPs daily while dewatering activities are being conducted.

- Inspect all equipment before use. Monitor dewatering operations to ensure they do not cause offsite discharge or erosion.
- Sample dewatering discharges as required by the General Permit.
- Unit-specific maintenance requirements are included with the description of each unit.
- Sediment removed during the maintenance of a dewatering device may be either spread onsite and stabilized or disposed of at a disposal site as approved by the owner.
- Sediment that is commingled with other pollutants should be disposed of in accordance with all applicable laws and regulations and as approved by the owner.

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Prevent or reduce the discharge of pollutants from paving operations, using measures to prevent runon and runoff pollution, properly disposing of wastes, and training employees and subcontractors.

The General Permit incorporates Numeric Action Levels (NAL) for pH and turbidity (see Section 2 of this handbook to determine your project's risk level and if you are subject to these requirements).

Many types of construction materials associated with paving and grinding operations, including mortar, concrete, and cement and their associated wastes have basic chemical properties that can raise pH levels outside of the permitted range. Additional care should be taken when managing these materials to prevent them from coming into contact with stormwater flows, which could lead to exceedances of the General Permit requirements.

Suitable Applications

These procedures are implemented where paving, surfacing, resurfacing, or sawcutting, may pollute stormwater runoff or discharge to the storm drain system or watercourses.

Limitations

- Paving opportunities may be limited during wet weather.

  Discharges of freshly paved surfaces may raise pH to environmentally harmful levels and trigger permit violations.

Implementation

General

- Avoid paving during the wet season when feasible.
- Reschedule paving and grinding activities if rain is forecasted.
- Train employees and sub-contractors in pollution prevention and reduction.
- Store materials away from drainage courses to prevent stormwater runon (see WM-1, Material Delivery and Storage).
- Protect drainage courses, particularly in areas with a grade, by employing BMPs to divert runoff or to trap and filter sediment.
- Stockpile material removed from roadways away from drain inlets, drainage ditches, and watercourses. These materials should be stored consistent with WM-3, Stockpile Management.
- Disposal of PCC (Portland cement concrete) and AC (asphalt concrete) waste should be in conformance with WM-8, Concrete Waste Management.

Saw Cutting, Grinding, and Pavement Removal

- Shovel or vacuum saw-cut slurry and remove from site. Cover or barricade storm drains during saw cutting to contain slurry.
- When paving involves AC, the following steps should be implemented to prevent the discharge of grinding residue, uncompacted or loose AC, tack coats, equipment cleaners, or unrelated paving materials:
  - AC grindings, pieces, or chunks used in embankments or shoulder backing should not be allowed to enter any storm drains or watercourses. Install inlet protection and perimeter controls until area is stabilized (i.e. cutting, grinding or other removal activities are complete and loose material has been properly removed and disposed of)or permanent controls are in place. Examples of temporary perimeter controls can be found in EC-9, Earth Dikes and Drainage Swales; SE-1, Silt Fence; SE-5, Fiber Rolls, or SE-13 Compost Socks and Berms
  - Collect and remove all broken asphalt and recycle when practical. Old or spilled asphalt should be recycled or disposed of properly.
- Do not allow saw-cut slurry to enter storm drains or watercourses. Residue from grinding operations should be picked up by a vacuum attachment to the grinding machine, or by sweeping, should not be allowed to flow across the pavement, and should not be left on the surface of the pavement. See also WM-8, Concrete Waste Management, and WM-10, Liquid Waste Management.
- Pavement removal activities should not be conducted in the rain.
- Collect removed pavement material by mechanical or manual methods. This material may be recycled for use as shoulder backing or base material.

- If removed pavement material cannot be recycled, transport the material back to an approved storage site.

Asphaltic Concrete Paving

- If paving involves asphaltic cement concrete, follow these steps:

  - Do not allow sand or gravel placed over new asphalt to wash into storm drains, streets, or creeks. Vacuum or sweep loose sand and gravel and properly dispose of this waste by referring to WM-5, Solid Waste Management.

  - Old asphalt should be disposed of properly. Collect and remove all broken asphalt from the site and recycle whenever possible.

Portland Cement Concrete Paving

- Do not wash sweepings from exposed aggregate concrete into a storm drain system. Collect waste materials by dry methods, such as sweeping or shoveling, and return to aggregate base stockpile or dispose of properly. Allow aggregate rinse to settle. Then, either allow rinse water to dry in a temporary pit as described in WM-8, Concrete Waste Management, or pump the water to the sanitary sewer if authorized by the local wastewater authority.

Sealing Operations

- During chip seal application and sweeping operations, petroleum or petroleum covered aggregate should not be allowed to enter any storm drain or water courses. Apply temporary perimeter controls until structure is stabilized (i.e. all sealing operations are complete and cured and loose materials have been properly removed and disposed).

- Inlet protection (SE-10, Storm Drain Inlet Protection) should be used during application of seal coat, tack coat, slurry seal, and fog seal.

- Seal coat, tack coat, slurry seal, or fog seal should not be applied if rainfall is predicted to occur during the application or curing period.

Paving Equipment

- Leaks and spills from paving equipment can contain toxic levels of heavy metals and oil and grease. Place drip pans or absorbent materials under paving equipment when not in use. Clean up spills with absorbent materials and dispose of in accordance with the applicable regulations. See NS-10, Vehicle and Equipment Maintenance, WM-4, Spill Prevention and Control, and WM-10, Liquid Waste Management.

- Substances used to coat asphalt transport trucks and asphalt spreading equipment should not contain soap and should be non-foaming and non-toxic.

- Paving equipment parked onsite should be parked over plastic to prevent soil contamination.

- Clean asphalt coated equipment offsite whenever possible. When cleaning dry, hardened asphalt from equipment, manage hardened asphalt debris as described in WM-5, Solid Waste Management. Any cleaning onsite should follow NS-8, Vehicle and Equipment Cleaning.

Thermoplastic Striping

- Thermoplastic striper and pre-heater equipment shutoff valves should be inspected to ensure that they are working properly to prevent leaking thermoplastic from entering drain inlets, the stormwater drainage system, or watercourses.
- Pre-heaters should be filled carefully to prevent splashing or spilling of hot thermoplastic. Leave six inches of space at the top of the pre-heater container when filling thermoplastic to allow room for material to move.
- Do not pre-heat, transfer, or load thermoplastic near drain inlets or watercourses.
- Clean truck beds daily of loose debris and melted thermoplastic. When possible, recycle thermoplastic material.

Raised/Recessed Pavement Marker Application and Removal

- Do not transfer or load bituminous material near drain inlets, the stormwater drainage system, or watercourses.
- Melting tanks should be loaded with care and not filled to beyond six inches from the top to leave room for splashing.
- When servicing or filling melting tanks, ensure all pressure is released before removing lids to avoid spills.
- On large-scale projects, use mechanical or manual methods to collect excess bituminous material from the roadway after removal of markers.

Costs

- All of the above are low cost measures.

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of paving and grinding operations.
- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Sample stormwater runoff required by the General Permit.
- Keep ample supplies of drip pans or absorbent materials onsite.
- Inspect and maintain machinery regularly to minimize leaks and drips.

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Procedures and practices designed for construction contractors to recognize illicit connections or illegally dumped or discharged materials on a construction site and report incidents.

Suitable Applications

This best management practice (BMP) applies to all construction projects. Illicit connection/discharge and reporting is applicable anytime an illicit connection or discharge is discovered, or illegally dumped material is found on the construction site.

Limitations

Illicit connections and illegal discharges or dumping, for the purposes of this BMP, refer to discharges and dumping caused by parties other than the contractor. If pre-existing hazardous materials or wastes are known to exist onsite, they should be identified in the SWPPP and handled as set forth in the SWPPP.

Implementation

Planning

- Review the SWPPP. Pre-existing areas of contamination should be identified and documented in the SWPPP.
- Inspect site before beginning the job for evidence of illicit connections, illegal dumping or discharges. Document any pre-existing conditions and notify the owner.

- Inspect site regularly during project execution for evidence of illicit connections, illegal dumping or discharges.
- Observe site perimeter for evidence for potential of illicitly discharged or illegally dumped material, which may enter the job site.

Identification of Illicit Connections and Illegal Dumping or Discharges

- **General –** unlabeled and unidentifiable material should be treated as hazardous.
- **Solids** - Look for debris, or rubbish piles. Solid waste dumping often occurs on roadways with light traffic loads or in areas not easily visible from the traveled way.
- **Liquids** - signs of illegal liquid dumping or discharge can include:
  - Visible signs of staining or unusual colors to the pavement or surrounding adjacent soils
  - Pungent odors coming from the drainage systems
  - Discoloration or oily substances in the water or stains and residues detained within ditches, channels or drain boxes
  - Abnormal water flow during the dry weather season
- **Urban Areas** - Evidence of illicit connections or illegal discharges is typically detected at storm drain outfall locations or at manholes. Signs of an illicit connection or illegal discharge can include:
  - Abnormal water flow during the dry weather season
  - Unusual flows in sub drain systems used for dewatering
  - Pungent odors coming from the drainage systems
  - Discoloration or oily substances in the water or stains and residues detained within ditches, channels or drain boxes
  - Excessive sediment deposits, particularly adjacent to or near active offsite construction projects
- **Rural Areas** - Illicit connections or illegal discharges involving irrigation drainage ditches are detected by visual inspections. Signs of an illicit discharge can include:
  - Abnormal water flow during the non-irrigation season
  - Non-standard junction structures
  - Broken concrete or other disturbances at or near junction structures

Reporting

Notify the owner of any illicit connections and illegal dumping or discharge incidents at the time of discovery. For illicit connections or discharges to the storm drain system, notify the local stormwater management agency. For illegal dumping, notify the local law enforcement agency.

Cleanup and Removal

The responsibility for cleanup and removal of illicit or illegal dumping or discharges will vary by location. Contact the local stormwater management agency for further information.

Costs

Costs to look for and report illicit connections and illegal discharges and dumping are low. The best way to avoid costs associated with illicit connections and illegal discharges and dumping is to keep the project perimeters secure to prevent access to the site, to observe the site for vehicles that should not be there, and to document any waste or hazardous materials that exist onsite before taking possession of the site.

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect the site regularly to check for any illegal dumping or discharge.
- Prohibit employees and subcontractors from disposing of non-job-related debris or materials at the construction site.
- Notify the owner of any illicit connections and illegal dumping or discharge incidents at the time of discovery.

Bacteria	
Oil and Grease	☑
Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Vehicle and equipment cleaning procedures and practices eliminate or reduce the discharge of pollutants to stormwater from vehicle and equipment cleaning operations. Procedures and practices include but are not limited to: using offsite facilities; washing in designated, contained areas only; eliminating discharges to the storm drain by infiltrating the wash water; and training employees and subcontractors in proper cleaning procedures.

Suitable Applications

These procedures are suitable on all construction sites where vehicle and equipment cleaning is performed.

Limitations

Even phosphate-free, biodegradable soaps have been shown to be toxic to fish before the soap degrades. Sending vehicles/equipment offsite should be done in conjunction with TC-1, Stabilized Construction Entrance/Exit.

Implementation

Other options to washing equipment onsite include contracting with either an offsite or mobile commercial washing business. These businesses may be better equipped to handle and dispose of the wash waters properly. Performing this work offsite can also be economical by eliminating the need for a separate washing operation onsite.

If washing operations are to take place onsite, then:

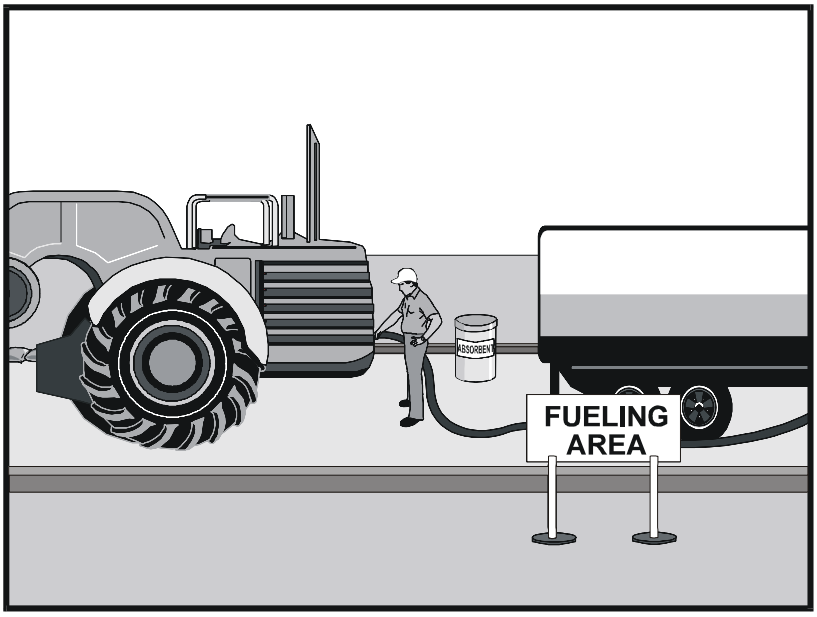
CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Use phosphate-free, biodegradable soaps.
- Educate employees and subcontractors on pollution prevention measures.
- Do not permit steam cleaning onsite. Steam cleaning can generate significant pollutant concentrates.
- Cleaning of vehicles and equipment with soap, solvents or steam should not occur on the project site unless resulting wastes are fully contained and disposed of. Resulting wastes should not be discharged or buried and must be captured and recycled or disposed according to the requirements of WM-10, Liquid Waste Management or WM-6, Hazardous Waste Management, depending on the waste characteristics. Minimize use of solvents. Use of diesel for vehicle and equipment cleaning is prohibited.
- All vehicles and equipment that regularly enter and leave the construction site must be cleaned offsite.
- When vehicle and equipment washing and cleaning must occur onsite, and the operation cannot be located within a structure or building equipped with appropriate disposal facilities, the outside cleaning area should have the following characteristics:
  - Located away from storm drain inlets, drainage facilities, or watercourses
  - Paved with concrete or asphalt and bermed to contain wash waters and to prevent runon and runoff
  - Configured with a sump to allow collection and disposal of wash water
  - No discharge of wash waters to storm drains or watercourses
  - Used only when necessary
- When cleaning vehicles and equipment with water:
  - Use as little water as possible. High-pressure sprayers may use less water than a hose and should be considered
  - Use positive shutoff valve to minimize water usage
  - Facility wash racks should discharge to a sanitary sewer, recycle system or other approved discharge system and must not discharge to the storm drainage system, watercourses, or to groundwater

Costs

Cleaning vehicles and equipment at an offsite facility may reduce overall costs for vehicle and equipment cleaning by eliminating the need to provide similar services onsite. When onsite cleaning is needed, the cost to establish appropriate facilities is relatively low on larger, long-duration projects, and moderate to high on small, short-duration projects.

Inspection and Maintenance



- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharges daily while non-stormwater discharges occur.
- Inspection and maintenance is minimal, although some berm repair may be necessary.
- Monitor employees and subcontractors throughout the duration of the construction project to ensure appropriate practices are being implemented.
- Inspect sump regularly and remove liquids and sediment as needed.
- Prohibit employees and subcontractors from washing personal vehicles and equipment on the construction site.

Bacteria	
Oil and Grease	☑
Organics	

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Vehicle equipment fueling procedures and practices are designed to prevent fuel spills and leaks and reduce or eliminate contamination of stormwater. This can be accomplished by using offsite facilities, fueling in designated areas only, enclosing or covering stored fuel, implementing spill controls, and training employees and subcontractors in proper fueling procedures.

Suitable Applications

These procedures are suitable on all construction sites where vehicle and equipment fueling takes place.

Limitations

Onsite vehicle and equipment fueling should only be used where it is impractical to send vehicles and equipment offsite for fueling. Sending vehicles and equipment offsite should be done in conjunction with TC-1, Stabilized Construction Entrance/ Exit.

Implementation

- Use offsite fueling stations as much as possible. These businesses are better equipped to handle fuel and spills properly. Performing this work offsite can also be economical by eliminating the need for a separate fueling area at a site.
- Discourage "topping-off" of fuel tanks.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Absorbent spill cleanup materials and spill kits should be available in fueling areas and on fueling trucks and should be disposed of properly after use.
- Drip pans or absorbent pads should be used during vehicle and equipment fueling, unless the fueling is performed over an impermeable surface in a dedicated fueling area.
- Use absorbent materials on small spills. Do not hose down or bury the spill. Remove the adsorbent materials promptly and dispose of properly.
- Avoid mobile fueling of mobile construction equipment around the site; rather, transport the equipment to designated fueling areas. With the exception of tracked equipment such as bulldozers and large excavators, most vehicles should be able to travel to a designated area with little lost time.
- Train employees and subcontractors in proper fueling and cleanup procedures.
- When fueling must take place onsite, designate an area away from drainage courses to be used. Fueling areas should be identified in the SWPPP.
- Dedicated fueling areas should be protected from stormwater runon and runoff and should be located at least 50 ft away from downstream drainage facilities and watercourses. Fueling must be performed on level-grade areas.
- Protect fueling areas with berms and dikes to prevent runon, runoff, and to contain spills.
- Nozzles used in vehicle and equipment fueling should be equipped with an automatic shutoff to control drips. Fueling operations should not be left unattended.
- Use vapor recovery nozzles to help control drips as well as air pollution where required by Air Quality Management Districts (AQMD).
- Federal, state, and local requirements should be observed for any stationary above ground storage tanks.

Costs

- All of the above measures are low cost except for the capital costs of above ground tanks that meet all local environmental, zoning, and fire codes.

Inspection and Maintenance

- Inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Vehicles and equipment should be inspected each day of use for leaks. Leaks should be repaired immediately, or problem vehicles or equipment should be removed from the project site.
- Keep ample supplies of spill cleanup materials onsite.

- Immediately clean up spills and properly dispose of contaminated soil and cleanup materials.

Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Prevent or reduce the contamination of stormwater resulting from vehicle and equipment maintenance by running a "dry and clean site". The best option would be to perform maintenance activities at an offsite facility. If this option is not available then work should be performed in designated areas only, while providing cover for materials stored outside, checking for leaks and spills, and containing and cleaning up spills immediately. Employees and subcontractors must be trained in proper procedures.

Suitable Applications

These procedures are suitable on all construction projects where an onsite yard area is necessary for storage and maintenance of heavy equipment and vehicles.

Limitations

Onsite vehicle and equipment maintenance should only be used where it is impractical to send vehicles and equipment offsite for maintenance and repair. Sending vehicles/equipment offsite should be done in conjunction with TC-1, Stabilized Construction Entrance/Exit.

Outdoor vehicle or equipment maintenance is a potentially significant source of stormwater pollution. Activities that can contaminate stormwater include engine repair and service, changing or replacement of fluids, and outdoor equipment storage and parking (engine fluid leaks). For further information on vehicle or equipment servicing, see NS-8,

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

Vehicle and Equipment Cleaning, and NS-9, Vehicle and Equipment Fueling.

Implementation

- Use offsite repair shops as much as possible. These businesses are better equipped to handle vehicle fluids and spills properly. Performing this work offsite can also be economical by eliminating the need for a separate maintenance area.
- If maintenance must occur onsite, use designated areas, located away from drainage courses. Dedicated maintenance areas should be protected from stormwater runon and runoff and should be located at least 50 ft from downstream drainage facilities and watercourses.
- Drip pans or absorbent pads should be used during vehicle and equipment maintenance work that involves fluids, unless the maintenance work is performed over an impermeable surface in a dedicated maintenance area.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- All fueling trucks and fueling areas are required to have spill kits and/or use other spill protection devices.
- Use adsorbent materials on small spills. Remove the absorbent materials promptly and dispose of properly.
- Inspect onsite vehicles and equipment daily at startup for leaks, and repair immediately.
- Keep vehicles and equipment clean; do not allow excessive build-up of oil and grease.
- Segregate and recycle wastes, such as greases, used oil or oil filters, antifreeze, cleaning solutions, automotive batteries, hydraulic and transmission fluids. Provide secondary containment and covers for these materials if stored onsite.
- Train employees and subcontractors in proper maintenance and spill cleanup procedures.
- Drip pans or plastic sheeting should be placed under all vehicles and equipment placed on docks, barges, or other structures over water bodies when the vehicle or equipment is planned to be idle for more than 1 hour.
- For long-term projects, consider using portable tents or covers over maintenance areas if maintenance cannot be performed offsite.
- Consider use of new, alternative greases and lubricants, such as adhesive greases, for chassis lubrication and fifth-wheel lubrication.
- Properly dispose of used oils, fluids, lubricants, and spill cleanup materials.
- Do not place used oil in a dumpster or pour into a storm drain or watercourse.
- Properly dispose of or recycle used batteries.
- Do not bury used tires.

- Repair leaks of fluids and oil immediately.

Listed below is further information if you must perform vehicle or equipment maintenance onsite.

Safer Alternative Products

- Consider products that are less toxic or hazardous than regular products. These products are often sold under an "environmentally friendly" label.
- Consider use of grease substitutes for lubrication of truck fifth-wheels. Follow manufacturers label for details on specific uses.
- Consider use of plastic friction plates on truck fifth-wheels in lieu of grease. Follow manufacturers label for details on specific uses.

Waste Reduction

Parts are often cleaned using solvents such as trichloroethylene, trichloroethane, or methylene chloride. Many of these cleaners are listed in California Toxic Rule as priority pollutants. These materials are harmful and must not contaminate stormwater. They must be disposed of as a hazardous waste. Reducing the number of solvents makes recycling easier and reduces hazardous waste management costs. Often, one solvent can perform a job as well as two different solvents. Also, if possible, eliminate or reduce the amount of hazardous materials and waste by substituting non-hazardous or less hazardous materials. For example, replace chlorinated organic solvents with non-chlorinated solvents. Non-chlorinated solvents like kerosene or mineral spirits are less toxic and less expensive to dispose of properly. Check the list of active ingredients to see whether it contains chlorinated solvents. The "chlor" term indicates that the solvent is chlorinated. Also, try substituting a wire brush for solvents to clean parts.

Recycling and Disposal

Separating wastes allows for easier recycling and may reduce disposal costs. Keep hazardous wastes separate, do not mix used oil solvents, and keep chlorinated solvents (like,-trichloroethane) separate from non-chlorinated solvents (like kerosene and mineral spirits). Promptly transfer used fluids to the proper waste or recycling drums. Don't leave full drip pans or other open containers lying around. Provide cover and secondary containment until these materials can be removed from the site.

Oil filters can be recycled. Ask your oil supplier or recycler about recycling oil filters.

Do not dispose of extra paints and coatings by dumping liquid onto the ground or throwing it into dumpsters. Allow coatings to dry or harden before disposal into covered dumpsters.

Store cracked batteries in a non-leaking secondary container. Do this with all cracked batteries, even if you think all the acid has drained out. If you drop a battery, treat it as if it is cracked. Put it into the containment area until you are sure it is not leaking.

Costs

All of the above are low cost measures. Higher costs are incurred to setup and maintain onsite maintenance areas.

Vehicle & Equipment Maintenance NS-10

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharges daily while non-stormwater discharges occur.
- Keep ample supplies of spill cleanup materials onsite.
- Maintain waste fluid containers in leak proof condition.
- Vehicles and equipment should be inspected on each day of use. Leaks should be repaired immediately, or the problem vehicle(s) or equipment should be removed from the project site.
- Inspect equipment for damaged hoses and leaky gaskets routinely. Repair or replace as needed.

Pile Driving Operations NS-11

Categories		
EC	Erosion Control	
SE	Sediment Control	
TC	Tracking Control	
WE	Wind Erosion Control	
NS	Non-Stormwater Management Control	☑
WM	Waste Management and Materials Pollution Control	

Legend:
☑ **Primary Objective**
☒ **Secondary Objective**

Targeted Constituents	
Sediment	☑
Nutrients	
Trash	
Metals	
Bacteria	
Oil and Grease	☑
Organics	

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

The construction and retrofit of bridges and retaining walls often include driving piles for foundation support and shoring operations. Driven piles are typically constructed of precast concrete, steel, or timber. Driven sheet piles are also used for shoring and cofferdam construction. Proper control and use of equipment, materials, and waste products from pile driving operations will reduce or eliminate the discharge of potential pollutants to the storm drain system, watercourses, and waters of the United States.

Suitable Applications

These procedures apply to all construction sites near or adjacent to a watercourse or groundwater where permanent and temporary pile driving (impact and vibratory) takes place, including operations using pile shells as well as construction of cast-in-steel-shell and cast-in-drilled-hole piles.

Limitations

None identified.

Implementation

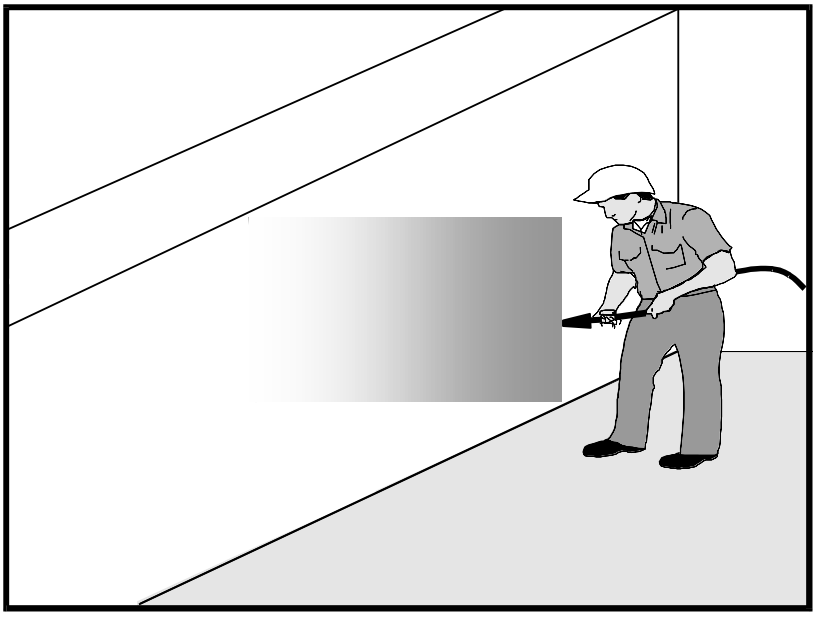
- Use drip pans or absorbent pads during vehicle and equipment operation, maintenance, cleaning, fueling, and storage. Refer to NS-8, Vehicle and Equipment Cleaning, NS-9, Vehicle and Equipment Fueling, and NS-10, Vehicle and Equipment Maintenance.

- Have spill kits and cleanup materials available at all locations of pile driving. Refer to WM-4, Spill Prevention and Control.
- Equipment that is stored or in use in streambeds, or on docks, barges, or other structures over water bodies should be kept leak free.
- Park equipment over plastic sheeting or equivalent where possible. Plastic is not a substitute for drip pans or absorbent pads. The storage or use of equipment in streambeds or other bodies of water must comply with all applicable permits.
- Implement other BMPs as applicable, such as NS-2, Dewatering Operations, WM-5, Solid Waste Management, WM-6, Hazardous Waste Management, and WM-10, Liquid Waste Management.
- When not in use, store pile-driving equipment away from concentrated flows of stormwater, drainage courses, and inlets. Protect hammers and other hydraulic attachments from runon and runoff by placing them on plywood and covering them with plastic or a comparable material prior to the onset of rain.
- Use less hazardous products, e.g., vegetable oil, when practicable.

Costs

All of the above measures can be low cost.

Inspection and Maintenance



- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharges daily while non-stormwater discharges occur.
- Inspect equipment every day at startup and repair equipment as needed (i.e., worn or damaged hoses, fittings, and gaskets). Recheck equipment at shift changes or at the end of the day and scheduled repairs as needed.

Metals	☑
Bacteria	
Oil and Grease	☑
Organics	

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Concrete curing is used in the construction of structures such as bridges, retaining walls, pump houses, large slabs, and structured foundations. Concrete curing includes the use of both chemical and water methods.

Concrete and its associated curing materials have basic chemical properties that can raise the pH of water to levels outside of the permitted range. Discharges of stormwater and non-stormwater exposed to concrete during curing may have a high pH and may contain chemicals, metals, and fines. The General Permit incorporates Numeric Action Levels (NAL) for pH (see Section 2 of this handbook to determine your project's risk level and if you are subject to these requirements).

Proper procedures and care should be taken when managing concrete curing materials to prevent them from coming into contact with stormwater flows, which could result in a high pH discharge.

Suitable Applications

Suitable applications include all projects where Portland Cement Concrete (PCC) and concrete curing chemicals are placed where they can be exposed to rainfall, runoff from other areas, or where runoff from the PCC will leave the site.

Limitations

- Runoff contact with concrete waste can raise pH levels in the water to environmentally harmful levels and trigger permit violations.

Implementation

Chemical Curing

- Avoid over spray of curing compounds.
- Minimize the drift by applying the curing compound close to the concrete surface. Apply an amount of compound that covers the surface but does not allow any runoff of the compound.
- Use proper storage and handling techniques for concrete curing compounds. Refer to WM-1, Material Delivery and Storage.
- Protect drain inlets prior to the application of curing compounds.
- Refer to WM-4, Spill Prevention and Control.

Water Curing for Bridge Decks, Retaining Walls, and other Structures

- Direct cure water away from inlets and watercourses to collection areas for evaporation or other means of removal in accordance with all applicable permits. See WM-8 Concrete Waste Management.
- Collect cure water at the top of slopes and transport to a concrete waste management area in a non-erosive manner. See EC-9 Earth Dikes and Drainage Swales, EC-10, Velocity Dissipation Devices, and EC-11, Slope Drains.
- Utilize wet blankets or a similar method that maintains moisture while minimizing the use and possible discharge of water.

Education

- Educate employees, subcontractors, and suppliers on proper concrete curing techniques to prevent contact with discharge as described herein.
- Arrange for the QSP or the appropriately trained contractor's superintendent or representative to oversee and enforce concrete curing procedures.

Costs

All of the above measures are generally low cost.

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities.
- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharges daily while non-stormwater discharges occur.
- Sample non-stormwater discharges and stormwater runoff that contacts uncured and partially cured concrete as required by the General Permit.

- Ensure that employees and subcontractors implement appropriate measures for storage, handling, and use of curing compounds.
- Inspect cure containers and spraying equipment for leaks.

Concrete Finishing NS-13

Categories

EC	Erosion Control	
SE	Sediment Control	
TC	Tracking Control	
WE	Wind Erosion Control	
NS	Non-Stormwater Management Control	☑
WM	Waste Management and Materials Pollution Control	☑

Legend:

☑ **Primary Category**

☒ **Secondary Category**

Targeted Constituents

Sediment	☑
Nutrients	
Trash	
Metals	☑
Bacteria	
Oil and Grease	
Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Concrete finishing methods are used for bridge deck rehabilitation, paint removal, curing compound removal, and final surface finish appearances. Methods include sand blasting, shot blasting, grinding, or high-pressure water blasting. Stormwater and non-stormwater exposed to concrete finishing by-products may have a high pH and may contain chemicals, metals, and fines. Proper procedures and implementation of appropriate BMPs can minimize the impact that concrete-finishing methods may have on stormwater and non-stormwater discharges.

The General Permit incorporates Numeric Action Levels (NAL) for pH (see Section 2 of this handbook to determine your project's risk level and if you are subject to these requirements).

Concrete and its associated curing materials have basic chemical properties that can raise pH levels outside of the permitted range. Additional care should be taken when managing these materials to prevent them from coming into contact with stormwater flows, which could lead to exceedances of the General Permit requirements.

Suitable Applications

These procedures apply to all construction locations where concrete finishing operations are performed.

Limitations

- Runoff contact with concrete waste can raise pH levels in the water to environmentally harmful levels and trigger permit violations.

Implementation

- Collect and properly dispose of water from high-pressure water blasting operations.
- Collect contaminated water from blasting operations at the top of slopes. Transport or dispose of contaminated water while using BMPs such as those for erosion control. Refer to EC-9, Earth Dikes and Drainage Swales, EC-10, Velocity Dissipation Devices, and EC-11, Slope Drains.
- Direct water from blasting operations away from inlets and watercourses to collection areas for infiltration or other means of removal (dewatering). Refer to NS-2 Dewatering Operations.
- Protect inlets during sandblasting operations. Refer to SE-10, Storm Drain Inlet Protection.
- Refer to WM-8, Concrete Waste Management for disposal of concrete debris.
- Minimize the drift of dust and blast material as much as possible by keeping the blasting nozzle close to the surface.
- When blast residue contains a potentially hazardous waste, refer to WM-6, Hazardous Waste Management.

Education

- Educate employees, subcontractors, and suppliers on proper concrete finishing techniques to prevent contact with discharge as described herein.
- Arrange for the QSP or the appropriately trained contractor's superintendent or representative to oversee and enforce concrete finishing procedures.

Costs

These measures are generally of low cost.

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities.
- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharges daily while non-stormwater discharges occur.
- Sample non-stormwater discharges and stormwater runoff that contacts concrete dust and debris as required by the General Permit.

- Sweep or vacuum up debris from sandblasting at the end of each shift.
- At the end of each work shift, remove and contain liquid and solid waste from containment structures, if any, and from the general work area.
- Inspect containment structures for damage prior to use and prior to onset of forecasted rain.

Material Delivery and Storage WM-1

Categories		
EC	Erosion Control	
SE	Sediment Control	
TC	Tracking Control	
WE	Wind Erosion Control	
NS	Non-Stormwater Management Control	
WM	Waste Management and Materials Pollution Control	☑

Legend:
☑ **Primary Category**
☒ **Secondary Category**

Description and Purpose

Prevent, reduce, or eliminate the discharge of pollutants from material delivery and storage to the stormwater system or watercourses by minimizing the storage of hazardous materials onsite, storing materials in watertight containers and/or a completely enclosed designated area, installing secondary containment, conducting regular inspections, and training employees and subcontractors.

This best management practice covers only material delivery and storage. For other information on materials, see WM-2, Material Use, or WM-4, Spill Prevention and Control. For information on wastes, see the waste management BMPs in this section.

Suitable Applications

These procedures are suitable for use at all construction sites with delivery and storage of the following materials:

- Soil stabilizers and binders
- Pesticides and herbicides
- Fertilizers
- Detergents
- Plaster
- Petroleum products such as fuel, oil, and grease

Targeted Constituents	
Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	
Oil and Grease	☑
Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

- Asphalt and concrete components
- Hazardous chemicals such as acids, lime, glues, adhesives, paints, solvents, and curing compounds
- Concrete compounds
- Other materials that may be detrimental if released to the environment

Limitations

- Space limitation may preclude indoor storage.
- Storage sheds often must meet building and fire code requirements.

Implementation

The following steps should be taken to minimize risk:

- Chemicals must be stored in water tight containers with appropriate secondary containment or in a storage shed.
- When a material storage area is located on bare soil, the area should be lined and bermed.
- Use containment pallets or other practical and available solutions, such as storing materials within newly constructed buildings or garages, to meet material storage requirements.
- Stack erodible landscape material on pallets and cover when not in use.
- Contain all fertilizers and other landscape materials when not in use.
- Temporary storage areas should be located away from vehicular traffic.
- Material Safety Data Sheets (MSDS) should be available on-site for all materials stored that have the potential to effect water quality.
- Construction site areas should be designated for material delivery and storage.
- Material delivery and storage areas should be located away from waterways, if possible.
    - Avoid transport near drainage paths or waterways.
    - Surround with earth berms or other appropriate containment BMP. See EC-9, Earth Dikes and Drainage Swales.
    - Place in an area that will be paved.
- Storage of reactive, ignitable, or flammable liquids must comply with the fire codes of your area. Contact the local Fire Marshal to review site materials, quantities, and proposed storage area to determine specific requirements. See the Flammable and Combustible Liquid Code, NFPA30.
- An up to date inventory of materials delivered and stored onsite should be kept.

- Hazardous materials storage onsite should be minimized.
- Hazardous materials should be handled as infrequently as possible.
- Keep ample spill cleanup supplies appropriate for the materials being stored. Ensure that cleanup supplies are in a conspicuous, labeled area.
- Employees and subcontractors should be trained on the proper material delivery and storage practices.
- Employees trained in emergency spill cleanup procedures must be present when dangerous materials or liquid chemicals are unloaded.
- If significant residual materials remain on the ground after construction is complete, properly remove and dispose of materials and any contaminated soil. See WM-7, Contaminated Soil Management. If the area is to be paved, pave as soon as materials are removed to stabilize the soil.

Material Storage Areas and Practices

- Liquids, petroleum products, and substances listed in 40 CFR Parts 110, 117, or 302 should be stored in approved containers and drums and should not be overfilled. Containers and drums should be placed in temporary containment facilities for storage.
- A temporary containment facility should provide for a spill containment volume able to contain precipitation from a 25-year storm event, plus the greater of 10% of the aggregate volume of all containers or 100% of the capacity of the largest container within its boundary, whichever is greater.
- A temporary containment facility should be impervious to the materials stored therein for a minimum contact time of 72 hours.
- A temporary containment facility should be maintained free of accumulated rainwater and spills. In the event of spills or leaks, accumulated rainwater and spills should be collected and placed into drums. These liquids should be handled as a hazardous waste unless testing determines them to be non-hazardous. All collected liquids or non-hazardous liquids should be sent to an approved disposal site.
- Sufficient separation should be provided between stored containers to allow for spill cleanup and emergency response access.
- Incompatible materials, such as chlorine and ammonia, should not be stored in the same temporary containment facility.
- Materials should be covered prior to, and during rain events.
- Materials should be stored in their original containers and the original product labels should be maintained in place in a legible condition. Damaged or otherwise illegible labels should be replaced immediately.

- Bagged and boxed materials should be stored on pallets and should not be allowed to accumulate on the ground. To provide protection from wind and rain throughout the rainy season, bagged and boxed materials should be covered during non-working days and prior to and during rain events.
- Stockpiles should be protected in accordance with WM-3, Stockpile Management.
- Materials should be stored indoors within existing structures or completely enclosed storage sheds when available.
- Proper storage instructions should be posted at all times in an open and conspicuous location.
- An ample supply of appropriate spill clean up material should be kept near storage areas.
- Also see WM-6, Hazardous Waste Management, for storing of hazardous wastes.

Material Delivery Practices

- Keep an accurate, up-to-date inventory of material delivered and stored onsite.
- Arrange for employees trained in emergency spill cleanup procedures to be present when dangerous materials or liquid chemicals are unloaded.

Spill Cleanup

- Contain and clean up any spill immediately.
- Properly remove and dispose of any hazardous materials or contaminated soil if significant residual materials remain on the ground after construction is complete. See WM-7, Contaminated Soil Management.
- See WM-4, Spill Prevention and Control, for spills of chemicals and/or hazardous materials.
- If spills or leaks of materials occur that are not contained and could discharge to surface waters, non-visible sampling of site discharge may be required. Refer to the General Permit or to your project specific Construction Site Monitoring Plan to determine if and where sampling is required.

Cost

- The largest cost of implementation may be in the construction of a materials storage area that is covered and provides secondary containment.

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Keep storage areas clean and well organized, including a current list of all materials onsite.
- Inspect labels on containers for legibility and accuracy.

- Repair or replace perimeter controls, containment structures, covers, and liners as needed to maintain proper function.

Material Use WM-2

Description and Purpose

Prevent or reduce the discharge of pollutants to the storm drain system or watercourses from material use by using alternative products, minimizing hazardous material use onsite, and training employees and subcontractors.

Suitable Applications

This BMP is suitable for use at all construction projects. These procedures apply when the following materials are used or prepared onsite:

- Pesticides and herbicides
- Fertilizers
- Detergents
- Petroleum products such as fuel, oil, and grease
- Asphalt and other concrete components
- Other hazardous chemicals such as acids, lime, glues, adhesives, paints, solvents, and curing compounds
- Other materials that may be detrimental if released to the environment

Legend:

☑ **Primary Category**

☒ **Secondary Category**

Targeted Constituents

Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	
Oil and Grease	☑
Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Limitations

Safer alternative building and construction products may not be available or suitable in every instance.

Implementation

The following steps should be taken to minimize risk:

- Minimize use of hazardous materials onsite.
- Follow manufacturer instructions regarding uses, protective equipment, ventilation, flammability, and mixing of chemicals.
- Train personnel who use pesticides. The California Department of Pesticide Regulation and county agricultural commissioners license pesticide dealers, certify pesticide applicators, and conduct onsite inspections.
- The preferred method of termiticide application is soil injection near the existing or proposed structure foundation/slab; however, if not feasible, soil drench application of termiticides should follow EPA label guidelines and the following recommendations (most of which are applicable to most pesticide applications):
  - Do not treat soil that is water-saturated or frozen.
  - Application shall not commence within 24-hours of a predicted precipitation event with a 40% or greater probability. Weather tracking must be performed on a daily basis prior to termiticide application and during the period of termiticide application.
  - Do not allow treatment chemicals to runoff from the target area. Apply proper quantity to prevent excess runoff. Provide containment for and divert stormwater from application areas using berms or diversion ditches during application.
  - Dry season: Do not apply within 10 feet of storm drains. Do not apply within 25 feet of aquatic habitats (such as, but not limited to, lakes; reservoirs; rivers; permanent streams; marshes or ponds; estuaries; and commercial fish farm ponds).
  - Wet season: Do not apply within 50 feet of storm drains or aquatic habitats (such as, but not limited to, lakes; reservoirs; rivers; permanent streams; marshes or ponds; estuaries; and commercial fish farm ponds) unless a vegetative buffer is present (if so, refer to dry season requirements).
  - Do not make on-grade applications when sustained wind speeds are above 10 mph (at application site) at nozzle end height.
  - Cover treatment site prior to a rain event in order to prevent run-off of the pesticide into non-target areas. The treated area should be limited to a size that can be backfilled and/or covered by the end of the work shift. Backfilling or covering of the treated area shall be done by the end of the same work shift in which the application is made.
  - The applicator must either cover the soil him/herself or provide written notification of the above requirement to the contractor on site and to the person commissioning the

application (if different than the contractor). If notice is provided to the contractor or the person commissioning the application, then they are responsible under the Federal Insecticide Fungicide, and Rodenticide Act (FIFRA) to ensure that: 1) if the concrete slab cannot be poured over the treated soil within 24 hours of application, the treated soil is covered with a waterproof covering (such as polyethylene sheeting), and 2) the treated soil is covered if precipitation is predicted to occur before the concrete slab is scheduled to be poured.

- Do not over-apply fertilizers, herbicides, and pesticides. Prepare only the amount needed. Follow the recommended usage instructions. Over-application is expensive and environmentally harmful. Unless on steep slopes, till fertilizers into the soil rather than hydraulic application. Apply surface dressings in several smaller applications, as opposed to one large application, to allow time for infiltration and to avoid excess material being carried offsite by runoff. Do not apply these chemicals before predicted rainfall.
- Train employees and subcontractors in proper material use.
- Supply Material Safety Data Sheets (MSDS) for all materials.
- Dispose of latex paint and paint cans, used brushes, rags, absorbent materials, and drop cloths, when thoroughly dry and are no longer hazardous, with other construction debris.
- Do not remove the original product label; it contains important safety and disposal information. Use the entire product before disposing of the container.
- Mix paint indoors or in a containment area. Never clean paintbrushes or rinse paint containers into a street, gutter, storm drain, or watercourse. Dispose of any paint thinners, residue, and sludge(s) that cannot be recycled, as hazardous waste.
- For water-based paint, clean brushes to the extent practicable, and rinse to a drain leading to a sanitary sewer where permitted or contain for proper disposal off site. For oil-based paints, clean brushes to the extent practicable, and filter and reuse thinners and solvents.
- Use recycled and less hazardous products when practical. Recycle residual paints, solvents, non-treated lumber, and other materials.
- Use materials only where and when needed to complete the construction activity. Use safer alternative materials as much as possible. Reduce or eliminate use of hazardous materials onsite when practical.
- Document the location, time, chemicals applied, and applicator's name and qualifications.
- Keep an ample supply of spill clean up material near use areas. Train employees in spill clean up procedures.
- Avoid exposing applied materials to rainfall and runoff unless sufficient time has been allowed for them to dry.
- Discontinue use of erodible landscape material within 2 days prior to a forecasted rain event and materials should be covered and/or bermed.

- Provide containment for material use areas such as masons' areas or paint mixing/preparation areas to prevent materials/pollutants from entering stormwater.

Costs

All of the above are low cost measures.

Inspection and Maintenance

- Inspect and verify that activity-based BMPs are in place prior to the commencement of associated activities.
- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Ensure employees and subcontractors throughout the job are using appropriate practices.

Stockpile Management WM-3

Treat Categories		
EC	Erosion Control	
SE	Sediment Control	☒
TC	Tracking Control	
WE	Wind Erosion Control	
NS	Non-Stormwater Management Control	☒
WM	Waste Management and Materials Pollution Control	☑

Legend:
☑ **Primary Category**
☒ **Secondary Category**

Description and Purpose

Stockpile management procedures and practices are designed to reduce or eliminate air and stormwater pollution from stockpiles of soil, soil amendments, sand, paving materials such as Portland cement concrete (PCC) rubble, asphalt concrete (AC), asphalt concrete rubble, aggregate base, aggregate sub base or pre-mixed aggregate, asphalt minder (so called "cold mix" asphalt), and pressure treated wood.

Suitable Applications

Implement in all projects that stockpile soil and other loose materials.

Limitations

- Plastic sheeting as a stockpile protection is temporary and hard to manage in windy conditions. Where plastic is used, consider use of plastic tarps with nylon reinforcement which may be more durable than standard sheeting.
- Plastic sheeting can increase runoff volume due to lack of infiltration and potentially cause perimeter control failure.
- Plastic sheeting breaks down faster in sunlight.
- The use of Plastic materials and photodegradable plastics should be avoided.

Implementation

Protection of stockpiles is a year-round requirement. To properly manage stockpiles:

Targeted Constituents	
Sediment	☑
Nutrients	☑
Trash	☑
Metals	☑
Bacteria	
Oil and Grease	☑
Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

- On larger sites, a minimum of 50 ft separation from concentrated flows of stormwater, drainage courses, and inlets is recommended.
- After 14 days of inactivity, a stockpile is non-active and requires further protection described below. All stockpiles are required to be protected as non-active stockpiles immediately if they are not scheduled to be used within 14 days.
- Protect all stockpiles from stormwater run-on using temporary perimeter sediment barriers such as compost berms (SE-13), temporary silt dikes (SE-12), fiber rolls (SE-5), silt fences (SE-1), sandbags (SE-8), gravel bags (SE-6), or biofilter bags (SE-14). Refer to the individual fact sheet for each of these controls for installation information.
- Implement wind erosion control practices as appropriate on all stockpiled material. For specific information, see WE-1, Wind Erosion Control.
- Manage stockpiles of contaminated soil in accordance with WM-7, Contaminated Soil Management.
- Place bagged materials on pallets and under cover.
- Ensure that stockpile coverings are installed securely to protect from wind and rain.
- Some plastic covers withstand weather and sunlight better than others. Select cover materials or methods based on anticipated duration of use.

Protection of Non-Active Stockpiles

A stockpile is considered non-active if it either is not used for 14 days or if it is scheduled not to be used for 14 days or more. Stockpiles need to be protected immediately if they are not scheduled to be used within 14 days. Non-active stockpiles of the identified materials should be protected as follows:

Soil stockpiles

- Soil stockpiles should be covered or protected with soil stabilization measures and a temporary perimeter sediment barrier at all times.
- Temporary vegetation should be considered for topsoil piles that will be stockpiled for extended periods.

Stockpiles of Portland cement concrete rubble, asphalt concrete, asphalt concrete rubble, aggregate base, or aggregate sub base

- Stockpiles should be covered and protected with a temporary perimeter sediment barrier at all times.

Stockpiles of "cold mix"

- Cold mix stockpiles should be placed on and covered with plastic sheeting or comparable material at all times and surrounded by a berm.

Stockpiles of fly ash, stucco, hydrated lime

- Stockpiles of materials that may raise the pH of runoff (i.e., basic materials) should be covered with plastic and surrounded by a berm.

Stockpiles/Storage of treated wood

- Treated wood should be covered with plastic sheeting or comparable material at all times and surrounded by a berm.

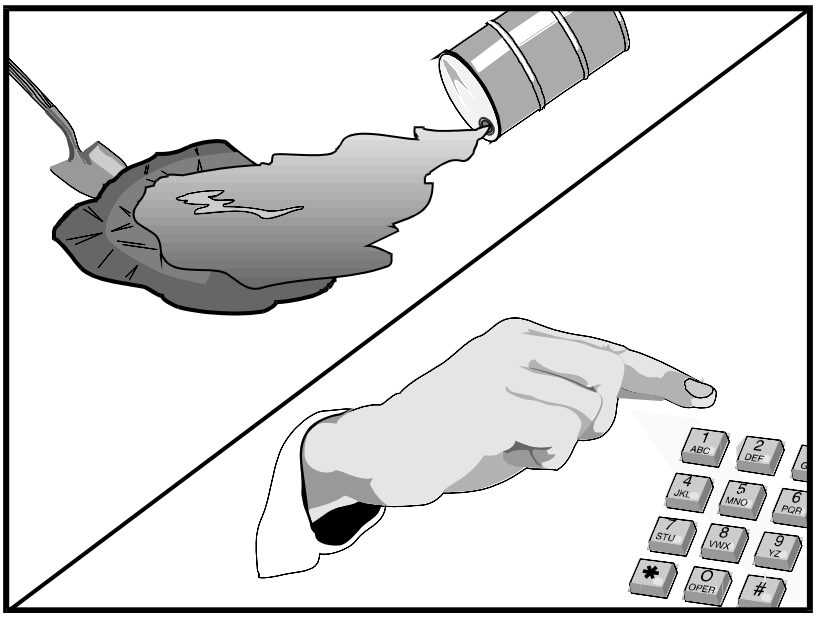
Protection of Active Stockpiles

A stockpile is active when it is being used or is scheduled to be used within 14 days of the previous use. Active stockpiles of the identified materials should be protected as follows:

- All stockpiles should be covered and protected with a temporary linear sediment barrier prior to the onset of precipitation.
- Stockpiles of "cold mix" and treated wood, and basic materials should be placed on and covered with plastic sheeting or comparable material and surrounded by a berm prior to the onset of precipitation.
- The downstream perimeter of an active stockpile should be protected with a linear sediment barrier or berm and runoff should be diverted around or away from the stockpile on the upstream perimeter.

Costs

For cost information associated with stockpile protection refer to the individual erosion or sediment control BMP fact sheet considered for implementation (For example, refer to SE-1 Silt Fence for installation of silt fence around the perimeter of a stockpile.)



Inspection and Maintenance

- Stockpiles must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- It may be necessary to inspect stockpiles covered with plastic sheeting more frequently during certain conditions (for example, high winds or extreme heat).
- Repair and/or replace perimeter controls and covers as needed to keep them functioning properly.
- Sediment shall be removed when it reaches one-third of the barrier height.

Stormwater Quality Handbooks - Construction Site Best Management Practices (BMPs) Manual, State of California Department of Transportation (Caltrans), March 2003.

Spill Prevention and Control WM-4

Description and Purpose

Prevent or reduce the discharge of pollutants to drainage systems or watercourses from leaks and spills by reducing the chance for spills, stopping the source of spills, containing and cleaning up spills, properly disposing of spill materials, and training employees.

This best management practice covers only spill prevention and control. However, WM-1, Materials Delivery and Storage, and WM-2, Material Use, also contain useful information, particularly on spill prevention. For information on wastes, see the waste management BMPs in this section.

Suitable Applications

This BMP is suitable for all construction projects. Spill control procedures are implemented anytime chemicals or hazardous substances are stored on the construction site, including the following materials:

- Soil stabilizers/binders
- Dust palliatives
- Herbicides
- Growth inhibitors
- Fertilizers
- Deicing/anti-icing chemicals

Organics	☑

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

- Fuels
- Lubricants
- Other petroleum distillates

Limitations

- In some cases, it may be necessary to use a private spill cleanup company.
- This BMP applies to spills caused by the contractor and subcontractors.
- Procedures and practices presented in this BMP are general. Contractor should identify appropriate practices for the specific materials used or stored onsite

Implementation

The following steps will help reduce the stormwater impacts of leaks and spills:

Education

- Be aware that different materials pollute in different amounts. Make sure that each employee knows what a "significant spill" is for each material they use, and what is the appropriate response for "significant" and "insignificant" spills.
- Educate employees and subcontractors on potential dangers to humans and the environment from spills and leaks.
- Hold regular meetings to discuss and reinforce appropriate disposal procedures (incorporate into regular safety meetings).
- Establish a continuing education program to indoctrinate new employees.
- Have contractor's superintendent or representative oversee and enforce proper spill prevention and control measures.

General Measures

- To the extent that the work can be accomplished safely, spills of oil, petroleum products, substances listed under 40 CFR parts 110,117, and 302, and sanitary and septic wastes should be contained and cleaned up immediately.
- Store hazardous materials and wastes in covered containers and protect from vandalism.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- Train employees in spill prevention and cleanup.
- Designate responsible individuals to oversee and enforce control measures.
- Spills should be covered and protected from stormwater runon during rainfall to the extent that it doesn't compromise clean up activities.
- Do not bury or wash spills with water.

- Store and dispose of used clean up materials, contaminated materials, and recovered spill material that is no longer suitable for the intended purpose in conformance with the provisions in applicable BMPs.
- Do not allow water used for cleaning and decontamination to enter storm drains or watercourses. Collect and dispose of contaminated water in accordance with WM-10, Liquid Waste Management.
- Contain water overflow or minor water spillage and do not allow it to discharge into drainage facilities or watercourses.
- Place proper storage, cleanup, and spill reporting instructions for hazardous materials stored or used on the project site in an open, conspicuous, and accessible location.
- Keep waste storage areas clean, well organized, and equipped with ample cleanup supplies as appropriate for the materials being stored. Perimeter controls, containment structures, covers, and liners should be repaired or replaced as needed to maintain proper function.

Cleanup

- Clean up leaks and spills immediately.
- Use a rag for small spills on paved surfaces, a damp mop for general cleanup, and absorbent material for larger spills. If the spilled material is hazardous, then the used cleanup materials are also hazardous and must be sent to either a certified laundry (rags) or disposed of as hazardous waste.
- Never hose down or bury dry material spills. Clean up as much of the material as possible and dispose of properly. See the waste management BMPs in this section for specific information.

Minor Spills

- Minor spills typically involve small quantities of oil, gasoline, paint, etc. which can be controlled by the first responder at the discovery of the spill.
- Use absorbent materials on small spills rather than hosing down or burying the spill.
- Absorbent materials should be promptly removed and disposed of properly.
- Follow the practice below for a minor spill:
  - Contain the spread of the spill.
  - Recover spilled materials.
  - Clean the contaminated area and properly dispose of contaminated materials.

Semi-Significant Spills

- Semi-significant spills still can be controlled by the first responder along with the aid of other personnel such as laborers and the foreman, etc. This response may require the cessation of all other activities.

- Spills should be cleaned up immediately:
  - Contain spread of the spill.
  - Notify the project foreman immediately.
  - If the spill occurs on paved or impermeable surfaces, clean up using "dry" methods (absorbent materials, cat litter and/or rags). Contain the spill by encircling with absorbent materials and do not let the spill spread widely.
  - If the spill occurs in dirt areas, immediately contain the spill by constructing an earthen dike. Dig up and properly dispose of contaminated soil.
  - If the spill occurs during rain, cover spill with tarps or other material to prevent contaminating runoff.

Significant/Hazardous Spills

- For significant or hazardous spills that cannot be controlled by personnel in the immediate vicinity, the following steps should be taken:
  - Notify the local emergency response by dialing 911. In addition to 911, the contractor will notify the proper county officials. It is the contractor's responsibility to have all emergency phone numbers at the construction site.
  - Notify the Governor's Office of Emergency Services Warning Center, (916) 845-8911.
  - For spills of federal reportable quantities, in conformance with the requirements in 40 CFR parts 110,119, and 302, the contractor should notify the National Response Center at (800) 424-8802.
  - Notification should first be made by telephone and followed up with a written report.
  - The services of a spill's contractor or a Haz-Mat team should be obtained immediately. Construction personnel should not attempt to clean up until the appropriate and qualified staffs have arrived at the job site.
  - Other agencies which may need to be consulted include, but are not limited to, the Fire Department, the Public Works Department, the Coast Guard, the Highway Patrol, the City/County Police Department, Department of Toxic Substances, California Division of Oil and Gas, Cal/OSHA, etc.

Reporting

- Report significant spills to local agencies, such as the Fire Department; they can assist in cleanup.
- Federal regulations require that any significant oil spill into a water body or onto an adjoining shoreline be reported to the National Response Center (NRC) at 800-424-8802 (24 hours).

Use the following measures related to specific activities:

Vehicle and Equipment Maintenance

- If maintenance must occur onsite, use a designated area and a secondary containment, located away from drainage courses, to prevent the runon of stormwater and the runoff of spills.
- Regularly inspect onsite vehicles and equipment for leaks and repair immediately
- Check incoming vehicles and equipment (including delivery trucks, and employee and subcontractor vehicles) for leaking oil and fluids. Do not allow leaking vehicles or equipment onsite.
- Always use secondary containment, such as a drain pan or drop cloth, to catch spills or leaks when removing or changing fluids.
- Place drip pans or absorbent materials under paving equipment when not in use.
- Use absorbent materials on small spills rather than hosing down or burying the spill. Remove the absorbent materials promptly and dispose of properly.
- Promptly transfer used fluids to the proper waste or recycling drums. Don't leave full drip pans or other open containers lying around
- Oil filters disposed of in trashcans or dumpsters can leak oil and pollute stormwater. Place the oil filter in a funnel over a waste oil-recycling drum to drain excess oil before disposal. Oil filters can also be recycled. Ask the oil supplier or recycler about recycling oil filters.
- Store cracked batteries in a non-leaking secondary container. Do this with all cracked batteries even if you think all the acid has drained out. If you drop a battery, treat it as if it is cracked. Put it into the containment area until you are sure it is not leaking.

Vehicle and Equipment Fueling

- If fueling must occur onsite, use designate areas, located away from drainage courses, to prevent the runon of stormwater and the runoff of spills.
- Discourage "topping off" of fuel tanks.
- Always use secondary containment, such as a drain pan, when fueling to catch spills/ leaks.

Costs

Prevention of leaks and spills is inexpensive. Treatment and/ or disposal of contaminated soil or water can be quite expensive.

Inspection and Maintenance

- Inspect and verify that activity–based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.

- Inspect BMPs subject to non-stormwater discharge daily while non-stormwater discharges occur.
- Keep ample supplies of spill control and cleanup materials onsite, near storage, unloading, and maintenance areas.
- Update your spill prevention and control plan and stock cleanup materials as changes occur in the types of chemicals onsite.

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Solid waste management procedures and practices are designed to prevent or reduce the discharge of pollutants to stormwater from solid or construction waste by providing designated waste collection areas and containers, arranging for regular disposal, and training employees and subcontractors.

Suitable Applications

This BMP is suitable for construction sites where the following wastes are generated or stored:

- Solid waste generated from trees and shrubs removed during land clearing, demolition of existing structures (rubble), and building construction
- Packaging materials including wood, paper, and plastic
- Scrap or surplus building materials including scrap metals, rubber, plastic, glass pieces, and masonry products
- Domestic wastes including food containers such as beverage cans, coffee cups, paper bags, plastic wrappers, and cigarettes
- Construction wastes including brick, mortar, timber, steel and metal scraps, pipe and electrical cuttings, non-hazardous equipment parts, styrofoam and other materials used to transport and package construction materials

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Highway planting wastes, including vegetative material, plant containers, and packaging materials

Limitations

Temporary stockpiling of certain construction wastes may not necessitate stringent drainage related controls during the non-rainy season or in desert areas with low rainfall.

Implementation

The following steps will help keep a clean site and reduce stormwater pollution:

- Select designated waste collection areas onsite.
- Inform trash-hauling contractors that you will accept only watertight dumpsters for onsite use. Inspect dumpsters for leaks and repair any dumpster that is not watertight.
- Locate containers in a covered area or in a secondary containment.
- Provide an adequate number of containers with lids or covers that can be placed over the container to keep rain out or to prevent loss of wastes when it is windy.
- Cover waste containers at the end of each work day and when it is raining.
- Plan for additional containers and more frequent pickup during the demolition phase of construction.
- Collect site trash daily, especially during rainy and windy conditions.
- Remove this solid waste promptly since erosion and sediment control devices tend to collect litter.
- Make sure that toxic liquid wastes (used oils, solvents, and paints) and chemicals (acids, pesticides, additives, curing compounds) are not disposed of in dumpsters designated for construction debris.
- Do not hose out dumpsters on the construction site. Leave dumpster cleaning to the trash hauling contractor.
- Arrange for regular waste collection before containers overflow.
- Clean up immediately if a container does spill.
- Make sure that construction waste is collected, removed, and disposed of only at authorized disposal areas.

Education

- Have the contractor's superintendent or representative oversee and enforce proper solid waste management procedures and practices.
- Instruct employees and subcontractors on identification of solid waste and hazardous waste.
- Educate employees and subcontractors on solid waste storage and disposal procedures.

- Hold regular meetings to discuss and reinforce disposal procedures (incorporate into regular safety meetings).
- Require that employees and subcontractors follow solid waste handling and storage procedures.
- Prohibit littering by employees, subcontractors, and visitors.
- Minimize production of solid waste materials wherever possible.

Collection, Storage, and Disposal

- Littering on the project site should be prohibited.
- To prevent clogging of the storm drainage system, litter and debris removal from drainage grates, trash racks, and ditch lines should be a priority.
- Trash receptacles should be provided in the contractor's yard, field trailer areas, and at locations where workers congregate for lunch and break periods.
- Litter from work areas within the construction limits of the project site should be collected and placed in watertight dumpsters at least weekly, regardless of whether the litter was generated by the contractor, the public, or others. Collected litter and debris should not be placed in or next to drain inlets, stormwater drainage systems, or watercourses.
- Dumpsters of sufficient size and number should be provided to contain the solid waste generated by the project.
- Full dumpsters should be removed from the project site and the contents should be disposed of by the trash hauling contractor.
- Construction debris and waste should be removed from the site biweekly or more frequently as needed.
- Construction material visible to the public should be stored or stacked in an orderly manner.
- Stormwater runon should be prevented from contacting stored solid waste through the use of berms, dikes, or other temporary diversion structures or through the use of measures to elevate waste from site surfaces.
- Solid waste storage areas should be located at least 50 ft from drainage facilities and watercourses and should not be located in areas prone to flooding or ponding.
- Except during fair weather, construction and highway planting waste not stored in watertight dumpsters should be securely covered from wind and rain by covering the waste with tarps or plastic.
- Segregate potentially hazardous waste from non-hazardous construction site waste.
- Make sure that toxic liquid wastes (used oils, solvents, and paints) and chemicals (acids, pesticides, additives, curing compounds) are not disposed of in dumpsters designated for construction debris.

- For disposal of hazardous waste, see WM-6, Hazardous Waste Management. Have hazardous waste hauled to an appropriate disposal and/or recycling facility.
- Salvage or recycle useful vegetation debris, packaging and surplus building materials when practical. For example, trees and shrubs from land clearing can be used as a brush barrier, or converted into wood chips, then used as mulch on graded areas. Wood pallets, cardboard boxes, and construction scraps can also be recycled.

Costs

All of the above are low cost measures.

Inspection and Maintenance

- Inspect and verify that activity–based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharge daily while non-stormwater discharges occur
- Inspect construction waste area regularly.
- Arrange for regular waste collection.

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Prevent or reduce the discharge of pollutants to stormwater from hazardous waste through proper material use, waste disposal, and training of employees and subcontractors.

Suitable Applications

This best management practice (BMP) applies to all construction projects. Hazardous waste management practices are implemented on construction projects that generate waste from the use of:

- Petroleum Products
- Asphalt Products
- Concrete Curing Compounds
- Pesticides
- Palliatives
- Acids
- Septic Wastes
- Paints
- Stains
- Solvents
- Wood Preservatives
- Roofing Tar
- Any materials deemed a hazardous waste in California, Title 22 Division 4.5, or listed in 40 CFR Parts 110, 117, 261, or 302

In addition, sites with existing structures may contain wastes, which must be disposed of in accordance with federal, state, and local regulations. These wastes include:

- Sandblasting grit mixed with lead-, cadmium-, or chromium-based paints
- Asbestos
- PCBs (particularly in older transformers)

Limitations

- Hazardous waste that cannot be reused or recycled must be disposed of by a licensed hazardous waste hauler.
- Nothing in this BMP relieves the contractor from responsibility for compliance with federal, state, and local laws regarding storage, handling, transportation, and disposal of hazardous wastes.
- This BMP does not cover aerially deposited lead (ADL) soils. For ADL soils refer to WM-7, Contaminated Soil Management.

Implementation

The following steps will help reduce stormwater pollution from hazardous wastes:

Material Use

- Wastes should be stored in sealed containers constructed of a suitable material and should be labeled as required by Title 22 CCR, Division 4.5 and 49 CFR Parts 172, 173, 178, and 179.
- All hazardous waste should be stored, transported, and disposed as required in Title 22 CCR, Division 4.5 and 49 CFR 261-263.
- Waste containers should be stored in temporary containment facilities that should comply with the following requirements:
    - Temporary containment facility should provide for a spill containment volume equal to 1.5 times the volume of all containers able to contain precipitation from a 25-year storm event, plus the greater of 10% of the aggregate volume of all containers or 100% of the capacity of the largest tank within its boundary, whichever is greater.
    - Temporary containment facility should be impervious to the materials stored there for a minimum contact time of 72 hours.
    - Temporary containment facilities should be maintained free of accumulated rainwater and spills. In the event of spills or leaks, accumulated rainwater and spills should be placed into drums after each rainfall. These liquids should be handled as a hazardous waste unless testing determines them to be non-hazardous. Non-hazardous liquids should be sent to an approved disposal site.
    - Sufficient separation should be provided between stored containers to allow for spill cleanup and emergency response access.

  - Incompatible materials, such as chlorine and ammonia, should not be stored in the same temporary containment facility.

  - Throughout the rainy season, temporary containment facilities should be covered during non-working days, and prior to rain events. Covered facilities may include use of plastic tarps for small facilities or constructed roofs with overhangs.

- Drums should not be overfilled, and wastes should not be mixed.

- Unless watertight, containers of dry waste should be stored on pallets.

- Do not over-apply herbicides and pesticides. Prepare only the amount needed. Follow the recommended usage instructions. Over application is expensive and environmentally harmful. Apply surface dressings in several smaller applications, as opposed to one large application. Allow time for infiltration and avoid excess material being carried offsite by runoff. Do not apply these chemicals just before it rains. People applying pesticides must be certified in accordance with federal and state regulations.

- Paint brushes and equipment for water and oil-based paints should be cleaned within a contained area and should not be allowed to contaminate site soils, watercourses, or drainage systems. Waste paints, thinners, solvents, residues, and sludges that cannot be recycled or reused should be disposed of as hazardous waste. When thoroughly dry, latex paint and paint cans, used brushes, rags, absorbent materials, and drop cloths should be disposed of as solid waste.

- Do not clean out brushes or rinse paint containers into the dirt, street, gutter, storm drain, or stream. “Paint out” brushes as much as possible. Rinse water-based paints to the sanitary sewer. Filter and reuse thinners and solvents. Dispose of excess oil-based paints and sludge as hazardous waste.

- The following actions should be taken with respect to temporary contaminant:

  - Ensure that adequate hazardous waste storage volume is available.

  - Ensure that hazardous waste collection containers are conveniently located.

  - Designate hazardous waste storage areas onsite away from storm drains or watercourses and away from moving vehicles and equipment to prevent accidental spills.

  - Minimize production or generation of hazardous materials and hazardous waste on the job site.

  - Use containment berms in fueling and maintenance areas and where the potential for spills is high.

  - Segregate potentially hazardous waste from non-hazardous construction site debris.

  - Keep liquid or semi-liquid hazardous waste in appropriate containers (closed drums or similar) and under cover.

- Clearly label all hazardous waste containers with the waste being stored and the date of accumulation.
- Place hazardous waste containers in secondary containment.
- Do not allow potentially hazardous waste materials to accumulate on the ground.
- Do not mix wastes.
- Use all of the product before disposing of the container.
- Do not remove the original product label; it contains important safety and disposal information.

Waste Recycling Disposal

- Select designated hazardous waste collection areas onsite.
- Hazardous materials and wastes should be stored in covered containers and protected from vandalism.
- Place hazardous waste containers in secondary containment.
- Do not mix wastes, this can cause chemical reactions, making recycling impossible and complicating disposal.
- Recycle any useful materials such as used oil or water-based paint.
- Make sure that toxic liquid wastes (used oils, solvents, and paints) and chemicals (acids, pesticides, additives, curing compounds) are not disposed of in dumpsters designated for construction debris.
- Arrange for regular waste collection before containers overflow.
- Make sure that hazardous waste (e.g., excess oil-based paint and sludge) is collected, removed, and disposed of only at authorized disposal areas.

Disposal Procedures

- Waste should be disposed of by a licensed hazardous waste transporter at an authorized and licensed disposal facility or recycling facility utilizing properly completed Uniform Hazardous Waste Manifest forms.
- A Department of Health Services certified laboratory should sample waste to determine the appropriate disposal facility.
- Properly dispose of rainwater in secondary containment that may have mixed with hazardous waste.
- Attention is directed to "Hazardous Material", "Contaminated Material", and "Aerially Deposited Lead" of the contract documents regarding the handling and disposal of hazardous materials.

Education

- Educate employees and subcontractors on hazardous waste storage and disposal procedures.
- Educate employees and subcontractors on potential dangers to humans and the environment from hazardous wastes.
- Instruct employees and subcontractors on safety procedures for common construction site hazardous wastes.
- Instruct employees and subcontractors in identification of hazardous and solid waste.
- Hold regular meetings to discuss and reinforce hazardous waste management procedures (incorporate into regular safety meetings).
- The contractor's superintendent or representative should oversee and enforce proper hazardous waste management procedures and practices.
- Make sure that hazardous waste is collected, removed, and disposed of only at authorized disposal areas.
- Warning signs should be placed in areas recently treated with chemicals.
- Place a stockpile of spill cleanup materials where it will be readily accessible.
- If a container does spill, clean up immediately.

Costs

All of the above are low cost measures.

Inspection and Maintenance

- Inspect and verify that activity–based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect BMPs in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Inspect BMPs subject to non-stormwater discharge daily while non-stormwater discharges occur
- Hazardous waste should be regularly collected.
- A foreman or construction supervisor should monitor onsite hazardous waste storage and disposal procedures.
- Waste storage areas should be kept clean, well organized, and equipped with ample cleanup supplies as appropriate for the materials being stored.
- Perimeter controls, containment structures, covers, and liners should be repaired or replaced as needed to maintain proper function.

- Hazardous spills should be cleaned up and reported in conformance with the applicable Material Safety Data Sheet (MSDS) and the instructions posted at the project site.
- The National Response Center, at (800) 424-8802, should be notified of spills of federal reportable quantities in conformance with the requirements in 40 CFR parts 110, 117, and 302. Also notify the Governors Office of Emergency Services Warning Center at (916) 845-8911.
- A copy of the hazardous waste manifests should be provided.

Potential Alternatives

None

If User/Subscriber modifies this fact sheet in any way, the CASQA name/logo and footer below must be removed from each page and not appear on the modified version.

Description and Purpose

Prevent the discharge of pollutants to stormwater from concrete waste by conducting washout onsite or offsite in a designated area, and by employee and subcontractor training.

The General Permit incorporates Numeric Action Levels (NAL) for pH (see Section 2 of this handbook to determine your project's risk level and if you are subject to these requirements).

Many types of construction materials, including mortar, concrete, stucco, cement and block and their associated wastes have basic chemical properties that can raise pH levels outside of the permitted range. Additional care should be taken when managing these materials to prevent them from coming into contact with stormwater flows and raising pH to levels outside the accepted range.

Suitable Applications

Concrete waste management procedures and practices are implemented on construction projects where:

- Concrete is used as a construction material or where concrete dust and debris result from demolition activities.
- Slurries containing Portland cement concrete (PCC) are generated, such as from saw cutting, coring, grinding, grooving, and hydro-concrete demolition.
- Concrete trucks and other concrete-coated equipment are washed onsite.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Mortar-mixing stations exist.
- Stucco mixing and spraying.
- See also NS-8, Vehicle and Equipment Cleaning.

Limitations

- Offsite washout of concrete wastes may not always be possible.
- Multiple washouts may be needed to assure adequate capacity and to allow for evaporation.

Implementation

The following steps will help reduce stormwater pollution from concrete wastes:

- Incorporate requirements for concrete waste management into material supplier and subcontractor agreements.
- Store dry and wet materials under cover, away from drainage areas. Refer to WM-1, Material Delivery and Storage for more information.
- Avoid mixing excess amounts of concrete.
- Perform washout of concrete trucks in designated areas only, where washout will not reach stormwater.
- Do not wash out concrete trucks into storm drains, open ditches, streets, streams or onto the ground. Trucks should always be washed out into designated facilities.
- Do not allow excess concrete to be dumped onsite, except in designated areas.
- For onsite washout:
  - On larger sites, it is recommended to locate washout areas at least 50 feet from storm drains, open ditches, or water bodies. Do not allow runoff from this area by constructing a temporary pit or bermed area large enough for liquid and solid waste.
  - Washout wastes into the temporary washout where the concrete can set, be broken up, and then disposed properly.
  - Washouts shall be implemented in a manner that prevents leaching to underlying soils. Washout containers must be water tight and washouts on or in the ground must be lined with a suitable impervious liner, typically a plastic type material.
- Do not wash sweepings from exposed aggregate concrete into the street or storm drain. Collect and return sweepings to aggregate base stockpile or dispose in the trash.
- See typical concrete washout installation details at the end of this fact sheet.

Education

- Educate employees, subcontractors, and suppliers on the concrete waste management techniques described herein.

- Arrange for contractor's superintendent or representative to oversee and enforce concrete waste management procedures.
- Discuss the concrete management techniques described in this BMP (such as handling of concrete waste and washout) with the ready-mix concrete supplier before any deliveries are made.

Concrete Demolition Wastes

- Stockpile concrete demolition waste in accordance with BMP WM-3, Stockpile Management.
- Dispose of or recycle hardened concrete waste in accordance with applicable federal, state or local regulations.

Concrete Slurry Wastes

- PCC and AC waste should not be allowed to enter storm drains or watercourses.
- PCC and AC waste should be collected and disposed of or placed in a temporary concrete washout facility (as described in Onsite Temporary Concrete Washout Facility, Concrete Transit Truck Washout Procedures, below).
- A foreman or construction supervisor should monitor onsite concrete working tasks, such as saw cutting, coring, grinding and grooving to ensure proper methods are implemented.
- Saw-cut concrete slurry should not be allowed to enter storm drains or watercourses. Residue from grinding operations should be picked up by means of a vacuum attachment to the grinding machine or by sweeping. Saw cutting residue should not be allowed to flow across the pavement and should not be left on the surface of the pavement. See also NS-3, Paving and Grinding Operations; and WM-10, Liquid Waste Management.
- Concrete slurry residue should be disposed in a temporary washout facility (as described in Onsite Temporary Concrete Washout Facility, Concrete Transit Truck Washout Procedures, below) and allowed to dry. Dispose of dry slurry residue in accordance with WM-5, Solid Waste Management.

Onsite Temporary Concrete Washout Facility, Transit Truck Washout Procedures

- Temporary concrete washout facilities should be located a minimum of 50 ft from storm drain inlets, open drainage facilities, and watercourses. Each facility should be located away from construction traffic or access areas to prevent disturbance or tracking.
- A sign should be installed adjacent to each washout facility to inform concrete equipment operators to utilize the proper facilities.
- Temporary concrete washout facilities should be constructed above grade or below grade at the option of the contractor. Temporary concrete washout facilities should be constructed and maintained in sufficient quantity and size to contain all liquid and concrete waste generated by washout operations.

- Temporary washout facilities should have a temporary pit or bermed areas of sufficient volume to completely contain all liquid and waste concrete materials generated during washout procedures.
- Temporary washout facilities should be lined to prevent discharge to the underlying ground or surrounding area.
- Washout of concrete trucks should be performed in designated areas only.
- Only concrete from mixer truck chutes should be washed into concrete wash out.
- Concrete washout from concrete pumper bins can be washed into concrete pumper trucks and discharged into designated washout area or properly disposed of or recycled offsite.
- Once concrete wastes are washed into the designated area and allowed to harden, the concrete should be broken up, removed, and disposed of per WM-5, Solid Waste Management. Dispose of or recycle hardened concrete on a regular basis.
- Temporary Concrete Washout Facility (Type Above Grade)
    - Temporary concrete washout facility (type above grade) should be constructed as shown on the details at the end of this BMP, with a recommended minimum length and minimum width of 10 ft; however, smaller sites or jobs may only need a smaller washout facility. With any washout, always maintain a sufficient quantity and volume to contain all liquid and concrete waste generated by washout operations.
    - Materials used to construct the washout area should conform to the provisions detailed in their respective BMPs (e.g., SE-8 Sandbag Barrier).
    - Plastic lining material should be a minimum of 10 mil in polyethylene sheeting and should be free of holes, tears, or other defects that compromise the impermeability of the material.
    - Alternatively, portable removable containers can be used as above grade concrete washouts. Also called a “roll-off”; this concrete washout facility should be properly sealed to prevent leakage and should be removed from the site and replaced when the container reaches 75% capacity.
- Temporary Concrete Washout Facility (Type Below Grade)
    - Temporary concrete washout facilities (type below grade) should be constructed as shown on the details at the end of this BMP, with a recommended minimum length and minimum width of 10 ft. The quantity and volume should be sufficient to contain all liquid and concrete waste generated by washout operations.
    - Lath and flagging should be commercial type.
    - Plastic lining material should be a minimum of 10 mil polyethylene sheeting and should be free of holes, tears, or other defects that compromise the impermeability of the material.

- The base of a washout facility should be free of rock or debris that may damage a plastic liner.

Removal of Temporary Concrete Washout Facilities

- When temporary concrete washout facilities are no longer required for the work, the hardened concrete should be removed and properly disposed or recycled in accordance with federal, state or local regulations. Materials used to construct temporary concrete washout facilities should be removed from the site of the work and properly disposed or recycled in accordance with federal, state or local regulations.

- Holes, depressions or other ground disturbance caused by the removal of the temporary concrete washout facilities should be backfilled and repaired.

Costs

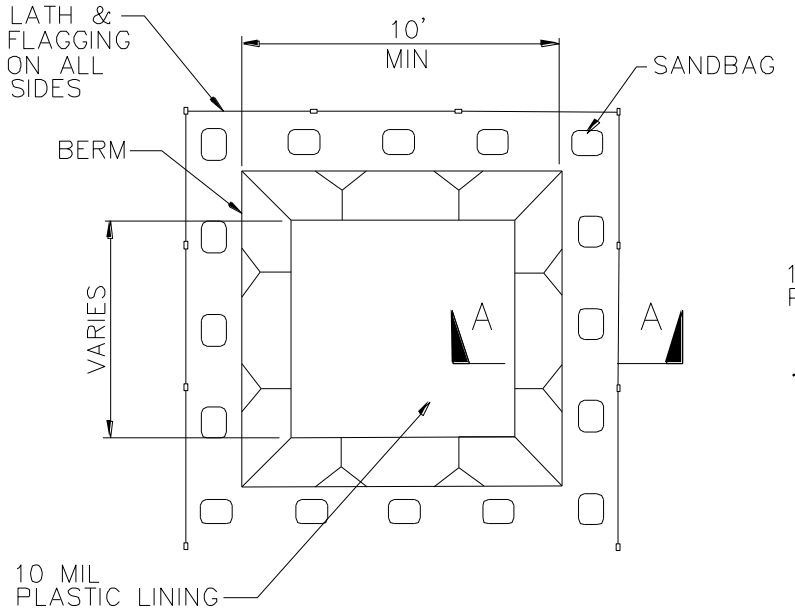
All of the above are low cost measures. Roll-off concrete washout facilities can be more costly than other measures due to removal and replacement; however, provide a cleaner alternative to traditional washouts. The type of washout facility, size, and availability of materials will determine the cost of the washout.

Inspection and Maintenance

- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.

- Temporary concrete washout facilities should be maintained to provide adequate holding capacity with a minimum freeboard of 4 in. for above grade facilities and 12 in. for below grade facilities. Maintaining temporary concrete washout facilities should include removing and disposing of hardened concrete and returning the facilities to a functional condition. Hardened concrete materials should be removed and properly disposed or recycled in accordance with federal, state or local regulations.

- Washout facilities must be cleaned, or new facilities must be constructed and ready for use once the washout is 75% full.



- Inspect washout facilities for damage (e.g. torn liner, evidence of leaks, signage, etc.). Repair all identified damage.

Description and Purpose

Proper sanitary and septic waste management prevent the discharge of pollutants to stormwater from sanitary and septic waste by providing convenient, well-maintained facilities, and arranging for regular service and disposal.

Suitable Applications

Sanitary septic waste management practices are suitable for use at all construction sites that use temporary or portable sanitary and septic waste systems.

Limitations

None identified.

Implementation

Sanitary or septic wastes should be treated or disposed of in accordance with state and local requirements. In many cases, one contract with a local facility supplier will be all that it takes to make sure sanitary wastes are properly disposed.

Storage and Disposal Procedures

- Temporary sanitary facilities should be located away from drainage facilities, watercourses, and from traffic circulation. If site conditions allow, place portable facilities a minimum of 50 feet from drainage conveyances and traffic areas. When subjected to high winds or risk of high winds, temporary sanitary facilities should be secured to prevent overturning.

CASQA
CALIFORNIA STORMWATER QUALITY ASSOCIATION

- Temporary sanitary facilities must be equipped with containment to prevent discharge of pollutants to the stormwater drainage system of the receiving water.
- Consider safety as well as environmental implications before placing temporary sanitary facilities.
- Wastewater should not be discharged or buried within the project site.
- Sanitary and septic systems that discharge directly into sanitary sewer systems, where permissible, should comply with the local health agency, city, county, and sewer district requirements.
- Only reputable, licensed sanitary and septic waste haulers should be used.
- Sanitary facilities should be located in a convenient location.
- Temporary septic systems should treat wastes to appropriate levels before discharging.
- If using an onsite disposal system (OSDS), such as a septic system, local health agency requirements must be followed.
- Temporary sanitary facilities that discharge to the sanitary sewer system should be properly connected to avoid illicit discharges.
- Sanitary and septic facilities should be maintained in good working order by a licensed service.
- Regular waste collection by a licensed hauler should be arranged before facilities overflow.
- If a spill does occur from a temporary sanitary facility, follow federal, state and local regulations for containment and clean-up.

Education

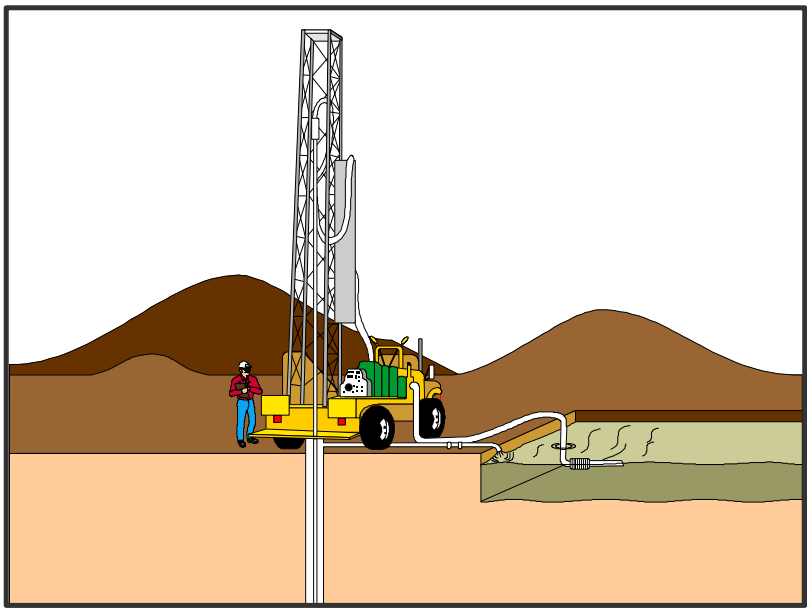
- Educate employees, subcontractors, and suppliers on sanitary and septic waste storage and disposal procedures.
- Educate employees, subcontractors, and suppliers of potential dangers to humans and the environment from sanitary and septic wastes.
- Instruct employees, subcontractors, and suppliers in identification of sanitary and septic waste.
- Hold regular meetings to discuss and reinforce the use of sanitary facilities (incorporate into regular safety meetings).
- Establish a continuing education program to indoctrinate new employees.

Costs

All of the above are low cost measures.

Sanitary/Septic Waste Management WM-9

Inspection and Maintenance



- BMPs must be inspected in accordance with General Permit requirements for the associated project type and risk level. It is recommended that at a minimum, BMPs be inspected weekly, prior to forecasted rain events, daily during extended rain events, and after the conclusion of rain events.
- Arrange for regular waste collection.
- If high winds are expected, portable sanitary facilities must be secured with spikes or weighed down to prevent over turning.
- If spills or leaks from sanitary or septic facilities occur that are not contained and discharge from the site, non-visible sampling of site discharge may be required. Refer to the General Permit or to your project specific Construction Site Monitoring Plan to determine if and where sampling is required.

Liquid Waste Management WM-10

Description and Purpose

Liquid waste management includes procedures and practices to prevent discharge of pollutants to the storm drain system or to watercourses as a result of the creation, collection, and disposal of non-hazardous liquid wastes.

Suitable Applications

Liquid waste management is applicable to construction projects that generate any of the following non-hazardous by-products, residuals, or wastes:

- Drilling slurries and drilling fluids
- Grease-free and oil-free wastewater and rinse water
- Dredgings
- Other non-stormwater liquid discharges not permitted by separate permits

Limitations

- Disposal of some liquid wastes may be subject to specific laws and regulations or to requirements of other permits secured for the construction project (e.g., NPDES permits, Army Corps permits, Coastal Commission permits, etc.).
- Liquid waste management does not apply to dewatering operations (NS-2 Dewatering Operations), solid waste management (WM-5, Solid Waste Management), hazardous wastes (WM-6, Hazardous Waste Management), or

concrete slurry residue (WM-8, Concrete Waste Management).

- Typical permitted non-stormwater discharges can include: water line flushing; landscape irrigation; diverted stream flows; rising ground waters; uncontaminated pumped ground water; discharges from potable water sources; foundation drains; irrigation water; springs; water from crawl space pumps; footing drains; lawn watering; flows from riparian habitats and wetlands; and discharges or flows from emergency fire fighting activities.

Implementation

General Practices

- Instruct employees and subcontractors how to safely differentiate between non-hazardous liquid waste and potential or known hazardous liquid waste.
- Instruct employees, subcontractors, and suppliers that it is unacceptable for any liquid waste to enter any storm drainage device, waterway, or receiving water.
- Educate employees and subcontractors on liquid waste generating activities and liquid waste storage and disposal procedures.
- Hold regular meetings to discuss and reinforce disposal procedures (incorporate into regular safety meetings).
- Verify which non-stormwater discharges are permitted by the statewide NPDES permit; different regions might have different requirements not outlined in this permit.
- Apply NS-8, Vehicle and Equipment Cleaning for managing wash water and rinse water from vehicle and equipment cleaning operations.

Containing Liquid Wastes

- Drilling residue and drilling fluids should not be allowed to enter storm drains and watercourses and should be disposed of.
- If an appropriate location is available, drilling residue and drilling fluids that are exempt under Title 23, CCR § 2511(g) may be dried by infiltration and evaporation in a containment facility constructed in conformance with the provisions concerning the Temporary Concrete Washout Facilities detailed in WM-8, Concrete Waste Management.
- Liquid wastes generated as part of an operational procedure, such as water-laden dredged material and drilling mud, should be contained and not allowed to flow into drainage channels or receiving waters prior to treatment.
- Liquid wastes should be contained in a controlled area such as a holding pit, sediment basin, roll-off bin, or portable tank.
- Containment devices must be structurally sound and leak free.
- Containment devices must be of sufficient quantity or volume to completely contain the liquid wastes generated.

- Precautions should be taken to avoid spills or accidental releases of contained liquid wastes. Apply the education measures and spill response procedures outlined in WM-4, Spill Prevention and Control.

- Containment areas or devices should not be located where accidental release of the contained liquid can threaten health or safety or discharge to water bodies, channels, or storm drains.

Capturing Liquid Wastes

- Capture all liquid wastes that have the potential to affect the storm drainage system (such as wash water and rinse water from cleaning walls or pavement), before they run off a surface.

- Do not allow liquid wastes to flow or discharge uncontrolled. Use temporary dikes or berms to intercept flows and direct them to a containment area or device for capture.

- Use a sediment trap (SE-3, Sediment Trap) for capturing and treating sediment laden liquid waste or capture in a containment device and allow sediment to settle.

Disposing of Liquid Wastes

- A typical method to handle liquid waste is to dewater the contained liquid waste, using procedures such as described in NS-2, Dewatering Operations, and SE-2, Sediment Basin, and dispose of resulting solids per WM-5, Solid Waste Management.

- Methods of disposal for some liquid wastes may be prescribed in Water Quality Reports, NPDES permits, Environmental Impact Reports, 401 or 404 permits, and local agency discharge permits, etc. Review the SWPPP to see if disposal methods are identified.

- Liquid wastes, such as from dredged material, may require testing and certification whether it is hazardous or not before a disposal method can be determined.

- For disposal of hazardous waste, see WM-6, Hazardous Waste Management.

- If necessary, further treat liquid wastes prior to disposal. Treatment may include, though is not limited to, sedimentation, filtration, and chemical neutralization.

Costs

Prevention costs for liquid waste management are minimal. Costs increase if cleanup or fines are involved.

Inspection and Maintenance

- Inspect and verify that activity–based BMPs are in place prior to the commencement of associated activities. While activities associated with the BMP are under way, inspect weekly during the rainy season and of two-week intervals in the non-rainy season to verify continued BMP implementation.

- Inspect BMPs subject to non-stormwater discharge daily while non-stormwater discharges occur.

- Remove deposited solids in containment areas and capturing devices as needed and at the completion of the task. Dispose of any solids as described in WM-5, Solid Waste Management.
- Inspect containment areas and capturing devices and repair as needed.

I. BACKGROUND

A. History

In 1972, the Federal Water Pollution Control Act (also referred to as the Clean Water Act [CWA]) was amended to provide that the discharge of pollutants to waters of the United States from any point source is unlawful unless the discharge is in compliance with a National Pollutant Discharge Elimination System (NPDES) permit. The 1987 amendments to the CWA added Section 402(p), which establishes a framework for regulating municipal and industrial storm water discharges under the NPDES Program. On November 16, 1990, the U.S. Environmental Protection Agency (USEPA) published final regulations that established storm water permit application requirements for specified categories of industries. The regulations provide that discharges of storm water to waters of the United States from construction projects that encompass five or more acres of soil disturbance are effectively prohibited unless the discharge is in compliance with an NPDES Permit. Regulations (Phase II Rule) that became final on December 8, 1999 lowered the permitting threshold from five acres to one acre.

While federal regulations allow two permitting options for storm water discharges (Individual Permits and General Permits), the State Water Board has elected to adopt only one statewide General Permit at this time that will apply to most storm water discharges associated with construction activity.

On August 19, 1999, the State Water Board reissued the General Construction Storm Water Permit (Water Quality Order 99-08-DWQ). On December 8, 1999 the State Water Board amended Order 99-08-DWQ to apply to sites as small as one acre.

The General Permit accompanying this fact sheet regulates storm water runoff from construction sites. Regulating many storm water discharges under one permit will greatly reduce the administrative burden associated with permitting individual storm water discharges. To obtain coverage under this General Permit, dischargers shall electronically file the Permit Registration Documents (PRDs), which includes a Notice of Intent (NOI), Storm Water Pollution Prevention Plan (SWPPP), and other compliance related documents required by this General Permit and mail the appropriate permit fee to the State Water Board. It is expected that as the storm water program develops, the Regional Water Quality Control Boards (Regional Water Boards) may issue General Permits or Individual Permits containing more specific permit provisions. When this occurs, this General Permit will no longer regulate those dischargers.

B. Legal Challenges and Court Decisions

1. Early Court Decisions

Shortly after the passage of the CWA, the USEPA promulgated regulations exempting most storm water discharges from the NPDES permit requirements. (See 40 C.F.R. § 125.4 (1975); see also *Natural Resources Defense Council v. Costle* (D.C. Cir. 1977) 568 F.2d 1369, 1372 (*Costle*); *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3d 1159, 1163 (*Defenders of Wildlife*).) When environmental groups challenged this exemption in federal court, the District of Columbia Court of Appeals invalidated the regulation, holding that the USEPA "does not have authority to exempt categories of point sources from the permit requirements of [CWA] § 402." (*Costle*, 568 F.2d at 1377.) The *Costle* court rejected the USEPA's argument that effluent-based storm sewer regulation was administratively infeasible because of the variable nature of storm water pollution and the number of affected storm sewers throughout the country. (*Id.* at 1377-82.) Although the court acknowledged the practical problems relating to storm sewer regulation, the court found the USEPA had the flexibility under the CWA to design regulations that would overcome these problems. (*Id.* at 1379-83.) In particular, the court pointed to general permits and permits based on requiring best management practices (BMPs).

During the next 15 years, the USEPA made numerous attempts to reconcile the statutory requirement of point source regulation with the practical problem of regulating possibly millions of diverse point source discharges of storm water. (See *Defenders of Wildlife*, 191 F.3d at 1163; see also Gallagher, Clean Water Act in Environmental Law Handbook (Sullivan, edit., 2003)
p. 300 (Environmental Law Handbook); Eisen, *Toward a Sustainable Urbanism: Lessons from Federal Regulation of Urban Storm Water Runoff* (1995) 48 Wash. U.J. Urb. & Contemp. L.1, 40-41 [Regulation of Urban Storm Water Runoff].)

In 1987, Congress amended the CWA to require NPDES permits for storm water discharges. (See CWA § 402(p), 33 U.S.C. § 1342(p); *Defenders of Wildlife,* 191 F.3d at 1163; *Natural Resources Defense Council v. USEPA* (9th Cir. 1992) 966 F.2d 1292, 1296.) In these amendments, enacted as part of the Water Quality Act of 1987, Congress distinguished between industrial and municipal storm water discharges. With respect to industrial storm water discharges, Congress provided that NPDES permits "shall meet all applicable provisions of this section and section 1311 [requiring the USEPA to establish effluent limitations under specific timetables]." (CWA § 402(p)(3)(A), 33 U.S.C. § 1342(p)(3)(A); see also *Defenders of Wildlife,* 191 F.3d at 1163-64.)

In 1990, USEPA adopted regulations specifying what activities were considered “industrial” and thus required discharges of storm water associated with those activities to obtain coverage under NPDES permits. (55 Fed. Reg. 47,990 (1990); 40 C.F.R. § 122.26(b)(14).) Construction activities, deemed a subset of the industrial activities category, must also be regulated by an NPDES permit. (40 C.F.R. § 122.26(b)(14)(x)). In 1999, USEPA issued regulations for “Phase II” of storm water regulation, which required most small construction sites (1-5 acres) to be regulated under the NPDES program. (64 Fed. Reg. 68,722; 40 C.F.R. § 122.26(b)(15)(i).)

2. Court Decisions on Public Participation

Two recent federal court opinions have vacated USEPA rules that denied meaningful public review of NPDES permit conditions. On January 14, 2003, the Ninth Circuit Court of Appeals held that certain aspects of USEPA’s Phase II regulations governing MS4s were invalid primarily because the general permit did not contain express requirements for public participation. (*Environmental Defense Center v. USEPA* (9th Cir. 2003) 344 F.3d 832.) Specifically, the court determined that applications for general permit coverage (including the Notice of Intent (NOI) and Storm Water Management Program (SWMP)) must be made available to the public, the applications must be reviewed and determined to meet the applicable standard by the permitting authority before coverage commences, and there must be a process to accommodate public hearings. (*Id.* at 852-54.) Similarly, on February 28, 2005, the Second Circuit Court of Appeals held that the USEPA's confined animal feeding operation (CAFO) rule violated the CWA because it allowed dischargers to write their own nutrient management plans without public review. (*Waterkeeper Alliance v. USEPA* (2d Cir. 2005) 399 F.3d 486.) Although neither decision involved the issuance of construction storm water permits, the State Water Board’s Office of Chief Counsel has recommended that the new General Permit address the courts’ rulings where feasible[1].

[1] In *Texas Independent Producers and Royalty Owners Assn. v. USEPA* (7th Cir. 2005) 410 F.3d 964, the Seventh Circuit Court of Appeals held that the USEPA’s construction general permit was not required to provide the public with the opportunity for a public hearing on the Notice of Intent or Storm Water Pollution Prevention Plan. The Seventh Circuit briefly discussed why it agreed with the Ninth Circuit’s dissent in *Environmental Defense Center*, but

The CWA and the USEPA's regulations provide states with the discretion to formulate permit terms, including specifying best management practices (BMPs), to achieve strict compliance with federal technology-based and water quality-based standards. (*Natural Resources Defense Council v. USEPA* (9th Cir. 1992) 966 F.2d 1292, 1308.) Accordingly, this General Permit has developed specific BMPs as well as numeric action levels (NALs) in order to achieve these minimum federal standards. In addition, the General Permit requires a SWPPP and REAP (another dynamic, site-specific plan) to be developed but has removed all language requiring the discharger to implement these plans – instead, the discharger is required to comply with specific requirements. By requiring the dischargers to implement these specific BMPs and NALs, this General Permit ensures that the dischargers do not "write their own permits." As a result this General Permit does not require each discharger's SWPPP and REAP to be reviewed and approved by the Regional Water Boards.

This General Permit also requires dischargers to electronically file all permit-related compliance documents. These documents include, but are not limited to, NOIs, SWPPPs, annual reports, Notice of Terminations (NOTs), and numeric action level (NAL) exceedance reports. Electronically submitted compliance information is immediately available to the public, as well as the Regional Water Quality Control Board (Regional Water Board) offices, via the Internet. In addition, this General Permit enables public review and hearings on permit applications when appropriate. Under this General Permit, the public clearly has a meaningful opportunity to participate in the permitting process.

---

generally did not discuss the substantive holdings in *Environmental Defense Center* and *Waterkeeper Alliance*, because neither court addressed the initial question of whether the plaintiffs had standing to challenge the permits at issue. However, notwithstanding the Seventh Circuit's decision, it is not binding or controlling on the State Water Board because California is located within the Ninth Circuit.

C. Blue Ribbon Panel of Experts and Feasibility of Numeric Effluent Limitations

In 2005 and 2006, the State Water Board convened an expert panel (panel) to address the feasibility of numeric effluent limitations (NELs) in California's storm water permits. Specifically, the panel was asked to address:

"Is it technically feasible to establish numeric effluent limitations, or some other quantifiable limit, for inclusion in storm water permits? How would such limitations or criteria be established, and what information and data would be required?"

"The answers should address industrial general permits, construction general permits, and area-wide municipal permits. The answers should also address both technology-based limitations or criteria and water quality-based limitations or criteria. In evaluating establishment of any objective criteria, the panel should address all of the following:

The ability of the State Water Board to establish appropriate objective limitations or criteria;

How compliance determinations would be made;

The ability of dischargers and inspectors to monitor for compliance; and

The technical and financial ability of dischargers to comply with the limitations or criteria."

Through a series of public participation processes (State Water Board meetings, State Water Board workshops, and the solicitation of written comments), a number of water quality, public process and overall program effectiveness problems were identified. Some of these problems are addressed through this General Permit.

D. Summary of Panel Findings on Construction Activities

The panel's final report can be downloaded and viewed through links at www.waterboards.ca.gov or by clicking here[2].

The panel made the following observations:

"Limited field studies indicate that traditional erosion and sediment controls are highly variable in performance, resulting in highly variable turbidity levels in the site discharge."

"Site-to-site variability in runoff turbidity from undeveloped sites can also be quite large in many areas of California, particularly in more arid regions with less natural vegetative cover and steep slopes."

---

[2] http://www.waterboards.ca.gov/stormwtr/docs/numeric/swpanel_final_report.pdf

"Active treatment technologies involving the use of polymers with relatively large storage systems now exist that can provide much more consistent and very low discharge turbidity. However, these technologies have as yet only been applied to larger construction sites, generally five acres or greater. Furthermore, toxicity has been observed at some locations, although at the vast majority of sites, toxicity has not occurred. There is also the potential for an accidental large release of such chemicals with their use."

"To date most of the construction permits have focused on TSS and turbidity, but have not addressed other, potentially significant pollutants such as phosphorus and an assortment of chemicals used at construction sites."

"Currently, there is no required training or certification program for contractors, preparers of soil erosion and sediment control Storm Water Pollution Prevention Plans, or field inspectors."

"The quality of storm water discharges from construction sites that effectively employ BMPs likely varies due to site conditions such as climate, soil, and topography."

"The States of Oregon and Washington have recently adopted similar concepts to the Action Levels described earlier."

In addition, the panel made the following conclusions:

"It is the consensus of the Panel that active treatment technologies make Numeric Limits technically feasible for pollutants commonly associated with storm water discharges from construction sites (e.g. TSS and turbidity) for larger construction sites. Technical practicalities and cost-effectiveness may make these technologies less feasible for smaller sites, including small drainages within a larger site, as these technologies have seen limited use at small construction sites. If chemical addition is not permitted, then Numeric Limits are not likely feasible."

"The Board should consider Numeric Limits or Action Levels for other pollutants of relevance to construction sites, but in particular pH. It is of particular concern where fresh concrete or wash water from cement mixers/equipment is exposed to storm water."

"The Board should consider the phased implementation of Numeric Limits and Action Levels, commensurate with the capacity of the dischargers and support industry to respond."

E. How the Panel's Findings are Used in this General Permit

The State Water Board carefully considered the findings of the panel and related public comments. The State Water Board also reviewed and considered the comments regarding statewide storm water policy and the reissuance of the Industrial General Permit. From the input received the State Water Board identified some permit and program performance gaps that are addressed in this General Permit. The Summary of Significant Changes (below) in this General Permit are a direct result of this process.

F. Summary of Significant Changes in This General Permit

The State Water Board has significant changes to Order 99-08-DWQ. This General Permit differs from Order 99-08-DWQ in the following significant ways:

Rainfall Erosivity Waiver: this General Permit includes the option allowing a small construction site (>1 and <5 acres) to self-certify if the rainfall erosivity value (R value) for their site's given location and time frame compute to be less than or equal to 5.

Technology-Based Numeric Action Levels: this General Permit includes NALs for pH and turbidity.

Risk-Based Permitting Approach: this General Permit establishes three levels of risk possible for a construction site. Risk is calculated in two parts: 1) Project Sediment Risk, and 2) Receiving Water Risk.

Minimum Requirements Specified: this General Permit imposes more minimum BMPs and requirements that were previously only required as elements of the SWPPP or were suggested by guidance.

Project Site Soil Characteristics Monitoring and Reporting: this General Permit provides the option for dischargers to monitor and report the soil characteristics at their project location. The primary purpose of this requirement is to provide better risk determination and eventually better program evaluation.

Effluent Monitoring and Reporting: this General Permit requires effluent monitoring and reporting for pH and turbidity in storm water discharges. The purpose of this monitoring is to evaluate whether NALs and NELs for Active Treatment Systems included in this General Permit are exceeded.

Receiving Water Monitoring and Reporting: this General Permit requires some Risk Level 3 and LUP Type 3 dischargers to monitor receiving waters and conduct bioassessments.

Post-Construction Storm Water Performance Standards: this General Permit specifies runoff reduction requirements for all sites not covered by a Phase I or Phase II MS4 NPDES permit, to avoid, minimize and/or mitigate post-construction storm water runoff impacts.

Rain Event Action Plan: this General Permit requires certain sites to develop and implement a Rain Event Action Plan (REAP) that must be designed to protect all exposed portions of the site within 48 hours prior to any likely precipitation event.

Annual Reporting: this General Permit requires all projects that are enrolled for more than one continuous three-month period to submit information and annually certify that their site is in compliance with these requirements. The primary purpose of this requirement is to provide information needed for overall program evaluation and pubic information.

Certification/Training Requirements for Key Project Personnel: this General Permit requires that key personnel (e.g., SWPPP preparers, inspectors, etc.) have specific training or certifications to ensure their level of knowledge and skills are adequate to ensure their ability to design and evaluate project specifications that will comply with General Permit requirements.

Linear Underground/Overhead Projects: this General Permit includes requirements for all Linear Underground/Overhead Projects (LUPs).

II. RATIONALE

A. General Permit Approach

A general permit for construction activities is an appropriate permitting approach for the following reasons:

1. A general permit is an efficient method to establish the essential regulatory requirements for a broad range of construction activities under differing site conditions;

2. A general permit is the most efficient method to handle the large number of construction storm water permit applications;

3. The application process for coverage under a general permit is far less onerous than that for individual permit and hence more cost effective;

4. A general permit is consistent with USEPA's four-tier permitting strategy, the purpose of which is to use the flexibility provided by the CWA in designing a workable and efficient permitting system; and

5. A general permit is designed to provide coverage for a group of related facilities or operations of a specific industry type or group of industries. It is appropriate when the discharge characteristics are sufficiently similar, and a standard set of permit requirements can effectively provide environmental protection and comply with water quality standards for discharges. In most cases, the general permit will provide sufficient and appropriate management requirements to protect the quality of receiving waters from discharges of storm water from construction sites.

There may be instances where a general permit is not appropriate for a specific construction project. A Regional Water Board may require any discharger otherwise covered under the General Permit to apply for and obtain an Individual Permit or apply for coverage under a more specific General Permit. The Regional Water Board must determine that this General Permit does not provide adequate assurance that water quality will be protected, or that there is a site-specific reason why an individual permit should be required.

B. Construction Activities Covered

1. **Construction activity subject to this General Permit:**

Any construction or demolition activity, including, but not limited to, clearing, grading, grubbing, or excavation, or any other activity that results in a land disturbance of equal to or greater than one acre.

Construction activity that results in land surface disturbances of less than one acre if the construction activity is part of a larger common plan of development or sale of one or more acres of disturbed land surface.

Construction activity related to residential, commercial, or industrial development on lands currently used for agriculture including, but not limited to, the construction of buildings related to agriculture that are considered industrial pursuant to USEPA regulations, such as dairy barns or food processing facilities.

Construction activity associated with LUPs including, but not limited to, those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment and associated ancillary facilities) and include, but are not limited to, underground utility mark-out, potholing, concrete

and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/tower pad and cable/wire pull station, substation construction, substructure installation, construction of tower footings and/or foundations, pole and tower installations, pipeline installations, welding, concrete and/or pavement repair or replacement, and stockpile/borrow locations.

Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities.[3]

Storm water discharges from dredge spoil placement that occur outside of U.S. Army Corps of Engineers jurisdiction[4] (upland sites) and that disturb one or more acres of land surface from construction activity are covered by this General Permit. Construction projects that intend to disturb one or more acres of land within the jurisdictional boundaries of a CWA § 404 permit should contact the appropriate Regional Water Board to determine whether this permit applies to the project.

2. Linear Underground/Overhead Projects (LUPs) subject to this General Permit:

Underground/overhead facilities typically constructed as LUPs include, but are not limited to, any conveyance, pipe, or pipeline for the transportation of any gaseous, liquid (including water, wastewater for domestic municipal services), liquescent, or slurry substance; any cable line or wire for the transmission of electrical energy; any cable line or wire for communications (e.g., telephone, telegraph, radio or television messages); and associated ancillary facilities. Construction activities associated with LUPs include, but are not limited to, those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment and associated ancillary facilities) and include, but are not limited to, underground utility mark-out, potholing, concrete and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/tower pad and cable/wire pull station, substation construction, substructure installation, construction of tower footings and/or foundations, pole and tower installations, pipeline installations, welding, concrete and/or pavement repair or replacement, and stockpile/borrow locations.

Water Quality Order 2003-0007-DWQ regulated construction activities associated with small LUPs that resulted in land disturbances greater than one acre, but less than five acres. These projects were considered non-traditional construction projects. Attachment A of this Order now regulates all construction activities from LUPs resulting in land disturbances greater than one acre.

3. Common Plan of Development or Sale

USEPA regulations include the term “common plan of development or sale” to ensure that acreage within a common project does not artificially escape the permit requirements because construction activities are phased, split among smaller parcels, or completed by different owners/developers. In the absence of an

---

[3] Pursuant to the Ninth Circuit Court of Appeals’ decision in *NRDC v. EPA* (9th Cir. 2008) 526 F.3d 591, and subsequent denial of the USEPA’s petition for reconsideration in November 2008, oil and gas construction activities discharging storm water contaminated only with sediment are no longer exempt from the NPDES program.

[4] A construction site that includes a dredge and/or fill discharge to any water of the United States (e.g., wetland, channel, pond, or marine water) requires a CWA Section 404 permit from the U.S. Army Corps of Engineers and a CWA Section 401 Water Quality Certification from the Regional Water Board or State Water Board.

exact definition of “common plan of development or sale,” the State Water Board is required to exercise its regulatory discretion in providing a common sense interpretation of the term as it applies to construction projects and permit coverage. An overbroad interpretation of the term would render meaningless the clear “one acre” federal permitting threshold and would potentially trigger permitting of almost any construction activity that occurs within an area that had previously received area-wide utility or road improvements.

Construction projects generally receive grading and/or building permits (Local Permits) from local authorities prior to initiating construction activity. These Local Permits spell out the scope of the project, the parcels involved, the type of construction approved, etc. Referring to the Local Permit helps define “common plan of development or sale.” In cases such as tract home development, a Local Permit will include all phases of the construction project including rough grading, utility and road installation, and vertical construction. All construction activities approved in the Local Permit are part of the common plan and must remain under the General Permit until construction is completed. For custom home construction, Local Permits typically only approve vertical construction as the rough grading, utilities, and road improvements were already independently completed under the a previous Local Permit. In the case of a custom home site, the homeowner must submit plans and obtain a distinct and separate Local Permit from the local authority in order to proceed. It is not the intent of the State Water Board to require permitting for an individual homeowner building a custom home on a private lot of less than one acre if it is subject to a separate Local Permit. Similarly, the installation of a swimming pool, deck, or landscaping that disturbs less than one acre that was not part of any previous Local Permit are not required to be permitted.

The following are several examples of construction activity of less than one acre that would require permit coverage:

a. A landowner receives a building permit(s) to build tract homes on a 100-acre site split into 200 one-third acre parcels, (the remaining acreage consists of streets and parkways) which are sold to individual homeowners as they are completed. The landowner completes and sells all the parcels except for two. Although the remaining two parcels combined are less than one acre, the landowner must continue permit coverage for the two parcels.

b. One of the parcels discussed above is sold to another owner who intends to complete the construction as already approved in the Local Permit. The new landowner must file Permit Registration Documents (PRDs) to complete the construction even if the new landowner is required to obtain a separate Local Permit.

c. Landowner in (1) above purchases 50 additional one half-acre parcels adjacent to the original 200-acre project. The landowner seeks a Local Permit (or amendment to existing Local permit) to build on 20 parcels while leaving the remaining 30 parcels for future development. The landowner must amend PRDs to include the 20 parcels 14 days prior to commencement of construction activity on those parcels.

C. Construction Activities Not Covered

1. Traditional Construction Projects Not Covered

This General Permit does not apply to the following construction activity:

a. Routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of the facility.

b. Disturbances to land surfaces solely related to agricultural operations such as disking, harrowing, terracing and leveling, and soil preparation.

c. Discharges of storm water from areas on tribal lands; construction on tribal lands is regulated by a federal permit.

d. Discharges of storm water within the Lake Tahoe Hydrologic Unit. The Lahontan Regional Water Board has adopted its own permit to regulate storm water discharges from construction activity in the Lake Tahoe Hydrologic Unit (Regional Water Board 6SLT). Owners of construction projects in this watershed must apply for the Lahontan Regional Water Board permit rather than the statewide Construction General Permit. Construction projects within the Lahontan region must also comply with the Lahontan Region Project Guideline for Erosion Control (R6T-2005-0007 Section), which can be found at **http://www.waterboards.ca.gov/lahontan/Adopted_Orders/2005/r6t_2005_0007.pdf**

e. Construction activity that disturbs less than one acre of land surface, unless part of a larger common plan of development or the sale of one or more acres of disturbed land surface.

f. Construction activity covered by an individual NPDES Permit for storm water discharges.

g. Landfill construction activity that is subject to the Industrial General Permit.

h. Construction activity that discharges to Combined Sewer Systems.

i. Conveyances that discharge storm water runoff combined with municipal sewage.

j. Discharges of storm water identified in CWA § 402(*l*)(2), 33 U.S.C. § 1342(*l*)(2).

2. **Linear Projects Not Covered**

a. LUP construction activity does not include linear routine maintenance projects. Routine maintenance projects are projects associated with operations and maintenance activities that are conducted on existing lines and facilities and within existing right-of-way, easements, franchise agreements, or other legally binding agreements of the discharger. Routine maintenance projects include, but are not limited to projects that are conducted to:

i. Maintain the original purpose of the facility or hydraulic capacity.

ii. Update existing lines[5] and facilities to comply with applicable codes, standards, and regulations regardless if such projects result in increased capacity.

iii. Repairing leaks.

[5]Update existing lines includes replacing existing lines with new materials or pipes.

Routine maintenance does not include construction of new[6] lines or facilities resulting from compliance with applicable codes, standards, and regulations.

Routine maintenance projects do not include those areas of maintenance projects that are outside of an existing right-of-way, franchise, easements, or agreements. When a project must secure new areas, those areas may be subject to this General Permit based on the area of disturbed land outside the original right-of-way, easement, or agreement.

b. LUP construction activity does not include field activities associated with the planning and design of a project (e.g., activities associated with route selection).

c. Tie-ins conducted immediately adjacent to "energized" or "pressurized" facilities by the discharger are not considered construction activities where all other LUP construction activities associated with the tie-in are covered by an NOI and SWPPP of a third party or municipal agency.

3. **EPA's Small Construction Rainfall Erosivity Waiver**

EPA's Storm Water Phase II Final Rule provides the option for a Small Construction Rainfall Erosivity Waiver. This waiver applies to small construction sites between 1 and 5 acres, and allows permitting authorities to waive those sites that do not have adverse water quality impacts.

Dischargers eligible for this waiver are exempt from Construction General Permit Coverage. In order to obtain the waiver, the discharger must certify to the State Water Board that small construction activity will occur only when the rainfall erosivity factor is less than 5 ("R" in the Revised Universal Soil Loss Equation). The period of construction activity begins at initial earth disturbance and ends with final stabilization. Where vegetation will be used for final stabilization, the date of installation of a practice that provides interim non-vegetative stabilization can be used for the end of the construction period. The operator must agree (as a condition waiver eligibility) to periodically inspect and properly maintain the area until the criteria for final stabilization as defined in the General Permit have been met. If use of this interim stabilization eligibility condition was relied on to qualify for the waiver, signature on the waiver with a certification statement constitutes acceptance of and commitment to complete the final stabilization process. The discharger must submit a waiver certification to the State Board prior to commencing construction activities.

USEPA funded a cooperative agreement with Texas A&M University to develop an online rainfall erosivity calculator. Dischargers can access the calculator from EPA's website at: www.epa.gov/npdes/stormwater/cgp. Use of the calculator allows the discharger to determine potential eligibility for the rainfall erosivity waiver. It may also be useful in determining the time periods during which construction activity could be waived from permit coverage.

[6]New lines are those that are not associated with existing facilities and are not part of a project to update or replace existing lines.

D. Obtaining and Terminating Permit Coverage

The appropriate Legally Responsible Person (LRP) must obtain coverage under this General Permit. To obtain coverage, the LRP or the LRP's Approved Signatory must file Permit Registration Documents (PRDs) prior to the commencement of construction activity. Failure to obtain coverage under this General Permit for storm water discharges to waters of the United States is a violation of the CWA and the California Water Code.

To obtain coverage under this General Permit, LRPs must electronically file the PRDs, which include a Notice of Intent (NOI), Storm Water Pollution Prevention Plan (SWPPP), and other documents required by this General Permit, and mail the appropriate permit fee to the State Water Board. It is expected that as the storm water program develops, the Regional Water Boards may issue General Permits or Individual Permits that contain more specific permit provisions. When this occurs, this General Permit will no longer regulate those dischargers that obtain coverage under Individual Permits.

Any information provided to the Regional Water Board shall comply with the Homeland Security Act and any other federal law that concerns security in the United States; any information that does not comply should not be submitted.

The application requirements of the General Permit establish a mechanism to clearly identify the responsible parties, locations, and scope of operations of dischargers covered by the General Permit and to document the discharger's knowledge of the General Permit's requirements.

This General Permit provides a grandfathering exception to existing dischargers subject to Water Quality Order No. 99-08-DWQ. Construction projects covered under Water Quality Order No. 99-08-DWQ shall obtain permit coverage at Risk Level 1. LUP projects covered under Water Quality Order No. 2003-0007-DWQ shall obtain permit coverage at LUP Type 1. The Regional Water Boards have the authority to require Risk Determination to be performed on projects currently covered under Water Quality Order No. 99-08-DWQ and 2003-0007-DWQ where they deem necessary.

LRPs must file a Notice of Termination (NOT) with the Regional Water Board when construction is complete and final stabilization has been reached or ownership has been transferred. The discharger must certify that all State and local requirements have been met in accordance with this General Permit. In order for construction to be found complete, the discharger must install post-construction storm water management measures and establish a long-term maintenance plan. This requirement is intended to ensure that the post-construction conditions at the project site do not cause or contribute to direct or indirect water quality impacts (i.e., pollution and/or hydromodification) upstream and downstream. Specifically, the discharger must demonstrate compliance with the post-construction standards set forth in this General Permit (Section XIII). The discharger is responsible for all compliance issues including all annual fees until the NOT has been filed and approved by the local Regional Water Board.

E. Discharge Prohibitions

This General Permit authorizes the discharge of storm water to surface waters from construction activities that result in the disturbance of one or more acres of land, provided that the discharger satisfies all permit conditions set forth in the Order. This General Permit prohibits the discharge of pollutants other than storm water and non-storm water discharges authorized by this General Permit or another NPDES permit. This General Permit also prohibits all discharges which contain a hazardous substance in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges. In addition, this General Permit incorporates discharge prohibitions contained in water quality control plans, as implemented by the nine Regional Water Boards. Discharges to Areas of Special Biological Significance (ASBS) are prohibited unless covered by an exception that the State Water Board has approved.

Non-storm water discharges include a wide variety of sources, including improper dumping, spills, or leakage from storage tanks or transfer areas. Non-storm water discharges may contribute significant pollutant loads to receiving waters. Measures to control spills, leakage, and dumping, and to prevent illicit connections during construction must be addressed through structural as well as non-structural BMPs. The State Water Board recognizes, however, that certain non-storm water discharges may be necessary for the completion of construction projects. Authorized non-storm water discharges may include those from de-chlorinated potable water sources such as: fire hydrant flushing, irrigation of vegetative erosion control measures, pipe flushing and testing, water to control dust, uncontaminated ground water dewatering, and other discharges not subject to a separate general NPDES permit adopted by a region. Therefore this General Permit authorizes such discharges provided they meet the following conditions.

These authorized non-storm water discharges must:

1. be infeasible to eliminate;
2. comply with BMPs as described in the SWPPP;
3. filter or treat, using appropriate technology, all dewatering discharges from sedimentation basins;
4. meet the NALs for pH and turbidity; and
5. not cause or contribute to a violation of water quality standards.

Additionally, authorized non-storm water discharges must not be used to clean up failed or inadequate construction or post-construction BMPs designed to keep materials onsite. Authorized non-storm water dewatering discharges may require a permit because some Regional Water Boards have adopted General Permits for dewatering discharges.

This General Permit prohibits the discharge of storm water that causes or threatens to cause pollution, contamination, or nuisance.

F. Effluent Standards for All Types of Discharges

1. Technology-Based Effluent Limitations

Permits for storm water discharges associated with construction activity must meet all applicable provisions of Sections 301 and 402 of the CWA. These provisions require controls of pollutant discharges that utilize best available technology economically achievable (BAT) for toxic pollutants and non conventional pollutants and best conventional pollutant control technology (BCT) for conventional pollutants. Additionally, these provisions require controls of pollutant discharges to reduce pollutants and any more stringent controls necessary to meet water quality standards. The USEPA has already established such limitations, known as effluent limitation guidelines (ELGs), for some industrial categories. This is not the case with construction discharges. In instances where there are no ELGs the permit writer is to use best professional judgment (BPJ) to establish requirements that the discharger must meet using BAT/BCT technology. This General Permit contains only narrative effluent limitations and does not contain numeric effluent limitations, except for Active Treatment Systems (ATS).

Order No. 2009-0009-DWQ, as originally adopted by the State Water Board on September 2, 2009, contained numeric effluent limitations for pH (within the range of 6.0 and 9.0 pH units) and turbidity (500 NTU) that applied only to Risk Level 3 and LUP Type 3 construction sites. The State Water Board adopted the numeric effluent limitations as technology-based effluent limitations based upon its best professional judgment. The California Building Industry Association, the Building Industry Legal Defense

Foundation, and the California Business Properties Association (petitioners) challenged Order No. 2009-0009-DWQ in *California Building Industry Association et al. v. State Water Resources Control Board*. On December 27, 2011, the Superior Court issued a judgment and writ of mandamus. The Superior Court ruled in favor of the State Water Board on almost all of the issues the petitioners raised, but the Superior Court invalidated the numeric effluent limitations for pH and turbidity for Risk Level 3 and LUP Type 3 sites because it determined that the State Water Board did not have sufficient BMP performance data to support those numeric effluent limitations. Therefore, the Superior Court concluded that the State Water Board did not comply with the federal regulations that apply to the use of best professional judgment. In invalidating the numeric effluent limitations, the Superior Court also suspended two ancillary requirements (a compliance storm event provision and receiving water monitoring at Risk Level 3 and LUP Type 3 sites that violated the numeric effluent limitations) that related solely to the invalidated numeric effluent limitations.

As a result of the Superior Court's writ of mandamus, this Order no longer contains numeric effluent limitations for pH and turbidity, except for ATS. In addition, as a result of the Superior Court's writ of mandamus, the receiving water monitoring requirements for Risk Level 3 and LUP Type 3 sites were suspended until the State Water Board amended this Order to restore the receiving water monitoring requirements. As amended, this Order now requires Risk Level 3 and LUP Type 3 Dischargers with direct discharges to surface waters to conduct receiving water monitoring whenever their effluent exceeds specified receiving water monitoring triggers. The receiving water monitoring triggers were established at the same levels as the previous numeric effluent limitations (effluent pH outside the range of 6.0 and 9.0 pH units or turbidity exceeding 500 NTU). In restoring the receiving water monitoring requirements, the State Water Board determined that it was appropriate to require receiving water monitoring for these types of sites with direct discharges to surface waters that exceeded the receiving water monitoring triggers under any storm event scenarios, because these sites represent the highest threat to receiving water quality. An exceedance of a receiving water monitoring trigger does not constitute a violation of this General Permit. These receiving water monitoring requirements take effect on the effective date of the amendment to this Order.

BAT/BCT technologies not only include passive systems such as conventional runoff and sediment control, but also treatment systems such as coagulation/flocculation using sand filtration, when appropriate. Such technologies allow for effective treatment of soil particles less 0.02 mm (medium silt) in diameter. The discharger must install structural controls, as necessary, such as erosion and sediment controls that meet BAT and BCT to achieve compliance with water quality standards. The narrative effluent limitations constitute compliance with the requirements of the CWA.

Because the permit is an NPDES permit, there is no legal requirement to address the factors set forth in Water Code sections 13241 and 13263, unless the permit is more stringent than what federal law requires. (See *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 618, 627.) None of the requirements in this permit are more stringent than the minimum federal requirements, which include technology-based requirements achieving BAT/BCT and strict compliance with water quality standards. The inclusion of numeric effluent limitations (NELs) in the permit for Active Treatment Systems does not cause the permit to be more stringent than current federal law. NELs and best management practices are simply two different methods of achieving the same federal requirement: strict compliance with state water quality standards. Federal law authorizes both narrative and numeric effluent limitations to meet state water quality standards. The use of NELs to achieve compliance with water quality standards is not a more stringent requirement than the use of BMPs. (State Water Board Order No. WQ 2006-0012 (*Boeing*).) Accordingly, the State Water Board does not need to take into account the factors in Water Code sections 13241 and 13263.

The State Water Board has concluded that the establishment of BAT/BCT will not create or aggravate other environmental problems through increases in air pollution, solid waste generation, or energy consumption. While there may be a slight increase in non-water quality impacts due to the implementation of additional monitoring or the construction of additional BMPs, these impacts will be negligible in comparison with the construction activities taking place on site and would be justified by the water quality benefits associated with compliance.

pH Receiving Water Monitoring Trigger

Given the potential contaminants, the minimum standard method for control of pH in runoff requires the use of preventive measures such as avoiding concrete pours during rainy weather, covering concrete and directing flow away from fresh concrete if a pour occurs during rain, covering scrap drywall and stucco materials when stored outside and potentially exposed to rain, and other housekeeping measures. If necessary, pH-impaired storm water from construction sites can be treated in a filter or settling pond or basin, with additional natural or chemical treatment required to meet pH limits set forth in this permit. The basin or pond acts as a collection point and holds storm water for a sufficient period for the contaminants to be settled out, either naturally or artificially, and allows any additional treatment to take place. The State Water Board considers these techniques to be equivalent to BCT. In determining the pH concentration trigger for discharges, the State Water Board used BPJ to set these limitations.

The chosen trigger was established by calculating three standard deviations above and below the mean pH of runoff from highway construction sites[7] in California. Proper implementation of BMPs should result in discharges that are within the range of 6.0 to 9.0 pH Units.

Turbidity Receiving Water Monitoring Trigger

The Turbidity receiving water monitoring trigger of 500 NTU is a technology-based trigger and was developed using three different analyses aimed at finding the appropriate threshold to set the technology-based limit to ensure environmental protection, effluent quality and cost-effectiveness. The analyses fell into three, main types: (1) an ecoregion-specific dataset developed by Simon et. al. (2004) [8]; (2) Statewide Regional Water Quality Control Board enforcement data; and (3) published, peer-reviewed studies and reports on in-situ performance of best management practices in terms of erosion and sediment control on active construction sites.

A 1:3 relationship between turbidity (expressed as NTU) and suspended sediment concentration (expressed as mg/L) is assumed based on a review of suspended sediment and turbidity data from three gages used in the USGS National Water Quality Assessment Program:

USGS 11074000 SANTA ANA R BL PRADO DAM CA
USGS 11447650 SACRAMENTO R A FREEPORT CA
USGS 11303500 SAN JOAQUIN R NR VERNALIS CA

The receiving water monitoring trigger represents staff determination that the trigger value is the most practicable based on available data. The turbidity receiving water monitoring trigger represents a bridge between the narrative effluent limitations and receiving water limitations. To support this receiving water monitoring trigger, State Water Board staff analyzed construction site discharge information (monitoring data, estimates) and receiving water monitoring information.

Since the turbidity receiving water monitoring trigger represents an appropriate threshold level expected at a site, compliance with this value does not necessarily represent compliance with either the narrative effluent limitations (as enforced through the BAT/BCT standard) or the receiving water limitations. In the San Diego region, some inland surface waters have a receiving water objective for turbidity equal to 20 NTU. Obviously a discharge up to, but not exceeding, the turbidity receiving water monitoring trigger of

[7] Caltrans Construction Sites Runoff Characterization Study, 2002. Available at: http://www.dot.ca.gov/hq/env/stormwater/pdf/CTSW-RT-02-055.pdf.

500 NTU may still cause or contribute to the exceedance of the 20 NTU standard. Most of the waters of the State are protected by turbidity objectives based on background conditions.

Table 1 - Regional Water Board Basin Plans, Water Quality Objectives for Turbidity

REGIONAL WATER BOARD	WQ Objective	Background/Natural Turbidity	Maximum Increase
1	Based on background	All levels	20%
2	Based on background	> 50 NTU	10%
3	Based on background	0-50 JTU 50-100 JTU > 100 JTU	20% 10 NTU 10%
4	Based on background	0-50 NTU > 50 NTU	20% 10%
5	Based on background	0-5 NTU 5-50 NTU 50-100 NTU >100 NTU	1 NTU 20% 10 NTU 10%
6	Based on background	All levels	10%
7	Based on background	N/A	N/A
8	Based on background	0-50 NTU 50-100 NTU >100 NTU	20% 10 NTU 10%
9	Inland Surface Waters, 20 NTU All others, based on background	 0-50 NTU 50-100 NTU >100 NTU	 20% 10 NTU 10%

Table 2 shows the suspended sediment concentrations at the 1.5 year flow recurrence interval for the 12 ecoregions in California from Simon et. al (2004).

Table 2 - Results of Ecoregion Analysis

Ecoregion	Percent of California Land Area	Median Suspended Sediment Concentration (mg/L)
1	9.1	874
4	0.2	120
5	8.8	35.6
6	20.7	1530
7	7.7	122
8	3.0	47.4
9	9.4	284
13	5.2	143
14	21.7	5150
78	8.1	581
80	2.4	199
81	3.7	503
Area-weighted average		1633

If a 1:3 relationship between turbidity and suspended sediment is assumed, the median turbidity is 544 NTU.

The following table is composed of turbidity readings measured in NTUs from administrative civil liability (ACL) actions for construction sites from 2003 - 2009. This data was derived from the complete listing of construction-related ACLs for the six year period. All ACLs were reviewed and those that included turbidimeter readings at the point of storm water discharge were selected for this dataset.

Table 3 – ACL Sampling Data taken by Regional Water Board Staff

WDID#	Region	Discharger	Turbidity (NTU)
5S34C331884	5S	Bradshaw Interceptor Section 6B	1800
5S05C325110	5S	Bridalwood Subdivision	1670
5S48C336297	5S	Cheyenne at Browns Valley	1629
5R32C314271	5R	Grizzly Ranch Construction	1400
6A090406008	6T	El Dorado County Department of Transportation, Angora Creek	97.4
5S03C346861	5S	TML Development, LLC	1600
6A31C325917	6T	Northstar Village	See Subdata Set

Subdata Set - Turbidity for point of storm water runoff discharge at Northstar Village

Date	Turbidity (NTU)	Location
10/5/2006	900	Middle Martis Creek
11/2/2006	190	Middle Martis Creek
01/04/2007	36	West Fork, West Martis Creek
02/08/2007	180	Middle Martis Creek
02/09/2007	130	Middle Martis Creek
02/09/2007	290	Middle Martis Creek
02/09/2007	100	West Fork, West Martis Creek
02/10/2007	28	Middle Martis Creek
02/10/2007	23	Middle Martis Creek
02/10/2007	32	Middle Martis Creek
02/10/2007	12	Middle Martis Creek
02/10/2007	60	West Fork, West Martis Creek
02/10/2007	34	West Fork, West Martis Creek

A 95% confidence interval for mean turbidity in an ACL order was constructed. The data set used was a small sample size, so the 500 NTU (the value derived as the receiving water monitoring trigger for this General Permit) needed to be verified as a possible population mean. In this case, the population refers to a hypothetical population of turbidity measurements of which our sample of 20 represents. A t-distribution was assumed due to the small sample size:

Mean: 512.23 NTU
Standard Deviation: 686.85
Margin of Error: 321.45
Confidence Interval: 190.78 NTU (Low)
833.68 NTU (High)

Based on a constructed 95% confidence interval, an ACL order turbidity measurement will be between 190.78 – 833.68 NTU. 500 NTU falls within this range. Using the same data set, a small-sample hypothesis test was also performed to test if the ACL turbidity data set contains enough information to cast doubt on choosing a 500 NTU as a mean. 500 NTU was again chosen due to its proposed use as an acceptable value. The test was carried out using a 95% confidence interval. Results indicated that the ACL turbidity data set *does not* contain significant sample evidence to reject the claim of 500 NTU as an acceptable mean for the ACL turbidity population.

There are not many published, peer-reviewed studies and reports on in-situ performance of best management practices in terms of erosion and sediment control on active construction sites. The most often cited study is a report titled, "Improving the Cost Effectiveness of Highway Construction Site Erosion and Pollution Control" (Horner, Guedry, and Kortenhof 1990, http://www.wsdot.wa.gov/Research/Reports/200/200.1.htm). In a comment letter summarizing this report sent to the State Water Board, the primary author, Dr. Horner, states:

"The most effective erosion control product was wood fiber mulch applied at two different rates along with a bonding agent and grass seed in sufficient time before the tests to achieve germination. Plots treated in this way reduced influent turbidity by more than 97 percent and discharged effluent exhibiting mean and maximum turbidity values of 21 and 73 NTU, respectively. Some other mulch and blanket materials performed nearly as well. These tests demonstrated the control ability of widely available BMPs over a very broad range of erosion potential."

Other technologies studied in this report produced effluent quality at or near 100 NTU. It is the BPJ of the State Water Board staff that erosion control, while preferred, is not always an option on construction sites and that technology performance in a controlled study showing effluent quality directly leaving a BMP is always easier and cheaper to control than effluent being discharged from the project (edge of property, etc.). As a result, it is the BPJ of the State Water Board staff that it is not cost effective or feasible, at this time, for all risk level and type 3 sites in California to achieve effluent discharges with turbidity values that are less than 100 NTU.

To summarize, the analysis showed that: (1) results of the Simon et. al dataset reveals turbidity values in background receiving water in California's ecoregions range from 16 NTU to 1716 NTU (with a mean of 544 NTU); (2) based on a constructed 95% confidence interval, construction sites will be subject to administrative civil liability (ACL) when their turbidity measurement falls between 190.78 – 833.68 NTU; and (3) sites with highly controlled discharges employing and maintaining good erosion control practices can discharge effluent from the BMP with turbidity values less than 100 NTU. State Water Board staff has determined, using its BPJ, that it is most cost effective to set the receiving water monitoring trigger for turbidity at 500 NTU.

i. *Compliance Storm Event*

While this General Permit no longer contains "compliance storm event" exceptions from technology-based NELs, the "compliance storm event" exception from the ATS NELs remain in effect. See Section K of this Fact Sheet, and Attachment F of this General Permit for more information.

a. TMDLs and Waste Load Allocations

Dischargers located within the watershed of a CWA § 303(d) impaired water body, for which a TMDL for sediment has been adopted by the Regional Water Board or USEPA, must comply with the approved TMDL if it identifies "construction activity" or land disturbance as a source of sediment. If it does, the

TMDL should include a specific waste load allocation for this activity/source. The discharger, in this case, may be required by a separate Regional Water Board order to implement additional BMPs, conduct additional monitoring activities, and/or comply with an applicable waste load allocation and implementation schedule. If a specific waste load allocation has been established that would apply to a specific discharge, the Regional Water Board may adopt an order requiring specific implementation actions necessary to meet that allocation. In the instance where an approved TMDL has specified a general waste load allocation to construction storm water discharges, but no specific requirements for construction sites have been identified in the TMDL, dischargers must consult with the state TMDL authority[9] to confirm that adherence to a SWPPP that meets the requirements of the General Permit will be consistent with the approved TMDL.

2. Determining Compliance with Effluent Standards

a. Technology-Based Numeric Action Levels (NALs)

This General Permit contains technology-based NALs for pH and turbidity, and requirements for effluent monitoring at all Risk level 2 & 3, and LUP Type 2 & 3 sites. Numeric action levels are essentially numeric benchmark values for certain parameters that, if exceeded in effluent sampling, trigger the discharger to take actions. Exceedance of an NAL does not itself constitute a violation of the General Permit. If the discharger fails to take the corrective action required by the General Permit, though, that may consititute a violation.

The primary purpose of NALs is to assist dischargers in evaluating the effectiveness of their on-site measures. Construction sites need to employ many different systems that must work together to achieve compliance with the permit's requirements. The NALs chosen should indicate whether the systems are working as intended.

Another purpose of NALs is to provide information regarding construction activities and water quality impacts. This data will provide the State and Regional Water Boards and the rest of the storm water community with more information about levels and types of pollutants present in runoff and how effective the dischargers BMPs are at reducing pollutants in effluent. The State Water Board also hopes to learn more about the linkage between effluent and receiving water quality. In addition, these requirements will provide information on the mechanics needed to establish compliance monitoring programs at construction sites in future permit deliberations.

i. *pH*

The chosen limits were established by calculating one standard deviation above and below the mean pH of runoff from highway construction sites[10] in California. Proper implementation of BMPs should result in discharges that are within the range of 6.5 to 8.5 pH Units.

---

[9] http://www.waterboards.ca.gov/tmdl/tmdl.html.
[10] Caltrans Construction Sites Runoff Characterization Study, 2002. Available at: http://www.dot.ca.gov/hq/env/stormwater/pdf/CTSW-RT-02-055.pdf.

The Caltrans study included 33 highway construction sites throughout California over a period of four years, which included 120 storm events. All of these sites had BMPs in place that would be generally implemented at all types of construction sites in California.

ii. ***Turbidity***

BPJ was used to develop an NAL that can be used as a learning tool to help dischargers improve their site controls, and to provide meaningful information on the effectiveness of storm water controls. A statewide turbidity NAL has been set at 250 NTU.

G. Receiving Water Limitations

Construction-related activities that cause or contribute to an exceedance of water quality standards must be addressed. The dynamic nature of construction activity gives the discharger the ability to quickly identify and monitor the source of the exceedances. This is because when storm water mobilizes sediment, it provides visual cues as to where corrective actions should take place and how effective they are once implemented.

This General Permit requires that storm water discharges and authorized non-storm water discharges must not contain pollutants that cause or contribute to an exceedance of any applicable water quality objective or water quality standards. The monitoring requirements in this General Permit for sampling and analysis procedures will help determine whether BMPs installed and maintained are preventing pollutants in discharges from the construction site that may cause or contribute to an exceedance of water quality standards.

Water quality standards consist of designated beneficial uses of surface waters and the adoption of ambient criteria necessary to protect those uses. When adopted by the State Water Board or a Regional Water Board, the ambient criteria are termed "water quality objectives." If storm water runoff from construction sites contains pollutants, there is a risk that those pollutants could enter surface waters and cause or contribute to an exceedance of water quality standards. For that reason, dischargers should be aware of the applicable water quality standards in their receiving waters. (The best method to ensure compliance with receiving water limitations is to implement BMPs that prevent pollutants from contact with storm water or from leaving the construction site in runoff.)

In California, water quality standards are published in the Basin Plans adopted by each Regional Water Board, the California Toxics Rule (CTR), the National Toxics Rule (NTR), and the Ocean Plan.

Dischargers can determine the applicable water quality standards by contacting Regional Water Board staff or by consulting one of the following sources. The actual Basin Plans that contain the water quality standards can be viewed at the website of the appropriate Regional Water Board. (http://www.waterboards.ca.gov/regions.html), the State Water Board site for statewide plans (http://www.waterboards.ca.gov/plnspols/index.html), or the USEPA regulations for the NTR and CTR (40 C.F.R. §§ 131.36-38). Basin Plans and statewide plans are also available by mail from the appropriate Regional Water Board or the State Water Board. The USEPA regulations are available at http://www.epa.gov/. Additional information concerning water quality standards can be accessed through http://www.waterboards.ca.gov/stormwtr/gen_const.html.

H. Training Qualifications and Requirements

The Blue Ribbon Panel (BRP) made the following observation about the lack of industry-specific training requirements:

"Currently, there is no required training or certification program for contractors, preparers of soil erosion and sediment control Storm Water Pollution Prevention Plans, or field inspectors."

Order 99-08-DWQ required that all dischargers train their employees on how to comply with the permit, but it did not specificy a curriculum or certification program. This has resulted in inconsistent implementation by all affected parties - the dischargers, the local governments where the construction activity occurs, and the regulators required to enforce 99-08-DWQ. This General Permit requires Qualified SWPPP Developers and practitioners to obtain appropriate training, and makes this curriculum mandatory two years after adoption, to allow time for course completion. The State and Regional Water Board are working with many stakeholders to develop the curriculum and mechanisms needed to develop and deliver the courses.

To ensure that the preparation, implementation, and oversight of the SWPPP is sufficient for effective pollution prevention, the Qualified SWPPP Developer and Qualified SWPPP Practitioners responsible for creating, revising, overseeing, and implementing the SWPPP must attend a State Water Board-sponsored or approved Qualified SWPPP Developer and Qualified SWPPP Practitioner training course.

I. Sampling, Monitoring, Reporting and Record Keeping

1. Traditional Construction Monitoring Requirements

This General Permit requires visual monitoring at all sites, and effluent water quality at all Risk Level 2 & 3 sites. It requires receiving water monitoring at some Risk Level 3 sites. All sites are required to submit annual reports, which contain various types of information, depending on the site characteristics and events. A summary of the monitoring and reporting requirements is found in Table 4.

Table 4 - Required Monitoring Elements for Risk Levels

	Visual	Non-visible Pollutant	Effluent	Receiving Water
Risk Level 1	three types required for all Risk Levels: non-storm water, pre-rain and post-rain	As needed for all Risk Levels (see below)	where applicable	not required
Risk Level 2			pH, turbidity	not required
Risk Level 3			pH, turbidity	(if Receiving Water Monitoring Trigger exceeded) pH, turbidity and SSC. Bioassessment for sites 30 acres or larger.

a. Visual

All dischargers are required to conduct quarterly, non-storm water visual inspections. For these inspections, the discharger must visually observe each drainage area for the presence of (or indications of prior) unauthorized and authorized non-storm water discharges and their sources. For storm-related inspections, dischargers must visually observe storm water discharges at all discharge locations within two business days after a qualifying event. For this requirement, a qualifying rain event is one producing precipitation of ½ inch or more of discharge. Dischargers must conduct a post-storm event inspection to (1) identify whether BMPs were adequately designed, implemented, and effective, and (2) identify any additional BMPs necessary and revise the SWPPP accordingly. Dischargers must maintain on-site records of all visual observations, personnel performing the observations, observation dates, weather conditions, locations observed, and corrective actions taken in response to the observations.

b. Non-Visible Pollutant Monitoring

This General Permit requires that all dischargers develop a sampling and analysis strategy for monitoring pollutants that are not visually detectable in storm water. Monitoring for non-visible pollutants must be required at any construction site when the exposure of construction materials occurs and where a discharge can cause or contribute to an exceedance of a water quality objective.

Of significant concern for construction discharges are the pollutants found in materials used in large quantities at construction sites throughout California and exposed throughout the rainy season, such as cement, flyash, and other recycled materials or by-products of combustion. The water quality standards that apply to these materials will depend on their composition. Some of the more common storm water pollutants from construction activity are not CTR pollutants. Examples of non-visible pollutants include glyphosate (herbicides), diazinon and chlorpyrifos (pesticides), nutrients (fertilizers), and molybdenum (lubricants). The use of diazinon and chlorpyrifos is a common practice among landscaping professionals and may trigger sampling and analysis requirements if these materials come into contact with storm water. High pH values from cement and gypsum, high pH and SSC from wash waters, and chemical/fecal contamination from portable toilets, also are not CTR pollutants. Although some of these constituents do have numeric water quality objectives in individual Basin Plans, many do not and are subject only to narrative water quality standards (i.e. not causing toxicity). Dischargers are encouraged to discuss these issues with Regional Water Board staff and other storm water quality professionals.

The most effective way to avoid the sampling and analysis requirements, and to ensure permit compliance, is to avoid the exposure of construction materials to precipitation and storm water runoff. Materials that are not exposed do not have the potential to enter storm water runoff, and therefore receiving waters sampling is not required. Preventing contact between storm water and construction materials is one of the most important BMPs at any construction site.

Preventing or eliminating the exposure of pollutants at construction sites is not always possible. Some materials, such as soil amendments, are designed to be used in a manner that will result in exposure to storm water. In these cases, it is important to make sure that these materials are applied according to the manufacturer's instructions and at a time when they are unlikely to be washed away. Other construction materials can be exposed when storage, waste disposal or the application of the material is done in a manner not protective of water quality. For these situations, sampling is required unless there is capture and containment of all storm water that has been exposed. In cases where construction materials may be exposed to storm water, but the storm water is contained and is not allowed to run off the site, sampling will only be required when inspections show that the containment failed or is breached, resulting in potential exposure or discharge to receiving waters.

The discharger must develop a list of potential pollutants based on a review of potential sources, which will include construction materials soil amendments, soil treatments, and historic contamination at the site. The discharger must review existing environmental and real estate documentation to determine the potential for pollutants that could be present on the construction site as a result of past land use activities.

Good sources of information on previously existing pollution and past land uses include:

i. Environmental Assessments;

ii. Initial Studies;

iii. Phase 1 Assessments prepared for property transfers; and

iv. Environmental Impact Reports or Environmental Impact Statements prepared under the requirements of the National Environmental Policy Act or the California Environmental Quality Act.

In some instances, the results of soil chemical analyses may be available and can provide additional information on potential contamination.

The potential pollutant list must include all non-visible pollutants that are known or should be known to occur on the construction site including, but not limited to, materials that:

i. are being used in construction activities;

ii. are stored on the construction site;

iii. were spilled during construction operations and not cleaned up;

iv. were stored (or used) in a manner that created the potential for a release of the materials during past land use activities;

v. were spilled during previous land use activities and not cleaned up; or

vi. were applied to the soil as part of past land use activities.

C. Effluent Monitoring

Federal regulations[11] require effluent monitoring for discharges subject to NALs. Subsequently, all Risk Level 2 and 3 dischargers must perform sampling and analysis of effluent discharges to characterize discharges associated with construction activity from the entire area disturbed by the project. Dischargers must collect samples of stored or contained storm water that is discharged subsequent to a storm event producing precipitation of ½ inch or more at the time of discharge.

Table 5 - Storm Water Effluent Monitoring Requirements by Risk Level

	Frequency	Effluent Monitoring (Section E, below)
Risk Level 1	when applicable	non-visible pollutant parameters (if applicable)
Risk Level 2	Minimum of 3 samples per day during qualifying rain event characterizing discharges associated with construction activity from the entire project disturbed area.	pH, turbidity, and non-visible pollutant parameters (if applicable)
Risk Level 3	Minimum of 3 samples per day during qualifying rain event characterizing discharges associated with construction activity from the entire project disturbed area.	pH, turbidity, and non-visible pollutant parameters if applicable

Risk Level 1 dischargers must analyze samples for:

i. any parameters indicating the presence of pollutants identified in the pollutant source assessment required in Attachment C contained in the General Permit.

[11] 40 C.F.R. § 122.44.

Risk Level 2 dischargers must analyze samples for:

i. pH and turbidity;

ii. any parameters indicating the presence of pollutants identified in the pollutant source assessment required in Attachment D contained in the General Permit, and

iii. any additional parameters for which monitoring is required by the Regional Water Board.

Risk Level 3 dischargers must analyze samples for:

i. pH, turbidity;

ii. any parameters indicating the presence of pollutants identified in the pollutant source assessment required in Attachment E contained in the General Permit, and

iii. any additional parameters for which monitoring is required by the Regional Water Board.

2. Linear Monitoring and Sampling Requirements

Attachment A, establishes minimum monitoring and reporting requirements for all LUPs. It establishes different monitoring requirements depending on project complexity and risk to water quality. The monitoring requirements for Type 1 LUPs are less than Type 2 & 3 projects because Type 1 projects have a lower potential to impact water quality.

A discharger shall prepare a monitoring program prior to the start of construction and immediately implement the program at the start of construction for LUPs. The monitoring program must be implemented at the appropriate level to protect water quality at all times throughout the life of the project.

a. Type 1 LUP Monitoring Requirements

A discharger must conduct daily visual inspections of Type 1 LUPs during working hours while construction activities are occurring. Inspections are to be conducted by qualified personnel and can be conducted in conjunction with other daily activities. Inspections will be conducted to ensure the BMPs are adequate, maintained, and in place at the end of the construction day. The discharger will revise the SWPPP, as appropriate, based on the results of the daily inspections. Inspections can be discontinued in non-active construction areas where soil disturbing activities have been completed and final stabilization has been achieved (e.g., trench has been paved, substructures have been installed, and successful final vegetative cover or other stabilization criteria have been met).

A discharger shall implement the monitoring program for inspecting Type 1 LUPs. This program requires temporary and permanent stabilization BMPs after active construction is completed. Inspection activities will continue until adequate permanent stabilization has been established and will continue in areas where re-vegetation is chosen until minimum vegetative coverage has been established. Photographs shall be taken during site inspections and submitted to the State Water Board.

b. Type 2 & 3 LUP Monitoring Requirements

A discharger must conduct daily visual inspections of Type 2 & 3 LUPs during working hours while construction activities are occurring. Inspections are to be conducted by qualified personnel and can be in conjunction with other daily activities.

All dischargers of Type 2 & 3 LUPs are required to conduct inspections by qualified personnel of the construction site during normal working hours prior to all anticipated storm events and after actual storm events. During extended storm events, the discharger shall conduct inspections during normal working hours for each 24-hour period. Inspections can be discontinued in non-active construction areas where soil disturbing activities have been completed and final stabilization has been achieved (e.g., trench has been paved, substructures installed, and successful vegetative cover or other stabilization criteria have been met).

The goals of these inspections are (1) to identify areas contributing to a storm water discharge; (2) to evaluate whether measures to reduce pollutant loadings identified in the SWPPP are adequate and properly installed and functioning in accordance with the terms of the General Permit; and (3) to determine whether additional control practices or corrective maintenance activities are needed. Equipment, materials, and workers must be available for rapid response to failures and emergencies. All corrective maintenance to BMPs shall be performed as soon as possible, depending upon worker safety.

All dischargers shall develop and implement a monitoring program for inspecting Type 2 & 3 LUPs that require temporary and permanent stabilization BMPs after active construction is completed. Inspections will be conducted to ensure the BMPs are adequate and maintained. Inspection activities will continue until adequate permanent stabilization has been established and will continue in areas where revegetation is chosen until minimum vegetative coverage has been established.

A log of inspections conducted before, during, and after the storm events must be maintained in the SWPPP. The log will provide the date and time of the inspection and who conducted the inspection. Photographs must be taken during site inspections and submitted to the State Water Board.

C. Sampling Requirements for all LUP Project Types

LUPs are also subject to sampling and analysis requirements for visible pollutants (i.e., sedimentation/siltation, turbidity) and for non-visible pollutants.

Sampling for visible pollutants is required for Type 2 & 3 LUPs.

Non-visible pollutant monitoring is required for pollutants associated with construction sites and activities that (1) are not visually detectable in storm water discharges, and (2) are known or should be known to occur on the construction site, and (3) could cause or contribute to an exceedance of water quality objectives in the receiving waters. Sample collection for non-visible pollutants must only be required (1) during a storm event when pollutants associated with construction activities may be discharged with storm water runoff due to a spill, or in the event there was a breach, malfunction, failure, and/or leak of any BMP, and (2) when the discharger has failed to adequately clean the area of material and pollutants. Failure to implement appropriate BMPs will trigger the same sampling requirements as those required for a breach, malfunction and/or leak, or when the discharger has failed to implement appropriate BMPs prior to the next storm event.

Additional monitoring parameters may be required by the Regional Water Boards.

It is not anticipated that many LUPs will be required to collect samples for pollutants not visually detected in runoff due to the nature and character of the construction site and activities as previously described in this fact sheet. Most LUPs are constructed in urban areas with public access (e.g., existing roadways, road shoulders, parking areas, etc.). This raises a concern regarding the potential contribution of pollutants from vehicle use and/or from normal activities of the public (e.g., vehicle washing, landscape fertilization, pest spraying, etc.) in runoff from the project site. Since the dischargers are not the land owners of the project area and are not able to control the presence of these pollutants in the storm water that runs through their projects, it is not the intent of this General Permit to require dischargers to sample for these pollutants. This General Permit does not require the discharger to sample for these types of pollutants except where the discharger has brought materials onsite that contain these pollutants and when a condition (e.g., breach, failure, etc.) described above occurs.

3. Receiving Water Monitoring

In order to ensure that receiving water limitations are met, discharges subject to receiving water monitoring triggers (i.e., Risk Level 3 and LUP Type 3 sites) or numeric effluent limitations (i.e., Risk Level 3 and LUP Type 3 sites utilizing ATS with direct discharges into receiving waters) must also monitor the downstream receiving water(s) for turbidity, SSC, and pH (if applicable) when a receiving water monitoring trigger or NEL is exceeded.

a. Bioassessment Monitoring

This General Permit requires a bioassessment of receiving waters for dischargers of Risk Level 3 or LUP Type 3 construction projects equal to or larger than 30 acres with direct discharges into receiving waters. Benthic macroinvertebrate samples will be taken upstream and downstream of the site's discharge point in the receiving water. Bioassessments measure the quality of the stream by analyzing the aquatic life present. Higher levels of appropriate aquatic species tend to indicate a healthy stream; whereas low levels of organisms can indicate stream degradation. Active construction sites have the potential to discharge large amounts of sediment and pollutants into receiving waters. Requiring a bioassessment for large project sites, with the most potential to impact water quality, provides a snapshot of the health of the receiving water prior to initiation of construction activities. This snapshot can be used in comparison to the health of the receiving water after construction has commenced.

Each ecoregion (biologically and geographically related area) in the State has a specific yearly peak time where stream biota is in a stable and abundant state. This time of year is called an Index Period. The bioassessment requirements in this General Permit, requires benthic macroinvertebrate sampling within a sites index period. The State Water Board has developed a map designating index periods for the ecoregions in the State (see State Water Board Website).

This General Permit requires the bioassessment methods to be in accordance with the Surface Water Ambient Monitoring Program (SWAMP) in order to provide data consistency within the state as well as generate useable biological stream data.

Table 6 - Receiving Water Monitoring Requirements

	Receiving Water Monitoring Parameters
Risk Level 1 /LUP Type 1	not required
Risk Level 2 / LUP Type 2	not required
Risk Level 3 / LUP Type 3	If Receiving Water Monitoring Trigger exceeded: pH (if applicable), turbidity, and SSC. Bioassessment for sites 30 acres or larger.

4. Reporting Requirements

a. NAL Exceedance Report

All Risk Level 3 and LUP Type 3 dischargers must electronically submit all storm event sampling results to the State And Regional Boards, via the electronic data system, no later than 10 days after the conclusion of the storm event.

b. Annual Report

All dischargers must prepare and electronically submit an annual report no later than September 1 of each year using the Storm water Multi-Application Reporting and Tracking System (SMARTS). The

Annual Report must include a summary and evaluation of all sampling and analysis results, original laboratory reports, chain of custody forms, a summary of all corrective actions taken during the compliance year, and identification of any compliance activities or corrective actions that were not implemented.

5. Record Keeping

According to 40 C.F.R. Parts 122.21(p) and 122.41(j), the discharger is required to retain paper or electronic copies of all records required by this General Permit for a period of at least three years from the date generated or the date submitted to the State Water Board or Regional Water Boards. A discharger must retain records for a period beyond three years as directed by Regional Water Board.

J. Risk Determination

1. Traditional Projects

a. Overall Risk Determination

There are two major requirements related to site planning and risk determination in this General Permit. The project's overall risk is broken up into two elements – (1) project sediment risk (the relative amount of sediment that can be discharged, given the project and location details) and (2) receiving water risk (the risk sediment discharges pose to the receiving waters).

Project Sediment Risk:
Project Sediment Risk is determined by multiplying the R, K, and LS factors from the Revised Universal Soil Loss Equation (RUSLE) to obtain an estimate of project-related bare ground soil loss expressed in tons/acre. The RUSLE equation is as follows:

A = (R)(K)(LS)(C)(P)

Where: A = the rate of sheet and rill erosion
R = rainfall-runoff erosivity factor
K = soil erodibility factor
LS = length-slope factor
C = cover factor (erosion controls)
P = management operations and support practices (sediment controls)

The C and P factors are given values of 1.0 to simulate bare ground conditions.

There is a map option and a manual calculation option for determining soil loss. For the map option, the R factor for the project is calculated using the online calculator at http://cfpub.epa.gov/npdes/stormwater/LEW/lewCalculator.cfm. The product of K and LS are shown on Figure 1. To determine soil loss in tons per acre, the discharger multiplies the R factor times the value for K times LS from the map.

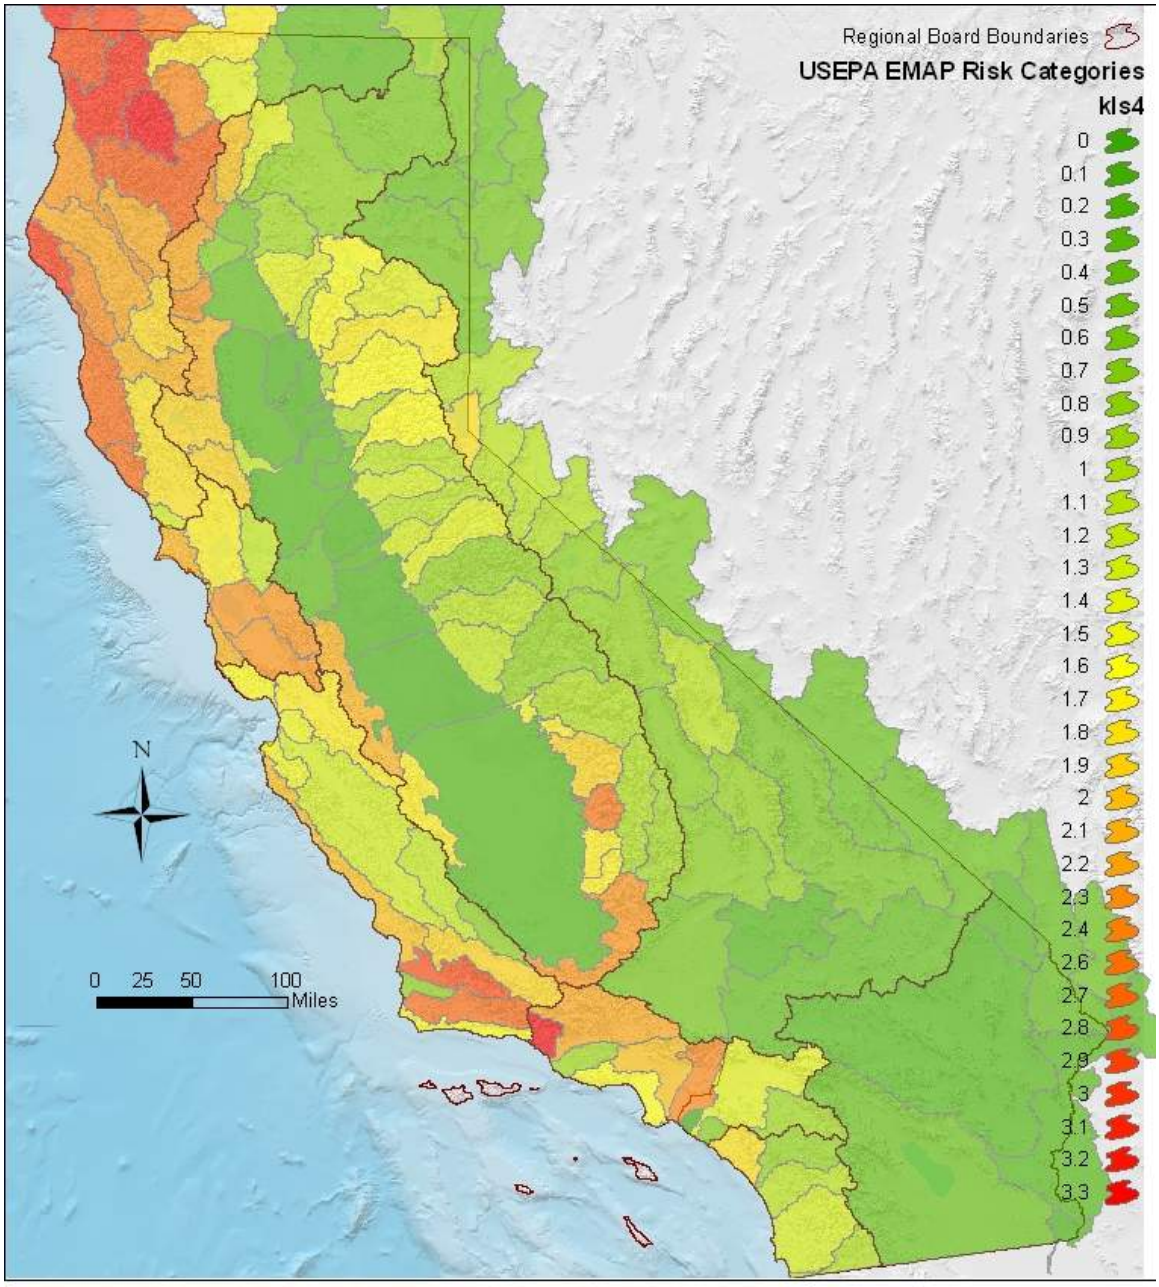

Figure 1 -Statewide Map of K * LS

For the manual calculation option, the R factor for the project is calculated using the online calculator at http://cfpub.epa.gov/npdes/stormwater/LEW/lewCalculator.cfm. The K and LS factors are determined using Appendix 1.

Soil loss of less than 15 tons/acre is considered **low** sediment risk.
Soil loss between 15 and 75 tons/acre is **medium** sediment risk.
Soil loss over 75 tons/acre is considered **high** sediment risk.

The soil loss values and risk categories were obtained from mean and standard deviation RKLS values from the USEPA EMAP program. High risk is the mean RKLS value plus two standard deviations. Low risk is the mean RKLS value minus two standard deviations.

Receiving Water Risk:
Receiving water risk is based on whether a project drains to a sediment-sensitive waterbody. A sediment-sensitive waterbody is either

on the most recent 303d list for waterbodies impaired for sediment;
has a USEPA-approved Total Maximum Daily Load implementation plan for sediment; **or**
has the beneficial uses of COLD, SPAWN, and MIGRATORY.

A project that meets at least one of the three criteria has a high receiving water risk. A list of sediment-sensitive waterbodies will be posted on the State Water Board's website. It is anticipated that an interactive map of sediment sensitive water bodies in California will be available in the future.

The Risk Levels have been altered by eliminating the possibility of a Risk Level 4, and expanding the constraints for Risk Levels 1, 2, and 3. Therefore, projects with high receiving water risk and high sediment risk will be considered a Risk Level 3 risk to water quality.

In response to public comments, the Risk Level requirements have also been changed such that Risk Level 1 projects will be subject to minimum BMP and visual monitoring requirements, Risk Level 2 projects will be subject to NALs and some additional monitoring requirements, and Risk Level 3 projects will be subject to NALs, and more rigorous monitoring requirements such as receiving water monitoring and in some cases bioassessment.

Table 7 - Combined Risk Level Matrix

Combined Risk Level Matrix				
Receiving Water Risk		Sediment Risk		
		Low	Medium	High
	Low	Level 1	Level 2	
	High	Level 2		Level 3

b. **Effluent Standards**

All dischargers are subject to the narrative effluent limitations specified in the General Permit. The narrative effluent limitations require storm water discharges associated with construction activity to meet all applicable provisions of Sections 301 and 402 of the CWA. These provisions require controls of pollutant discharges that utilize BAT and BCT to reduce pollutants and any more stringent controls necessary to meet water quality standards.

Risk Level 2 dischargers that pose a medium risk to water quality are subject to technology-based NALs for pH and turbidity. Risk Level 3 dischargers that pose a high risk to water quality are also subject to technology-based NALs for pH and turbidity.

c. Good Housekeeping

Proper handling and managing of construction materials can help minimize threats to water quality. The discharger must consider good housekeeping measures for: construction materials, waste management, vehicle storage & maintenance, landscape materials, and potential pollutant sources. Examples include; conducting an inventory of products used, implementing proper storage & containment, and properly cleaning all leaks from equipment and vehicles.

d. Non-Storm Water Management

Non-storm water discharges directly connected to receiving waters or the storm drain system have the potential to negatively impact water quality. The discharger must implement measures to control all non-storm water discharges during construction, and from dewatering activities associated with construction. Examples include; properly washing vehicles in contained areas, cleaning streets, and minimizing irrigation runoff.

e. Erosion Control

The best way to minimize the risk of creating erosion and sedimentation problems during construction is to disturb as little of the land surface as possible by fitting the development to the terrain. When development is tailored to the natural contours of the land, little grading is necessary and, consequently, erosion potential is lower.[14] Other effective erosion control measures include: preserving existing vegetation where feasible, limiting disturbance, and stabilizing and re-vegetating disturbed areas as soon as possible after grading or construction activities. Particular attention must be paid to large, mass-graded sites where the potential for soil exposure to the erosive effects of rainfall and wind is great and where there is potential for significant sediment discharge from the site to surface waters. Until permanent vegetation is established, soil cover is the most cost-effective and expeditious method to protect soil particles from detachment and transport by rainfall. Temporary soil stabilization can be the single most important factor in reducing erosion at construction sites. The discharger is required to consider measures such as: covering disturbed areas with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, and permanent seeding. These erosion control measures are only examples of what should be considered and should not preclude new or innovative approaches currently available or being developed. Erosion control BMPs should be the primary means of preventing storm water contamination, and sediment control techniques should be used to capture any soil that becomes eroded.[12]

Risk Level 3 dischargers pose a higher risk to water quality and are therefore additionally required to ensure that post-construction soil loss is equivalent to or less than the pre-construction levels.

f. Sediment Control

Sediment control BMPs should be the secondary means of preventing storm water contamination. When erosion control techniques are ineffective, sediment control techniques should be used to capture any soil that becomes eroded. The discharger is required to consider perimeter control measures such as: installing silt fences or placing straw wattles below slopes. These sediment control measures are only

---

[12] U.S. Environmental Protection Agency. 2007. Developing Your Storm Water Pollution Prevention Plan: A Guide for Construction Sites.

examples of what should be considered and should not preclude new or innovative approaches currently available or being developed.

Because Risk Level 2 and 3 dischargers pose a higher risk to water quality, additional requirements for the application of sediment controls are imposed on these projects. This General Permit also authorizes the Regional Water Boards to require Risk Level 3 dischargers to implement additional site-specific sediment control requirements if the implementation of other erosion or sediment controls are not adequately protecting the receiving waters.

g. Run-on and Runoff Control

Inappropriate management of run-on and runoff can result in excessive physical impacts to receiving waters from sediment and increased flows. The discharger is required to manage all run-on and runoff from a project site. Examples include: installing berms and other temporary run-on and runoff diversions.

Risk Level 1 dischargers with lower risks to impact water quality are not subject to the run-on and runoff control requirements unless an evaluation deems them necessary or visual inspections show that such controls are required.

h. Inspection, Maintenance and Repair

All measures must be periodically inspected, maintained and repaired to ensure that receiving water quality is protected. Frequent inspections coupled with thorough documentation and timely repair is necessary to ensure that all measures are functioning as intended.

i. Rain Event Action Plan (REAP)

A Rain Event Action Plan (REAP) is a written document, specific for each rain event. A REAP should be designed that when implemented it protects all exposed portions of the site within 48 hours of any likely precipitation event forecast of 50% or greater probability.

This General Permit requires Risk Level 2 and 3 dischargers to develop and implement a REAP designed to protect all exposed portions of their sites within 48 hours prior to any likely precipitation event. The REAP requirement is designed to ensure that the discharger has adequate materials, staff, and time to implement erosion and sediment control measures that are intended to reduce the amount of sediment and other pollutants generated from the active site. A REAP must be developed when there is likely a forecast of 50% or greater probability of precipitation in the project area. (The National Oceanic and Atmospheric Administration (NOAA) defines a chance of precipitation as a probability of precipitation of 30% to 50% chance of producing precipitation in the project area.[13] NOAA defines the probability of precipitation (PoP) as the likelihood of occurrence (expressed as a percent) of a measurable amount (0.01 inch or more) of liquid precipitation (or the water equivalent of frozen precipitation) during a specified period of time at any given point in the forecast area.) Forecasts are normally issued for 12-hour time periods. Descriptive terms for uncertainty and aerial coverage are used as follows:

Table 8 -National Oceanic and Atmospheric Administration (NOAA) Definition of Probability of Precipitation (PoP)

[13] http://www.crh.noaa.gov/lot/severe/wxterms.php.

PoP	Expressions of Uncertainty	Aerial Coverage
0%	none used	none used
10%	none used	isolated
20%	slight chance	isolated
30-50%	chance	scattered
60-70%	likely	numerous
80-100%	none used	none used

The discharger must obtain the precipitation forecast information from the National Weather Service Forecast Office (http://www.srh.noaa.gov/).

2. **Linear Projects**

a. **Linear Risk Determination**

LUPs vary in complexity and water quality concerns based on the type of project. This General Permit has varying application requirements based on the project's risk to water quality. Factors that lead to the characterization of the project include location, sediment risk, and receiving water risk.

Based on the location and complexity of a project area or project section area, LUPs are separated into project types. As described below, LUPs have been categorized into three project types.

i. ***Type 1 LUPs***

Type 1 LUPs are those construction projects where:

(1) 70 percent or more of the construction activity occurs on a paved surface and where areas disturbed during construction will be returned to preconstruction conditions or equivalent protection established at the end of the construction activities for the day, or

(2) greater than 30 percent of construction activities occur within the non-paved shoulders or land immediately adjacent to paved surfaces, or where construction occurs on unpaved improved roads, including their shoulders or land immediately adjacent to them where:

Areas disturbed during construction will be returned to pre-construction conditions or equivalent protection established at the end of the construction activities for the day to minimize the potential for erosion and sediment deposition, and

Areas where established vegetation was disturbed during construction will be stabilized and re-vegetated by the end of project. When required, adequate temporary stabilization Best Management Practices (BMPs) will be installed and maintained until vegetation is established to meet minimum cover requirements established in this General Permit for final stabilization.

Type 1 LUPs typically do not have a high potential to impact storm water quality because (1) these construction activities are not typically conducted during a rain event, (2) these projects are normally constructed over a short period of time[14], minimizing the duration that pollutants could potentially be exposed to rainfall; and (3) disturbed soils such as those from trench excavation are required to be hauled away, backfilled into the trench, and/or covered (e.g., metal plates, pavement, plastic covers over spoil piles) at the end of the construction day.

Type 1 LUPs are determined during the risk assessment found in Attachment A.1 to be 1) low sediment risk and low receiving water risk; 2) low sediment risk and medium receiving water risk; and 3) medium sediment risk and low receiving water risk.

This General Permit requires the discharger to ensure a SWPPP is developed for these construction activities that is specific to project type, location and characteristics.

ii. ***Type 2 LUPs:***

Type 2 projects are determined to have a combination of High, Medium, and Low project sediment risk along with High, Medium, and Low receiving water risk. Like Type 1 projects, Type 2 projects are typically constructed over a short period of time. However, these projects have a higher potential to impact water quality because they:

(1) typically occur outside the more urban/developed areas;

(2) have larger areas of soil disturbance that are not closed or restored at the end of the day;

(3) may have onsite stockpiles of soil, spoil and other materials;

(4) cross or occur in close proximity to a wide variety of sensitive resources that may include, but are not limited to, steep topography and/or water bodies; and

(5) have larger areas of disturbed soils that may be exposed for a longer time interval before final stabilization, cleanup and/or reclamation occurs.

This General Permit requires the discharger to develop and implement a SWPPP for these construction activities that are specific for project type, location and characteristics.

iii. ***Type 3 LUPs:***

[14] Short period of time refers to a project duration of weeks to months, but typically less than one year in duration.

Type 3 projects are determined to have a combination of High and Medium project sediment risk along with High and Medium receiving water risk. Similar to Type 2 projects, Type 3 projects have a higher potential to impact water quality because they:

(1) typically occur outside of the more urban/developed areas;

(2) have larger areas of soil disturbance that are not closed or restored at the end of the day;

(3) may have onsite stockpiles of soil, spoil and other materials;

(4) cross or occur in close proximity to a wide variety of sensitive resources that may include, but are not limited to, steep topography and/or water bodies; and

(5) have larger areas of disturbed soils that may be exposed for a longer time interval before final stabilization, cleanup and/or reclamation occurs.

This General Permit requires the discharger to develop and implement a SWPPP for these construction activities that are specific for project type, location, and characteristics.

b. Linear Effluent Standards

All LUPs are subject to the narrative effluent limitations specified in the General Permit.

Type 2 and Type 3 projects are subject to technology-based NALs for pH and turbidity.

c. Linear Good Housekeeping

Improper use and handling of construction materials could potentially cause a threat to water quality. In order to ensure proper site management of these construction materials, all LUP dischargers must comply with a minimum set of Good Housekeeping measures specified in Attachment A of this General Permit.

d. Linear Non-Storm Water Management

In order to ensure control of all non-storm water discharges during construction, all LUP dischargers must comply with the Non-Storm Water Management measures specified in Attachment A of this General Permit.

e. Linear Erosion Control

This General Permit requires all LUP dischargers to implement effective wind erosion control measures, and soil cover for inactive areas. Type 3 LUPs posing a higher risk to water quality are additionally required to ensure the post-construction soil loss is equivalent to or less than the pre-construction levels.

f. Linear Sediment Control

In order to ensure control and containment of all sediment discharges, all LUP dischargers must comply with the general Sediment Control measures specified in Attachment A or this General Permit. Additional requirements for sediment controls are imposed on Type 2 & 3 LUPs due to their higher risk to water quality.

g. Linear Run-on and Runoff Control

Discharges originating outside of a project's perimeter and flowing onto the property can adversely affect the quantity and quality of discharges originating from a project site. In order to ensure proper management of run-on and runoff, all LUPs must comply with the run-on and runoff control measures specified in Attachment A of this General Permit. Due to the lower risk of impacting water quality, Type 1 LUPs are not required to implement run-on and runoff controls unless deemed necessary by the discharger.

h. Linear Inspection, Maintenance and Repair

Proper inspection, maintenance, and repair activities are important to ensure the effectiveness of on-site measures to control water quality. In order to ensure that inspection, maintenance, and repair activities are adequately performed, the all LUP dischargers a re required to comply with the Inspection, Maintenance, and Repair requirements specified in Attachment A of this General Permit.

K. ATS[15] Requirements

There are instances on construction sites where traditional erosion and sediment controls do not effectively control accelerated erosion. Under such circumstances, or under circumstances where storm water discharges leaving the site may cause or contribute to an exceedance of a water quality standard, the use of an Active Treatment System (ATS) may be necessary. Additionally, it may be appropriate to use an ATS when site constraints inhibit the ability to construct a correctly sized sediment basin, when clay and/or highly erosive soils are present, or when the site has very steep or long slope lengths.[16]

Although treatment systems have been in use in some form since the mid-1990s, the ATS industry in California is relatively young, and detailed regulatory standards have not yet been developed. Many developers are using these systems to treat storm water discharges from their construction sites. The new ATS requirements set forth in this General Permit are based on those in place for small wastewater treatment systems, ATS regulations from the Central Valley Regional Water Quality Control Board (September 2005 memorandum "2005/2006 Rainy Season – Monitoring Requirements for Storm Water Treatment Systems that Utilize Chemical Additives to Enhance Sedimentation"), the Construction Storm Water Program at the State of Washington's Department of Ecology, as well as recent advances in technology and knowledge of coagulant performance and aquatic safety.

The effective design of an ATS requires a detailed survey and analysis of site conditions. With proper planning, ATS performance can provide exceptional water quality discharge and prevent significant impacts to surface water quality, even under extreme environmental conditions.

These systems can be very effective in reducing the sediment in storm water runoff, but the systems that use additives/polymers to enhance sedimentation also pose a potential risk to water quality (e.g., operational failure, equipment failure, additive/polymer release, etc.). The State Water Board is concerned about the potential acute and chronic impacts that the polymers and other chemical additives may have on fish and aquatic organisms if released in sufficient quantities or concentrations. In addition

[15] An ATS is a treatment system that employs chemical coagulation, chemical flocculation, or electrocoagulation in order to reduce turbidity caused by fine suspended sediment.
[16] Pitt, R., S. Clark, and D. Lake. 2006. Construction Site Erosion and Sediment Controls: Planning, Design, and Performance. DEStech Publications. Lancaster, PA. 370pp.

to anecdotal evidence of polymer releases causing aquatic toxicity in California, the literature supports this concern.[17] For example, cationic polymers have been shown to bind with the negatively charged gills of fish, resulting in mechanical suffocation.[18] Due to the potential toxicity impacts, which may be caused by the release of additives/polymers into receiving waters, this General Permit establishes residual polymer monitoring and toxicity testing requirements have been established in this General Permit for discharges from construction sites that utilize an ATS in order to protect receiving water quality and beneficial uses.

The primary treatment process in an ATS is coagulation/flocculation. ATS's operate on the principle that the added coagulant is bound to suspended sediment, forming floc, which is gravitationally settled in tanks or a basin, or removed by sand filters. A typical installation utilizes an injection pump upstream from the clarifier tank, basin, or sand filters, which is electronically metered to both flow rate and suspended solids level of the influent, assuring a constant dose. The coagulant mixes and reacts with the influent, forming a dense floc. The floc may be removed by gravitational setting in a clarifier tank or basin, or by filtration. Water from the clarifier tank, basin, or sand filters may be routed through cartridge(s) and/or bag filters for final polishing. Vendor-specific systems use various methods of dose control, sediment/floc removal, filtration, etc., that are detailed in project-specific documentation. The particular coagulant/flocculant to be used for a given project is determined based on the water chemistry of the site because the coagulants are specific in their reactions with various types of sediments. Appropriate selection of dosage must be carefully matched to the characteristics of each site.

ATS's are operated in two differing modes, either Batch or Flow-Through. Batch treatment can be defined as Pump-Treat-Hold-Test-Release. In Batch treatment, water is held in a basin or tank, and is not discharged until treatment is complete. Batch treatment involves holding or recirculating the treated water in a holding basin or tank(s) until treatment is complete or the basin or storage tank(s) is full. In Flow-Through treatment, water is pumped into the ATS directly from the runoff collection system or storm water holding pond, where it is treated and filtered as it flows through the system, and is then directly discharged. "Flow-Through Treatment" is also referred to as "Continuous Treatment."

1. Effluent Standards

This General Permit establishes NELs for discharges from construction sites that utilize an ATS. These systems lend themselves to NELs for turbidity and pH because of their known reliable treatment. Advanced systems have been in use in some form since the mid-1990s. An ATS is considered reliable, can consistently produce a discharge of less than 10 NTU, and has been used successfully at many sites in several states since 1995 to reduce turbidity to very low levels.[19]

This General Permit contains "compliance storm event" exceptions from the technology-based NELs for ATS discharges. The rationale is that technology-based requirements are developed assuming a certain design storm. In the case of ATS the industry-standard design storm is 10-year, 24-hour (as stated in

Attachment F of this General Permit), so the compliance storm event has been established as the 10-year 24-hour event as well to provide consistency.

2. **Training**

Operator training is critical to the safe and efficient operation and maintenance of the ATS, and to ensure that all State Water Board monitoring and sampling requirements are met. The General Permit requires that all ATS operators have training specific to using ATS's liquid coagulants.

L. Post-Construction Requirements

Under past practices, new and redevelopment construction activities have resulted in modified natural watershed and stream processes. This is caused by altering the terrain, modifying the vegetation and soil characteristics, introducing impervious surfaces such as pavement and buildings, increasing drainage density through pipes and channels, and altering the condition of stream channels through straightening, deepening, and armoring. These changes result in a drainage system where sediment transport capacity is increased and sediment supply is decreased. A receiving channel's response is dependent on dominant channel materials and its stage of adjustment.

Construction activity can lead to impairment of beneficial uses in two main ways. First, during the actual construction process, storm water discharges can negatively affect the chemical, biological, and physical properties of downstream receiving waters. Due to the disturbance of the landscape, the most likely pollutant is sediment, however pH and other non-visible pollutants are also of great concern. Second, after most construction activities are completed at a construction site, the finished project may result in significant modification of the site's response to precipitation. New development and redevelopment projects have almost always resulted in permanent post-construction water quality impacts because more precipitation ends up as runoff and less precipitation is intercepted, evapotranspired, and infiltrated.

General Permit 99-08-DWQ required the SWPPP to include a description of all post-construction BMPs on a site and a maintenance schedule. An effective storm water management strategy must address the full suite of storm events (water quality, channel protection, overbank flood protection, extreme flood protection) (Figure 2).

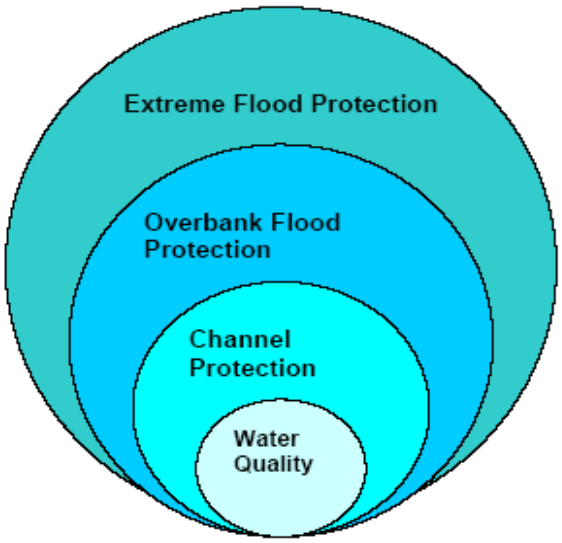

Figure 2 - Suite of Storm Events

The post-construction storm water performance standards in this General Permit specifically address water quality and channel protection events. Overbank flood protection and extreme flood protection events are traditionally dealt with in local drainage and flood protection ordinances. However, measures in this General Permit to address water quality and channel protection also reduce overbank and extreme flooding impacts. This General Permit aims to match post-construction runoff to pre-construction runoff for the 85th percentile storm event, which not only reduces the risk of impact to the receiving water's channel morphology but also provides some protection of water quality.

This General Permit clarifies that its runoff reduction requirements only apply to projects that lie outside of jurisdictions covered by a Standard Urban Storm water Management Plan (SUSMP) (or other more protective) post-construction requirements in either Phase I or Phase II permits.

Figures 3 and 4, below, show the General Permit enrollees (to Order 99-08-DWQ, as of March 10, 2008) overlaid upon a map with SUSMP (or more protective) areas in blue and purple. Areas without blue or purple indicate where the General Permit's runoff reduction requirements would actually apply.

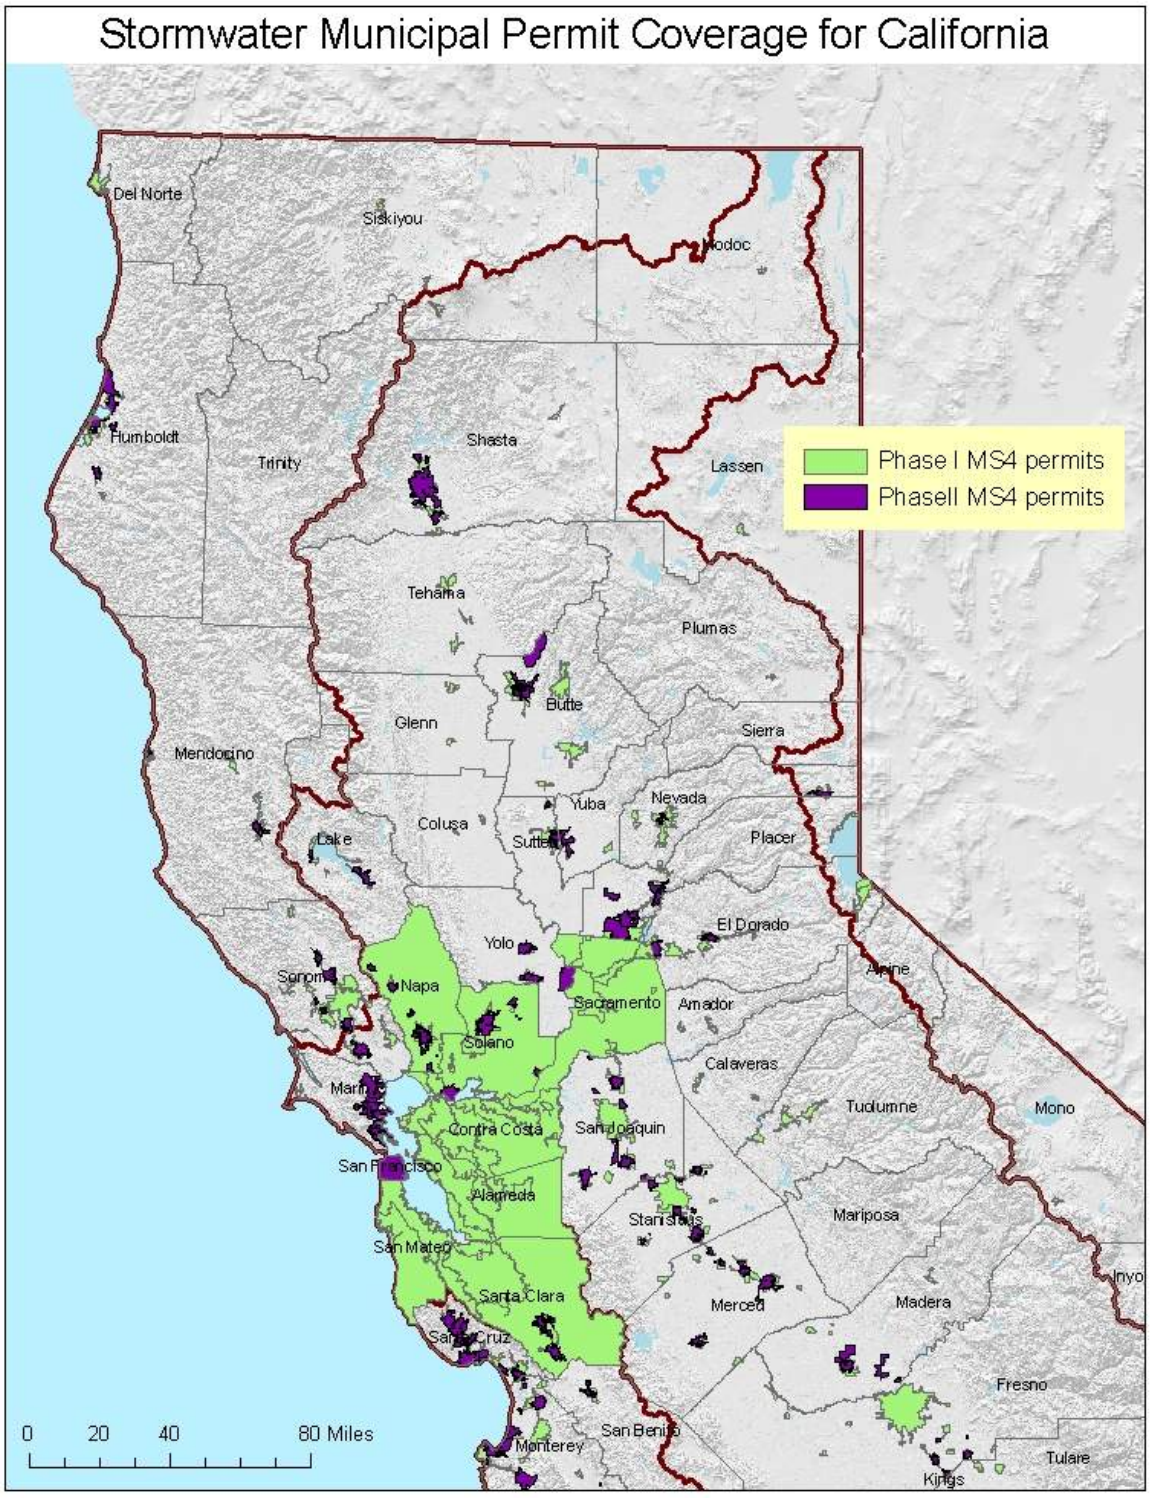

Figure 3 - Northern CA (2009) Counties / Cities With SUSMP-Plus Coverage

Stormwater Municipal Permit Coverage for California

Figure 4 - Southern CA (2009) Counties / Cities With SUSMP-Plus Coverage

Water Quality:
This General Permit requires dischargers to replicate the pre-project runoff water balance (defined as the amount of rainfall that ends up as runoff) for the smallest storms up to the 85th percentile storm event, or the smallest storm event that generates runoff, whichever is larger. Contemporary storm water management generally routes these flows directly to the drainage system, increasing pollutant loads and potentially causing adverse effects on receiving waters. These smaller water quality events happen much more frequently than larger events and generate much higher pollutant loads on an annual basis. There are other adverse hydrological impacts that result from not designing according to the site's pre-construction water balance. In Maryland, Klein[20] noted that baseflow decreases as the extent of urbanization increases. Ferguson and Suckling[21] noted a similar relation in watersheds in Georgia. On Long Island, Spinello and Simmons[22] noted substantial decreases in base flow in intensely urbanized watersheds.

The permit emphasizes runoff reduction through on-site storm water reuse, interception, evapo-transpiration and infiltration through non-structural controls and conservation design measures (e.g., downspout disconnection, soil quality preservation/enhancement, interceptor trees). Employing these measures close to the source of runoff generation is the easiest and most cost-effective way to comply with the pre-construction water balance standard. Using low-tech runoff reduction techniques close to the source is consistent with a number of recommendations in the literature.[23] In many cases, BMPs implemented close to the source of runoff generation cost less than end-of the pipe measures.[24] Dischargers are given the option of using Appendix 2 to calculate the required runoff volume or a watershed process-based, continuous simulation model such as the EPA's Storm Water Management Model (SWMMM) or Hydrologic Simulation Program Fortran (HSPF). Such methods used by the discharger will be reviewed by the Regional Water Board upon NOT application.

Channel Protection:
In order to address channel protection, a basic understanding of fluvial geomorphic concepts is necessary. A dominant paradigm in fluvial geomorphology holds that streams adjust their channel dimensions (width and depth) in response to long-term changes in sediment supply and bankfull discharge (1.5 to 2 year recurrence interval). The bankfull stage corresponds to the discharge at which channel maintenance is the most effective, that is, the discharge at which the moving sediment, forming or removing bars, forming or changing bends and meanders, and generally doing work that results in the average morphologic characteristics of channels.[25] Lane (1955 as cited in Rosgen 1996[26]) showed the generalized relationship between sediment load, sediment size, stream discharge and stream slope in

Figure 5. A change in any one of these variables sets up a series of mutual adjustments in the companion variables with a resulting direct change in the physical characteristics of the stream channel.

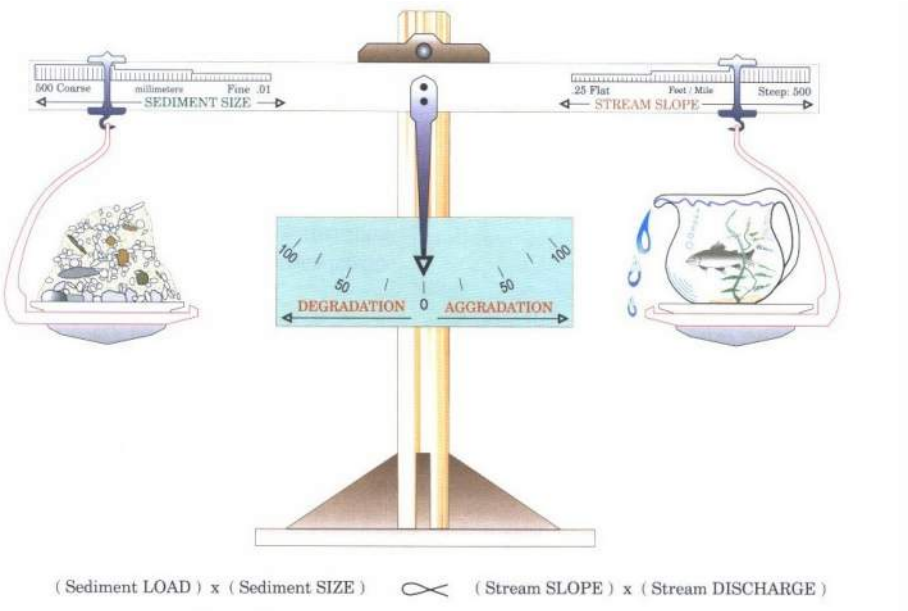

Figure 5 - Schematic of the Lane Relationship

After Lane (1955) as cited in Rosgen (1996)

Stream slope multiplied by stream discharge (the right side of the scale) is essentially an approximation of stream power, a unifying concept in fluvial geomorphology (Bledsoe 1999). Urbanization generally increases stream power and affects the resisting forces in a channel (sediment load and sediment size represented on the left side of the scale).

During construction, sediment loads can increase from 2 to 40,000 times over pre-construction levels.[27] Most of this sediment is delivered to stream channels during large, episodic rain events.[28] This increased sediment load leads to an initial aggradation phase where stream depths may decrease as sediment fills the channel, leading to a decrease in channel capacity and increase in flooding and overbank deposition. A degradation phase initiates after construction is completed.

Schumm et. al (1984) developed a channel evolution model that describes the series of adjustments from initial downcutting, to widening, to establishing new floodplains at lower elevations (Figure 6).

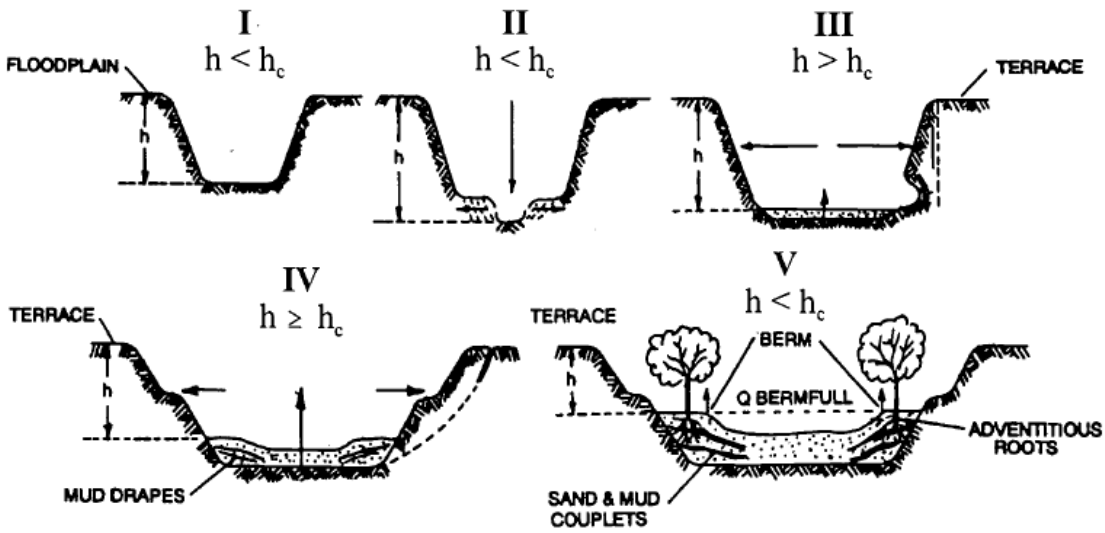

Figure 6 - Channel Changes Associated with Urbanization

After Incised Channel Evolution Sequence in Schumm et. al 1984

Channel incision (Stage II) and widening (Stages III and to a lesser degree, Stage IV) are due to a number of fundamental changes on the landscape. Connected impervious area and compaction of pervious surfaces increase the frequency and volume of bankfull discharges.[29] Increased drainage density (miles of stream length per square mile of watershed) also negatively impacts receiving stream channels.[30] Increased drainage density and hydraulic efficiency leads to an increase in the frequency and volume of bankfull discharges because the time of concentration is shortened. Flows from engineered pipes and channels are also often "sediment starved" and seek to replenish their sediment supply from the channel.

Encroachment of stream channels can also lead to an increase in stream slope, which leads to an increase in stream power. In addition, watershed sediment loads and sediment size (with size generally represented as the median bed and bank particle size, or d_{50}) decrease during urbanization.[31] This means

[29] Booth, D. B. and C. R. Jackson. 1997. Urbanization of Aquatic Systems: Degradation Thresholds, Storm Water Detection, and the Limits of Mitigation. Journal of the American Water Resources Association Vol. 33, No.5, pp. 1077-1089.

that even if pre- and post-development stream power are the same, more erosion will occur in the post-development stage because the smaller particles are less resistant (provided they are non-cohesive).

As shown in Stages II and III, the channel deepens and widens to accommodate the increased stream power [32]and decrease in sediment load and sediment size. Channels may actually narrow as entrained sediment from incision is deposited laterally in the channel. After incised channels begin to migrate laterally (Stage III), bank erosion begins, which leads to general channel widening.[33] At this point, a majority of the sediment that leaves a drainage area comes from within the channel, as opposed to the background and construction related hillslope contribution. Stage IV is characterized by more aggradation and localized bank instability. Stage V represents a new quasi-equilibrium channel morphology in balance with the new flow and sediment supply regime. In other words, stream power is in balance with sediment load and sediment size.

The magnitude of the channel morphology changes discussed above varies along a stream network as well as with the age of development, slope, geology (sand-bedded channels may cycle through the evolution sequence in a matter of decades whereas clay-dominated channels may take much longer), watershed sediment load and size, type of urbanization, and land use history. It is also dependent on a channel's stage in the channel evolution sequence when urbanization occurs. Management strategies

must take into account a channel's stage of adjustment and account for future changes in the evolution of channel form (Stein and Zaleski 2005). [34]

Traditional structural water quality BMPs (e.g. detention basins and other devices used to store volumes of runoff) unless they are highly engineered to provide adequate flow duration control, do not adequately protect receiving waters from accelerated channel bed and bank erosion, do not address post-development increases in runoff volume, and do not mitigate the decline in benthic macroinvertebrate communities in the receiving waters[35] suggest that structural BMPs are not as effective in protecting aquatic communities as a continuous riparian buffer of native vegetation. This is supported by the findings of Zucker and White[36], where instream biological metrics were correlated with the extent of forested buffers.

This General Permit requires dischargers to maintain pre-development drainage densities and times of concentration in order to protect channels and encourages dischargers to implement setbacks to reduce channel slope and velocity changes that can lead to aquatic habitat degradation.

There are a number of other approaches for modeling fluvial systems, including statistical and physical models and simpler stream power models.[37] The use of these models in California is described in Stein and Zaleski (2005).[38] Rather than prescribe a specific one-size-fits-all modeling method in this permit, the State Water Board intends to develop a stream power and channel evolution model-based framework to assess channels and develop a hierarchy of suitable analysis methods and management strategies. In time, this framework may become a State Water Board water quality control policy.

Permit Linkage to Overbank and Extreme Flood Protection
Site design BMPs (e.g. rooftop and impervious disconnection, vegetated swales, setbacks and buffers) filter and settle out pollutants and provide for more infiltration than is possible for traditional centralized structural BMPs placed at the lowest point in a site. They provide source control for runoff and lead to a reduction in pollutant loads. When implemented, they also help reduce the magnitude and volume of larger, less frequent storm events (e.g., 10-yr, 24-hour storm and larger), thereby reducing the need for expensive flood control infrastructure. Nonstructural BMPs can also be a landscape amenity, instead of a large isolated structure requiring substantial area for ancillary access, buffering, screening and maintenance facilities.[25] The multiple benefits of using non-structural benefits will be critically important as the state's population increases and imposes strains upon our existing water resources.

Maintaining predevelopment drainage densities and times of concentration will help reduce post-development peak flows and volumes in areas not covered under a municipal permit. The most effective way to preserve drainage areas and maximize time of concentration is to implement landform grading,

incorporate site design BMPs and implement distributed structural BMPs (e.g., bioretention cells, rain gardens, rain cisterns).

M. Storm Water Pollution Prevention Plans

USEPA's Construction General Permit requires that qualified personnel conduct inspections. USEPA defines qualified personnel as "a person knowledgeable in the principles and practice of erosion and sediment controls who possesses the skills to assess conditions at the construction site that could impact storm water quality and to assess the effectiveness of any sediment and erosion control measures selected to control the quality of storm water discharges from the construction activity."[39] USEPA also suggests that qualified personnel prepare SWPPPs and points to numerous states that require certified professionals to be on construction sites at all times. States that currently have certification programs are Washington, Georgia, Florida, Delaware, Maryland, and New Jersey. The Permit 99-08-DWQ did not require that qualified personnel prepare SWPPPs or conduct inspections. However, to ensure that water quality is being protected, this General Permit requires that all SWPPPs be written, amended, and certified by a Qualified SWPPP Developer. A Qualified SWPPP Developer must possess one of the eight certifications and or registrations specified in this General Permit and effective two years after the adoption date of this General Permit, must have attended a State Water Board-sponsored or approved Qualified SWPPP Developer training course. Table 9 provides an overview of the criteria used in determining qualified certification titles for a QSD and QSP.

The previous versions of the General Permit required development and implementation of a SWPPP as the primary compliance mechanism. The SWPPP has two major objectives: (1) to help identify the sources of sediment and other pollutants that affect the quality of storm water discharges; and (2) to describe and ensure the implementation of BMPs to reduce or eliminate sediment and other pollutants in storm water and non-storm water discharges. The SWPPP must include BMPs that address source control, BMPs that address pollutant control, and BMPs that address treatment control.

This General Permit shifts some of the measures that were covered by this general requirement to specific permit requirements, each individually enforceable as a permit term. This General Permit emphasizes the use of appropriately selected, correctly installed and maintained pollution reduction BMPs. This approach provides the flexibility necessary to establish BMPs that can effectively address source control of pollutants during changing construction activities. These specific requirements also improve both the clarity and the enforceability of the General Permit so that the dischargers understand, and the public can determine whether the discharges are in compliance with, permit requirements.

The SWPPP must be implemented at the appropriate level to protect water quality at all times throughout the life of the project. The SWPPP must remain on the site during construction activities, commencing with the initial mobilization and ending with the termination of coverage under the General Permit. For LUPs the discharger shall make the SWPPP available at the construction site during working hours while construction is occurring and shall be made available upon request by a State or Municipal inspector. When the original SWPPP is retained by a crewmember in a construction vehicle and is not currently at the construction site, current copies of the BMPs and map/drawing will be left with the field crew and the original SWPPP shall be made available via a request by radio or telephone. Once construction activities are complete, until stabilization is achieved, the SWPPP shall be available from the SWPPP contact listed in the PRDs

A SWPPP must be appropriate for the type and complexity of a project and will be developed and implemented to address project specific conditions. Some projects may have similarities or complexities, yet each project is unique in its progressive state that requires specific description and selection of BMPs needed to address all possible generated pollutants

N. Regional Water Board Authorities

Because this General Permit will be issued to thousands of construction sites across the State, the Regional Water Boards retain discretionary authority over certain issues that may arise from the discharges in their respective regions. This General Permit does not grant the Regional Water Boards any authority they do not otherwise have; rather, it merely emphasizes that the Regional Water Boards can take specific actions related to this General Permit. For example, the Regional Water Boards will be enforcing this General Permit and may need to adjust some requirements for a discharger based on the discharger’s compliance history.

STATE WATER RESOURCES CONTROL BOARD
ORDER NO. 2009-0009-DWQ
[AS AMENDED BY ORDER NO. 2010-0014-DWQ]
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM
GENERAL PERMIT NO. CAS000002

WASTE DISCHARGE REQUIREMENTS
FOR
DISCHARGES OF STORM WATER RUNOFF ASSOCIATED WITH CONSTRUCTION AND LAND DISTURBANCE ACTIVITIES

I. FINDINGS

A. General Findings

The State Water Resources Control Board (State Water Board) finds that:

1. The federal Clean Water Act (CWA) prohibits certain discharges of storm water containing pollutants except in compliance with a National Pollutant Discharge Elimination System (NPDES) permit (Title 33 United States Code (U.S.C.) §§ 1311 and 1342(p); also referred to as Clean Water Act (CWA) §§ 301 and 402(p)). The U.S. Environmental Protection Agency (U.S. EPA) promulgates federal regulations to implement the CWA's mandate to control pollutants in storm water runoff discharges. (Title 40 Code of Federal Regulations (C.F.R.) Parts 122, 123, and 124). The federal statutes and regulations require discharges to surface waters comprised of storm water associated with construction activity, including demolition, clearing, grading, and excavation, and other land disturbance activities (except operations that result in disturbance of less than one acre of total land area and which are not part of a larger common plan of development or sale), to obtain coverage under an NPDES permit. The NPDES permit must require implementation of Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or eliminate pollutants in storm water runoff. The NPDES permit must also include additional requirements necessary to implement applicable water quality standards.

2. This General Permit authorizes discharges of storm water associated with construction activity so long as the dischargers comply with all requirements, provisions, limitations and prohibitions in the permit. In addition, this General Permit regulates the discharges of storm water associated with construction activities from all Linear

Underground/Overhead Projects resulting in the disturbance of greater than or equal to one acre (Attachment A).

3. This General Permit regulates discharges of pollutants in storm water associated with construction activity (storm water discharges) to waters of the United States from construction sites that disturb one or more acres of land surface, or that are part of a common plan of development or sale that disturbs more than one acre of land surface.

4. This General Permit does not preempt or supersede the authority of local storm water management agencies to prohibit, restrict, or control storm water discharges to municipal separate storm sewer systems or other watercourses within their jurisdictions.

5. This action to adopt a general NPDES permit is exempt from the provisions of Chapter 3 of the California Environmental Quality Act (CEQA) (Public Resources Code Section 21100, et seq.), pursuant to Section 13389 of the California Water Code.

6. Pursuant to 40 C.F.R. § 131.12 and State Water Board Resolution No. 68-16,[1] which incorporates the requirements of § 131.12 where applicable, the State Water Board finds that discharges in compliance with this General Permit will not result in the lowering of water quality standards, and are therefore consistent with those provisions. Compliance with this General Permit will result in improvements in water quality.

7. This General Permit serves as an NPDES permit in compliance with CWA § 402 and will take effect on July 1, 2010 by the State Water Board provided the Regional Administrator of the U.S. EPA has no objection. If the U.S. EPA Regional Administrator objects to its issuance, the General Permit will not become effective until such objection is withdrawn.

8. Following adoption and upon the effective date of this General Permit, the Regional Water Quality Control Boards (Regional Water Boards) shall enforce the provisions herein.

9. Regional Water Boards establish water quality standards in Basin Plans. The State Water Board establishes water quality standards in various statewide plans, including the California Ocean Plan. U.S. EPA establishes water quality standards in the National Toxic Rule (NTR) and the California Toxic Rule (CTR).

[1] Resolution No. 68-16 generally requires that existing water quality be maintained unless degradation is justified based on specific findings.

10. This General Permit does not authorize discharges of fill or dredged material regulated by the U.S. Army Corps of Engineers under CWA § 404 and does not constitute a waiver of water quality certification under CWA § 401.

11. The primary storm water pollutant at construction sites is excess sediment. Excess sediment can cloud the water, which reduces the amount of sunlight reaching aquatic plants, clog fish gills, smother aquatic habitat and spawning areas, and impede navigation in our waterways. Sediment also transports other pollutants such as nutrients, metals, and oils and greases.

12. Construction activities can impact a construction site's runoff sediment supply and transport characteristics. These modifications, which can occur both during and after the construction phase, are a significant cause of degradation of the beneficial uses established for water bodies in California. Dischargers can avoid these effects through better construction site design and activity practices.

13. This General Permit recognizes four distinct phases of construction activities. The phases are Grading and Land Development Phase, Streets and Utilities Phase, Vertical Construction Phase, and Final Landscaping and Site Stabilization Phase. Each phase has activities that can result in different water quality effects from different water quality pollutants. This General Permit also recognizes inactive construction as a category of construction site type.

14. Compliance with any specific limits or requirements contained in this General Permit does not constitute compliance with any other applicable requirements.

15. Following public notice in accordance with State and Federal laws and regulations, the State Water Board heard and considered all comments and testimony in a public hearing on 06/03/2009. The State Water Board has prepared written responses to all significant comments.

16. Construction activities obtaining coverage under the General Permit may have multiple discharges subject to requirements that are specific to general, linear, and/or active treatment system discharge types.

17. The State Water Board may reopen the permit if the U.S. EPA adopts a final effluent limitation guideline for construction activities.

B. Activities Covered Under the General Permit

18. Any construction or demolition activity, including, but not limited to, clearing, grading, grubbing, or excavation, or any other activity that results in a land disturbance of equal to or greater than one acre.

19. Construction activity that results in land surface disturbances of less than one acre if the construction activity is part of a larger common plan of development or the sale of one or more acres of disturbed land surface.

20. Construction activity related to residential, commercial, or industrial development on lands currently used for agriculture including, but not limited to, the construction of buildings related to agriculture that are considered industrial pursuant to U.S. EPA regulations, such as dairy barns or food processing facilities.

21. Construction activity associated with Linear Underground/Overhead Utility Projects (LUPs) including, but not limited to, those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment and associated ancillary facilities) and include, but are not limited to, underground utility mark-out, potholing, concrete and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/tower pad and cable/wire pull station, substation construction, substructure installation, construction of tower footings and/or foundations, pole and tower installations, pipeline installations, welding, concrete and/or pavement repair or replacement, and stockpile/borrow locations.

22. Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities.[2]

23. Storm water discharges from dredge spoil placement that occur outside of U.S. Army Corps of Engineers jurisdiction (upland sites) and that disturb one or more acres of land surface from construction activity are covered by this General Permit. Construction sites that intend to disturb one or more acres of land within the jurisdictional boundaries of

[2] Pursuant to the Ninth Circuit Court of Appeals' decision in *NRDC v. EPA* (9th Cir. 2008) 526 F.3d 591, and subsequent denial of the U.S. EPA's petition for reconsideration in November 2008, oil and gas construction activities discharging storm water contaminated only with sediment are no longer exempt from the NPDES program.

a CWA § 404 permit should contact the appropriate Regional Water Board to determine whether this permit applies to the site.

C. Activities Not Covered Under the General Permit

24. Routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of the facility.

25. Disturbances to land surfaces solely related to agricultural operations such as disking, harrowing, terracing and leveling, and soil preparation.

26. Discharges of storm water from areas on tribal lands; construction on tribal lands is regulated by a federal permit.

27. Construction activity and land disturbance involving discharges of storm water within the Lake Tahoe Hydrologic Unit. The Lahontan Regional Water Board has adopted its own permit to regulate storm water discharges from construction activity in the Lake Tahoe Hydrologic Unit (Regional Water Board 6SLT). Owners of construction sites in this watershed must apply for the Lahontan Regional Water Board permit rather than the statewide Construction General Permit.

28. Construction activity that disturbs less than one acre of land surface, and that is not part of a larger common plan of development or the sale of one or more acres of disturbed land surface.

29. Construction activity covered by an individual NPDES Permit for storm water discharges.

30. Discharges from small (1 to 5 acre) construction activities with an approved Rainfall Erosivity Waiver authorized by U.S. EPA Phase II regulations certifying to the State Board that small construction activity will occur only when the Rainfall Erosivity Factor is less than 5 (“R” in the Revised Universal Soil Loss Equation).

31. Landfill construction activity that is subject to the Industrial General Permit.

32. Construction activity that discharges to Combined Sewer Systems.

33. Conveyances that discharge storm water runoff combined with municipal sewage.

34. Discharges of storm water identified in CWA § 402(*l*)(2), 33 U.S.C. § 1342(*l*)(2).

35. Discharges occurring in basins that are not tributary or hydrologically connected to waters of the United States (for more information contact your Regional Water Board).

D. Obtaining and Modifying General Permit Coverage

36. This General Permit requires all dischargers to electronically file all Permit Registration Documents (PRDs), Notices of Termination (NOT), changes of information, annual reporting, and other compliance documents required by this General Permit through the State Water Board's Storm water Multi-Application and Report Tracking System (SMARTS) website.

37. Any information provided to the Regional Water Board shall comply with the Homeland Security Act and any other federal law that concerns security in the United States; any information that does not comply should not be submitted.

38. This General Permit grants an exception from the Risk Determination requirements for existing sites covered under Water Quality Orders No. 99-08-DWQ, and No. 2003-0007-DWQ. For certain sites, adding additional requirements may not be cost effective. Construction sites covered under Water Quality Order No. 99-08-DWQ shall obtain permit coverage at the Risk Level 1. LUPs covered under Water Quality Order No. 2003-0007-DWQ shall obtain permit coverage as a Type 1 LUP. The Regional Water Boards have the authority to require Risk Determination to be performed on sites currently covered under Water Quality Orders No. 99-08-DWQ and No. 2003-0007-DWQ where they deem it necessary. The State Water Board finds that there are two circumstances when it may be appropriate for the Regional Water Boards to require a discharger that had filed an NOI under State Water Board Order No. 99-08-DWQ to recalculate the site's risk level. These circumstances are: (1) when the discharger has a demonstrated history of noncompliance with State Water Board Order No. 99-08-DWQ or; (2) when the discharger's site poses a significant risk of causing or contributing to an exceedance of a water quality standard without the implementation of the additional Risk Level 2 or 3 requirements.

E. Prohibitions

39. All discharges are prohibited except for the storm water and non-storm water discharges specifically authorized by this General Permit or another NPDES permit. Non-storm water discharges include a wide variety of sources, including improper dumping, spills, or leakage from storage tanks or transfer areas. Non-storm water discharges may

contribute significant pollutant loads to receiving waters. Measures to control spills, leakage, and dumping, and to prevent illicit connections during construction must be addressed through structural as well as non-structural Best Management Practices (BMPs)[3]. The State Water Board recognizes, however, that certain non-storm water discharges may be necessary for the completion of construction.

40. This General Permit prohibits all discharges which contain a hazardous substance in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

41. This General Permit incorporates discharge prohibitions contained in water quality control plans, as implemented by the State Water Board and the nine Regional Water Boards.

42. Pursuant to the Ocean Plan, discharges to Areas of Special Biological Significance (ASBS) are prohibited unless covered by an exception that the State Water Board has approved.

43. This General Permit prohibits the discharge of any debris[4] from construction sites. Plastic and other trash materials can cause negative impacts to receiving water beneficial uses. The State Water Board encourages the use of more environmentally safe, biodegradable materials on construction sites to minimize the potential risk to water quality.

F. Training

44. In order to improve compliance with and to maintain consistent enforcement of this General Permit, all dischargers are required to appoint two positions - the Qualified SWPPP Developer (QSD) and the Qualified SWPPP Practitioner (QSP) - who must obtain appropriate training. Together with the key stakeholders, the State and Regional Water Boards are leading the development of this curriculum through a collaborative organization called The Construction General Permit (CGP) Training Team.

45. The Professional Engineers Act (Bus. & Prof. Code section 6700, et seq.) requires that all engineering work must be performed by a California licensed engineer.

[3] BMPs are scheduling of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants to waters of the United States. BMPs also include treatment requirements, operating procedures, and practice to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

[4] Litter, rubble, discarded refuse, and remains of destroyed inorganic anthropogenic waste.

G. Determining and Reducing Risk

46. The risk of accelerated erosion and sedimentation from wind and water depends on a number of factors, including proximity to receiving water bodies, climate, topography, and soil type.

47. This General Permit requires dischargers to assess the risk level of a site based on both sediment transport and receiving water risk. This General Permit contains requirements for Risk Levels 1, 2 and 3, and LUP Risk Type 1, 2, and 3 (Attachment A). Risk levels are established by determining two factors: first, calculating the site's sediment risk; and second, receiving water risk during periods of soil exposure (i.e. grading and site stabilization). Both factors are used to determine the site-specific Risk Level(s). LUPs can be determined to be Type 1 based on the flowchart in Attachment A.1.

48. Although this General Permit does not mandate specific setback distances, dischargers are encouraged to set back their construction activities from streams and wetlands whenever feasible to reduce the risk of impacting water quality (e.g., natural stream stability and habitat function). Because there is a reduced risk to receiving waters when setbacks are used, this General Permit gives credit to setbacks in the risk determination and post-construction storm water performance standards. The risk calculation and runoff reduction mechanisms in this General Permit are expected to facilitate compliance with any Regional Water Board and local agency setback requirements, and to encourage voluntary setbacks wherever practicable.

49. Rain events can occur at any time of the year in California. Therefore, a Rain Event Action Plan (REAP) is necessary for Risk Level 2 and 3 traditional construction projects (LUPs exempt) to ensure that active construction sites have adequate erosion and sediment controls implemented prior to the onset of a storm event, even if construction is planned only during the dry season.

50. Soil particles smaller than 0.02 millimeters (mm) (i.e., finer than medium silt) do not settle easily using conventional measures for sediment control (i.e., sediment basins). Given their long settling time, dislodging these soils results in a significant risk that fine particles will be released into surface waters and cause unacceptable downstream impacts. If operated correctly, an Active Treatment System (ATS[5]) can prevent or reduce the release of fine particles from construction sites.

[5] An ATS is a treatment system that employs chemical coagulation, chemical flocculation, or electro coagulation in order to reduce turbidity caused by fine suspended sediment.

Use of an ATS can effectively reduce a site's risk of impacting receiving waters.

51. Dischargers located in a watershed area where a Total Maximum Daily Load (TMDL) has been adopted or approved by the Regional Water Board or U.S. EPA may be required by a separate Regional Water Board action to implement additional BMPs, conduct additional monitoring activities, and/or comply with an applicable waste load allocation and implementation schedule. Such dischargers may also be required to obtain an individual Regional Water Board permit specific to the area.

H. Effluent Standards

52. The State Water Board convened a blue ribbon panel of storm water experts that submitted a report entitled, “The Feasibility of Numeric Effluent Limits Applicable to Discharges of Storm Water Associated with Municipal, Industrial and Construction Activities,” dated June 19, 2006. The panel concluded that numeric limits or action levels are technically feasible to control construction storm water discharges, provided that certain conditions are considered. The panel also concluded that numeric effluent limitations (NELs) are feasible for discharges from construction sites that utilize an ATS. The State Water Board has incorporated the expert panel’s suggestions into this General Permit, which includes numeric action levels (NALs) for pH and turbidity, and special numeric limits for ATS discharges.

Determining Compliance with Numeric Limitations

53. This General Permit sets a pH NAL of 6.5 to 8.5, and a turbidity NAL of 250 NTU. The purpose of the NAL and its associated monitoring requirement is to provide operational information regarding the performance of the measures used at the site to minimize the discharge of pollutants and to protect beneficial uses and receiving waters from the adverse effects of construction-related storm water discharges. An exceedance of a NAL does not constitute a violation of this General Permit.

54. This General Permit requires dischargers with NAL exceedances to immediately implement additional BMPs and revise their Storm Water Pollution Prevention Plans (SWPPPs) accordingly to either prevent pollutants and authorized non-storm water discharges from contaminating storm water, or to substantially reduce the pollutants to levels consistently below the NALs. NAL exceedances are reported in the State Water Boards SMARTS system, and the discharger is

required to provide an NAL Exceedance Report when requested by a Regional Water Board.

I. Receiving Water Limitations

55. This General Permit requires all enrolled dischargers to determine the receiving waters potentially affected by their discharges and to comply with all applicable water quality standards, including any more stringent standards applicable to a water body.

J. Sampling, Monitoring, Reporting and Record Keeping

56. Visual monitoring of storm water and non-storm water discharges is required for all sites subject to this General Permit.

57. Records of all visual monitoring inspections are required to remain on-site during the construction period and for a minimum of three years.

58. For all Risk Level 3/LUP Type 3 and Risk Level 2/LUP Type 2 sites, this General Permit requires effluent monitoring for pH and turbidity. Sampling, analysis and monitoring requirements for effluent monitoring for pH and turbidity are contained in this General Permit.

59. Risk Level 3 and LUP Type 3 sites with effluent that exceeds the Receiving Water Monitoring Triggers contained in this General Permit and with direct discharges to receiving water are required to conduct receiving water monitoring. An exceedance of a Receiving Water Monitoring Trigger does not constitute a violation of this General Permit.

60. This General Permit establishes a 5 year, 24 hour (expressed in inches of rainfall) as an exemptions to the receiving water monitoring requirements for Risk Level 3 and LUP Type 3 dischargers.

61. If run-on is caused by a forest fire or any other natural disaster, then receiving water monitoring triggers do not apply.

62. For Risk Level 3 and LUP Type 3 sites larger than 30 acres and with direct discharges to receiving waters, this General Permit requires bioassessment sampling before and after site completion to determine if significant degradation to the receiving water's biota has occurred. Bioassessment sampling guidelines are contained in this General Permit.

63. A summary and evaluation of the sampling and analysis results will be submitted in the Annual Reports.

64. This General Permit contains sampling, analysis and monitoring requirements for non-visible pollutants at all sites subject to this General Permit.

65. Compliance with the General Permit relies upon dischargers to electronically self-report any discharge violations and to comply with any Regional Water Board enforcement actions.

66. This General Permit requires that all dischargers maintain a paper or electronic copy of all required records for three years from the date generated or date submitted, whichever is last. These records must be available at the construction site until construction is completed. For LUPs, these documents may be retained in a crew member's vehicle and made available upon request.

K. Active Treatment System (ATS) Requirements

67. Active treatment systems add chemicals to facilitate flocculation, coagulation and filtration of suspended sediment particles. The uncontrolled release of these chemicals to the environment can negatively affect the beneficial uses of receiving waters and/or degrade water quality (e.g., acute and chronic toxicity). Additionally, the batch storage and treatment of storm water through an ATS' can potentially cause physical impacts on receiving waters if storage volume is inadequate or due to sudden releases of the ATS batches and improperly designed outfalls.

68. If designed, operated and maintained properly an ATS can achieve very high removal rates of suspended sediment (measured as turbidity), albeit at sometimes significantly higher costs than traditional erosion/sediment control practices. As a result, this General Permit establishes NELs consistent with the expected level of typical ATS performance.

69. This General Permit requires discharges of storm water associated with construction activity that undergo active treatment to comply with special operational and effluent limitations to ensure that these discharges do not adversely affect the beneficial uses of the receiving waters or cause degradation of their water quality.

70. For ATS discharges, this General Permit establishes technology-based NELs for turbidity.

71. This General Permit establishes a 10 year, 24 hour (expressed in inches of rainfall) Compliance Storm Event exemption from the technology-based numeric effluent limitations for ATS discharges. Exceedances of the ATS turbidity NEL constitutes a violation of this General Permit.

L. Post-Construction Requirements

72. This General Permit includes performance standards for post-construction that are consistent with State Water Board Resolution No. 2005-0006, "Resolution Adopting the Concept of Sustainability as a Core Value for State Water Board Programs and Directing Its Incorporation," and 2008-0030, "Requiring Sustainable Water Resources Management." The requirement for all construction sites to match pre-project hydrology will help ensure that the physical and biological integrity of aquatic ecosystems are sustained. This "runoff reduction" approach is analogous in principle to Low Impact Development (LID) and will serve to protect related watersheds and waterbodies from both hydrologic-based and pollution impacts associated with the post-construction landscape.

73. LUP projects are not subject to post-construction requirements due to the nature of their construction to return project sites to pre-construction conditions.

M. Storm Water Pollution Prevention Plan Requirements

74. This General Permit requires the development of a site-specific SWPPP. The SWPPP must include the information needed to demonstrate compliance with all requirements of this General Permit, and must be kept on the construction site and be available for review. The discharger shall ensure that a QSD develops the SWPPP.

75. To ensure proper site oversight, this General Permit requires a Qualified SWPPP Practitioner to oversee implementation of the BMPs required to comply with this General Permit.

N. Regional Water Board Authorities

76. Regional Water Boards are responsible for implementation and enforcement of this General Permit. A general approach to permitting is not always suitable for every construction site and environmental circumstances. Therefore, this General Permit recognizes that Regional Water Boards must have some flexibility and authority to alter, approve, exempt, or rescind permit authority granted under this

General Permit in order to protect the beneficial uses of our receiving waters and prevent degradation of water quality.

IT IS HEREBY ORDERED that all dischargers subject to this General Permit shall comply with the following conditions and requirements (including all conditions and requirements as set forth in Attachments A, B, C, D, E and F)[6]:

II. CONDITIONS FOR PERMIT COVERAGE

A. Linear Underground/Overhead Projects (LUPs)

1. Linear Underground/Overhead Projects (LUPs) include, but are not limited to, any conveyance, pipe, or pipeline for the transportation of any gaseous, liquid (including water and wastewater for domestic municipal services), liquescent, or slurry substance; any cable line or wire for the transmission of electrical energy; any cable line or wire for communications (e.g. telephone, telegraph, radio or television messages); and associated ancillary facilities. Construction activities associated with LUPs include, but are not limited to, (a) those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment, and associated ancillary facilities); and include, but are not limited to, (b) underground utility mark-out, potholing, concrete and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/tower pad and cable/wire pull station, substation construction, substructure installation, construction of tower footings and/or foundations, pole and tower installations, pipeline installations, welding, concrete and/ or pavement repair or replacement, and stockpile/borrow locations.

2. The Legally Responsible Person is responsible for obtaining coverage under the General Permit where the construction of pipelines, utility lines, fiber-optic cables, or other linear underground/overhead projects will occur across several properties unless the LUP construction activities are covered under another construction storm water permit.

3. Only LUPs shall comply with the conditions and requirements in Attachment A, A.1 & A.2 of this Order. The balance of this Order is not applicable to LUPs except as indicated in Attachment A.

[6] These attachments are part of the General Permit itself and are not separate documents that are capable of being updated independently by the State Water Board.

B. Obtaining Permit Coverage Traditional Construction Sites

1. The Legally Responsible Person (LRP) (see Special Provisions, Electronic Signature and Certification Requirements, Section IV.I.1) must obtain coverage under this General Permit.

2. To obtain coverage, the LRP must electronically file Permit Registration Documents (PRDs) prior to the commencement of construction activity. Failure to obtain coverage under this General Permit for storm water discharges to waters of the United States is a violation of the CWA and the California Water Code.

3. PRDs shall consist of:

   a. Notice of Intent (NOI)
   b. Risk Assessment (Section VIII)
   c. Site Map
   d. Storm Water Pollution Prevention Plan (Section XIV)
   e. Annual Fee
   f. Signed Certification Statement

   Any information provided to the Regional Water Board shall comply with the Homeland Security Act and any other federal law that concerns security in the United States; any information that does not comply should not be submitted.

   Attachment B contains additional PRD information. Dischargers must electronically file the PRDs, and mail the appropriate annual fee to the State Water Board.

4. This permit is effective on July 1, 2010.

   a. **Dischargers Obtaining Coverage On or After July 1, 2010:** All dischargers requiring coverage on or after July 1, 2010, shall electronically file their PRDs prior to the commencement of construction activities, and mail the appropriate annual fee no later than seven days prior to the commencement of construction activities. Permit coverage shall not commence until the PRDs and the annual fee are received by the State Water Board, and a WDID number is assigned and sent by SMARTS.

   b. **Dischargers Covered Under 99-08-DWQ and 2003-0007-DWQ:** Existing dischargers subject to State Water Board Order No. 99-08-DWQ (existing dischargers) will continue coverage under 99-08-DWQ until July 1, 2010. After July 1, 2010, all NOIs subject to State Water Board Order No. 99-08-DWQ will be terminated.

Existing dischargers shall electronically file their PRDs no later than July 1, 2010. If an existing discharger's site acreage subject to the annual fee has changed, it shall mail a revised annual fee no less than seven days after receiving the revised annual fee notification, **or else lose permit coverage**. All existing dischargers shall be exempt from the risk determination requirements in Section VIII of this General Permit until two years after permit adoption. All existing dischargers are therefore subject to Risk Level 1 requirements regardless of their site's sediment and receiving water risks. However, a Regional Board retains the authority to require an existing discharger to comply with the Section VIII risk determination requirements.

5. The discharger is only considered covered by this General Permit upon receipt of a Waste Discharger Identification (WDID) number assigned and sent by the State Water Board Storm water Multi-Application and Report Tracking System (SMARTS). In order to demonstrate compliance with this General Permit, the discharger must obtain a WDID number and must present documentation of a valid WDID upon demand.

6. During the period this permit is subject to review by the U.S. EPA, the prior permit (State Water Board Order No. 99-08-DWQ) remains in effect. Existing dischargers under the prior permit will continue to have coverage under State Water Board Order No. 99-08-DWQ until this General Permit takes effect on July 1, 2010. Dischargers who complete their projects and electronically file an NOT prior to July 1, 2010, are not required to obtain coverage under this General Permit.

7. Small Construction Rainfall Erosivity Waiver

   EPA's Small Construction Erosivity Waiver applies to sites between one and five acres demonstrating that there are no adverse water quality impacts.

   Dischargers eligible for a Rainfall Erosivity Waiver based on low erosivity potential shall complete the electronic Notice of Intent (NOI) and Sediment Risk form through the State Water Board's SMARTS system, certifying that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five. Where the LRP changes or another LRP is added during construction, the new LRP must also submit a waiver certification through the SMARTS system.

   If a small construction site continues beyond the projected completion date given on the waiver certification, the LRP shall recalculate the

rainfall erosivity factor for the new project duration and submit this information through the SMARTS system. If the new R factor is below five (5), the discharger shall update through SMARTS all applicable information on the waiver certification and retain a copy of the revised waiver onsite. The LRP shall submit the new waiver certification 30 days prior to the projected completion date listed on the original waiver form to assure exemption from permitting requirements is uninterrupted. If the new R factor is five (5) or above, the LRP shall be required to apply for coverage under this Order.

8. In the case of a public emergency that requires immediate construction activities, a discharger shall submit a brief description of the emergency construction activity within five days of the onset of construction, and then shall submit all PRDs within thirty days.

C. Revising Permit Coverage for Change of Acreage or New Ownership

1. The discharger may reduce or increase the total acreage covered under this General Permit when a portion of the site is complete and/or conditions for termination of coverage have been met (See Section II.D Conditions for Termination of Coverage); when ownership of a portion of the site is sold to a different entity; or when new acreage, subject to this General Permit, is added to the site.

2. Within 30 days of a reduction or increase in total disturbed acreage, the discharger shall electronically file revisions to the PRDs that include:

   a. A revised NOI indicating the new project size;

   b. A revised site map showing the acreage of the site completed, acreage currently under construction, acreage sold/transferred or added, and acreage currently stabilized in accordance with the Conditions for Termination of Coverage in Section II.D below.

   c. SWPPP revisions, as appropriate; and

   d. Certification that any new landowners have been notified of applicable requirements to obtain General Permit coverage. The certification shall include the name, address, telephone number, and e-mail address of the new landowner.

   e. If the project acreage has increased, dischargers shall mail payment of revised annual fees within 14 days of receiving the revised annual fee notification.

3. The discharger shall continue coverage under the General Permit for any parcel that has not achieved "Final Stabilization" as defined in Section II.D.

4. When an LRP with active General Permit coverage transfers its LRP status to another person or entity that qualifies as an LRP, the existing LRP shall inform the new LRP of the General Permit's requirements. In order for the new LRP to continue the construction activity on its parcel of property, the new LRP, or the new LRP's approved signatory, must submit PRDs in accordance with this General Permit's requirements.

D. Conditions for Termination of Coverage

1. Within 90 days of when construction is complete or ownership has been transferred, the discharger shall electronically file a Notice of Termination (NOT), a final site map, and photos through the State Water Boards SMARTS system. Filing a NOT certifies that all General Permit requirements have been met. The Regional Water Board will consider a construction site complete only when all portions of the site have been transferred to a new owner, or all of the following conditions have been met:

   a. For purposes of "final stabilization," the site will not pose any additional sediment discharge risk than it did prior to the commencement of construction activity;

   b. There is no potential for construction-related storm water pollutants to be discharged into site runoff;

   c. Final stabilization has been reached;

   d. Construction materials and wastes have been disposed of properly;

   e. Compliance with the Post-Construction Standards in Section XIII of this General Permit has been demonstrated;

   f. Post-construction storm water management measures have been installed and a long-term maintenance plan[7] has been established; and

   g. All construction-related equipment, materials and any temporary BMPs no longer needed are removed from the site.

[7] For the purposes of this requirement a long-term maintenance plan will be designed for a minimum of five years, and will describe the procedures to ensure that the post-construction storm water management measures are adequately maintained.

2. The discharger shall certify that final stabilization conditions are satisfied in their NOT. Failure to certify shall result in continuation of permit coverage and annual billing.

3. The NOT must demonstrate through photos, RUSLE or RUSLE2, or results of testing and analysis that the site meets all of the conditions above (Section II.D.1) and the final stabilization condition (Section II.D.1.a) is attained by one of the following methods:

   a. "70% final cover method," no computational proof required

      OR:

   b. "RUSLE or RUSLE2 method," computational proof required

      OR:

   c. "Custom method", the discharger shall demonstrate in some other manner than a or b, above, that the site complies with the "final stabilization" requirement in Section II.D.1.a.

III. DISCHARGE PROHIBITIONS

A. Dischargers shall not violate any discharge prohibitions contained in applicable Basin Plans or statewide water quality control plans. Waste discharges to Areas of Special Biological Significance (ASBS) are prohibited by the California Ocean Plan, unless granted an exception issued by the State Water Board.

B. All discharges are prohibited except for the storm water and non-storm water discharges specifically authorized by this General Permit or another NPDES permit.

C. Authorized non-storm water discharges may include those from de-chlorinated potable water sources such as: fire hydrant flushing, irrigation of vegetative erosion control measures, pipe flushing and testing, water to control dust, uncontaminated ground water from dewatering, and other discharges not subject to a separate general NPDES permit adopted by a Regional Water Board. The discharge of non-storm water is authorized under the following conditions:

1. The discharge does not cause or contribute to a violation of any water quality standard;

2. The discharge does not violate any other provision of this General Permit;

3. The discharge is not prohibited by the applicable Basin Plan;

4. The discharger has included and implemented specific BMPs required by this General Permit to prevent or reduce the contact of the non-storm water discharge with construction materials or equipment.

5. The discharge does not contain toxic constituents in toxic amounts or (other) significant quantities of pollutants;

6. The discharge is monitored and meets the applicable NALs; and

7. The discharger reports the sampling information in the Annual Report.

If any of the above conditions are not satisfied, the discharge is not authorized by this General Permit. The discharger shall notify the Regional Water Board of any anticipated non-storm water discharges not already authorized by this General Permit or another NPDES permit, to determine whether a separate NPDES permit is necessary.

D. Debris resulting from construction activities are prohibited from being discharged from construction sites.

E. When soil contamination is found or suspected and a responsible party is not identified, or the responsible party fails to promptly take the appropriate action, the discharger shall have those soils sampled and tested to ensure proper handling and public safety measures are implemented. The discharger shall notify the appropriate local, State, and federal agency(ies) when contaminated soil is found at a construction site, and will notify the appropriate Regional Water Board.

IV. SPECIAL PROVISIONS

A. Duty to Comply

1. The discharger shall comply with all of the conditions of this General Permit. Any permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for enforcement action and/or removal from General Permit coverage.

2. The discharger shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

B. General Permit Actions

1. This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the discharger for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not annul any General Permit condition.

2. If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition and the dischargers so notified.

C. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for a discharger in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this General Permit.

D. Duty to Mitigate

The discharger shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit, which has a reasonable likelihood of adversely affecting human health or the environment.

E. Proper Operation and Maintenance

The discharger shall at all times properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the discharger to achieve compliance with the conditions of this General Permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a discharger when necessary to achieve compliance with the conditions of this General Permit.

F. Property Rights

This General Permit does not convey any property rights of any sort or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor does it authorize any infringement of Federal, State, or local laws or regulations.

G. Duty to Maintain Records and Provide Information

1. The discharger shall maintain a paper or electronic copy of all required records, including a copy of this General Permit, for three years from the date generated or date submitted, whichever is last. These records shall be available at the construction site until construction is completed.

2. The discharger shall furnish the Regional Water Board, State Water Board, or U.S. EPA, within a reasonable time, any requested information to determine compliance with this General Permit. The discharger shall also furnish, upon request, copies of records that are required to be kept by this General Permit.

H. Inspection and Entry

The discharger shall allow the Regional Water Board, State Water Board, U.S. EPA, and/or, in the case of construction sites which discharge through a municipal separate storm sewer, an authorized representative of the municipal operator of the separate storm sewer system receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

1. Enter upon the discharger's premises at reasonable times where a regulated construction activity is being conducted or where records must be kept under the conditions of this General Permit;

2. Access and copy at reasonable times any records that must be kept under the conditions of this General Permit;

3. Inspect at reasonable times the complete construction site, including any off-site staging areas or material storage areas, and the erosion/sediment controls; and

4. Sample or monitor at reasonable times for the purpose of ensuring General Permit compliance.

I. Electronic Signature and Certification Requirements

1. All Permit Registration Documents (PRDs) and Notices of Termination (NOTs) shall be electronically signed, certified, and submitted via SMARTS to the State Water Board. Either the Legally Responsible Person (LRP), as defined in Appendix 5 – Glossary, or a person legally authorized to sign and certify PRDs and NOTs on behalf of the LRP (the LRP's Approved Signatory, as defined in Appendix 5 - Glossary) must submit all information electronically via SMARTS.

2. Changes to Authorization. If an Approved Signatory's authorization is no longer accurate, a new authorization satisfying the requirements of paragraph (a) of this section must be submitted via SMARTS prior to or together with any reports, information or applications to be signed by an Approved Signatory.

3. All Annual Reports, or other information required by the General Permit (other than PRDs and NOTs) or requested by the Regional Water Board, State Water Board, U.S. EPA, or local storm water management agency shall be certified and submitted by the LRP or the LRP's Approved Signatory.

J. Certification

Any person signing documents under Section IV.I above, shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

K. Anticipated Noncompliance

The discharger shall give advance notice to the Regional Water Board and local storm water management agency of any planned changes in the construction activity, which may result in noncompliance with General Permit requirements.

L. Bypass

Bypass[8] is prohibited. The Regional Water Board may take enforcement action against the discharger for bypass unless:

1. Bypass was unavoidable to prevent loss of life, personal injury or severe property damage;[9]

2. There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventative maintenance;

3. The discharger submitted a notice at least ten days in advance of the need for a bypass to the Regional Water Board; or

4. The discharger may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to assure efficient operation. In such a case, the above bypass conditions are not applicable. The discharger shall submit notice of an unanticipated bypass as required.

M. Upset

1. A discharger that wishes to establish the affirmative defense of an upset[10] in an action brought for noncompliance shall demonstrate,

[8] The intentional diversion of waste streams from any portion of a treatment facility

[9] Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

[10] An exceptional incident in which there is unintentional and temporary noncompliance the technology based numeric effluent limitations because of factors beyond the reasonable control of the discharger. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventative maintenance, or careless or improper operation.

through properly signed, contemporaneous operating logs, or other relevant evidence that:

a. An upset occurred and that the discharger can identify the cause(s) of the upset

b. The treatment facility was being properly operated by the time of the upset

c. The discharger submitted notice of the upset as required; and

d. The discharger complied with any remedial measures required

2. No determination made before an action of noncompliance occurs, such as during administrative review of claims that noncompliance was caused by an upset, is final administrative action subject to judicial review.

3. In any enforcement proceeding, the discharger seeking to establish the occurrence of an upset has the burden of proof

N. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years or by both.

O. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the discharger from any responsibilities, liabilities, or penalties to which the discharger is or may be subject to under Section 311 of the CWA.

P. Severability

The provisions of this General Permit are severable; and, if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

Q. Reopener Clause

This General Permit may be modified, revoked and reissued, or terminated for cause due to promulgation of amended regulations, receipt of U.S. EPA guidance concerning regulated activities, judicial decision, or in accordance with 40 Code of Federal Regulations (CFR) 122.62, 122.63, 122.64, and 124.5.

R. Penalties for Violations of Permit Conditions

1. Section 309 of the CWA provides significant penalties for any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the CWA or any permit condition or limitation implementing any such section in a permit issued under Section 402. Any person who violates any permit condition of this General Permit is subject to a civil penalty not to exceed $37,500[11] per calendar day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

2. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties, which in some cases are greater than those under the CWA.

S. Transfers

This General Permit is not transferable.

T. Continuation of Expired Permit

This General Permit continues in force and effect until a new General Permit is issued or the SWRCB rescinds this General Permit. Only those dischargers authorized to discharge under the expiring General Permit are covered by the continued General Permit.

[11] May be further adjusted in accordance with the Federal Civil Penalties Inflation Adjustment Act.

V. EFFLUENT STANDARDS & RECEIVING WATER MONITORING

A. Narrative Effluent Limitations

1. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

2. Dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

Table 1- Numeric Action Levels, Test Methods, Detection Limits, and Reporting Units

Parameter	Test Method	Discharge Type	Min. Detection Limit	Units	Numeric Action Level
pH	Field test with calibrated portable instrument	Risk Level 2	0.2	pH units	lower NAL = 6.5 upper NAL = 8.5
		Risk Level 3			lower NAL = 6.5 upper NAL = 8.5
Turbidity	EPA 0180.1 and/or field test with calibrated portable instrument	Risk Level 2	1	NTU	250 NTU
		Risk Level 3			250 NTU

B. Numeric Action Levels (NALs)

1. For Risk Level 2 and 3 dischargers, the lower storm event average NAL for pH is 6.5 pH units and the upper storm event average NAL for

pH is 8.5 pH units. The discharger shall take actions as described below if the discharge is outside of this range of pH values.

2. For Risk Level 2 and 3 dischargers, the NAL storm event daily average for turbidity is 250 NTU. The discharger shall take actions as described below if the discharge is outside of this range of turbidity values.

3. Whenever the results from a storm event daily average indicate that the discharge is below the lower NAL for pH, exceeds the upper NAL for pH, or exceeds the turbidity NAL (as listed in Table 1), the discharger shall conduct a construction site and run-on evaluation to determine whether pollutant source(s) associated with the site's construction activity may have caused or contributed to the NAL exceedance and shall immediately implement corrective actions if they are needed.

4. The site evaluation shall be documented in the SWPPP and specifically address whether the source(s) of the pollutants causing the exceedance of the NAL:

   a. Are related to the construction activities and whether additional BMPs are required to (1) meet BAT/BCT requirements; (2) reduce or prevent pollutants in storm water discharges from causing exceedances of receiving water objectives; and (3) determine what corrective action(s) were taken or will be taken and with a description of the schedule for completion.

      AND/OR:

   b. Are related to the run-on associated with the construction site location and whether additional BMPs measures are required to (1) meet BAT/BCT requirements; (2) reduce or prevent pollutants in storm water discharges from causing exceedances of receiving water objectives; and (3) what corrective action(s) were taken or will be taken with a description of the schedule for completion.

C. Receiving Water Monitoring Triggers

1. The receiving water monitoring triggers for Risk Level 3 dischargers with direct discharges to surface waters are triggered when the daily average effluent pH values during any site phase when there is a high risk of pH discharge[12] fall outside of the range of 6.0 and 9.0 pH units, or when the daily average effluent turbidity exceeds 500 NTU.

2. Risk Level 3 dischargers with with direct discharges to surface waters shall conduct receiving water monitoring whenever their effluent monitoring results exceed the receiving water monitoring triggers. If the pH trigger is exceeded, the receiving water shall be monitored for pH for the duration of coverage under this General Permit. If the turbidity trigger is exceeded, the receiving water shall be monitored for turbidity and SSC for the duration of coverage under this general permit.

3. Risk Level 3 dischargers with direct discharges to surfaces waters shall initiate receiving water monitoring when the triggers are exceeded unless the storm event causing the exceedance is determined after the fact to equal to or greater than the 5-year 24-hour storm (expressed in inches of rainfall) as determined by using these maps:

   http://www.wrcc.dri.edu/pcpnfreq/nca5y24.gif
   http://www.wrcc.dri.edu/pcpnfreq/sca5y24.gif

   Verification of the 5-year 24-hour storm event shall be done by reporting on-site rain gauge readings as well as nearby governmental rain gauge readings.

4. If run-on is caused by a forest fire or any other natural disaster, then receiving water monitoring triggers do not apply.

[12] A period of high risk of pH discharge is defined as a project's complete utilities phase, complete vertical build phase, and any portion of any phase where significant amounts of materials are placed directly on the land at the site in a manner that could result in significant alterations of the background pH of the discharges.

VI. RECEIVING WATER LIMITATIONS

A. The discharger shall ensure that storm water discharges and authorized non-storm water discharges to any surface or ground water will not adversely affect human health or the environment.

B. The discharger shall ensure that storm water discharges and authorized non-storm water discharges will not contain pollutants in quantities that threaten to cause pollution or a public nuisance.

C. The discharger shall ensure that storm water discharges and authorized non-storm water discharges will not contain pollutants that cause or contribute to an exceedance of any applicable water quality objectives or water quality standards (collectively, WQS) contained in a Statewide Water Quality Control Plan, the California Toxics Rule, the National Toxics Rule, or the applicable Regional Water Board's Water Quality Control Plan (Basin Plan).

D. Dischargers located within the watershed of a CWA § 303(d) impaired water body, for which a TMDL has been approved by the U.S. EPA, shall comply with the approved TMDL if it identifies "construction activity" or land disturbance as a source of the pollution.

VII. TRAINING QUALIFICATIONS AND CERTIFICATION REQUIREMENTS

A. General

The discharger shall ensure that all persons responsible for implementing requirements of this General Permit shall be appropriately trained in accordance with this Section. Training should be both formal and informal, occur on an ongoing basis, and should include training offered by recognized governmental agencies or professional organizations. Those responsible for preparing and amending SWPPPs shall comply with the requirements in this Section VII.

The discharger shall provide documentation of all training for persons responsible for implementing the requirements of this General Permit in the Annual Reports.

B. SWPPP Certification Requirements

1. **Qualified SWPPP Developer:** The discharger shall ensure that SWPPPs are written, amended and certified by a Qualified SWPPP Developer (QSD). A QSD shall have one of the following registrations or certifications, and appropriate experience, as required for:

   a. A California registered professional civil engineer;

   b. A California registered professional geologist or engineering geologist;

   c. A California registered landscape architect;

   d. A professional hydrologist registered through the American Institute of Hydrology;

   e. A Certified Professional in Erosion and Sediment Control (CPESC) ™ registered through Enviro Cert International, Inc.;

   f. A Certified Professional in Storm Water Quality (CPSWQ) ™ registered through Enviro Cert International, Inc.; or

   g. A professional in erosion and sediment control registered through the National Institute for Certification in Engineering Technologies (NICET).

Effective two years after the adoption date of this General Permit, a QSD shall have attended a State Water Board-sponsored or approved QSD training course.

2. The discharger shall list the name and telephone number of the currently designated Qualified SWPPP Developer(s) in the SWPPP.

3. **Qualified SWPPP Practitioner:** The discharger shall ensure that all BMPs required by this General Permit are implemented by a Qualified SWPPP Practitioner (QSP). A QSP is a person responsible for non-storm water and storm water visual observations, sampling and analysis. Effective two years from the date of adoption of this General Permit, a QSP shall be either a QSD or have one of the following certifications:

   a. A certified erosion, sediment and storm water inspector registered through Enviro Cert International, Inc.; or

   b. A certified inspector of sediment and erosion control registered through Certified Inspector of Sediment and Erosion Control, Inc.

   Effective two years after the adoption date of this General Permit, a QSP shall have attended a State Water Board-sponsored or approved QSP training course.

4. The LRP shall list in the SWPPP, the name of any Approved Signatory, and provide a copy of the written agreement or other mechanism that provides this authority from the LRP in the SWPPP.

5. The discharger shall include, in the SWPPP, a list of names of all contractors, subcontractors, and individuals who will be directed by the Qualified SWPPP Practitioner. This list shall include telephone numbers and work addresses. Specific areas of responsibility of each subcontractor and emergency contact numbers shall also be included.

6. The discharger shall ensure that the SWPPP and each amendment will be signed by the Qualified SWPPP Developer. The discharger shall include a listing of the date of initial preparation and the date of each amendment in the SWPPP.

VIII. RISK DETERMINATION

The discharger shall calculate the site's sediment risk and receiving water risk during periods of soil exposure (i.e. grading and site stabilization) and use the calculated risks to determine a Risk Level(s) using the methodology in

Appendix 1. For any site that spans two or more planning watersheds,[13] the discharger shall calculate a separate Risk Level for each planning watershed. The discharger shall notify the State Water Board of the site's Risk Level determination(s) and shall include this determination as a part of submitting the PRDs. If a discharger ends up with more than one Risk Level determination, the Regional Water Board may choose to break the project into separate levels of implementation.

IX. RISK LEVEL 1 REQUIREMENTS

Risk Level 1 Dischargers shall comply with the requirements included in Attachment C of this General Permit.

X. RISK LEVEL 2 REQUIREMENTS

Risk Level 2 Dischargers shall comply with the requirements included in Attachment D of this General Permit.

XI. RISK LEVEL 3 REQUIREMENTS

Risk Level 3 Dischargers shall comply with the requirements included in Attachment E of this General Permit.

XII. ACTIVE TREATMENT SYSTEMS (ATS)

Dischargers choosing to implement an ATS on their site shall comply with all of the requirements in Attachment F of this General Permit.

[13] Planning watershed: defined by the Calwater Watershed documents as a watershed that ranges in size from approximately 3,000 to 10,000 acres http://cain.ice.ucdavis.edu/calwater/calwfaq.html, http://gis.ca.gov/catalog/BrowseRecord.epl?id=22175 .

XIII. POST-CONSTRUCTION STANDARDS

A. All dischargers shall comply with the following runoff reduction requirements unless they are located within an area subject to post-construction standards of an active Phase I or II municipal separate storm sewer system (MS4) permit that has an approved Storm Water Management Plan.

1. This provision shall take effect three years from the adoption date of this permit, or later at the discretion of the Executive Officer of the Regional Board.

2. The discharger shall demonstrate compliance with the requirements of this section by submitting with their NOI a map and worksheets in accordance with the instructions in Appendix 2. The discharger shall use non-structural controls unless the discharger demonstrates that non-structural controls are infeasible or that structural controls will produce greater reduction in water quality impacts.

3. The discharger shall, through the use of non-structural and structural measures as described in Appendix 2, replicate the pre-project water balance (for this permit, defined as the volume of rainfall that ends up as runoff) for the smallest storms up to the 85th percentile storm event (or the smallest storm event that generates runoff, whichever is larger). Dischargers shall inform Regional Water Board staff at least 30 days prior to the use of any structural control measure used to comply with this requirement. Volume that cannot be addressed using non-structural practices shall be captured in structural practices and approved by the Regional Water Board. When seeking Regional Board approval for the use of structural practices, dischargers shall document the infeasibility of using non-structural practices on the project site, or document that there will be fewer water quality impacts through the use of structural practices.

4. For sites whose disturbed area exceeds two acres, the discharger shall preserve the pre-construction drainage density (miles of stream length per square mile of drainage area) for all drainage areas within the area serving a first order stream[14] or larger stream and ensure that post-project time of runoff concentration is equal or greater than pre-project time of concentration.

[14] A first order stream is defined as a stream with no tributaries.

B. All dischargers shall implement BMPs to reduce pollutants in storm water discharges that are reasonably foreseeable after all construction phases have been completed at the site (Post-construction BMPs).

XIV. SWPPP REQUIREMENTS

A. The discharger shall ensure that the Storm Water Pollution Prevention Plans (SWPPPs) for all traditional project sites are developed and amended or revised by a QSD. The SWPPP shall be designed to address the following objectives:

1. All pollutants and their sources, including sources of sediment associated with construction, construction site erosion and all other activities associated with construction activity are controlled;

2. Where not otherwise required to be under a Regional Water Board permit, all non-storm water discharges are identified and either eliminated, controlled, or treated;

3. Site BMPs are effective and result in the reduction or elimination of pollutants in storm water discharges and authorized non-storm water discharges from construction activity to the BAT/BCT standard;

4. Calculations and design details as well as BMP controls for site run-on are complete and correct, and

5. Stabilization BMPs installed to reduce or eliminate pollutants after construction are completed.

B. To demonstrate compliance with requirements of this General Permit, the QSD shall include information in the SWPPP that supports the conclusions, selections, use, and maintenance of BMPs.

C. The discharger shall make the SWPPP available at the construction site during working hours while construction is occurring and shall be made available upon request by a State or Municipal inspector. When the original SWPPP is retained by a crewmember in a construction vehicle and is not currently at the construction site, current copies of the BMPs and map/drawing will be left with the field crew and the original SWPPP shall be made available via a request by radio/telephone.

XV. REGIONAL WATER BOARD AUTHORITIES

A. In the case where the Regional Water Board does not agree with the discharger's self-reported risk level (e.g., they determine themselves to be a Level 1 Risk when they are actually a Level 2 Risk site), Regional Water Boards may either direct the discharger to reevaluate the Risk Level(s) for their site or terminate coverage under this General Permit.

B. Regional Water Boards may terminate coverage under this General Permit for dischargers who fail to comply with its requirements or where they determine that an individual NPDES permit is appropriate.

C. Regional Water Boards may require dischargers to submit a Report of Waste Discharge / NPDES permit application for Regional Water Board consideration of individual requirements.

D. Regional Water Boards may require additional Monitoring and Reporting Program Requirements, including sampling and analysis of discharges to sediment-impaired water bodies.

E. Regional Water Boards may require dischargers to retain records for more than the three years required by this General Permit.

XVI. ANNUAL REPORTING REQUIREMENTS

A. All dischargers shall prepare and electronically submit an Annual Report no later than September 1 of each year.

B. The discharger shall certify each Annual Report in accordance with the Special Provisions.

C. The discharger shall retain an electronic or paper copy of each Annual Report for a minimum of three years after the date the annual report is filed.

D. The discharger shall include storm water monitoring information in the Annual Report consisting of:

1. a summary and evaluation of all sampling and analysis results, including copies of laboratory reports;

2. the analytical method(s), method reporting unit(s), and method detection limit(s) of each analytical parameter (analytical results that are less than the method detection limit shall be reported as "less than the method detection limit");

3. a summary of all corrective actions taken during the compliance year;

4. identification of any compliance activities or corrective actions that were not implemented;

5. a summary of all violations of the General Permit;

6. the names of individual(s) who performed the facility inspections, sampling, visual observation (inspections), and/or measurements;

7. the date, place, time of facility inspections, sampling, visual observation (inspections), and/or measurements, including precipitation (rain gauge); and

8. the visual observation and sample collection exception records and reports specified in Attachments C, D, and E.

E. The discharger shall provide training information in the Annual Report consisting of:

1. documentation of all training for individuals responsible for all activities associated with compliance with this General Permit;

2. documentation of all training for individuals responsible for BMP installation, inspection, maintenance, and repair; and

3. documentation of all training for individuals responsible for overseeing, revising, and amending the SWPPP.

ATTACHMENT A
Linear Underground/ Overhead Requirements

A. DEFINITION OF LINEAR UNDERGROUND/OVERHEAD PROJECTS 1
B. LINEAR PROJECT PERMIT REGISTRATION DOCUMENTS (PRDs) 3
C. LINEAR PROJECT TERMINATION OF COVERAGE REQUIREMENTS..4
D. DISCHARGE PROHIBITIONS 6
E. SPECIAL PROVISIONS.....8
F. EFFLUENT STANDARDS & RECEIVING WATER MONITORING 13
G. RECEIVING WATER LIMITATIONS 16
H. TRAINING QUALIFICATIONS 17
I. TYPES OF LINEAR PROJECTS 19
J. LUP TYPE-SPECIFIC REQUIREMENTS 20
K. STORM WATER POLLUTION PREVENTION PLAN (SWPPP) REQUIREMENTS 28
L. REGIONAL WATER BOARD AUTHORITIES.....29
M. MONITORING AND REPORTING REQUIREMENTS 31

All Linear Underground/Overhead project dischargers who submit permit registration documents (PRDs) indicating their intention to be regulated under the provisions of this General Permit shall comply with the following:

A. DEFINITION OF LINEAR UNDERGROUND/OVERHEAD PROJECTS

1. Linear Underground/Overhead Projects (LUPs) include, but are not limited to, any conveyance, pipe, or pipeline for the transportation of any gaseous, liquid (including water and wastewater for domestic municipal services), liquiescent, or slurry substance; any cable line or wire for the transmission of electrical energy; any cable line or wire for communications (e.g., telephone, telegraph, radio, or television messages); and associated ancillary facilities. Construction activities associated with LUPs include, but are not limited to, (a) those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment, and associated ancillary facilities); and include, but are not limited to, (b) underground utility mark-out, potholing, concrete and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/tower pad and cable/wire pull station, substation construction, substructure installation, construction of tower footings and/or foundations, pole and tower installations, pipeline installations, welding, concrete and/ or pavement repair or replacement, and stockpile/borrow locations.

2. LUP evaluation shall consist of two tasks:

a. Confirm that the project or project section(s) qualifies as an LUP. The State Water Board website contains a project determination guidance flowchart. http://www.waterboards.ca.gov/water_issues/programs/stormwater/constpermits.shtml

b. Identify which Type(s) (1, 2 or 3 described in Section I below) are applicable to the project or project sections based on project sediment and receiving water risk. (See Attachment A.1)

3. A Legally Responsible Person (LRP) for a Linear Underground/Overhead project is required to obtain CGP coverage under one or more permit registration document (PRD) electronic submittals to the State Water Board's Storm Water Multi-Application and Report Tracking (SMARTs) system. Attachment A.1 contains a flow chart to be used when determining if a linear project qualifies for coverage and to determine LUP Types. Since a LUP may be constructed within both developed and undeveloped locations and portions of LUPs may be constructed by different contractors, LUPs may be broken into logical permit sections. Sections may be determined based on portions of a project conducted by one contractor. Other situations may also occur, such as the time period in which the sections of a project will be constructed (e.g. project phases), for which separate permit coverage is possible. For projects that are broken into separate sections, a description of how each section relates to the overall project and the definition of the boundaries between sections shall be clearly stated.

4. Where construction activities transverse or enter into different Regional Water Board jurisdictions, LRPs shall obtain permit coverage for each Regional Water Board area involved prior to the commencement of construction activities.

5. Small Construction Rainfall Erosivity Waiver

EPA's Small Construction Erosivity Waiver applies to sites between one and five acres demonstrating that there are no adverse water quality impacts.

Dischargers eligible for a Rainfall Erosivity Waiver based on low erosivity potential shall complete the electronic Notice of Intent (NOI) and Sediment Risk form through the State Water Board's SMARTS system, certifying that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five. Where the LRP changes or another LRP is added during construction, the new LRP must also submit a waiver certification through the SMARTS system.

If a small linear construction site continues beyond the projected completion date given on the waiver certification, the LRP shall recalculate the rainfall erosivity factor for the new project duration and submit this information through the SMARTS system. If the new R factor is below five (5), the discharger shall update through SMARTS all applicable information on the waiver certification and retain a copy of the revised waiver onsite. The LRP shall submit the new waiver certification 30 days prior to the projected completion date listed on the original waiver form to assure exemption from permitting requirements is uninterrupted. If the new R factor is five (5) or above, the LRP shall be required to apply for coverage under this Order.

B. LINEAR PROJECT PERMIT REGISTRATION DOCUMENTS (PRDs)

Any information provided to the Regional Water Board shall comply with the Homeland Security Act and any other federal law that concerns security in the United States; any information that does not comply should not be submitted. PRDs shall consist of the following:

1. Notice of Intent (NOI)

Prior to construction activities, the LRP of a proposed linear underground/overhead project shall utilize the processes and methods provided in Attachment A.2, Permit Registration Documents (PRDs) – General Instructions for Linear Underground/Overhead Projects to comply with the Construction General Permit.

2. Site Maps

LRPs submitting PRDs shall include at least 3 maps. The first map will be a zoomed[1] 1000-1500 ft vicinity map that shows the starting point of the project. The second will be a zoomed map of 1000-1500 ft showing the ending location of the project. The third will be a larger view vicinity map, 1000 ft to 2000 ft, displaying the entire project location depending on the project size, and indicating the LUP type (1, 2 or 3) areas within the total project footprint.

3. Drawings

LRPs submitting PRDs shall include a construction drawing(s) or other appropriate drawing(s) or map(s) that shows the locations of storm drain

[1] An image with a close-up/enhanced detailed view of site features that show minute details such as streets and neighboring structures.
Or: An image with a close-up/enhanced detailed view of the site's surrounding infrastructure.
Or: An image with a close up detailed view of the project and its surroundings.

inlets and waterbodies[2] that may receive discharges from the construction activities and that shows the locations of BMPs to be installed for all those BMPs that can be illustrated on the revisable drawing(s) or map(s). If storm drain inlets, waterbodies, and/or BMPs cannot be adequately shown on the drawing(s) or map(s) they should be described in detail within the SWPPP.

4. Storm Water Pollution Prevention Plan (SWPPP)

LUP dischargers shall comply with the SWPPP Preparation, Implementation, and Oversight requirements in Section K of this Attachment.

5. Contact information

LUP dischargers shall include contact information for all contractors (or subcontractors) responsible for each area of an LUP project. This should include the names, telephone numbers, and addresses of contact personnel. Specific areas of responsibility of each contact, and emergency contact numbers should also be included.

6. In the case of a public emergency that requires immediate construction activities, a discharger shall submit a brief description of the emergency construction activity within five days of the onset of construction, and then shall submit all PRDs within thirty days.

C. LINEAR PROJECT TERMINATION OF COVERAGE REQUIREMENTS

The LRP may terminate coverage of an LUP when construction activities are completed by submitting an electronic notice of termination (NOT) through the State Water Board's SMARTS system. Termination requirements are different depending on the complexity of the LUP. An LUP is considered complete when: (a) there is no potential for construction-related storm water pollution; (b) all elements of the SWPPP have been completed; (c) construction materials and waste have been disposed of properly; (d) the site is in compliance with all local storm water management requirements; and (e) the LRP submits a notice of termination (NOT) and has received approval for termination from the appropriate Regional Water Board office.

1. LUP Stabilization Requirements

The LUP discharger shall ensure that all disturbed areas of the construction site are stabilized prior to termination of coverage under this General Permit. Final stabilization for the purposes of submitting an NOT

[2] Includes basin(s) that the MS4 storm sewer systems may drain to for Hydromodification or Hydrological Conditional of Concerns under the MS4 permits.

is satisfied when all soil disturbing activities are completed and one of the following criteria is met:

a. In disturbed areas that were vegetated prior to construction activities of the LUP, the area disturbed must be re-established to a uniform vegetative cover equivalent to 70 percent coverage of the preconstruction vegetative conditions. Where preconstruction vegetation covers less than 100 percent of the surface, such as in arid areas, the 70 percent coverage criteria is adjusted as follows: if the preconstruction vegetation covers 50 percent of the ground surface, 70 percent of 50 percent (.70 X .50=.35) would require 35 percent total uniform surface coverage; or

b. Where no vegetation is present prior to construction, the site is returned to its original line and grade and/or compacted to achieve stabilization; or

c. Equivalent stabilization measures have been employed. These measures include, but are not limited to, the use of such BMPs as blankets, reinforced channel liners, soil cement, fiber matrices, geotextiles, or other erosion resistant soil coverings or treatments.

2. LUP Termination of Coverage Requirements

The LRP shall file an NOT through the State Water Board's SMARTS system. By submitting an NOT, the LRP is certifying that construction activities for an LUP are complete and that the project is in full compliance with requirements of this General Permit and that it is now compliant with soil stabilization requirements where appropriate. Upon approval by the appropriate Regional Water Board office, permit coverage will be terminated.

3. Revising Coverage for Change of Acreage

When the LRP of a portion of an LUP construction project changes, or when a phase within a multi-phase project is completed, the LRP may reduce the total acreage covered by this General Permit. In reducing the acreage covered by this General Permit, the LRP shall electronically file revisions to the PRDs that include:

a. a revised NOI indicating the new project size;

b. a revised site map showing the acreage of the project completed, acreage currently under construction, acreage sold, transferred or added, and acreage currently stabilized.

c. SWPPP revisions, as appropriate; and

d. certification that any new LRPs have been notified of applicable requirements to obtain General Permit coverage. The certification shall include the name, address, telephone number, and e-mail address (if known) of the new LRP.

If the project acreage has increased, dischargers shall mail payment of revised annual fees within 14 days of receiving the revised annual fee notification.

D. DISCHARGE PROHIBITIONS

1. LUP dischargers shall not violate any discharge prohibitions contained in applicable Basin Plans or statewide water quality control plans. Waste discharges to Areas of Special Biological Significance (ASBS) are prohibited by the California Ocean Plan, unless granted an exception issued by the State Water Board.

2. LUP dischargers are prohibited from discharging non-storm water that is not otherwise authorized by this General Permit. Non-storm water discharges authorized by this General Permit[3] may include, fire hydrant flushing, irrigation of vegetative erosion control measures, pipe flushing and testing, water to control dust, street cleaning, dewatering,[4] uncontaminated groundwater from dewatering, and other discharges not subject to a separate general NPDES permit adopted by a Regional Water Board. Such discharges are allowed by this General Permit provided they are not relied upon to clean up failed or inadequate construction or post-construction BMPs designed to keep materials on site. These authorized non-storm water discharges:

[3] Dischargers must identify all authorized non-storm water discharges in the LUP's SWPPP and identify BMPs that will be implemented to either eliminate or reduce pollutants in non-storm water discharges. Regional Water Boards may direct the discharger to discontinue discharging such non-storm water discharges if determined that such discharges discharge significant pollutants or threaten water quality.
[4] Dewatering activities may be prohibited or need coverage under a separate permit issued by the Regional Water Boards. Dischargers shall check with the appropriate Regional Water Boards for any required permit or basin plan conditions prior to initial dewatering activities to land, storm drains, or waterbodies.

a. Shall not cause or contribute to a violation of any water quality standard;

b. Shall not violate any other provision of this General Permit;

c. Shall not violate any applicable Basin Plan;

d. Shall comply with BMPs as described in the SWPPP;

e. Shall not contain toxic constituents in toxic amounts or (other) significant quantities of pollutants;

f. Shall be monitored and meets the applicable NALs; and

g. Shall be reported by the discharger in the Annual Report.

If any of the above conditions are not satisfied, the discharge is not authorized by this General Permit. The discharger shall notify the Regional Water Board of any anticipated non-storm water discharges not authorized by this General Permit to determine the need for a separate NPDES permit.

Additionally, some LUP dischargers may be required to obtain a separate permit if the applicable Regional Water Board has adopted a General Permit for dewatering discharges. Wherever feasible, alternatives, that do not result in the discharge of non-storm water, shall be implemented in accordance with this Attachment's Section K.2 - SWPPP Implementation Schedule.

3. LUP dischargers shall ensure that trench spoils or any other soils disturbed during construction activities that are contaminated[5] are not discharged with storm water or non-storm water discharges into any storm drain or water body except pursuant to an NPDES permit.

When soil contamination is found or suspected and a responsible party is not identified, or the responsible party fails to promptly take the appropriate action, the LUP discharger shall have those soils sampled and tested to ensure that proper handling and public safety measures are

[5] Contaminated soil contains pollutants in concentrations that exceed the appropriate thresholds that various regulatory agencies set for those substances. Preliminary testing of potentially contaminated soils will be based on odor, soil discoloration, or prior history of the site's chemical use and storage and other similar factors. When soil contamination is found or suspected and a responsible party is not identified, or the responsible party fails to promptly take the appropriate action, the discharger shall have those soils sampled and tested to ensure proper handling and public safety measures are implemented. The legally responsible person will notify the appropriate local, State, or federal agency(ies) when contaminated soil is found at a construction site, and will notify the Regional Water Board by submitting an NOT at the completion of the project.

implemented. The LUP discharger shall notify the appropriate local, State, and federal agency(ies) when contaminated soil is found at a construction site, and will notify the appropriate Regional Water Board.

4. Discharging any pollutant-laden water that will cause or contribute to an exceedance of the applicable Regional Water Board's Basin Plan from a dewatering site or sediment basin into any receiving water or storm drain is prohibited.

5. Debris[6] resulting from construction activities are prohibited from being discharged from construction project sites.

E. SPECIAL PROVISIONS

1. Duty to Comply

a. The LUP discharger must comply with all of the conditions of this General Permit. Any permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for enforcement action and/or removal from General Permit coverage.

b. The LUP discharger shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

2. General Permit Actions

a. This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the discharger for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not annul any General Permit condition.

[6] Litter, rubble, discarded refuse, and remains of something destroyed.

b. If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition and the dischargers so notified.

3. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for an LUP discharger in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this General Permit.

4. Duty to Mitigate

The LUP discharger shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit, which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper Operation and Maintenance

The LUP discharger shall at all times properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the discharger to achieve compliance with the conditions of this General Permit and with the requirements of the Storm Water Pollution Prevention Plan (SWPPP). Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a discharger when necessary to achieve compliance with the conditions of this General Permit.

6. Property Rights

This General Permit does not convey any property rights of any sort or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor does it authorize any infringement of Federal, State, or local laws or regulations.

7. Duty to Maintain Records and Provide Information

a. The LUP discharger shall maintain a paper or electronic copy of all required records, including a copy of this General Permit, for three years from the date generated or date submitted, whichever is last. These records shall be kept at the construction site or in a crew

member's vehicle until construction is completed, and shall be made available upon request.

b. The LUP discharger shall furnish the Regional Water Board, State Water Board, or USEPA, within a reasonable time, any requested information to determine compliance with this General Permit. The LUP discharger shall also furnish, upon request, copies of records that are required to be kept by this General Permit.

8. Inspection and Entry

The LUP discharger shall allow the Regional Water Board, State Water Board, USEPA, and/or, in the case of construction sites which discharge through a municipal separate storm sewer, an authorized representative of the municipal operator of the separate storm sewer system receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the discharger's premises at reasonable times where a regulated construction activity is being conducted or where records must be kept under the conditions of this General Permit;

b. Access and copy at reasonable times any records that must be kept under the conditions of this General Permit;

c. Inspect at reasonable times the complete construction site, including any off-site staging areas or material storage areas, and the erosion/sediment controls; and

d. Sample or monitor at reasonable times for the purpose of ensuring General Permit compliance.

9. Electronic Signature and Certification Requirements

a. All Permit Registration Documents (PRDs) and Notices of Termination (NOTs) shall be electronically signed, certified, and submitted via SMARTS to the State Water Board. Either the Legally Responsible Person (LRP), as defined in Appendix 5 – Glossary, or a person legally authorized to sign and certify PRDs and NOTs on behalf of the LRP (the LRP's Approved Signatory, as defined in Appendix 5 - Glossary) must submit all information electronically via SMARTS.

b. Changes to Authorization. If an Approved Signatory's authorization is no longer accurate, a new authorization satisfying the requirements of paragraph (a) of this section must be submitted via SMARTS prior to or

together with any reports, information or applications to be signed by an Approved Signatory.

c. All SWPPP revisions, annual reports, or other information required by the General Permit (other than PRDs and NOTs) or requested by the Regional Water Board, State Water Board, USEPA, or local storm water management agency shall be certified and submitted by the LRP or the LRP's Approved Signatory.

10. Certification

Any person signing documents under Section E.9 above, shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

11. Anticipated Noncompliance

The LUP discharger shall give advance notice to the Regional Water Board and local storm water management agency of any planned changes in the construction activity, which may result in noncompliance with General Permit requirements.

12. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years or by both.

13. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the discharger from any responsibilities, liabilities, or penalties to which the LUP discharger is or may be subject to under Section 311 of the CWA.

14. Severability

The provisions of this General Permit are severable; and, if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

15. Reopener Clause

This General Permit may be modified, revoked and reissued, or terminated for cause due to promulgation of amended regulations, receipt of USEPA guidance concerning regulated activities, judicial decision, or in accordance with 40 Code of Federal Regulations (CFR) 122.62, 122.63, 122.64, and 124.5.

16. Penalties for Violations of Permit Conditions

a. Section 309 of the CWA provides significant penalties for any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the CWA or any permit condition or limitation implementing any such section in a permit issued under Section 402. Any person who violates any permit condition of this General Permit is subject to a civil penalty not to exceed $37,500[7] per calendar day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

b. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties, which in some cases are greater than those under the CWA.

17. Transfers

This General Permit is not transferable. A new LRP of an ongoing construction activity must submit PRDs in accordance with the requirements of this General Permit to be authorized to discharge under this General Permit. An LRP who is a property owner with active General Permit coverage who sells a fraction or all the land shall inform the new property owner(s) of the requirements of this General Permit.

18. Continuation of Expired Permit

This General Permit continues in force and effect until a new General Permit is issued or the SWRCB rescinds this General Permit. Only those

[7] May be further adjusted in accordance with the Federal Civil Penalties Inflation Adjustment Act

dischargers authorized to discharge under the expiring General Permit are covered by the continued General Permit.

F. EFFLUENT STANDARDS & RECEIVING WATER MONITORING

1. Narrative Effluent Limitations

a. LUP dischargers shall ensure that storm water discharges and authorized non-storm water discharges regulated by this General Permit do not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

b. LUP dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of structural or non-structural controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

Table 1. Numeric Action Levels, Test Methods, Detection Limits, and Reporting Units

Parameter	Test Method	Discharge Type	Min. Detection Limit	Units	Numeric Action Level
pH	Field test with calibrated portable instrument	LUP Type 2	0.2	pH units	lower NAL = 6.5 upper NAL = 8.5
		LUP Type 3			lower NAL = 6.5 upper NAL = 8.5
Turbidity	EPA 0180.1 and/or field test with calibrated portable instrument	LUP Type 2	1	NTU	250 NTU
		LUP Type 3			250 NTU

2. Numeric Action Levels (NALs)

a. For LUP Type 2 and 3 dischargers, the lower storm event daily average NAL for pH is 6.5 pH units and the upper storm event daily average NAL for pH is 8.5 pH units. The LUP discharger shall take actions as described below if the storm event daily average discharge is outside of this range of pH values.

b. For LUP Type 2 and 3 dischargers, the storm event daily average NAL for turbidity is 250 NTU. The discharger shall take actions as described below if the storm event daily average discharge is outside of this range of turbidity values.

c. Whenever daily average analytical effluent monitoring results indicate that the discharge is below the lower NAL for pH, exceeds the upper NAL for pH, or exceeds the turbidity NAL (as listed in Table 1), the LUP discharger shall conduct a construction site and run-on evaluation to determine whether pollutant source(s) associated with the site's construction activity may have caused or contributed to the NAL exceedance and shall immediately implement corrective actions if they are needed.

d. The site evaluation will be documented in the SWPPP and specifically address whether the source(s) of the pollutants causing the exceedance of the NAL:

i Are related to the construction activities and whether additional BMPs or SWPPP implementation measures are required to (1) meet BAT/BCT requirements; (2) reduce or prevent pollutants in storm water discharges from causing exceedances of receiving water objectives; and (3) determine what corrective action(s) were taken or will be taken and with a description of the schedule for completion.

AND/OR:

ii Are related to the run-on associated with the construction site location and whether additional BMPs or SWPPP implementation measures are required to (1) meet BAT/BCT requirements; (2) reduce or prevent pollutants in storm water discharges from causing exceedances of receiving water objectives; and (3) decide what corrective action(s) were taken or will be taken, including a description of the schedule for completion.

3. Receiving Water Monitoring Triggers

a. The receiving water monitoring triggers for LUP Type 3 dischargers with direct discharges to surface waters are triggered when the daily average effluent pH values during any site phase when there is a high risk of pH discharge[8] fall outside of the range of 6.0 and 9.0 pH units, or when the daily average effluent turbidity exceeds 500 NTU.

b. LUP Type 3 dischargers with direct discharges to surface waters shall conduct receiving water monitoring whenever their effluent monitoring results exceed the receiving water monitoring triggers. If the pH trigger is exceeded, the receiving water shall be monitored for pH for the duration of coverage under this General Permit. If the turbidity trigger is exceeded, the receiving water shall be monitored for turbidity and SSC for the duration of coverage under this General Permit.

c. LUP Type 3 dischargers with direct discharges to surfaces waters shall initiate receiving water monitoring when the triggers are exceeded unless the storm event causing the exceedance is determined after the fact to equal to or greater than the 5-year 24-hour storm (expressed in inches of rainfall) as determined by using these maps:

   http://www.wrcc.dri.edu/pcpnfreq/nca5y24.gif
   http://www.wrcc.dri.edu/pcpnfreq/sca5y24.gif

   Verification of the 5-year 24-hour storm event shall be done by reporting on-site rain gauge readings as well as nearby governmental rain gauge readings.

d. If run-on is caused by a forest fire or any other natural disaster, then receiving water monitoring triggers do not apply.

G. RECEIVING WATER LIMITATIONS

1. LUP dischargers shall ensure that storm water discharges and authorized non-storm water discharges to any surface or ground water will not adversely affect human health or the environment.

2. LUP dischargers shall ensure that storm water discharges and authorized non-storm water discharges will not contain pollutants in quantities that threaten to cause pollution or a public nuisance.

3. LUP dischargers shall ensure that storm water discharges and authorized non-storm water discharges will not contain pollutants that cause or

[8] A period of high risk of pH discharge is defined as a project's complete utilities phase, complete vertical build phase, and any portion of any phase where significant amounts of materials are placed directly on the land at the site in a manner that could result in significant alterations of the background pH of the discharges.

contribute to an exceedance of any applicable water quality objectives or water quality standards (collectively, WQS) contained in a Statewide Water Quality Control Plan, the California Toxics Rule, the National Toxics Rule, or the applicable Regional Water Board's Water Quality Control Plan (Basin Plan).

H. TRAINING QUALIFICATIONS

1. General

All persons responsible for implementing requirements of this General Permit shall be appropriately trained. Training should be both formal and informal, occur on an ongoing basis, and should include training offered by recognized governmental agencies or professional organizations. Persons responsible for preparing, amending and certifying SWPPPs shall comply with the requirements in this Section H.

2. SWPPP Certification Requirements

a. **Qualified SWPPP Developer:** The LUP discharger shall ensure that all SWPPPs be written, amended and certified by a Qualified SWPPP Developer (QSD). A QSD shall have one of the following registrations or certifications, and appropriate experience, as required for:

i A California registered professional civil engineer;

ii A California registered professional geologist or engineering geologist;

iii A California registered landscape architect;

iv A professional hydrologist registered through the American Institute of Hydrology;

v A certified professional in erosion and sediment control (CPESC) ™ registered through Enviro Cert International, Inc;

vi A certified professional in storm water quality (CPSWQ)™ registered through Enviro Cert International, Inc.; or

vii A certified professional in erosion and sediment control registered through the National Institute for Certification in Engineering Technologies (NICET).

Effective two years after the adoption date of this General Permit, a QSD shall have attended a State Water Board-sponsored or approved QSD training course.

b. The LUP discharger shall ensure that the SWPPP is written and amended, as needed, to address the specific circumstances for each construction site covered by this General Permit prior to commencement of construction activity for any stage.

c. The LUP discharger shall list the name and telephone number of the currently designated Qualified SWPPP Developer(s) in the SWPPP.

d. **Qualified SWPPP Practitioner:** The LUP discharger shall ensure that all elements of any SWPPP for each project will be implemented by a Qualified SWPPP Practitioner (QSP). A QSP is a person responsible for non-storm water and storm water visual observations, sampling and analysis, and for ensuring full compliance with the permit and implementation of all elements of the SWPPP. Effective two years from the date of adoption of this General Permit, a QSP shall be either a QSD or have one of the following certifications:

   i A certified erosion, sediment and storm water inspector registered through Certified Professional in Erosion and Sediment Control, Inc.; or

   ii A certified inspector of sediment and erosion control registered through Certified Inspector of Sediment and Erosion Control, Inc.

   Effective two years after the adoption date of this General Permit, a QSP shall have attended a State Water Board-sponsored or approved QSP training course.

e. The LUP discharger shall ensure that the SWPPP include a list of names of all contractors, subcontractors, and individuals who will be directed by the Qualified SWPPP Practitioner, and who is ultimately responsible for implementation of the SWPPP. This list shall include telephone numbers and work addresses. Specific areas of responsibility of each subcontractor and emergency contact numbers shall also be included.

f. The LUP discharger shall ensure that the SWPPP and each amendment be signed by the Qualified SWPPP Developer. The LUP discharger shall include a listing of the date of initial preparation and the dates of each amendment in the SWPPP.

I. TYPES OF LINEAR PROJECTS

This attachment establishes three types (Type 1, 2 & 3) of complexity for areas within an LUP or project section based on threat to water quality. Project area Types are determined through Attachment A.1.

The Type 1 requirements below establish the baseline requirements for all LUPs subject to this General Permit. Additional requirements for Type 2 and Type 3 LUPs are labeled.

1. Type 1 LUPs*:*

LUP dischargers with areas of a LUP designated as Type 1 shall comply with the requirements in this Attachment. Type 1 LUPs are:

a. Those construction areas where 70 percent or more of the construction activity occurs on a paved surface and where areas disturbed during construction will be returned to preconstruction conditions or equivalent protection established at the end of the construction activities for the day; or

b. Where greater than 30 percent of construction activities occur within the non-paved shoulders or land immediately adjacent to paved surfaces, or where construction occurs on unpaved improved roads, including their shoulders or land immediately adjacent to them where:

   i Areas disturbed during construction will be returned to preconstruction conditions or equivalent protection is established at the end of the construction activities for the day to minimize the potential for erosion and sediment deposition, and

   ii Areas where established vegetation was disturbed during construction will be stabilized and re-vegetated by the end of project. When required, adequate temporary stabilization BMPs will be installed and maintained until vegetation is established to meet minimum cover requirements established in this General Permit for final stabilization.

c. Where the risk determination is as follows:

   i Low sediment risk, low receiving water risk, or

   ii Low sediment risk, medium receiving water risk, or

   iii Medium sediment risk, low receiving water risk

2. Type 2 LUPs:

Type 2 LUPs are determined by the Combined Risk Matrix in Attachment A.1. Type 2 LUPs have the specified combination of risk:

d. High sediment risk, low receiving water risk, or

e. Medium sediment risk, medium receiving water risk, or

f. Low sediment risk, high receiving water risk

Receiving water risk is either considered "Low" for those areas of the project that are not in close proximity to a sensitive receiving watershed, "Medium" for those areas of the project within a sensitive receiving watershed yet outside of the flood plain of a sensitive receiving water body, and "High" where the soil disturbance is within close proximity to a sensitive receiving water body. Project sediment risk is calculated based on the Risk Factor Worksheet in Attachment C of this General Permit.

3. Type 3 LUPs:

Type 3 LUPs are determined by the Combined Risk Matrix in Attachment A.1. Type 3 LUPs have the specified combination of risk:

a. High sediment risk, high receiving water risk, or

b. High sediment risk, medium receiving water risk, or

c. Medium sediment risk, high receiving water risk

Receiving water risk is either considered "Medium" for those areas of the project within a sensitive receiving watershed yet outside of the flood plain of a sensitive receiving water body, or "High" where the soil disturbance is within close proximity to a sensitive receiving water body. Project sediment risk is calculated based on the Risk Factor Worksheet in Attachment C.

J. LUP TYPE-SPECIFIC REQUIREMENTS

1. Effluent Standards

a. Narrative – LUP dischargers shall comply with the narrative effluent standards below.

i Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

ii LUP dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

b. Numeric – LUP Type 1 dischargers are not subject to a numeric effluent standard

c. Numeric –LUP Type 2 dischargers are subject to a pH NAL of 6.5-8.5, and a turbidity NAL of 250 NTU.

d. Numeric – LUP Type 3 dischargers are subject to a pH NAL of 6.5-8.5, and a turbidity NAL of 250 NTU.

2. Good Site Management "Housekeeping"

a. LUP dischargers shall implement good site management (i.e., "housekeeping") measures for construction materials that could potentially be a threat to water quality if discharged. At a minimum, the good housekeeping measures shall consist of the following:

i Identify the products used and/or expected to be used and the end products that are produced and/or expected to be produced. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

ii Cover and berm loose stockpiled construction materials that are not actively being used (i.e. soil, spoils, aggregate, fly-ash, stucco, hydrated lime, etc.).

iii Store chemicals in watertight containers (with appropriate secondary containment to prevent any spillage or leakage) or in a storage shed (completely enclosed).

iv Minimize exposure of construction materials to precipitation (not applicable to materials designed to be outdoors and exposed to the environment).

v Implement BMPs to control the off-site tracking of loose construction and landscape materials.

b. LUP dischargers shall implement good housekeeping measures for waste management, which, at a minimum, shall consist of the following:

i Prevent disposal of any rinse or wash waters or materials on impervious or pervious site surfaces or into the storm drain system.

ii Ensure the containment of sanitation facilities (e.g., portable toilets) to prevent discharges of pollutants to the storm water drainage system or receiving water.

iii Clean or replace sanitation facilities and inspecting them regularly for leaks and spills.

iv Cover waste disposal containers at the end of every business day and during a rain event.

v Prevent discharges from waste disposal containers to the storm water drainage system or receiving water.

vi Contain and securely protect stockpiled waste material from wind and rain at all times unless actively being used.

vii Implement procedures that effectively address hazardous and non-hazardous spills.

viii Develop a spill response and implementation element of the SWPPP prior to commencement of construction activities. The SWPPP shall require that:

(1) Equipment and materials for cleanup of spills shall be available on site and that spills and leaks shall be cleaned up immediately and disposed of properly; and

(2) Appropriate spill response personnel are assigned and trained.

ix Ensure the containment of concrete washout areas and other washout areas that may contain additional pollutants so there is no discharge into the underlying soil and onto the surrounding areas.

c. LUP dischargers shall implement good housekeeping for vehicle storage and maintenance, which, at a minimum, shall consist of the following:

   i Prevent oil, grease, or fuel from leaking into the ground, storm drains or surface waters.

   ii Implement appropriate BMPs whenever equipment or vehicles are fueled, maintained or stored.

   iii Clean leaks immediately and disposing of leaked materials properly.

d. LUP dischargers shall implement good housekeeping for landscape materials, which, at a minimum, shall consist of the following:

   i Contain stockpiled materials such as mulches and topsoil when they are not actively being used.

   ii Contain fertilizers and other landscape materials when they are not actively being used.

   iii Discontinue the application of any erodible landscape material at least 2 days before a forecasted rain event[9] or during periods of precipitation.

   iv Applying erodible landscape material at quantities and application rates according to manufacture recommendations or based on written specifications by knowledgeable and experienced field personnel.

   v Stacking erodible landscape material on pallets and covering or storing such materials when not being used or applied.

e. LUP dischargers shall conduct an assessment and create a list of potential pollutant sources and identify any areas of the site where additional BMPs are necessary to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. This potential pollutant list shall be kept with the SWPPP and shall identify all non-visible pollutants which are known, or should be known, to occur on the construction site. At a minimum, when developing BMPs, LUP dischargers shall do the following:

[9] 50% or greater chance of producing precipitation.

i Consider the quantity, physical characteristics (e.g., liquid, powder, solid), and locations of each potential pollutant source handled, produced, stored, recycled, or disposed of at the site.

ii Consider the degree to which pollutants associated with those materials may be exposed to and mobilized by contact with storm water.

iii Consider the direct and indirect pathways that pollutants may be exposed to storm water or authorized non-storm water discharges. This shall include an assessment of past spills or leaks, non-storm water discharges, and discharges from adjoining areas.

iv Ensure retention of sampling, visual observation, and inspection records.

v Ensure effectiveness of existing BMPs to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges.

f. LUP dischargers shall implement good housekeeping measures on the construction site to control the air deposition of site materials and from site operations.

3. Non-Storm Water Management

a. LUP dischargers shall implement measures to control all non-storm water discharges during construction.

b. LUP dischargers shall wash vehicles in such a manner as to prevent non-storm water discharges to surface waters or MS4 drainage systems.

c. LUP dischargers shall clean streets in such a manner as to prevent unauthorized non-storm water discharges from reaching surface water or MS4 drainage systems.

4. Erosion Control

a. LUP dischargers shall implement effective wind erosion control.

b. LUP dischargers shall provide effective soil cover for inactive[10] areas and all finished slopes, and utility backfill.

[10] Areas of construction activity that have been disturbed and are not scheduled to be re-disturbed for at least 14 days

c. LUP dischargers shall limit the use of plastic materials when more sustainable, environmentally friendly alternatives exist. Where plastic materials are deemed necessary, the discharger shall consider the use of plastic materials resistant to solar degradation.

5. Sediment Controls

a. LUP dischargers shall establish and maintain effective perimeter controls as needed, and implement effective BMPs for all construction entrances and exits to sufficiently control erosion and sediment discharges from the site.

b. On sites where sediment basins are to be used, LUP dischargers shall, at minimum, design sediment basins according to the guidance provided in CASQA's Construction BMP Handbook.

c. **Additional LUP Type 2 & 3 Requirement:** LUP Type 2 & 3 dischargers shall apply linear sediment controls along the toe of the slope, face of the slope, and at the grade breaks of exposed slopes to comply with sheet flow lengths[11] in accordance with Table 2 below.

Table 2 – Critical Slope/Sheet Flow Length Combinations

Slope Percentage	Sheet flow length not to exceed
0-25%	20 feet
25-50%	15 feet
Over 50%	10 feet

d. **Additional LUP Type 2 & 3 Requirement:** LUP Type 2 & 3 dischargers shall ensure that construction activity traffic to and from the project is limited to entrances and exits that employ effective controls to prevent off-site tracking of sediment.

e. **Additional LUP Type 2 & 3 Requirement:** LUP Type 2 & 3 dischargers shall ensure that all storm drain inlets and perimeter controls, runoff control BMPs, and pollutant controls at entrances and exits (e.g. tire washoff locations) are maintained and protected from activities that reduce their effectiveness.

f. **Additional LUP Type 2 & 3 Requirement:** LUP Type 2 & 3 dischargers shall inspect all immediate access roads. At a minimum daily and prior to any rain event, the discharger shall remove any

[11] Sheet flow length is the length that shallow, low velocity flow travels across a site.

sediment or other construction activity-related materials that are deposited on the roads (by vacuuming or sweeping).

g. **Additional LUP Type 3 Requirement:** The Regional Water Board may require LUP Type 3 dischargers to implement additional site-specific sediment control requirements if the implementation of the other requirements in this section are not adequately protecting the receiving waters.

6. Run-on and Run-off Controls

a. LUP dischargers shall effectively manage all run-on, all runoff within the site and all runoff that discharges off the site. Run-on from off site-shall be directed away from all disturbed areas or shall collectively be in compliance with the effluent limitations in this Attachment.

b. Run-on and runoff controls are not required for Type 1 LUPs unless the evaluation of quantity and quality of run-on and runoff deems them necessary or visual inspections show that the site requires such controls.

7. Inspection, Maintenance and Repair

a. All inspection, maintenance repair and sampling activities at the discharger's LUP location shall be performed or supervised by a QSP representing the discharger. The QSP may delegate any or all of these activities to an employee trained to do the task(s) appropriately, but shall ensure adequate deployment.

b. LUP dischargers shall conduct visual inspections and observations daily during working hours (not recorded). At least once each 24-hour period during extended storm events, **LUP Type 2 & 3 dischargers** shall conduct visual inspections to identify and record BMPs that need maintenance to operate effectively, that have failed, or that could fail to operate as intended. Inspectors shall be the QSP or be trained by the QSP.

c. Upon identifying failures or other shortcomings, as directed by the QSP, LUP dischargers shall begin implementing repairs or design changes to BMPs within 72 hours of identification and complete the changes as soon as possible.

d. For each pre- and post-rain event inspection required, LUP dischargers shall complete an inspection checklist, using a form provided by the State Water Board or Regional Water Board or in an alternative format that includes the information described below.

e. The LUP discharger shall ensure that the checklist remains on-site or with the SWPPP. At a minimum, an inspection checklist should include:

i Inspection date and date the inspection report was written.

ii Weather information, including presence or absence of precipitation, estimate of beginning of qualifying storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall in inches.

iii Site information, including stage of construction, activities completed, and approximate area of the site exposed.

iv A description of any BMPs evaluated and any deficiencies noted.

v If the construction site is safely accessible during inclement weather, list the observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list the results of visual inspections at all relevant outfalls, discharge points, downstream locations and any projected maintenance activities.

vi Report the presence of noticeable odors or of any visible sheen on the surface of any discharges.

vii Any corrective actions required, including any necessary changes to the SWPPP and the associated implementation dates.

viii Photographs taken during the inspection, if any.

ix Inspector’s name, title, and signature.

K. STORM WATER POLLUTION PREVENTION PLAN (SWPPP) REQUIREMENTS

1. Objectives

SWPPPs for all LUPs shall be developed and amended or revised by a QSD. The SWPPP shall be designed to address the following objectives:

a. All pollutants and their sources, including sources of sediment, associated with construction activities associated with LUP activity are controlled;

b. All non-storm water discharges are identified and either eliminated, controlled, or treated;

c. BMPs are effective and result in the reduction or elimination of pollutants in storm water discharges and authorized non-storm water discharges from LUPs during construction; and

d. Stabilization BMPs installed to reduce or eliminate pollutants after construction is completed are effective and maintained.

2. SWPPP Implementation Schedule

a. LUPs for which PRDs have been submitted to the State Water Board shall develop a site/project location SWPPP prior to the start of land-disturbing activity in accordance with this Section and shall implement the SWPPP concurrently with commencement of soil-disturbing activities.

b. For an ongoing LUP involving a change in the LRP, the new LRP shall review the existing SWPPP and amend it, if necessary, or develop a new SWPPP within 15 calendar days to conform to the requirements set forth in this General Permit.

3. Availability

The SWPPP shall be available at the construction site during working hours while construction is occurring and shall be made available upon request by a State or Municipal inspector. When the original SWPPP is retained by a crewmember in a construction vehicle and is not currently at the construction site, copies of the BMPs and map/drawing will be left with the field crew and the original SWPPP shall be made available via a request by radio/telephone.

L. REGIONAL WATER BOARD AUTHORITIES

1. Regional Water Boards shall administer the provisions of this General Permit. Administration of this General Permit may include, but is not limited to, requesting the submittal of SWPPPs, reviewing SWPPPs, reviewing monitoring and sampling and analysis reports, conducting compliance inspections, gathering site information by any medium including sampling, photo and video documentation, and taking enforcement actions.

2. Regional Water Boards may terminate coverage under this General Permit for dischargers who fail to comply with its requirements or where they determine that an individual NPDES permit is appropriate.

3. Regional Water Boards may issue separate permits for discharges of storm water associated with construction activity to individual dischargers, categories of dischargers, or dischargers in a geographic area. Upon issuance of such permits by a Regional Water Board, dischargers subject to those permits shall no longer be regulated by this General Permit.

4. Regional Water Boards may direct the discharger to reevaluate the LUP Type(s) for the project (or elements/areas of the project) and impose the appropriate level of requirements.

5. Regional Water Boards may terminate coverage under this General Permit for dischargers who negligently or with willful intent incorrectly determine or report their LUP Type (e.g., they determine themselves to be a LUP Type 1 when they are actually a Type 2).

6. Regional Water Boards may review PRDs and reject or accept applications for permit coverage or may require dischargers to submit a Report of Waste Discharge / NPDES permit application for Regional Water Board consideration of individual requirements.

7. Regional Water Boards may impose additional requirements on dischargers to satisfy TMDL implementation requirements or to satisfy provisions in their Basin Plans.

8. Regional Water Boards may require additional Monitoring and Reporting Program Requirements, including sampling and analysis of discharges to sediment-impaired water bodies.

9. Regional Water Boards may require dischargers to retain records for more than the three years required by this General Permit.

10. Based on an LUP's threat to water quality and complexity, the Regional Water Board may determine on a case-by-case basis that an LUP, or a portion of an LUP, is not eligible for the linear project requirements contained in this Attachment, and require that the discharger comply with all standard requirements in this General Permit.

11. The Regional Water Board may require additional monitoring and reporting program requirements including sampling and analysis of discharges to CWA § 303(d)-listed water bodies. Additional requirements imposed by the Regional Water Board shall be consistent with the overall monitoring effort in the receiving waters.

M. MONITORING AND REPORTING REQUIREMENTS

Table 3. LUP Summary of Monitoring Requirements

LUP Type	Visual Inspections				Sample Collection		
	Daily Site BMP	Pre-storm Event: Baseline	Daily Storm BMP	Post Storm	Storm Water Discharge	Receiving Water	Non-Visible (when applicable)
1	X						X
2	X	X	X	X	X		X
3	X	X	X	X	X	X	X

1. Objectives

LUP dischargers shall prepare a monitoring and reporting program (M&RP) prior to the start of construction and immediately implement the program at the start of construction for LUPs. The monitoring program must be implemented at the appropriate level to protect water quality at all times throughout the life of the project. The M&RP must be a part of the SWPPP, included as an appendix or separate SWPPP chapter.

2. M&RP Implementation Schedule

a. LUP dischargers shall implement the requirements of this Section at the time of commencement of construction activity. LUP dischargers are responsible for implementing these requirements until construction activity is complete and the site is stabilized.

b. LUP dischargers shall revise the M&RP when:

i Site conditions or construction activities change such that a change in monitoring is required to comply with the requirements and intent of this General Permit.

ii The Regional Water Board requires the discharger to revise its M&RP based on its review of the document. Revisions may include, but not be limited to, conducting additional site inspections, submitting reports, and certifications. Revisions shall be submitted via postal mail or electronic e-mail.

iii The Regional Water Board may require additional monitoring and reporting program requirements including sampling and analysis of discharges to CWA § 303(d)-listed water bodies. Additional requirements imposed by the Regional Water Board shall be consistent with the overall monitoring effort in the receiving waters.

3. LUP Type 1 Monitoring and Reporting Requirements

a. LUP Type 1 Inspection Requirements

i LUP Type 1 dischargers shall ensure that all inspections are conducted by trained personnel. The name(s) and contact number(s) of the assigned inspection personnel should be listed in the SWPPP.

ii LUP Type 1 dischargers shall ensure that all visual inspections are conducted daily during working hours and in conjunction with other daily activities in areas where active construction is occurring.

iii LUP Type 1 dischargers shall ensure that photographs of the site taken before, during, and after storm events are taken during inspections, and submitted through the State Water Board's SMARTS website once every three rain events.

iv LUP Type 1 dischargers shall conduct daily visual inspections to verify that:

(1) Appropriate BMPs for storm water and non-storm water are being implemented in areas where active construction is occurring (including staging areas);

(2) Project excavations are closed, with properly protected spoils, and that road surfaces are cleaned of excavated material and construction materials such as chemicals by either removing or storing the material in protective storage containers at the end of every construction day;

(3) Land areas disturbed during construction are returned to pre-construction conditions or an equivalent protection is used at the end of each workday to eliminate or minimize erosion and the possible discharge of sediment or other pollutants during a rain event.

v Inspections may be discontinued in non-active construction areas where soil-disturbing activities are completed and final soil stabilization is achieved (e.g., paving is completed, substructures

are installed, vegetation meets minimum cover requirements for final stabilization, or other stabilization requirements are met).

vi Inspection programs are required for LUP Type 1 projects where temporary and permanent stabilization BMPs are installed and are to be monitored after active construction is completed. Inspection activities shall continue until adequate permanent stabilization is established and, in areas where re-vegetation is chosen, until minimum vegetative coverage is established in accordance with Section C.1 of this Attachment.

b. LUP Type 1 Monitoring Requirements for Non-Visible Pollutants

LUP Type 1 dischargers shall implement sampling and analysis requirements to monitor non-visible pollutants associated with (1) construction sites; (2) activities producing pollutants that are not visually detectable in storm water discharges; and (3) activities which could cause or contribute to an exceedance of water quality objectives in the receiving waters.

i Sampling and analysis for non-visible pollutants is only required where the LUP Type 1 discharger believes pollutants associated with construction activities have the potential to be discharged with storm water runoff due to a spill or in the event there was a breach, malfunction, failure and/or leak of any BMP. Also, failure to implement BMPs may require sample collection.

(1) Visual observations made during the monitoring program described above will help the LUP Type 1 discharger determine when to collect samples.

(2) The LUP Type 1 discharger is not required to sample if one of the conditions described above (e.g., breach or spill) occurs and the site is cleaned of material and pollutants and/or BMPs are implemented prior to the next storm event.

ii LUP Type 1 dischargers shall collect samples down-gradient from all discharge locations where the visual observations were made triggering the monitoring, and which can be safely accessed. For sites where sampling and analysis is required, personnel trained in water quality sampling procedures shall collect storm water samples.

iii If sampling for non-visible pollutant parameters is required, LUP Type 1 dischargers shall ensure that samples be analyzed for parameters indicating the presence of pollutants identified in the pollutant source assessment required in Section J.2.a.i.

iv LUP Type 1 dischargers shall collect samples during the first two hours of discharge from rain events that occur during business hours and which generate runoff.

v LUP Type 1 dischargers shall ensure that a sufficiently large sample of storm water that has not come into contact with the disturbed soil or the materials stored or used on-site (uncontaminated sample[12]) will be collected for comparison with the discharge sample. Samples shall be collected during the first two hours of discharge from rain events that occur during daylight hours and which generate runoff.

vi LUP Type 1 dischargers shall compare the uncontaminated sample to the samples of discharge using field analysis or through laboratory analysis. Analyses may include, but are not limited to, indicator parameters such as: pH, specific conductance, dissolved oxygen, conductivity, salinity, and Total Dissolved Solids (TDS).

vii For laboratory analyses, all sampling, sample preservation, and other analyses must be conducted according to test procedures pursuant to 40 C.F.R. Part 136. LUP Type 1 dischargers shall ensure that field samples are collected and analyzed according to manufacturer specifications of the sampling devices employed. Portable meters shall be calibrated according to manufacturer's specification.

viii LUP Type 1 dischargers shall ensure that all field and/or analytical data are kept in the SWPPP document.

c. LUP Type 1 Visual Observation Exceptions

i LUP Type 1 dischargers shall be prepared to collect samples and conduct visual observation (inspections) to meet the minimum visual observation requirements of this Attachment. The Type 1 LUP discharger is not required to physically collect samples or conduct visual observation (inspections) under the following conditions:

(1) During dangerous weather conditions such as flooding and electrical storms;

(2) Outside of scheduled site business hours.

(3) When access to the site is unsafe due to storm events.

[12] Sample collected at a location unaffected by contruction activities.

ii If the LUP Type 1 discharger does not collect the required samples or visual observation (inspections) due to these exceptions, an explanation why the sampling or visual observation (inspections) were not conducted shall be included in both the SWPPP and the Annual Report.

d. Particle Size Analysis for Risk Justification

LUP Type 1 dischargers utilizing justifying an alternative project risk shall report a soil particle size analysis used to determine the RUSLE K-Factor. ASTM D-422 (Standard Test Method for Particle-Size Analysis of Soils), as revised, shall be used to determine the percentages of sand, very fine sand, silt, and clay on the site.

4. LUP Type 2 & 3 Monitoring and Reporting Requirements

a. LUP Type 2 & 3 Inspection Requirements

i LUP Type 2 & 3 dischargers shall ensure that all inspections are conducted by trained personnel. The name(s) and contact number(s) of the assigned inspection personnel should be listed in the SWPPP.

ii LUP Type 2 & 3 dischargers shall ensure that all visual inspections are conducted daily during working hours and in conjunction with other daily activities in areas where active construction is occurring.

iii LUP Type 2 & 3 dischargers shall ensure that photographs of the site taken before, during, and after storm events are taken during inspections, and submitted through the State Water Board's SMARTS website once every three rain events.

iv LUP Type 2 & 3 dischargers shall conduct daily visual inspections to verify that appropriate BMPs for storm water and non-storm water are being implemented and in place in areas where active construction is occurring (including staging areas).

v LUP Type 2 & 3 dischargers shall conduct inspections of the construction site prior to anticipated storm events, during extended storm events, and after actual storm events to identify areas contributing to a discharge of storm water associated with construction activity. Pre-storm inspections are to ensure that BMPs are properly installed and maintained; post-storm inspections are to assure that BMPs have functioned adequately. During

extended storm events, inspections shall be required during normal working hours for each 24-hour period.

vi Inspections may be discontinued in non-active construction areas where soil-disturbing activities are completed and final soil stabilization is achieved (e.g., paving is completed, substructures are installed, vegetation meets minimum cover requirements for final stabilization, or other stabilization requirements are met).

vii LUP Type 2 & 3 dischargers shall implement a monitoring program for inspecting projects that require temporary and permanent stabilization BMPs after active construction is complete. Inspections shall ensure that the BMPs are adequate and maintained. Inspection activities shall continue until adequate permanent stabilization is established and, in vegetated areas, until minimum vegetative coverage is established in accordance with Section C.1 of this Attachment.

viii If possible, LUP Type 2 & 3 dischargers shall install a rain gauge on-site at an accessible and secure location with readings made during all storm event inspections. When readings are unavailable, data from the closest rain gauge with publically available data may be used.

ix LUP Type 2 & 3 dischargers shall Include and maintain a log of the inspections conducted in the SWPPP. The log will provide the date and time of the inspection and who conducted the inspection.

b. LUP Type 2 & 3 Storm Water Effluent Monitoring Requirements

Table 4. LUP Type 2 & 3 Effluent Monitoring Requirements

LUP Type	Frequency	Effluent Monitoring
2	Minimum of 3 samples per day characterizing discharges associated with construction activity from the project active areas of construction.	Turbidity, pH, and non-visible pollutant parameters (if applicable)
3	Minimum of 3 samples per day characterizing discharges associated with construction activity from the project active areas of construction.	turbidity, pH, and non-visible pollutant parameters (if applicable)

i LUP Type 2 & 3 dischargers shall collect storm water grab samples from sampling locations characterizing discharges associated with activity from the LUP active areas of construction. At a minimum, 3 samples shall be collected per day of discharge.

ii LUP Type 2 & 3 dischargers shall collect samples of stored or contained storm water that is discharged subsequent to a storm event producing precipitation of ½ inch or more at the time of discharge.

iii LUP Type 2 & 3 dischargers shall ensure that storm water grab sample(s) obtained be representative of the flow and characteristics of the discharge.

iv LUP Type 2 & 3 dischargers shall analyze their effluent samples for:

(1) pH and turbidity
(2) Any additional parameter for which monitoring is required by the Regional Water Board.

c. LUP Type 2 & 3 Storm Water Effluent Sampling Locations

i LUP Type 2 & 3 dischargers shall perform sampling and analysis of storm water discharges to characterize discharges associated with construction activity from the entire disturbed project or area.

ii LUP Type 2 & 3 dischargers may monitor and report run-on from surrounding areas if there is reason to believe run-on may contribute to exceedance of NALs.

iii LUP Type 2 & 3 dischargers shall select analytical test methods from the list provided in Table 5 below.

iv LUP Type 2 & 3 dischargers shall ensure that all storm water sample collection preservation and handling shall be conducted in accordance with the “Storm Water Sample Collection and Handling Instructions” below.

d. LUP Type 3 Receiving Water Monitoring Requirements

i In the event that an LUP Type 3 discharger’s effluent exceeds the receiving water monitoring triggers of 500 NTU turbidity or pH range of 6.0-9.0, contained in this General Permit and has a direct discharge to receiving waters, the LUP discharger shall subsequently sample Receiving Waters (RWs) for turbidity, pH (if applicable) and SSC for the duration of coverage under this General Permit. In the event that an LUP Tupe 3 discharger utilizing ATS with direct discharges into receiving waters discharges effluent that exceeds the NELs in this permit, the discharger shall

subsequently sample RWs for turbidity, pH (if applicable), and SSC for the duration of coverage under this General Permit.

ii LUP Type 3 dischargers that meet the project criteria in Appendix 3 of this General Permit and have more than 30 acres of soil disturbance in the project area or project section area designated as Type 3, shall comply with the Bioassessment requirements prior to commencement of construction activity.

iii LUP Type 3 dischargers shall obtain RW samples in accordance with the requirements of the Receiving Water Sampling Locations section (Section M.4.c. of this Attachment).

e. LUP Type 3 Receiving Water Sampling Locations

i **Upstream/up-gradient RW samples**: LUP Type 3 dischargers shall obtain any required upstream/up-gradient receiving water samples from a representative and accessible location as close as possible to and upstream from the effluent discharge point.

ii **Downstream/down-gradient RW samples**: LUP Type 3 dischargers shall obtain any required downstream/down-gradient receiving water samples from a representative and accessible location as close as possible to and downstream from the effluent discharge point.

iii If two or more discharge locations discharge to the same receiving water, LUP Type 3 dischargers may sample the receiving water at a single upstream and downstream location.

f. LUP Type 2 & 3 Monitoring Requirements for Non-Visible Pollutants

LUP Type 2 & 3 dischargers shall implement sampling and analysis requirements to monitor non-visible pollutants associated with (1) construction sites; (2) activities producing pollutants that are not visually detectable in storm water discharges; and (3) activities which could cause or contribute to an exceedance of water quality objectives in the receiving waters.

i Sampling and analysis for non-visible pollutants is only required where LUP Type 2 & 3 dischargers believe pollutants associated with construction activities have the potential to be discharged with storm water runoff due to a spill or in the event there was a breach, malfunction, failure and/or leak of any BMP. Also, failure to implement BMPs may require sample collection.

(1) Visual observations made during the monitoring program described above will help LUP Type 2 & 3 dischargers determine when to collect samples.

(2) LUP Type 2 & 3 dischargers are not required to sample if one of the conditions described above (e.g., breach or spill) occurs and the site is cleaned of material and pollutants and/or BMPs are implemented prior to the next storm event.

ii LUP Type 2 & 3 dischargers shall collect samples down-gradient from the discharge locations where the visual observations were made triggering the monitoring and which can be safely accessed. For sites where sampling and analysis is required, personnel trained in water quality sampling procedures shall collect storm water samples.

iii If sampling for non-visible pollutant parameters is required, LUP Type 2 & 3 dischargers shall ensure that samples be analyzed for parameters indicating the presence of pollutants identified in the pollutant source assessment required in Section J.2.a.i.

iv LUP Type 2 & 3 dischargers shall collect samples during the first two hours of discharge from rain events that occur during business hours and which generate runoff.

v LUP Type 2 & 3 dischargers shall ensure that a sufficiently large sample of storm water that has not come into contact with the disturbed soil or the materials stored or used on-site (uncontaminated sample[13]) will be collected for comparison with the discharge sample. Samples shall be collected during the first two hours of discharge from rain events that occur during daylight hours and which generate runoff.

vi LUP Type 2 & 3 dischargers shall compare the uncontaminated sample to the samples of discharge using field analysis or through laboratory analysis. Analyses may include, but are not limited to, indicator parameters such as: pH, specific conductance, dissolved oxygen, conductivity, salinity, and Total Dissolved Solids (TDS).

vii For laboratory analyses, all sampling, sample preservation, and other analyses must be conducted according to test procedures pursuant to 40 C.F.R. Part 136. LUP Type 2 & 3 dischargers shall ensure that field samples are collected and analyzed according to manufacturer specifications of the sampling devices employed.

[13] Sample collected at a location unaffected by construction activities

Portable meters shall be calibrated according to manufacturer's specification.

viii LUP Type 2 & 3 dischargers shall ensure that all field and/or analytical data are kept in the SWPPP document.

g. LUP Type 2 & 3 Visual Observation and Sample Collection Exceptions

i LUP Type 2 & 3 dischargers shall be prepared to collect samples and conduct visual observation (inspections) to meet the minimum visual observation requirements of this Attachment. Type 2 & 3 LUP dischargers are not required to physically collect samples or conduct visual observation (inspections) under the following conditions:

(1) During dangerous weather conditions such as flooding and electrical storms;

(2) Outside of scheduled site business hours.

(3) When access to the site is unsafe due to storm events.

ii If the LUP Type 2 or 3 discharger does not collect the required samples or visual observation (inspections) due to these exceptions, an explanation why the sampling or visual observation (inspections) were not conducted shall be included in both the SWPPP and the Annual Report.

h. LUP Type 2 & 3 Storm Water Sample Collection and Handling Instructions

LUP Type 2 & 3 dischargers shall refer to Table 5 below for test Methods, detection Limits, and reporting Units. During storm water sample collection and handling, the LUP Type 2 & 3 discharger shall:

i Identify the parameters required for testing and the number of storm water discharge points that will be sampled. Request the laboratory to provide the appropriate number of sample containers, types of containers, sample container labels, blank chain of custody forms, and sample preservation instructions.

ii Determine how to ship the samples to the laboratory. The testing laboratory should receive samples within 48 hours of the physical sampling (unless otherwise required by the laboratory). The options are to either deliver the samples to the laboratory, arrange to have the laboratory pick them up, or ship them overnight to the laboratory.

iii Use only the sample containers provided by the laboratory to collect and store samples. Use of any other type of containers could contaminate your samples.

iv Prevent sample contamination, by not touching, or putting anything into the sample containers before collecting storm water samples.

v Not overfilling sample containers. Overfilling can change the analytical results.

vi Tightly screw the cap of each sample container without stripping the threads of the cap.

vii Complete and attach a label to each sample container. The label shall identify the date and time of sample collection, the person taking the sample, and the sample collection location or discharge point. The label should also identify any sample containers that have been preserved.

viii Carefully pack sample containers into an ice chest or refrigerator to prevent breakage and maintain temperature during shipment. Remember to place frozen ice packs into the shipping container. Samples should be kept as close to 4° C (39° F) as possible until arriving at the laboratory. Do not freeze samples.

ix Complete a Chain of Custody form for each set of samples. The Chain of Custody form shall include the discharger's name, address, and phone number, identification of each sample container and sample collection point, person collecting the samples, the date and time each sample container was filled, and the analysis that is required for each sample container.

x Upon shipping/delivering the sample containers, obtain both the signatures of the persons relinquishing and receiving the sample containers.

xi Designate and train personnel to collect, maintain, and ship samples in accordance with the above sample protocols and good laboratory practices.

xii Refer to the Surface Water Ambient Monitoring Program's (SWAMP) 2008 Quality Assurance Program Plan (QAPrP) for more

information on sampling collection and analysis. See http://www.waterboards.ca.gov/water_issues/programs/swamp/[14]

Table 5. Test Methods, Detection Limits, Reporting Units and Applicable NALs

Parameter	Test Method	Discharge Type	Min. Detection Limit	Reporting Units	Numeric Action Levels	(LUP Type 3) Receiving Water Monitoring Trigger
pH	Field test with calibrated portable instrument	Type 2 & 3	0.2	pH units	Lower = 6.5 upper = 8.5	Lower = 6.0 upper = 9.0
Turbidity	EPA 0180.1 and/or field test with calibrated portable instrument	Type 2 & 3	1	NTU	250 NTU	500 NTU
SSC	ASTM Method D 3977-97[15]	Type 3 if Receiving Water Monitoring Trigger is exceeded	5	Mg/L	N/A	N/A
Bioassessment	(STE) Level I of (SAFIT),[16] fixed-count of 600 org/sample	Type 3 LUPs > 30 acres	N/A	N/A	N/A	N/A

i. LUP Type 2 & 3 Monitoring Methods

i The LUP Type 2 or 3 discharger's project M&RP shall include a description of the following items:

(1) Visual observation locations, visual observation procedures, and visual observation follow-up and tracking procedures.

[14] Additional information regarding SWAMP's QAPrP can be found at: http://www.waterboards.ca.gov/water_issues/programs/swamp/.

[15] ASTM, 1999, Standard Test Method for Determining Sediment Concentration in Water Samples: American Society of Testing and Materials, D 3977-97, Vol. 11.02, pp. 389-394

[16] The current SAFIT STEs (28 November 2006) list requirements for both the Level I and Level II taxonomic effort, and are located at: http://www.swrcb.ca.gov/swamp/docs/safit/ste_list.pdf. When new editions are published by SAFIT, they will supersede all previous editions. All editions will be posted at the State Water Board's SWAMP website.

(2) Sampling locations, and sample collection and handling procedures. This shall include detailed procedures for sample collection, storage, preservation, and shipping to the testing lab to assure that consistent quality control and quality assurance is maintained. Dischargers shall attach to the monitoring program a copy of the Chain of Custody form used when handling and shipping samples.

(3) Identification of the analytical methods and related method detection limits (if applicable) for each parameter required in Section M.4.f above.

ii LUP Type 2 & 3 dischargers shall ensure that all sampling and sample preservation be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a discharger's own field instruments for measuring pH and turbidity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses shall be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. With the exception of field analysis conducted by the discharger for turbidity and pH, all analyses shall be sent to and conducted at a laboratory certified for such analyses by the State Department of Health Services (SSC exception). The LUP discharger shall conduct its own field analysis of pH and may conduct its own field analysis of turbidity if the discharger has sufficient capability (qualified and trained employees, properly calibrated and maintained field instruments, etc.) to adequately perform the field analysis.

j. LUP Type 2 & 3 Analytical Methods

LUP Type 2 & 3 dischargers shall refer to Table 5 above for test Methods, detection Limits, and reporting Units.

i **pH**: LUP Type 2 & 3 dischargers shall perform pH analysis on-site with a calibrated pH meter or pH test kit. The LUP discharger shall record pH monitoring results on paper and retain these records in accordance with Section M.4.o, below.

ii **Turbidity**: LUP Type 2 & 3 dischargers shall perform turbidity analysis using a calibrated turbidity meter (turbidimeter), either on-site or at an accredited lab. Acceptable test methods include Standard Method 2130 or USEPA Method 180.1. The results shall

be recorded in the site log book in Nephelometric Turbidity Units (NTU).

iii **Suspended sediment concentration (SSC)**: LUP Type 3 dischargers exceeding the turbidity Receiving Water Monitoring Trigger, shall perform SSC analysis using ASTM Method D3977-97.

iv **Bioassessment**: LUP Type 3 dischargers shall perform bioassessment sampling and analysis according to Appendix 3 of this General Permit.

k. Watershed Monitoring Option

If an LUP Type 2 or 3 discharger is part of a qualified regional watershed-based monitoring program the LUP Type 2 or 3 discharger may be eligible for relief from the monitoring requirements in this Attachment. The Regional Water Board may approve proposals to substitute an acceptable watershed-based monitoring program if it determines that the watershed-based monitoring program will provide information to determine each discharger's compliance with the requirements of this General Permit.

l. Particle Size Analysis for Risk Justification

LUP Type 2 & 3 dischargers justifying an alternative project risk shall report a soil particle size analysis used to determine the RUSLE K-Factor. ASTM D-422 (Standard Test Method for Particle-Size Analysis of Soils), as revised, shall be used to determine the percentages of sand, very fine sand, silt, and clay on the site.

m. NAL Exceedance Report

i In the event that any effluent sample exceeds an applicable NAL, the Regional Water Boards may require LUP Type 2 & 3 dischargers to submit NAL Exceedance Reports.

ii LUP Type 2 & 3 dischargers shall certify each NAL Exceedance Report in accordance with the Special Provisions for Construction Activity.

iii LUP Type 2 & 3 dischargers shall retain an electronic or paper copy of each NAL Exceedance Report for a minimum of three years after the date the exceedance report is filed.

iv LUP Type 2 & 3 dischargers shall include in the NAL Exceedance Report:

(1) the analytical method(s), method reporting unit(s), and method detection limit(s) of each analytical parameter (analytical results that are less than the method detection limit shall be reported as "less than the method detection limit"); and
(2) the date, place, time of sampling, visual observation (inspections), and/or measurements, including precipitation.
(3) Description of the current BMPs associated with the effluent sample that exceeded the NAL and the proposed corrective actions taken.

n. Monitoring Records

LUP Type 2 & 3 dischargers shall ensure that records of all storm water monitoring information and copies of all reports (including Annual Reports) required by this General Permit be retained for a period of at least three years. LUP Type 2 & 3 dischargers may retain records off-site and make them available upon request. These records shall include:

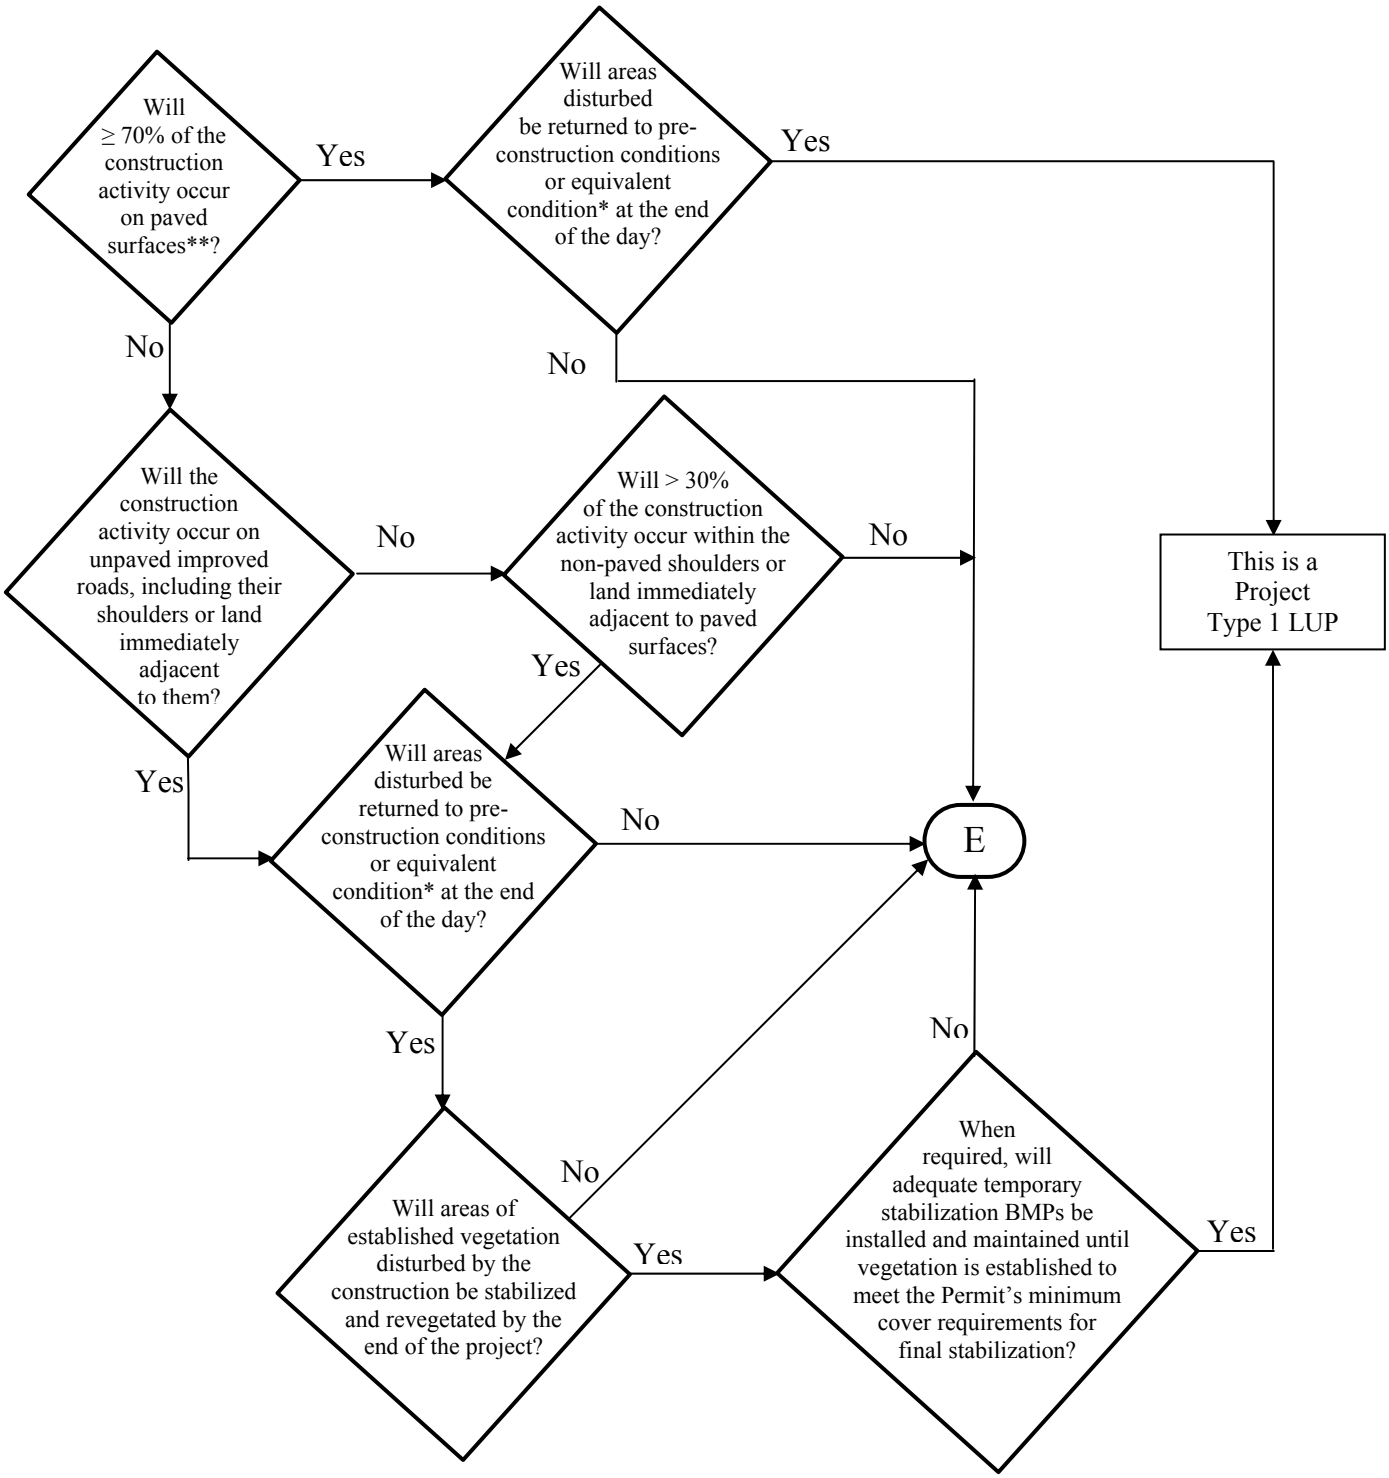
i The date, place, time of facility inspections, sampling, visual observation (inspections), and/or measurements, including precipitation (rain gauge);

ii The individual(s) who performed the facility inspections, sampling, visual observation (inspections), and or measurements;

iii The date and approximate time of analyses;

iv The individual(s) who performed the analyses;

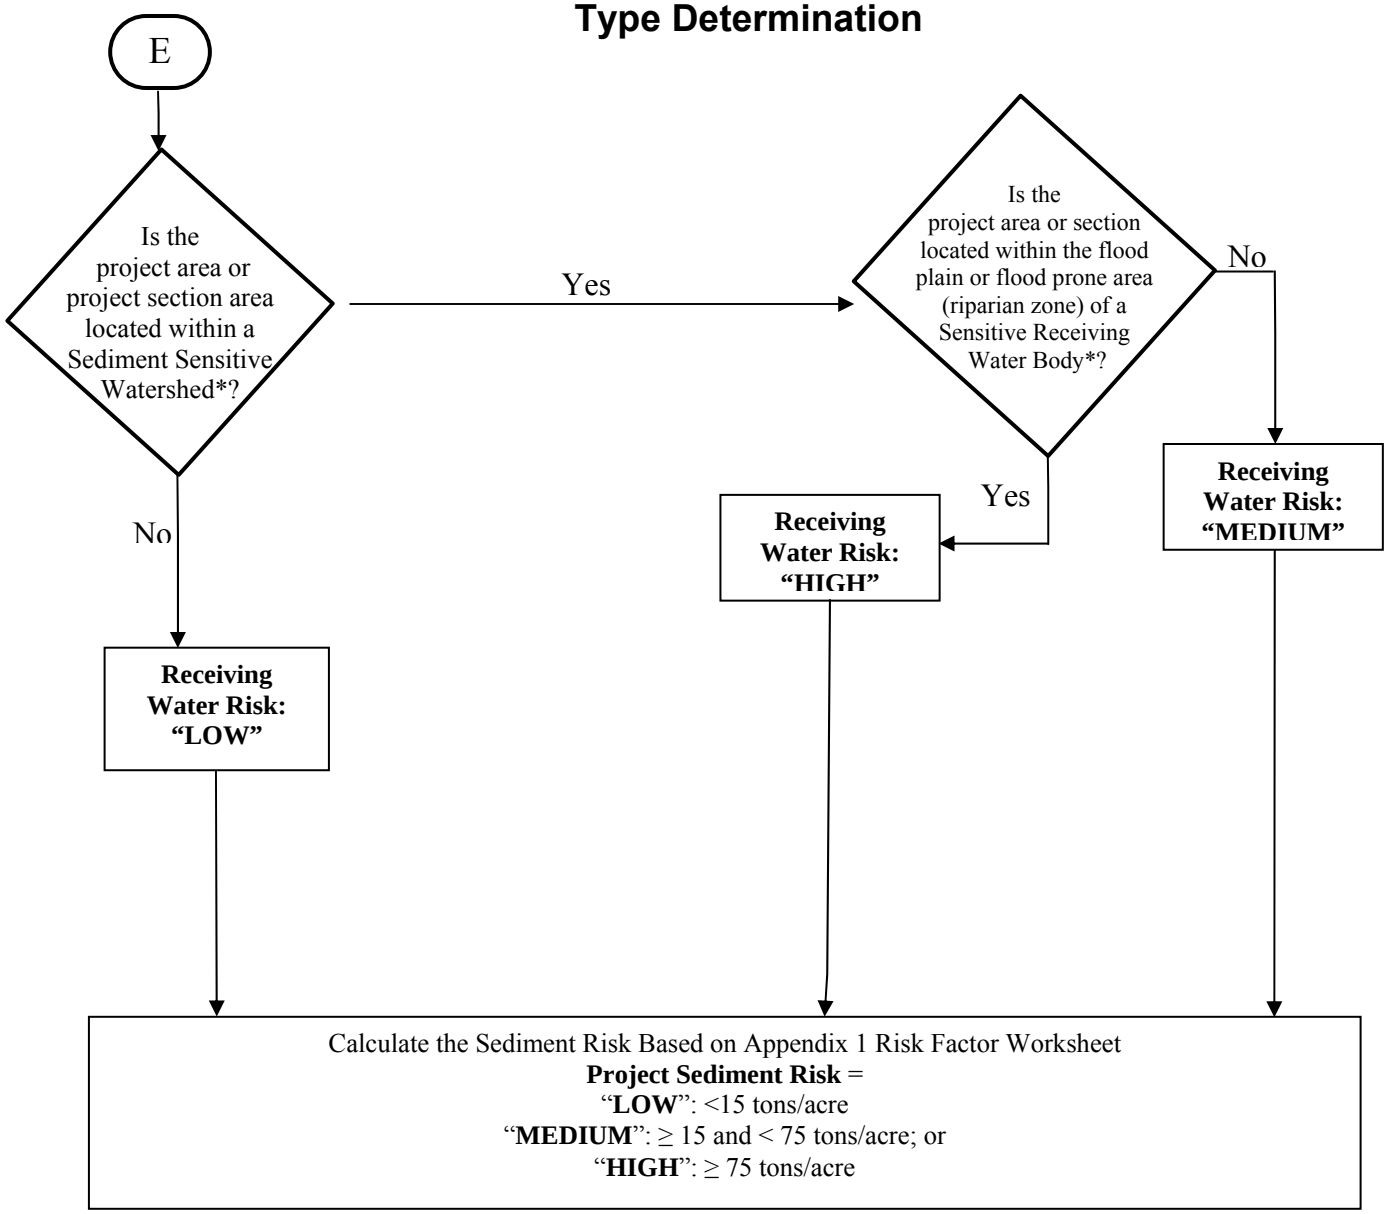
v A summary of all analytical results from the last three years, the method detection limits and reporting units, the analytical techniques or methods used, and all chain of custody forms;



vi Quality assurance/quality control records and results;

vii Non-storm water discharge inspections and visual observation (inspections) and storm water discharge visual observation records (see Section M.4.a above);

viii Visual observation and sample collection exception records (see Section M.4.g above); and



ix The records of any corrective actions and follow-up activities that resulted from analytical results, visual observation (inspections), or inspections.

ATTACHMENT A.1
LUP Project Area or Project Section Area Type Determination

*See Definition of Terms
** Or: "Will < 30% of the soil disturbance occur on unpaved surfaces?

ATTACHMENT A.1
LUP Project Area or Project Section Area Type Determination

* See Definition of Terms

PROJECT SEDIMENT RISK

RECEIVING WATER RISK	**LOW**	**MEDIUM**	**HIGH**
LOW	Type 1	Type 1	Type 2
MEDIUM	Type 1	Type 2	Type 3
HIGH	Type 2	Type 3	Type 3

ATTACHMENT A.1
Definition of Terms

1. **Equivalent Condition** – Means disturbed soils such as those from trench excavation are required to be hauled away, backfilled into the trench, and/or covered (e.g., metal plates, pavement, plastic covers over spoil piles) at the end of the construction day.
2. **Linear Construction Activity** – Linear construction activity consists of underground/ overhead facilities that typically include, but are not limited to, any conveyance, pipe or pipeline for the transportation of any gaseous, liquid (including water, wastewater for domestic municipal services), liquescent, or slurry substance; any cable line or wire for the transmission of electrical energy; any cable line or wire for communications (e.g., telephone, telegraph, radio or television messages); and associated ancillary facilities. Construction activities associated with LUPs include, but are not limited to those activities necessary for the installation of underground and overhead linear facilities (e.g., conduits, substructures, pipelines, towers, poles, cables, wires, connectors, switching, regulating and transforming equipment and associated ancillary facilities) and include, but are not limited to, underground utility mark-out, potholing, concrete and asphalt cutting and removal, trenching, excavation, boring and drilling, access road and pole/ tower pad and cable/ wire pull station, substation construction, substructure installation, construction of tower footings and/or foundations, pole and tower installations, pipeline installations, welding, concrete and/or pavement repair or replacement, and stockpile/ borrow locations.
3. **Sediment Sensitive Receiving Water Body –** Defined as a water body segment that is listed on EPA's approved CWA 303(d) list for sedimentation/siltation, turbidity, or is designated with beneficial uses of SPAWN, MIGRATORY, and COLD.
4. **Sediment Sensitive Watershed –** Defined as a watershed draining into a receiving water body listed on EPA's approved CWA 303(d) list for sedimentation/siltation, turbidity, or a water body designated with beneficial uses of SPAWN, MIGRATORY, and COLD.

ATTACHMENT A.2
PERMIT REGISTRATION DOCUMENTS (PRDs)
GENERAL INSTRUCTIONS FOR LINEAR UNDERGROUND/OVERHEAD PROJECTS TO COMPLY WITH THE CONSTRUCTION GENERAL PERMIT

GENERAL INSTRUCTIONS

Who Must Submit

This permit is effective on July 1, 2010.

The Legally Responsible Person (LRP) for construction activities associated with linear underground/overhead project (LUP) must electronically apply for coverage under this General Permit on or after July 1, 2010. If it is determined that the LUP construction activities require an NPDES permit, the Legally Responsible Person[1] (LRP) shall submit PRDs for this General Permit in accordance with the following:

LUPs associated with Private or Municipal Development Projects

1. For LUPs associated with pre-development and pre-redevelopment construction activities:

   The LRP must obtain coverage[2] under this General Permit for its pre-development and pre-redevelopment construction activities where the total disturbed land area of these construction activities is greater than 1 acre.

2. For LUPs associated with new development and redevelopment construction projects:

   The LRP must obtain coverage under this General Permit for LUP construction activities associated with new development and redevelopment projects where the total disturbed land area of the LUP is greater than 1 acre. Coverage under this permit is not required where the same LUP construction activities are covered by another NPDES permit.

LUPs not associated with private or municipal new development or redevelopment projects:

The LRP must obtain coverage under this General Permit on or after July 1, 2010 for its LUP construction activities where the total disturbed land area is greater than 1 acre.

PRD Submittal Requirements

Prior to the start of construction activities a LRP must submit PRDs and fees to the State Water Board for each LUP.

New and Ongoing LUPs

Dischargers of new LUPs that commence construction activities after the adoption date of this General Permit shall file PRDs prior to the commencement of construction and implement the SWPPP upon the start of construction.

[1] person possessing the title of the land on which the construction activities will occur for the regulated site
[2] obtain coverage means filing PRDs for the project.

PERMIT REGISTRATION DOCUMENTS (PRDs)
GENERAL INSTRUCTIONS (CONTINUED)

Dischargers of ongoing LUPs that are currently covered under State Water Board Order No. 2003-0007 (Small LUP General Permit) shall electronically file Permit Registration Documents no later than July 1, 2010. After July 1, 2010, all NOIs subject to State Water Board Order No. 2003-0007-DWQ will be terminated. All existing dischargers shall be exempt from the risk determination requirements in Attachment A. All existing dischargers are therefore subject to LUP Type 1 requirements regardless of their project's sediment and receiving water risks. However, a Regional Board retains the authority to require an existing discharger to comply with the risk determination requirements in Attachment A.

Where to Apply

The Permit Registration Documents (PRDs) can be found at www.waterboards.ca.gov/water_issues/programs/stormwater/

Fees

The annual fee for storm water permits are established through the State of California Code of Regulations.

When Permit Coverage Commences

To obtain coverage under the General Permit, the LRP must include the complete PRDs and the annual fee. All PRDs deemed incomplete will be rejected with an explanation as to what is required to complete submittal. Upon receipt of complete PRDs and associated fee, each discharger will be sent a waste discharger's identification (WDID) number.

Projects and Activities Not Defined As Construction Activity

1. LUP construction activity does not include routine maintenance projects to maintain original line and grade, hydraulic capacity, or original purpose of the facility. Routine maintenance projects are projects associated with operations and maintenance activities that are conducted on existing lines and facilities and within existing right-of-way, easements, franchise agreements or other legally binding agreements of the discharger. Routine maintenance projects include, but are not limited to projects that are conducted to:

    - Maintain the original purpose of the facility, or hydraulic capacity.
    - Update existing lines[3] and facilities to comply with applicable codes, standards and regulations regardless if such projects result in increased capacity.
    - Repairing leaks.

    Routine maintenance does not include construction of new[4] lines or facilities resulting from compliance with applicable codes, standards and regulations.

[3] Update existing lines includes replacing existing lines with new materials or pipes.
[4] New lines are those that are not associated with existing facilities and are not part of a project to update or replace existing lines.

PERMIT REGISTRATION DOCUMENTS (PRDs)
GENERAL INSTRUCTIONS (CONTINUED)

Routine maintenance projects do not include those areas of maintenance projects that are outside of an existing right-of-way, franchise, easements, or agreements. When a project must acquire new areas, those areas may be subject to this General Permit based on the area of disturbed land outside the original right-of-way, easement, or agreement.

2. LUP construction activity does not include field activities associated with the planning and design of a project (e.g., activities associated with route selection).

3. Tie-ins conducted immediately adjacent to "energized" or "pressurized" facilities by the discharger are not considered small construction activities where all other LUP construction activities associated with the tie-in are covered by a NOI and SWPPP of a third party or municipal agency.

Calculating Land Disturbance Areas of LUPs

The total land area disturbed for LUPs is the sum of the:

- Surface areas of trenches, laterals and ancillary facilities, plus
- Area of the base of stockpiles on unpaved surfaces, plus
- Surface area of the borrow area, plus
- Areas of paved surfaces constructed for the project, plus
- Areas of new roads constructed or areas of major reconstruction to existing roads (e.g. improvements to two-track surfaces or road widening) for the sole purpose of accessing construction activities or as part of the final project, plus
- Equipment and material storage, staging, and preparation areas (laydown areas) not on paved surfaces, plus
- Soil areas outside the surface area of trenches, laterals and ancillary facilities that will be graded, and/or disturbed by the use of construction equipment, vehicles and machinery during construction activities.

Stockpiling Areas

Stockpiling areas, borrow areas and the removal of soils from a construction site may or may not be included when calculating the area of disturbed soil for a site depending on the following conditions:

- For stockpiling of soils onsite or immediately adjacent to a LUP site and the stockpile is not on a paved surface, the area of the base of the stockpile is to be included in the disturbed area calculation.

- The surface area of borrow areas that are onsite or immediately adjacent to a project site are to be included in the disturbed area calculation.

- For soil that is hauled offsite to a location owned or operated by the discharger that is not a paved surface, the area of the base of the stockpile is to be included in the disturbed area calculation except when the offsite location is already subject to a separate storm water permit.

PERMIT REGISTRATION DOCUMENTS (PRDs)
GENERAL INSTRUCTIONS (CONTINUED)

- For soil that is brought to the project from an off-site location owned or operated by the discharger the surface area of the borrow pit is to be included in the disturbed area calculation except when the offsite location is already subject to a separate storm water permit.

- Trench spoils on a paved surface that are either returned to the trench or excavation or hauled away from the project daily for disposal or reuse will not be included in the disturbed area calculation.

If you have any questions concerning submittal of PRDs, please call the State Water Board at (866) 563-3107.

ATTACHMENT B
PERMIT REGISTRATION DOCUMENTS (PRDs) TO COMPLY WITH THE TERMS OF THE GENERAL PERMIT TO DISCHARGE STORM WATER ASSOCIATED WITH CONSTRUCTION ACTIVITY

GENERAL INSTRUCTIONS

A. All Linear Construction Projects shall comply with the PRD requirements in Attachment A.2 of this Order.

B. Who Must Submit

Discharges of storm water associated with construction that results in the disturbance of one acre or more of land must apply for coverage under the General Construction Storm Water Permit (General Permit). Any construction activity that is a part of a larger common plan of development or sale must also be permitted, regardless of size. (For example, if 0.5 acre of a 20-acre subdivision is disturbed by the construction activities of discharger A and the remaining 19.5 acres is to be developed by discharger B, discharger A must obtain a General Storm Water Permit for the 0.5 acre project).

Other discharges from construction activities that are covered under this General Permit can be found in the General Permit Section II.B.

It is the LRP's responsibility to obtain coverage under this General Permit by electronically submitting complete PRDs (Permit Registration Documents).

In all cases, the proper procedures for submitting the PRDs must be completed before construction can commence.

C. Construction Activity Not Covered By This General Permit

Discharges from construction that are not covered under this General Permit can be found in the General Permit Sections II.A &B..

D. Annual Fees and Fee Calculation

Annual fees are calculated based upon the total area of land to be disturbed not the total size of the acreage owned. However, the calculation includes all acres to be disturbed during the duration of the project. For example, if 10 acres are scheduled to be disturbed the first year and 10 in each subsequent year for 5 years, the annual fees would be based upon 50 acres of disturbance. The State Water Board will evaluate adding acreage to an existing Permit Waste Discharge Identification (WDID) number on a case-by-case basis. In general, any acreage to be considered must be contiguous to the permitted land area and the existing

SWPPP must be appropriate for the construction activity and topography of the acreage under consideration. As acreage is built out and stabilized or sold, the Change of Information (COI) form enables the applicant to remove those acres from inclusion in the annual fee calculation. Checks should be made payable to: State Water Board.

The Annual fees are established through regulations adopted by the State Water Board. The total annual fee is the current base fee plus applicable surcharges for all construction sites submitting an NOI, based on the total acreage to be disturbed during the life of the project. Annual fees are subject to change by regulation.

Dischargers that apply for and satisfy the Small Construction Erosivity Wavier requirements shall pay a fee of $200.00 plus an applicable surcharge, see the General Permit Section II.B.7.

E. When to Apply

LRP's proposing to conduct construction activities subject to this General Permit must submit their PRDs prior to the commencement of construction activity.

F. Requirements for Completing Permit Registration Documents (PRDs)

All dischargers required to comply with this General Permit shall electronically submit the required PRDs for their type of construction as defined below.

G. Standard PRD Requirements (All Dischargers)

1. Notice of Intent
2. Risk Assessment (Standard or Site-Specific)
3. Site Map
4. SWPPP
5. Annual Fee
6. Certification

H. Additional PRD Requirements Related to Construction Type

1. Discharger in unincorporated areas of the State (not covered under an adopted Phase I or II SUSMP requirements) and that are not a linear project shall also submit a completed:
   a. Post-Construction Water Balance Calculator (Appendix 2).

2. Dischargers who are proposing to implement ATS shall submit:
   a. Complete ATS Plan in accordance with Attachment F at least 14 days prior to the planned operation of the ATS and a paper copy shall be available onsite during ATS operation.

b. Certification proof that design done by a professional in accordance with Attachment F.

3. Dischargers who are proposing an alternate Risk Justification:
   a. Particle Size Analysis.

I. Exceptions to Standard PRD Requirements

Construction sites with an R value less than 5 as determined in the Risk Assessment are not required to submit a SWPPP.

J. Description of PRDs

1. Notice of Intent (NOI)

2. Site Map(s) Includes:
   a. The project's surrounding area (vicinity)
   b. Site layout
   c. Construction site boundaries
   d. Drainage areas
   e. Discharge locations
   f. Sampling locations
   g. Areas of soil disturbance (temporary or permanent)
   h. Active areas of soil disturbance (cut or fill)
   i. Locations of all runoff BMPs
   j. Locations of all erosion control BMPs
   k. Locations of all sediment control BMPs
   l. ATS location (if applicable)
   m. Locations of sensitive habitats, watercourses, or other features which are not to be disturbed
   n. Locations of all post-construction BMPs
   o. Locations of storage areas for waste, vehicles, service, loading/unloading of materials, access (entrance/exits) points to construction site, fueling, and water storage, water transfer for dust control and compaction practices

3. **SWPPPs**
   A site-specific SWPPP shall be developed by each discharger and shall be submitted with the PRDs.

4. **Risk Assessment**
   All dischargers shall use the Risk Assessment procedure as describe in the General Permit Appendix 1.

   a. The Standard Risk Assessment includes utilization of the following:
      i. Receiving water Risk Assessment interactive map

ii. EPA Rainfall Erosivity Factor Calculator Website
iii. Sediment Risk interactive map
iv. Sediment sensitive water bodies list

b. The Site-Specific Risk Assessment includes the completion of the hand calculated R value Risk Calculator

5. **Post-Construction Water Balance Calculator**
All dischargers subject to this requirement shall complete the Water Balance Calculator (in Appendix 2) in accordance with the instructions.

6. **ATS Design Document and Certification**
All dischargers using ATS must submit electronically their system design (as well as any supporting documentation) and proof that the system was designed by a qualified ATS design professional (See Attachment F).

To obtain coverage under the General Permit PRDs must be included and completed. If any of the required items are missing, the PRD submittal is considered incomplete and will be rejected. Upon receipt of a complete PRD submittal, the State Water Board will process the application package in the order received and assign a (WDID) number.

Questions?

If you have any questions on completing the PRDs please email stormwater@waterboards.ca.gov or call (866) 563-3107.

ATTACHMENT C
RISK LEVEL 1 REQUIREMENTS

A. Effluent Standards

[These requirements are the same as those in the General Permit order.]

1. Narrative – Risk Level 1 dischargers shall comply with the narrative effluent standards listed below:

   a. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

   b. Dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

2. Numeric – Risk Level 1 dischargers are not subject to a numeric effluent standard.

B. Good Site Management "Housekeeping"

1. Risk Level 1 dischargers shall implement good site management (i.e., "housekeeping") measures for construction materials that could potentially be a threat to water quality if discharged. At a minimum, Risk Level 1 dischargers shall implement the following good housekeeping measures:

   a. Conduct an inventory of the products used and/or expected to be used and the end products that are produced and/or expected to be produced. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

   b. Cover and berm loose stockpiled construction materials that are not actively being used (i.e. soil, spoils, aggregate, fly-ash, stucco, hydrated lime, etc.).

c. Store chemicals in watertight containers (with appropriate secondary containment to prevent any spillage or leakage) or in a storage shed (completely enclosed).

d. Minimize exposure of construction materials to precipitation. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

e. Implement BMPs to prevent the off-site tracking of loose construction and landscape materials.

2. Risk Level 1 dischargers shall implement good housekeeping measures for waste management, which, at a minimum, shall consist of the following:

a. Prevent disposal of any rinse or wash waters or materials on impervious or pervious site surfaces or into the storm drain system.

b. Ensure the containment of sanitation facilities (e.g., portable toilets) to prevent discharges of pollutants to the storm water drainage system or receiving water.

c. Clean or replace sanitation facilities and inspecting them regularly for leaks and spills.

d. Cover waste disposal containers at the end of every business day and during a rain event.

e. Prevent discharges from waste disposal containers to the storm water drainage system or receiving water.

f. Contain and securely protect stockpiled waste material from wind and rain at all times unless actively being used.

g. Implement procedures that effectively address hazardous and non-hazardous spills.

h. Develop a spill response and implementation element of the SWPPP prior to commencement of construction activities. The SWPPP shall require that:

i. Equipment and materials for cleanup of spills shall be available on site and that spills and leaks shall be cleaned up immediately and disposed of properly; and

ii. Appropriate spill response personnel are assigned and trained.

i. Ensure the containment of concrete washout areas and other washout areas that may contain additional pollutants so there is no discharge into the underlying soil and onto the surrounding areas.

3. Risk Level 1 dischargers shall implement good housekeeping for vehicle storage and maintenance, which, at a minimum, shall consist of the following:

   a. Prevent oil, grease, or fuel to leak in to the ground, storm drains or surface waters.

   b. Place all equipment or vehicles, which are to be fueled, maintained and stored in a designated area fitted with appropriate BMPs.

   c. Clean leaks immediately and disposing of leaked materials properly.

4. Risk Level 1 dischargers shall implement good housekeeping for landscape materials, which, at a minimum, shall consist of the following:

   a. Contain stockpiled materials such as mulches and topsoil when they are not actively being used.

   b. Contain fertilizers and other landscape materials when they are not actively being used.

   c. Discontinue the application of any erodible landscape material within 2 days before a forecasted rain event or during periods of precipitation.

   d. Apply erodible landscape material at quantities and application rates according to manufacture recommendations or based on written specifications by knowledgeable and experienced field personnel.

   e. Stack erodible landscape material on pallets and covering or storing such materials when not being used or applied.

5. Risk Level 1 dischargers shall conduct an assessment and create a list of potential pollutant sources and identify any areas of the site where additional BMPs are necessary to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. This potential pollutant list shall be kept with the SWPPP and shall identify

all non-visible pollutants which are known, or should be known, to occur on the construction site. At a minimum, when developing BMPs, Risk Level 1 dischargers shall do the following:

a. Consider the quantity, physical characteristics (e.g., liquid, powder, solid), and locations of each potential pollutant source handled, produced, stored, recycled, or disposed of at the site.

b. Consider the degree to which pollutants associated with those materials may be exposed to and mobilized by contact with storm water.

c. Consider the direct and indirect pathways that pollutants may be exposed to storm water or authorized non-storm water discharges. This shall include an assessment of past spills or leaks, non-storm water discharges, and discharges from adjoining areas.

d. Ensure retention of sampling, visual observation, and inspection records.

e. Ensure effectiveness of existing BMPs to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges.

6. Risk Level 1 dischargers shall implement good housekeeping measures on the construction site to control the air deposition of site materials and from site operations. Such particulates can include, but are not limited to, sediment, nutrients, trash, metals, bacteria, oil and grease and organics.

C. Non-Storm Water Management

1. Risk Level 1 dischargers shall implement measures to control all non-storm water discharges during construction.

2. Risk Level 1 dischargers shall wash vehicles in such a manner as to prevent non-storm water discharges to surface waters or MS4 drainage systems.

3. Risk Level 1 dischargers shall clean streets in such a manner as to prevent unauthorized non-storm water discharges from reaching surface water or MS4 drainage systems.

D. Erosion Control

1. Risk Level 1 dischargers shall implement effective wind erosion control.

2. Risk Level 1 dischargers shall provide effective soil cover for inactive[1] areas and all finished slopes, open space, utility backfill, and completed lots.

3. Risk Level 1 dischargers shall limit the use of plastic materials when more sustainable, environmentally friendly alternatives exist. Where plastic materials are deemed necessary, the discharger shall consider the use of plastic materials resistant to solar degradation.

E. Sediment Controls

1. Risk Level 1 dischargers shall establish and maintain effective perimeter controls and stabilize all construction entrances and exits to sufficiently control erosion and sediment discharges from the site.

2. On sites where sediment basins are to be used, Risk Level 1 dischargers shall, at minimum, design sediment basins according to the method provided in CASQA's Construction BMP Guidance Handbook.

F. Run-on and Runoff Controls

Risk Level 1 dischargers shall effectively manage all run-on, all runoff within the site and all runoff that discharges off the site. Run-on from off site shall be directed away from all disturbed areas or shall collectively be in compliance with the effluent limitations in this General Permit.

G. Inspection, Maintenance and Repair

1. Risk Level 1 dischargers shall ensure that all inspection, maintenance repair and sampling activities at the project location shall be performed or supervised by a Qualified SWPPP Practitioner (QSP) representing the discharger. The QSP may delegate any or all of these activities to an employee trained to do the task(s) appropriately, but shall ensure adequate deployment.

2. Risk Level 1 dischargers shall perform weekly inspections and observations, and at least once each 24-hour period during extended

[1] Inactive areas of construction are areas of construction activity that have been disturbed and are not scheduled to be re-disturbed for at least 14 days.

storm events, to identify and record BMPs that need maintenance to operate effectively, that have failed, or that could fail to operate as intended. Inspectors shall be the QSP or be trained by the QSP.

3. Upon identifying failures or other shortcomings, as directed by the QSP, Risk Level 1 dischargers shall begin implementing repairs or design changes to BMPs within 72 hours of identification and complete the changes as soon as possible.

4. For each inspection required, Risk Level 1 dischargers shall complete an inspection checklist, using a form provided by the State Water Board or Regional Water Board or in an alternative format.

5. Risk Level 1 dischargers shall ensure that checklists shall remain onsite with the SWPPP and at a minimum, shall include:

    a. Inspection date and date the inspection report was written.

    b. Weather information, including presence or absence of precipitation, estimate of beginning of qualifying storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall in inches.

    c. Site information, including stage of construction, activities completed, and approximate area of the site exposed.

    d. A description of any BMPs evaluated and any deficiencies noted.

    e. If the construction site is safely accessible during inclement weather, list the observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list the results of visual inspections at all relevant outfalls, discharge points, downstream locations and any projected maintenance activities.

    f. Report the presence of noticeable odors or of any visible sheen on the surface of any discharges.

    g. Any corrective actions required, including any necessary changes to the SWPPP and the associated implementation dates.

    h. Photographs taken during the inspection, if any.

    i. Inspector’s name, title, and signature.

H. Rain Event Action Plan

Not required for Risk Level 1 dischargers.

I. Risk Level 1 Monitoring and Reporting Requirements

Table 1- Summary of Monitoring Requirements

Risk Level	Visual Inspections					Sample Collection	
	Quarterly Non-storm Water Discharge	Pre-storm Event		Daily Storm BMP	Post Storm	Storm Water Discharge	Receiving Water
		Baseline	REAP				
1	X	X		X	X		

1. **Construction Site Monitoring Program Requirements**

   a. Pursuant to Water Code Sections 13383 and 13267, all dischargers subject to this General Permit shall develop and implement a written site-specific Construction Site Monitoring Program (CSMP) in accordance with the requirements of this Section. The CSMP shall include all monitoring procedures and instructions, location maps, forms, and checklists as required in this section. The CSMP shall be developed prior to the commencement of construction activities, and revised as necessary to reflect project revisions. The CSMP shall be a part of the Storm Water Pollution Prevention Plan (SWPPP), included as an appendix or separate SWPPP chapter.

   b. Existing dischargers registered under the State Water Board Order No. 99-08-DWQ shall make and implement necessary revisions to their Monitoring Programs to reflect the changes in this General Permit in a timely manner, but no later than July 1, 2010. Existing dischargers shall continue to implement their existing Monitoring Programs in compliance with State Water Board Order No. 99-08-DWQ until the necessary revisions are completed according to the schedule above.

   c. When a change of ownership occurs for all or any portion of the construction site prior to completion or final stabilization, the new discharger shall comply with these requirements as of the date the ownership change occurs.

2. **Objectives**

   The CSMP shall be developed and implemented to address the following objectives:

   a. To demonstrate that the site is in compliance with the Discharge Prohibitions;

b. To determine whether non-visible pollutants are present at the construction site and are causing or contributing to exceedances of water quality objectives;

c. To determine whether immediate corrective actions, additional Best Management Practice (BMP) implementation, or SWPPP revisions are necessary to reduce pollutants in storm water discharges and authorized non-storm water discharges; and

d. To determine whether BMPs included in the SWPPP are effective in preventing or reducing pollutants in storm water discharges and authorized non-storm water discharges.

3. **Risk Level 1 - Visual Monitoring (Inspection) Requirements for Qualifying Rain Events**

a. Risk Level 1 dischargers shall visually observe (inspect) storm water discharges at all discharge locations within two business days (48 hours) after each qualifying rain event.

b. Risk Level 1 dischargers shall visually observe (inspect) the discharge of stored or contained storm water that is derived from and discharged subsequent to a qualifying rain event producing precipitation of ½ inch or more at the time of discharge. Stored or contained storm water that will likely discharge after operating hours due to anticipated precipitation shall be observed prior to the discharge during operating hours.

c. Risk Level 1 dischargers shall conduct visual observations (inspections) during business hours only.

d. Risk Level 1 dischargers shall record the time, date and rain gauge reading of all qualifying rain events.

e. Within 2 business days (48 hours) prior to each qualifying rain event, Risk Level 1 dischargers shall visually observe (inspect):

i. All storm water drainage areas to identify any spills, leaks, or uncontrolled pollutant sources. If needed, the discharger shall implement appropriate corrective actions.

ii. All BMPs to identify whether they have been properly implemented in accordance with the SWPPP. If needed, the discharger shall implement appropriate corrective actions.

iii. Any storm water storage and containment areas to detect leaks and ensure maintenance of adequate freeboard.

f. For the visual observations (inspections) described in e.i and e.iii above, Risk Level 1 dischargers shall observe the presence or absence of floating and suspended materials, a sheen on the surface, discolorations, turbidity, odors, and source(s) of any observed pollutants.

g. Within two business days (48 hours) after each qualifying rain event, Risk Level 1 dischargers shall conduct post rain event visual observations (inspections) to (1) identify whether BMPs were adequately designed, implemented, and effective, and (2) identify additional BMPs and revise the SWPPP accordingly.

h. Risk Level 1 dischargers shall maintain on-site records of all visual observations (inspections), personnel performing the observations, observation dates, weather conditions, locations observed, and corrective actions taken in response to the observations.

4. **Risk Level 1 – Visual Observation Exemptions**

a. Risk Level 1 dischargers shall be prepared to conduct visual observation (inspections) until the minimum requirements of Section I.3 above are completed. Risk Level 1 dischargers are not required to conduct visual observation (inspections) under the following conditions:

i. During dangerous weather conditions such as flooding and electrical storms.

ii. Outside of scheduled site business hours.

b. If no required visual observations (inspections) are collected due to these exceptions, Risk Level 1 dischargers shall include an explanation in their SWPPP and in the Annual Report documenting why the visual observations (inspections) were not conducted.

5. **Risk Level 1 – Monitoring Methods**

Risk Level 1 dischargers shall include a description of the visual observation locations, visual observation procedures, and visual observation follow-up and tracking procedures in the CSMP.

6. **Risk Level 1 – Non-Storm Water Discharge Monitoring Requirements**

a. Visual Monitoring Requirements:

   i. Risk Level 1 dischargers shall visually observe (inspect) each drainage area for the presence of (or indications of prior) unauthorized and authorized non-storm water discharges and their sources.

   ii. Risk Level 1 dischargers shall conduct one visual observation (inspection) quarterly in each of the following periods: January-March, April-June, July-September, and October-December. Visual observation (inspections) are only required during daylight hours (sunrise to sunset).

   iii. Risk Level 1 dischargers shall ensure that visual observations (inspections) document the presence or evidence of any non-storm water discharge (authorized or unauthorized), pollutant characteristics (floating and suspended material, sheen, discoloration, turbidity, odor, etc.), and source. Risk Level 1 dischargers shall maintain on-site records indicating the personnel performing the visual observation (inspections), the dates and approximate time each drainage area and non-storm water discharge was observed, and the response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.

7. **Risk Level 1 – Non-Visible Pollutant Monitoring Requirements**

   a. Risk Level 1 dischargers shall collect one or more samples during any breach, malfunction, leakage, or spill observed during a visual inspection which could result in the discharge of pollutants to surface waters that would not be visually detectable in storm water.

   b. Risk Level 1 dischargers shall ensure that water samples are large enough to characterize the site conditions.

   c. Risk Level 1 dischargers shall collect samples at all discharge locations that can be safely accessed.

   d. Risk Level 1 dischargers shall collect samples during the first two hours of discharge from rain events that occur during business hours and which generate runoff.

   e. Risk Level 1 dischargers shall analyze samples for all non-visible pollutant parameters (if applicable) - parameters indicating the

presence of pollutants identified in the pollutant source assessment required (Risk Level 1 dischargers shall modify their CSMPs to address these additional parameters in accordance with any updated SWPPP pollutant source assessment).

f. Risk Level 1 dischargers shall collect a sample of storm water that has not come in contact with the disturbed soil or the materials stored or used on-site (uncontaminated sample) for comparison with the discharge sample.

g. Risk Level 1 dischargers shall compare the uncontaminated sample to the samples of discharge using field analysis or through laboratory analysis.[2]

h. Risk Level 1 dischargers shall keep all field /or analytical data in the SWPPP document.

8. **Risk Level 1 – Particle Size Analysis for Project Risk Justification**

Risk Level 1 dischargers justifying an alternative project risk shall report a soil particle size analysis used to determine the RUSLE K-Factor. ASTM D-422 (Standard Test Method for Particle-Size Analysis of Soils), as revised, shall be used to determine the percentages of sand, very fine sand, silt, and clay on the site.

9. **Risk Level 1 – Records**

Risk Level 1 dischargers shall retain records of all storm water monitoring information and copies of all reports (including Annual Reports) for a period of at least three years. Risk Level 1 dischargers shall retain all records on-site while construction is ongoing. These records include:

a. The date, place, time of facility inspections, sampling, visual observation (inspections), and/or measurements, including precipitation.

b. The individual(s) who performed the facility inspections, sampling, visual observation (inspections), and or measurements.

c. The date and approximate time of analyses.

d. The individual(s) who performed the analyses.

[2] For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field discharge samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed.

e. A summary of all analytical results from the last three years, the method detection limits and reporting units, and the analytical techniques or methods used.

f. Rain gauge readings from site inspections.

g. Quality assurance/quality control records and results.

h. Non-storm water discharge inspections and visual observation (inspections) and storm water discharge visual observation records (see Sections I.3 and I.6 above).

i. Visual observation and sample collection exception records (see Section I.4 above).

j. The records of any corrective actions and follow-up activities that resulted from analytical results, visual observation (inspections), or inspections.

ATTACHMENT D
RISK LEVEL 2 REQUIREMENTS

A. Effluent Standards

[These requirements are the same as those in the General Permit order.]

1. Narrative – Risk Level 2 dischargers shall comply with the narrative effluent standards listed below:

   a. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

   b. Dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

2. Numeric – Risk level 2 dischargers are subject to a pH NAL of 6.5-8.5, and a turbidity NAL of 250 NTU.

B. Good Site Management "Housekeeping"

1. Risk Level 2 dischargers shall implement good site management (i.e., "housekeeping") measures for construction materials that could potentially be a threat to water quality if discharged. At a minimum, Risk Level 2 dischargers shall implement the following good housekeeping measures:

   a. Conduct an inventory of the products used and/or expected to be used and the end products that are produced and/or expected to be produced. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

   b. Cover and berm loose stockpiled construction materials that are not actively being used (i.e. soil, spoils, aggregate, fly-ash, stucco, hydrated lime, etc.).

c. Store chemicals in watertight containers (with appropriate secondary containment to prevent any spillage or leakage) or in a storage shed (completely enclosed).

d. Minimize exposure of construction materials to precipitation. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

e. Implement BMPs to prevent the off-site tracking of loose construction and landscape materials.

2. Risk Level 2 dischargers shall implement good housekeeping measures for waste management, which, at a minimum, shall consist of the following:

a. Prevent disposal of any rinse or wash waters or materials on impervious or pervious site surfaces or into the storm drain system.

b. Ensure the containment of sanitation facilities (e.g., portable toilets) to prevent discharges of pollutants to the storm water drainage system or receiving water.

c. Clean or replace sanitation facilities and inspecting them regularly for leaks and spills.

d. Cover waste disposal containers at the end of every business day and during a rain event.

e. Prevent discharges from waste disposal containers to the storm water drainage system or receiving water.

f. Contain and securely protect stockpiled waste material from wind and rain at all times unless actively being used.

g. Implement procedures that effectively address hazardous and non-hazardous spills.

h. Develop a spill response and implementation element of the SWPPP prior to commencement of construction activities. The SWPPP shall require:

i. Equipment and materials for cleanup of spills shall be available on site and that spills and leaks shall be cleaned up immediately and disposed of properly.

ii. Appropriate spill response personnel are assigned and trained.

i. Ensure the containment of concrete washout areas and other washout areas that may contain additional pollutants so there is no discharge into the underlying soil and onto the surrounding areas.

3. Risk Level 2 dischargers shall implement good housekeeping for vehicle storage and maintenance, which, at a minimum, shall consist of the following:

   a. Prevent oil, grease, or fuel to leak in to the ground, storm drains or surface waters.

   b. Place all equipment or vehicles, which are to be fueled, maintained and stored in a designated area fitted with appropriate BMPs.

   c. Clean leaks immediately and disposing of leaked materials properly.

4. Risk Level 2 dischargers shall implement good housekeeping for landscape materials, which, at a minimum, shall consist of the following:

   a. Contain stockpiled materials such as mulches and topsoil when they are not actively being used.

   b. Contain all fertilizers and other landscape materials when they are not actively being used.

   c. Discontinue the application of any erodible landscape material within 2 days before a forecasted rain event or during periods of precipitation.

   d. Apply erodible landscape material at quantities and application rates according to manufacture recommendations or based on written specifications by knowledgeable and experienced field personnel.

   e. Stack erodible landscape material on pallets and covering or storing such materials when not being used or applied.

5. Risk Level 2 dischargers shall conduct an assessment and create a list of potential pollutant sources and identify any areas of the site where additional BMPs are necessary to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. This potential pollutant list shall be kept with the SWPPP and shall identify

all non-visible pollutants which are known, or should be known, to occur on the construction site. At a minimum, when developing BMPs, Risk Level 2 dischargers shall do the following:

a. Consider the quantity, physical characteristics (e.g., liquid, powder, solid), and locations of each potential pollutant source handled, produced, stored, recycled, or disposed of at the site.

b. Consider the degree to which pollutants associated with those materials may be exposed to and mobilized by contact with storm water.

c. Consider the direct and indirect pathways that pollutants may be exposed to storm water or authorized non-storm water discharges. This shall include an assessment of past spills or leaks, non-storm water discharges, and discharges from adjoining areas.

d. Ensure retention of sampling, visual observation, and inspection records.

e. Ensure effectiveness of existing BMPs to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges.

6. Risk Level 2 dischargers shall implement good housekeeping measures on the construction site to control the air deposition of site materials and from site operations. Such particulates can include, but are not limited to, sediment, nutrients, trash, metals, bacteria, oil and grease and organics.

7. **Additional Risk Level 2 Requirement:** Risk Level 2 dischargers shall document all housekeeping BMPs in the SWPPP and REAP(s) in accordance with the nature and phase of the construction project. Construction phases at traditional land development projects include Grading and Land Development Phase, Streets and Utilities, or Vertical Construction for traditional land development projects.

C. Non-Storm Water Management

1. Risk Level 2 dischargers shall implement measures to control all non-storm water discharges during construction.

2. Risk Level 2 dischargers shall wash vehicles in such a manner as to prevent non-storm water discharges to surface waters or MS4 drainage systems.

3. Risk Level 2 dischargers shall clean streets in such a manner as to prevent unauthorized non-storm water discharges from reaching surface water or MS4 drainage systems.

D. Erosion Control

1. Risk Level 2 dischargers shall implement effective wind erosion control.

2. Risk Level 2 dischargers shall provide effective soil cover for inactive[1] areas and all finished slopes, open space, utility backfill, and completed lots.

3. Risk Level 2 dischargers shall limit the use of plastic materials when more sustainable, environmentally friendly alternatives exist. Where plastic materials are deemed necessary, the discharger shall consider the use of plastic materials resistant to solar degradation.

E. Sediment Controls

1. Risk Level 2 dischargers shall establish and maintain effective perimeter controls and stabilize all construction entrances and exits to sufficiently control erosion and sediment discharges from the site.

2. On sites where sediment basins are to be used, Risk Level 2 dischargers shall, at minimum, design sediment basins according to the method provided in CASQA's Construction BMP Guidance Handbook.

3. **Additional Risk Level 2 Requirement:** Risk Level 2 dischargers shall implement appropriate erosion control BMPs (runoff control and soil stabilization) in conjunction with sediment control BMPs for areas under active[2] construction.

4. **Additional Risk Level 2 Requirement:** Risk Level 2 dischargers shall apply linear sediment controls along the toe of the slope, face of the slope, and at the grade breaks of exposed slopes to comply with sheet flow lengths[3] in accordance with Table 1.

[1] Inactive areas of construction are areas of construction activity that have been disturbed and are not scheduled to be re-disturbed for at least 14 days.
[2] Active areas of construction are areas undergoing land surface disturbance. This includes construction activity during the preliminary stage, mass grading stage, streets and utilities stage and the vertical construction stage.
[3] Sheet flow length is the length that shallow, low velocity flow travels across a site.

Table 1 - Critical Slope/Sheet Flow Length Combinations

Slope Percentage	Sheet flow length not to exceed
0-25%	20 feet
25-50%	15 feet
Over 50%	10 feet

5. **Additional Risk Level 2 Requirement:** Risk Level 2 dischargers shall ensure that construction activity traffic to and from the project is limited to entrances and exits that employ effective controls to prevent offsite tracking of sediment.

6. **Additional Risk Level 2 Requirement:** Risk Level 2 dischargers shall ensure that all storm drain inlets and perimeter controls, runoff control BMPs, and pollutant controls at entrances and exits (e.g. tire washoff locations) are maintained and protected from activities that reduce their effectiveness.

7. **Additional Risk Level 2 Requirement:** Risk Level 2 dischargers shall inspect on a daily basis all immediate access roads daily. At a minimum daily (when necessary) and prior to any rain event, the discharger shall remove any sediment or other construction activity-related materials that are deposited on the roads (by vacuuming or sweeping).

F. Run-on and Run-off Controls

Risk Level 2 dischargers shall effectively manage all run-on, all runoff within the site and all runoff that discharges off the site. Run-on from off site shall be directed away from all disturbed areas or shall collectively be in compliance with the effluent limitations in this General Permit.

G. Inspection, Maintenance and Repair

1. Risk Level 2 dischargers shall ensure that all inspection, maintenance repair and sampling activities at the project location shall be performed or supervised by a Qualified SWPPP Practitioner (QSP) representing the discharger. The QSP may delegate any or all of these activities to an employee appropriately trained to do the task(s).

2. Risk Level 2 dischargers shall perform weekly inspections and observations, and at least once each 24-hour period during extended storm events, to identify and record BMPs that need maintenance to operate effectively, that have failed, or that could fail to operate as intended. Inspectors shall be the QSP or be trained by the QSP.

3. Upon identifying failures or other shortcomings, as directed by the QSP, Risk Level 2 dischargers shall begin implementing repairs or design changes to BMPs within 72 hours of identification and complete the changes as soon as possible.

4. For each inspection required, Risk Level 2 dischargers shall complete an inspection checklist, using a form provided by the State Water Board or Regional Water Board or in an alternative format.

5. Risk Level 2 dischargers shall ensure that checklists shall remain onsite with the SWPPP and at a minimum, shall include:

   a. Inspection date and date the inspection report was written.

   b. Weather information, including presence or absence of precipitation, estimate of beginning of qualifying storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall in inches.

   c. Site information, including stage of construction, activities completed, and approximate area of the site exposed.

   d. A description of any BMPs evaluated and any deficiencies noted.

   e. If the construction site is safely accessible during inclement weather, list the observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list the results of visual inspections at all relevant outfalls, discharge points, downstream locations and any projected maintenance activities.

   f. Report the presence of noticeable odors or of any visible sheen on the surface of any discharges.

   g. Any corrective actions required, including any necessary changes to the SWPPP and the associated implementation dates.

   h. Photographs taken during the inspection, if any.

   i. Inspector's name, title, and signature.

H. Rain Event Action Plan

1. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP develop a Rain Event Action Plan (REAP) 48 hours prior to any

likely precipitation event. A likely precipitation event is any weather pattern that is forecast to have a 50% or greater probability of producing precipitation in the project area. The discharger shall ensure a QSP obtain a printed copy of precipitation forecast information from the National Weather Service Forecast Office (e.g., by entering the zip code of the project's location at http://www.srh.noaa.gov/forecast).

2. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP develop the REAPs for all phases of construction (i.e., Grading and Land Development, Streets and Utilities, Vertical Construction, Final Landscaping and Site Stabilization).

3. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP ensure that the REAP include, at a minimum, the following site information:

   a. Site Address
   b. Calculated Risk Level (2 or 3)
   c. Site Storm Water Manager Information including the name, company, and 24-hour emergency telephone number
   d. Erosion and Sediment Control Provider information including the name, company, and 24-hour emergency telephone number
   e. Storm Water Sampling Agent information including the name, company, and 24-hour emergency telephone number

4. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP include in the REAP, at a minimum, the following project phase information:

   a. Activities associated with each construction phase
   b. Trades active on the construction site during each construction phase
   c. Trade contractor information
   d. Suggested actions for each project phase

5. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP develop additional REAPs for project sites where construction activities are indefinitely halted or postponed (Inactive Construction). At a minimum, Inactive Construction REAPs must include:

   a. Site Address
   b. Calculated Risk Level (2 or 3)
   c. Site Storm Water Manager Information including the name, company, and 24-hour emergency telephone number

d. Erosion and Sediment Control Provider information including the name, company, and 24-hour emergency telephone number
e. Storm Water Sampling Agent information including the name, company, and 24-hour emergency telephone number
f. Trades active on site during Inactive Construction
g. Trade contractor information
h. Suggested actions for inactive construction sites

6. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP begin implementation and make the REAP available onsite no later than 24 hours prior to the likely precipitation event.

7. **Additional Risk Level 2 Requirement:** The discharger shall ensure a QSP maintain onsite a paper copy of each REAP onsite in compliance with the record retention requirements of the Special Provisions in this General Permit.

I. Risk Level 2 Monitoring and Reporting Requirements

Table 2- Summary of Monitoring Requirements

Risk Level	Visual Inspections					Sample Collection	
	Quarterly Non-storm Water Discharge	Pre-storm Event		Daily Storm BMP	Post Storm	Storm Water Discharge	Receiving Water
		Baseline	REAP				
2	X	X	X	X	X	X	

1. Construction Site Monitoring Program Requirements

   a. Pursuant to Water Code Sections 13383 and 13267, all dischargers subject to this General Permit shall develop and implement a written site-specific Construction Site Monitoring Program (CSMP) in accordance with the requirements of this Section. The CSMP shall include all monitoring procedures and instructions, location maps, forms, and checklists as required in this section. The CSMP shall be developed prior to the commencement of construction activities, and revised as necessary to reflect project revisions. The CSMP shall be a part of the Storm Water Pollution Prevention Plan (SWPPP), included as an appendix or separate SWPPP chapter.

   b. Existing dischargers registered under the State Water Board Order No. 99-08-DWQ shall make and implement necessary revisions to their Monitoring Program to reflect the changes in this General Permit in a timely manner, but no later than July 1, 2010. Existing dischargers shall continue to implement their existing Monitoring Programs in compliance with State Water Board Order No. 99-08-DWQ until the necessary revisions are completed according to the schedule above.

   c. When a change of ownership occurs for all or any portion of the construction site prior to completion or final stabilization, the new discharger shall comply with these requirements as of the date the ownership change occurs.

2. **Objectives**

   The CSMP shall be developed and implemented to address the following objectives:

   a. To demonstrate that the site is in compliance with the Discharge Prohibitions and applicable Numeric Action Levels (NALs).

b. To determine whether non-visible pollutants are present at the construction site and are causing or contributing to exceedances of water quality objectives.

c. To determine whether immediate corrective actions, additional Best Management Practice (BMP) implementation, or SWPPP revisions are necessary to reduce pollutants in storm water discharges and authorized non-storm water discharges.

d. To determine whether BMPs included in the SWPPP/Rain Event Action Plan (REAP) are effective in preventing or reducing pollutants in storm water discharges and authorized non-storm water discharges.

3. **Risk Level 2 – Visual Monitoring (Inspection) Requirements for Qualifying Rain Events**

a. Risk Level 2 dischargers shall visually observe (inspect) storm water discharges at all discharge locations within two business days (48 hours) after each qualifying rain event.

b. Risk Level 2 dischargers shall visually observe (inspect) the discharge of stored or contained storm water that is derived from and discharged subsequent to a qualifying rain event producing precipitation of ½ inch or more at the time of discharge. Stored or contained storm water that will likely discharge after operating hours due to anticipated precipitation shall be observed prior to the discharge during operating hours.

c. Risk Level 2 dischargers shall conduct visual observations (inspections) during business hours only.

d. Risk Level 2 dischargers shall record the time, date and rain gauge reading of all qualifying rain events.

e. Within 2 business days (48 hours) prior to each qualifying rain event, Risk Level 2 dischargers shall visually observe (inspect):

i. all storm water drainage areas to identify any spills, leaks, or uncontrolled pollutant sources. If needed, the discharger shall implement appropriate corrective actions.

ii. all BMPs to identify whether they have been properly implemented in accordance with the SWPPP/REAP. If needed, the discharger shall implement appropriate corrective actions.

iii. any storm water storage and containment areas to detect leaks and ensure maintenance of adequate freeboard.

f. For the visual observations (inspections) described in c.i and c.iii above, Risk Level 2 dischargers shall observe the presence or absence of floating and suspended materials, a sheen on the surface, discolorations, turbidity, odors, and source(s) of any observed pollutants.

g. Within two business days (48 hours) after each qualifying rain event, Risk Level 2 dischargers shall conduct post rain event visual observations (inspections) to (1) identify whether BMPs were adequately designed, implemented, and effective, and (2) identify additional BMPs and revise the SWPPP accordingly.

h. Risk Level 2 dischargers shall maintain on-site records of all visual observations (inspections), personnel performing the observations, observation dates, weather conditions, locations observed, and corrective actions taken in response to the observations.

4. **Risk Level 2 – Water Quality Sampling and Analysis**

a. Risk Level 2 dischargers shall collect storm water grab samples from sampling locations, as defined in Section I.5. The storm water grab sample(s) obtained shall be representative of the flow and characteristics of the discharge.

b. At minimum, Risk Level 2 dischargers shall collect 3 samples per day of the qualifying event.

c. Risk Level 2 dischargers shall ensure that the grab samples collected of stored or contained storm water are from discharges subsequent to a qualifying rain event (producing precipitation of ½ inch or more at the time of discharge).

<u>Storm Water Effluent Monitoring Requirements</u>

d. Risk Level 2 dischargers shall analyze their effluent samples for:

i. pH and turbidity.

ii. Any additional parameters for which monitoring is required by the Regional Water Board.

5. **Risk Level 2 – Storm Water Discharge Water Quality Sampling Locations**

Effluent Sampling Locations

a. Risk Level 2 dischargers shall perform sampling and analysis of storm water discharges to characterize discharges associated with construction activity from the entire project disturbed area.

b. Risk Level 2 dischargers shall collect effluent samples at all discharge points where storm water is discharged off-site.

c. Risk Level 2 dischargers shall ensure that storm water discharge collected and observed represent[4] the effluent in each drainage area based on visual observation of the water and upstream conditions.

d. Risk Level 2 dischargers shall monitor and report site run-on from surrounding areas if there is reason to believe run-on may contribute to an exceedance of NALs.

e. Risk Level 2 dischargers who deploy an ATS on their site, or a portion on their site, shall collect ATS effluent samples and measurements from the discharge pipe or another location representative of the nature of the discharge.

f. Risk Level 2 dischargers shall select analytical test methods from the list provided in Table 3 below.

g. All storm water sample collection preservation and handling shall be conducted in accordance with Section I.7 “Storm Water Sample Collection and Handling Instructions” below.

6. **Risk Level 2 – Visual Observation and Sample Collection Exemptions**

a. Risk Level 2 dischargers shall be prepared to collect samples and conduct visual observation (inspections) until the minimum requirements of Sections I.3 and I.4 above are completed. Risk Level 2 dischargers are not required to physically collect samples or conduct visual observation (inspections) under the following conditions:

[4] For example, if there has been concrete work recently in an area, or drywall scrap is exposed to the rain, a pH sample shall be taken of drainage from the relevant work area. Similarly, if sediment laden water is flowing through some parts of a silt fence, samples shall be taken of the sediment-laden water even if most water flowing through the fence is clear.

i. During dangerous weather conditions such as flooding and electrical storms.

ii. Outside of scheduled site business hours.

b. If no required samples or visual observation (inspections) are collected due to these exceptions, Risk Level 2 dischargers shall include an explanation in their SWPPP and in the Annual Report documenting why the sampling or visual observation (inspections) were not conducted.

7. **Risk Level 2 – Storm Water Sample Collection and Handling Instructions**

a. Risk Level 2 dischargers shall refer to Table 3 below for test methods, detection limits, and reporting units.

b. Risk Level 2 dischargers shall ensure that testing laboratories will receive samples within 48 hours of the physical sampling (unless otherwise required by the laboratory), and shall use only the sample containers provided by the laboratory to collect and store samples.

c. Risk Level 2 dischargers shall designate and train personnel to collect, maintain, and ship samples in accordance with the Surface Water Ambient Monitoring Program's (SWAMP) 2008 Quality Assurance Program Plan (QAPrP).[5]

8. **Risk Level 2 – Monitoring Methods**

a. Risk Level 2 dischargers shall include a description of the following items in the CSMP:

i. Visual observation locations, visual observation procedures, and visual observation follow-up and tracking procedures.

ii. Sampling locations, and sample collection and handling procedures. This shall include detailed procedures for sample collection, storage, preservation, and shipping to the testing lab to assure that consistent quality control and quality assurance is maintained. Dischargers shall attach to the monitoring program

[5] Additional information regarding SWAMP's QAPrP can be found at http://www.waterboards.ca.gov/water_issues/programs/swamp/. QAPrP:http://www.waterboards.ca.gov/water_issues/programs/swamp/docs/qapp/swamp_qapp_master090108a.pdf.

an example Chain of Custody form used when handling and shipping samples.

iii. Identification of the analytical methods and related method detection limits (if applicable) for each parameter required in Section I.4 above.

b. Risk Level 2 dischargers shall ensure that all sampling and sample preservation are in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a discharger's own field instruments for measuring pH and turbidity) should be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. Risk Level 2 dischargers shall ensure that all laboratory analyses are conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. With the exception of field analysis conducted by the discharger for turbidity and pH, all analyses should be sent to and conducted at a laboratory certified for such analyses by the State Department of Health Services. Risk Level 2 dischargers shall conduct their own field analysis of pH and may conduct their own field analysis of turbidity if the discharger has sufficient capability (qualified and trained employees, properly calibrated and maintained field instruments, etc.) to adequately perform the field analysis.

9. **Risk Level 2 – Analytical Methods**

a. Risk Level 2 dischargers shall refer to Table 3 below for test methods, detection limits, and reporting units.

b. **pH**: Risk Level 2 dischargers shall perform pH analysis on-site with a calibrated pH meter or a pH test kit. Risk Level 2 dischargers shall record pH monitoring results on paper and retain these records in accordance with Section I.14, below.

c. **Turbidity**: Risk Level 2 dischargers shall perform turbidity analysis using a calibrated turbidity meter (turbidimeter), either on-site or at an accredited lab. Acceptable test methods include Standard Method 2130 or USEPA Method 180.1. The results will be recorded in the site log book in Nephelometric Turbidity Units (NTU).

10. **Risk Level 2 - Non-Storm Water Discharge Monitoring Requirements**

a. Visual Monitoring Requirements:

   i. Risk Level 2 dischargers shall visually observe (inspect) each drainage area for the presence of (or indications of prior) unauthorized and authorized non-storm water discharges and their sources.

   ii. Risk Level 2 dischargers shall conduct one visual observation (inspection) quarterly in each of the following periods: January-March, April-June, July-September, and October-December. Visual observation (inspections) are only required during daylight hours (sunrise to sunset).

   iii. Risk Level 2 dischargers shall ensure that visual observations (inspections) document the presence or evidence of any non-storm water discharge (authorized or unauthorized), pollutant characteristics (floating and suspended material, sheen, discoloration, turbidity, odor, etc.), and source. Risk Level 2 dischargers shall maintain on-site records indicating the personnel performing the visual observation (inspections), the dates and approximate time each drainage area and non-storm water discharge was observed, and the response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges.

b. Effluent Sampling Locations:

   i. Risk Level 2 dischargers shall sample effluent at all discharge points where non-storm water and/or authorized non-storm water is discharged off-site.

   ii. Risk Level 2 dischargers shall send all non-storm water sample analyses to a laboratory certified for such analyses by the State Department of Health Services.

   iii. Risk Level 2 dischargers shall monitor and report run-on from surrounding areas if there is reason to believe run-on may contribute to an exceedance of NALs.

11. **Risk Level 2 – Non-Visible Pollutant Monitoring Requirements**

a. Risk Level 2 dischargers shall collect one or more samples during any breach, malfunction, leakage, or spill observed during a visual

inspection which could result in the discharge of pollutants to surface waters that would not be visually detectable in storm water.

b. Risk Level 2 dischargers shall ensure that water samples are large enough to characterize the site conditions.

c. Risk Level 2 dischargers shall collect samples at all discharge locations that can be safely accessed.

d. Risk Level 2 dischargers shall collect samples during the first two hours of discharge from rain events that occur during business hours and which generate runoff.

e. Risk Level 2 dischargers shall analyze samples for all non-visible pollutant parameters (if applicable) - parameters indicating the presence of pollutants identified in the pollutant source assessment required (Risk Level 2 dischargers shall modify their CSMPs to address these additional parameters in accordance with any updated SWPPP pollutant source assessment).

f. Risk Level 2 dischargers shall collect a sample of storm water that has not come in contact with the disturbed soil or the materials stored or used on-site (uncontaminated sample) for comparison with the discharge sample.

g. Risk Level 2 dischargers shall compare the uncontaminated sample to the samples of discharge using field analysis or through laboratory analysis.[6]

h. Risk Level 2 dischargers shall keep all field /or analytical data in the SWPPP document.

12. **Risk Level 2 – Watershed Monitoring Option**

Risk Level 2 dischargers who are part of a qualified regional watershed-based monitoring program may be eligible for relief from the requirements in Sections I.5. The Regional Water Board may approve proposals to substitute an acceptable watershed-based monitoring program by determining if the watershed-based monitoring program will provide substantially similar monitoring information in evaluating discharger compliance with the requirements of this General Permit.

[6] For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field discharge samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed.

13. **Risk Level 2 – Particle Size Analysis for Project Risk Justification**

    Risk Level 2 dischargers justifying an alternative project risk shall report a soil particle size analysis used to determine the RUSLE K-Factor. ASTM D-422 (Standard Test Method for Particle-Size Analysis of Soils), as revised, shall be used to determine the percentages of sand, very fine sand, silt, and clay on the site.

14. **Risk Level 2 – Records**

    Risk Level 2 dischargers shall retain records of all storm water monitoring information and copies of all reports (including Annual Reports) for a period of at least three years. Risk Level 2 dischargers shall retain all records on-site while construction is ongoing. These records include:

    a. The date, place, time of facility inspections, sampling, visual observation (inspections), and/or measurements, including precipitation.

    b. The individual(s) who performed the facility inspections, sampling, visual observation (inspections), and or measurements.

    c. The date and approximate time of analyses.

    d. The individual(s) who performed the analyses.

    e. A summary of all analytical results from the last three years, the method detection limits and reporting units, the analytical techniques or methods used, and the chain of custody forms.

    f. Rain gauge readings from site inspections;

    g. Quality assurance/quality control records and results.

    h. Non-storm water discharge inspections and visual observation (inspections) and storm water discharge visual observation records (see Sections I.3 and I.10 above).

    i. Visual observation and sample collection exception records (see Section I.6 above).

    j. The records of any corrective actions and follow-up activities that resulted from analytical results, visual observation (inspections), or inspections.

15. **Risk Level 2 – NAL Exceedance Report**

a. In the event that any effluent sample exceeds an applicable NAL, Risk Level 2 dischargers shall electronically submit all storm event sampling results to the State Water Board no later than 10 days after the conclusion of the storm event. The Regional Boards have the authority to require the submittal of an NAL Exceedance Report.

b. Risk Level 2 dischargers shall certify each NAL Exceedance Report in accordance with the Special Provisions for Construction Activity.

c. Risk Level 2 dischargers shall retain an electronic or paper copy of each NAL Exceedance Report for a minimum of three years after the date the annual report is filed.

d. Risk Level 2 dischargers shall include in the NAL Exceedance Report:

i. The analytical method(s), method reporting unit(s), and method detection limit(s) of each analytical parameter (analytical results that are less than the method detection limit shall be reported as “less than the method detection limit”).

ii. The date, place, time of sampling, visual observation (inspections), and/or measurements, including precipitation.

iii. A description of the current BMPs associated with the effluent sample that exceeded the NAL and the proposed corrective actions taken.

Table 3 – Risk Level 2 Test Methods, Detection Limits, Reporting Units and Applicable NALs/NELs

Parameter	Test Method / Protocol	Discharge Type	Min. Detection Limit	Reporting Units	Numeric Action Level
pH	Field test with calibrated portable instrument	Risk Level 2 Discharges	0.2	pH units	lower NAL = 6.5 upper NAL = 8.5
Turbidity	EPA 0180.1 and/or field test with calibrated portable instrument	Risk Level 2 Discharges other than ATS	1	NTU	250 NTU
		For ATS discharges	1	NTU	N/A

ATTACHMENT E
RISK LEVEL 3 REQUIREMENTS

A. Effluent Standards

[These requirements are the same as those in the General Permit order.]

1. Narrative – Risk Level 3 dischargers shall comply with the narrative effluent standards listed below:

   a. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of reportable quantities established in 40 C.F.R. §§ 117.3 and 302.4, unless a separate NPDES Permit has been issued to regulate those discharges.

   b. Dischargers shall minimize or prevent pollutants in storm water discharges and authorized non-storm water discharges through the use of controls, structures, and management practices that achieve BAT for toxic and non-conventional pollutants and BCT for conventional pollutants.

2. Numeric –Risk Level 3 dischargers are subject to a pH NAL of 6.5-8.5, and a turbidity NAL of 250 NTU.

B. Good Site Management "Housekeeping"

1. Risk Level 3 dischargers shall implement good site management (i.e., "housekeeping") measures for construction materials that could potentially be a threat to water quality if discharged. At a minimum, Risk Level 3 dischargers shall implement the following good housekeeping measures:

   a. Conduct an inventory of the products used and/or expected to be used and the end products that are produced and/or expected to be produced. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

   b. Cover and berm loose stockpiled construction materials that are not actively being used (i.e. soil, spoils, aggregate, fly-ash, stucco, hydrated lime, etc.).

c. Store chemicals in watertight containers (with appropriate secondary containment to prevent any spillage or leakage) or in a storage shed (completely enclosed).

d. Minimize exposure of construction materials to precipitation. This does not include materials and equipment that are designed to be outdoors and exposed to environmental conditions (i.e. poles, equipment pads, cabinets, conductors, insulators, bricks, etc.).

e. Implement BMPs to prevent the off-site tracking of loose construction and landscape materials.

2. Risk Level 3 dischargers shall implement good housekeeping measures for waste management, which, at a minimum, shall consist of the following:

a. Prevent disposal of any rinse or wash waters or materials on impervious or pervious site surfaces or into the storm drain system.

b. Ensure the containment of sanitation facilities (e.g., portable toilets) to prevent discharges of pollutants to the storm water drainage system or receiving water.

c. Clean or replace sanitation facilities and inspecting them regularly for leaks and spills.

d. Cover waste disposal containers at the end of every business day and during a rain event.

e. Prevent discharges from waste disposal containers to the storm water drainage system or receiving water.

f. Contain and securely protecting stockpiled waste material from wind and rain at all times unless actively being used.

g. Implement procedures that effectively address hazardous and non-hazardous spills.

h. Develop a spill response and implementation element of the SWPPP prior to commencement of construction activities. The SWPPP shall require that:

i. Equipment and materials for cleanup of spills shall be available on site and that spills and leaks shall be cleaned up immediately and disposed of properly; and

ii. Appropriate spill response personnel are assigned and trained.

i. Ensure the containment of concrete washout areas and other washout areas that may contain additional pollutants so there is no discharge into the underlying soil and onto the surrounding areas.

3. Risk Level 3 dischargers shall implement good housekeeping for vehicle storage and maintenance, which, at a minimum, shall consist of the following:

   a. Prevent oil, grease, or fuel to leak in to the ground, storm drains or surface waters.

   b. Place all equipment or vehicles, which are to be fueled, maintained and stored in a designated area fitted with appropriate BMPs.

   c. Clean leaks immediately and disposing of leaked materials properly.

4. Risk Level 3 dischargers shall implement good housekeeping for landscape materials, which, at a minimum, shall consist of the following:

   a. Contain stockpiled materials such as mulches and topsoil when they are not actively being used.

   b. Contain fertilizers and other landscape materials when they are not actively being used.

   c. Discontinuing the application of any erodible landscape material within 2 days before a forecasted rain event or during periods of precipitation.

   d. Applying erodible landscape material at quantities and application rates according to manufacture recommendations or based on written specifications by knowledgeable and experienced field personnel.

   e. Stacking erodible landscape material on pallets and covering or storing such materials when not being used or applied.

5. Risk Level 3 dischargers shall conduct an assessment and create a list of potential pollutant sources and identify any areas of the site where additional BMPs are necessary to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. This potential pollutant list shall be kept with the SWPPP and shall identify

all non-visible pollutants which are known, or should be known, to occur on the construction site. At a minimum, when developing BMPs, Risk Level 3 dischargers shall do the following:

a. Consider the quantity, physical characteristics (e.g., liquid, powder, solid), and locations of each potential pollutant source handled, produced, stored, recycled, or disposed of at the site.

b. Consider the degree to which pollutants associated with those materials may be exposed to and mobilized by contact with storm water.

c. Consider the direct and indirect pathways that pollutants may be exposed to storm water or authorized non-storm water discharges. This shall include an assessment of past spills or leaks, non-storm water discharges, and discharges from adjoining areas.

d. Ensure retention of sampling, visual observation, and inspection records.

e. Ensure effectiveness of existing BMPs to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges.

6. Risk Level 3 dischargers shall implement good housekeeping measures on the construction site to control the air deposition of site materials and from site operations. Such particulates can include, but are not limited to, sediment, nutrients, trash, metals, bacteria, oil and grease and organics.

7. **Additional Risk Level 3 Requirement:** Risk Level 3 dischargers shall document all housekeeping BMPs in the SWPPP and REAP(s) in accordance with the nature and phase of the construction project. Construction phases at traditional land development projects include Grading and Land Development Phase, Streets and Utilities, or Vertical Construction for traditional land development projects.

C. Non-Storm Water Management

1. Risk Level 3 dischargers shall implement measures to control all non-storm water discharges during construction.

2. Risk Level 3 dischargers shall wash vehicles in such a manner as to prevent non-storm water discharges to surface waters or MS4 drainage systems.

3. Risk Level 3 dischargers shall clean streets in such a manner as to prevent unauthorized non-storm water discharges from reaching surface water or MS4 drainage systems.

D. Erosion Control

1. Risk Level 3 dischargers shall implement effective wind erosion control.

2. Risk Level 3 dischargers shall provide effective soil cover for inactive[1] areas and all finished slopes, open space, utility backfill, and completed lots.

3. Dischargers shall limit the use of plastic materials when more sustainable, environmentally friendly alternatives exist. Where plastic materials are deemed necessary, the discharger shall consider the use of plastic materials resistant to solar degradation.

E. Sediment Controls

1. Risk Level 3 dischargers shall establish and maintain effective perimeter controls and stabilize all construction entrances and exits to sufficiently control erosion and sediment discharges from the site.

2. On sites where sediment basins are to be used, Risk Level 3 dischargers shall, at minimum, design sediment basins according to the method provided in CASQA's Construction BMP Guidance Handbook.

3. **Additional Risk Level 3 Requirement:** Risk Level 3 dischargers shall implement appropriate erosion control BMPs (runoff control and soil stabilization) in conjunction with sediment control BMPs for areas under active[2] construction.

4. **Additional Risk Level 3 Requirement:** Risk Level 3 dischargers shall apply linear sediment controls along the toe of the slope, face of the slope, and at the grade breaks of exposed slopes to comply with sheet flow lengths[3] in accordance with Table 1.

[1] Inactive areas of construction are areas of construction activity that have been disturbed and are not scheduled to be re-disturbed for at least 14 days.
[2] Active areas of construction are areas undergoing land surface disturbance. This includes construction activity during the preliminary stage, mass grading stage, streets and utilities stage and the vertical construction stage
[3] Sheet flow length is the length that shallow, low velocity flow travels across a site.

Table 1 - Critical Slope/Sheet Flow Length Combinations

Slope Percentage	Sheet flow length not to exceed
0-25%	20 feet
25-50%	15 feet
Over 50%	10 feet

5. **Additional Risk Level 3 Requirement:** Risk Level 3 dischargers shall ensure that construction activity traffic to and from the project is limited to entrances and exits that employ effective controls to prevent offsite tracking of sediment.

6. **Additional Risk Level 3 Requirement:** Risk Level 3 dischargers shall ensure that all storm drain inlets and perimeter controls, runoff control BMPs, and pollutant controls at entrances and exits (e.g. tire washoff locations) are maintained and protected from activities that reduce their effectiveness.

7. **Additional Risk Level 3 Requirement:** Risk Level 3 dischargers shall inspect on a daily basis all immediate access roads daily. At a minimum daily (when necessary) and prior to any rain event, the discharger shall remove any sediment or other construction activity-related materials that are deposited on the roads (by vacuuming or sweeping).

8. **Additional Risk Level 3 Requirement:** The Regional Water Board may require Risk Level 3 dischargers to implement additional site-specific sediment control requirements if the implementation of the other requirements in this section are not adequately protecting the receiving waters.

F. Run-on and Run-off Controls

Risk Level 3 dischargers shall effectively manage all run-on, all runoff within the site and all runoff that discharges off the site. Run-on from off site shall be directed away from all disturbed areas or shall collectively be in compliance with the effluent limitations in this General Permit.

G. Inspection, Maintenance and Repair

1. Risk Level 3 dischargers shall ensure that all inspection, maintenance repair and sampling activities at the project location shall be performed or supervised by a Qualified SWPPP Practitioner (QSP) representing the discharger. The QSP may delegate any or all of these activities to an employee appropriately trained to do the task(s).

2. Risk Level 3 dischargers shall perform weekly inspections and observations, and at least once each 24-hour period during extended storm events, to identify and record BMPs that need maintenance to operate effectively, that have failed, or that could fail to operate as intended. Inspectors shall be the QSP or be trained by the QSP.

3. Upon identifying failures or other shortcomings, as directed by the QSP, Risk Level 3 dischargers shall begin implementing repairs or design changes to BMPs within 72 hours of identification and complete the changes as soon as possible.

4. For each inspection required, Risk Level 3 dischargers shall complete an inspection checklist, using a form provided by the State Water Board or Regional Water Board or in an alternative format.

5. Risk Level 3 dischargers shall ensure that checklists shall remain onsite with the SWPPP and at a minimum, shall include:

    a. Inspection date and date the inspection report was written.

    b. Weather information, including presence or absence of precipitation, estimate of beginning of qualifying storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall in inches.

    c. Site information, including stage of construction, activities completed, and approximate area of the site exposed.

    d. A description of any BMPs evaluated and any deficiencies noted.

    e. If the construction site is safely accessible during inclement weather, list the observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list the results of visual inspections at all relevant outfalls, discharge points, downstream locations and any projected maintenance activities.

    f. Report the presence of noticeable odors or of any visible sheen on the surface of any discharges.

    g. Any corrective actions required, including any necessary changes to the SWPPP and the associated implementation dates.

    h. Photographs taken during the inspection, if any.

i. Inspector's name, title, and signature.

H. Rain Event Action Plan

1. **Additional Risk Level 3 Requirement:** The discharger shall ensure a QSP develop a Rain Event Action Plan (REAP) 48 hours prior to any likely precipitation event. A likely precipitation event is any weather pattern that is forecast to have a 50% or greater probability of producing precipitation in the project area. The QSP shall obtain a printed copy of precipitation forecast information from the National Weather Service Forecast Office (e.g., by entering the zip code of the project's location at http://www.srh.noaa.gov/forecast).

2. **Additional Risk Level 3 Requirement:** The discharger shall ensure a QSP develop the REAPs for all phases of construction (i.e., Grading and Land Development, Streets and Utilities, Vertical Construction, Final Landscaping and Site Stabilization).

3. **Additional Risk Level 3 Requirement:** The discharger shall ensure a QSP ensure that the REAP include, at a minimum, the following site information:

   a. Site Address.
   b. Calculated Risk Level (2 or 3).
   c. Site Storm Water Manager Information including the name, company, and 24-hour emergency telephone number.
   d. Erosion and Sediment Control Provider information including the name, company, and 24-hour emergency telephone number.
   e. Storm Water Sampling Agent information including the name, company, and 24-hour emergency telephone number.

4. **Additional Risk Level 3 Requirement:** The QSP shall include in the REAP, at a minimum, the following project phase information:

   a. Activities associated with each construction phase.
   b. Trades active on the construction site during each construction phase.
   c. Trade contractor information.
   d. Suggested actions for each project phase.

5. **Additional Risk Level 3 Requirement:** The QSP shall develop additional REAPs for project sites where construction activities are indefinitely halted or postponed (Inactive Construction). At a minimum, Inactive Construction REAPs must include:

a. Site Address.
b. Calculated Risk Level (2 or 3).
c. Site Storm Water Manager Information including the name, company, and 24-hour emergency telephone number.
d. Erosion and Sediment Control Provider information including the name, company, and 24-hour emergency telephone number.
e. Storm Water Sampling Agent information including the name, company, and 24-hour emergency telephone number.
f. Trades active on site during Inactive Construction.
g. Trade contractor information.
h. Suggested actions for inactive construction sites.

6. **Additional Risk Level 3 Requirement:** The discharger shall ensure a QSP begin implementation and make the REAP available onsite no later than 24 hours prior to the likely precipitation event.

7. **Additional Risk Level 3 Requirement:** The discharger shall ensure a QSP maintain onsite a paper copy of each REAP onsite in compliance with the record retention requirements of the Special Provisions in this General Permit.

I. Risk Level 3 Monitoring and Reporting Requirements

Table 2- Summary of Monitoring Requirements

Risk Level	Visual Inspections					Sample Collection	
	Quarterly Non-storm Water Discharge	Pre-storm Event		Daily Storm BMP	Post Storm	Storm Water Discharge	Receiving Water
		Baseline	REAP				
3	X	X	X	X	X	X	X[4]

1. Construction Site Monitoring Program Requirements

   a. Pursuant to Water Code Sections 13383 and 13267, all dischargers subject to this General Permit shall develop and implement a written site-specific Construction Site Monitoring Program (CSMP) in accordance with the requirements of this Section. The CSMP shall include all monitoring procedures and instructions, location maps, forms, and checklists as required in this section. The CSMP shall be developed prior to the commencement of construction activities, and revised as necessary to reflect project revisions. The CSMP shall be a part of the Storm Water Pollution Prevention Plan (SWPPP), included as an appendix or separate SWPPP chapter.

   b. Existing dischargers registered under the State Water Board Order No. 99-08-DWQ shall make and implement necessary revisions to their Monitoring Program to reflect the changes in this General Permit in a timely manner, but no later than July 1, 2010. Existing dischargers shall continue to implement their existing Monitoring Program in compliance with State Water Board Order No. 99-08-DWQ until the necessary revisions are completed according to the schedule above.

   c. When a change of ownership occurs for all or any portion of the construction site prior to completion or final stabilization, the new discharger shall comply with these requirements as of the date the ownership change occurs.

2. **Objectives**

   The CSMP shall be developed and implemented to address the following objectives:

[4] When receiving water monitoring trigger is exceeded

a. To demonstrate that the site is in compliance with the Discharge Prohibitions and applicable Numeric Action Levels (NALs) of this General Permit.

b. To determine whether non-visible pollutants are present at the construction site and are causing or contributing to exceedances of water quality objectives.

c. To determine whether immediate corrective actions, additional Best Management Practice (BMP) implementation, or SWPPP revisions are necessary to reduce pollutants in storm water discharges and authorized non-storm water discharges.

d. To determine whether BMPs included in the SWPPP/Rain Event Action Plan (REAP) are effective in preventing or reducing pollutants in storm water discharges and authorized non-storm water discharges.

3. **Risk Level 3 – Visual Monitoring (Inspection) Requirements for Qualifying Rain Events**

a. Risk Level 3 dischargers shall visually observe (inspect) storm water discharges at all discharge locations within two business days (48 hours) after each qualifying rain event.

b. Risk Level 3 dischargers shall visually observe (inspect) the discharge of stored or contained storm water that is derived from and discharged subsequent to a qualifying rain event producing precipitation of ½ inch or more at the time of discharge. Stored or contained storm water that will likely discharge after operating hours due to anticipated precipitation shall be observed prior to the discharge during operating hours.

c. Risk Level 3 dischargers shall conduct visual observations (inspections) during business hours only.

d. Risk Level 3 dischargers shall record the time, date and rain gauge reading of all qualifying rain events.

e. Within 2 business days (48 hours) prior to each qualifying rain event, Risk Level 3 dischargers shall visually observe (inspect):

i. all storm water drainage areas to identify any spills, leaks, or uncontrolled pollutant sources. If needed, the discharger shall implement appropriate corrective actions.

ii. all BMPs to identify whether they have been properly implemented in accordance with the SWPPP/REAP. If needed, the discharger shall implement appropriate corrective actions.

iii. any storm water storage and containment areas to detect leaks and ensure maintenance of adequate freeboard.

f. For the visual observations (inspections) described in c.i. and c.iii above, Risk Level 3 dischargers shall observe the presence or absence of floating and suspended materials, a sheen on the surface, discolorations, turbidity, odors, and source(s) of any observed pollutants.

g. Within two business days (48 hours) after each qualifying rain event, Risk Level 3 dischargers shall conduct post rain event visual observations (inspections) to (1) identify whether BMPs were adequately designed, implemented, and effective, and (2) identify additional BMPs and revise the SWPPP accordingly.

h. Risk Level 3 dischargers shall maintain on-site records of all visual observations (inspections), personnel performing the observations, observation dates, weather conditions, locations observed, and corrective actions taken in response to the observations.

4. **Risk Level 3 – Water Quality Sampling and Analysis**

a. Risk Level 3 dischargers shall collect storm water grab samples from sampling locations, as defined in Section I.5. The storm water grab sample(s) obtained shall be representative of the flow and characteristics of the discharge.

b. At minimum, Risk Level 3 dischargers shall collect 3 samples per day of the qualifying event.

c. Risk Level 3 dischargers shall ensure that the grab samples collected of stored or contained storm water are from discharges subsequent to a qualifying rain event (producing precipitation of ½ inch or more at the time of discharge).

<u>Storm Water Effluent Monitoring Requirements</u>

d. Risk Level 3 dischargers shall analyze their effluent samples for:

i. pH and turbidity.

ii. Any additional parameters for which monitoring is required by the Regional Water Board.

e. Risk 3 dischargers shall electronically submit all storm event sampling results to the State Water Board no later than 10 days after the conclusion of the storm event.

Receiving Water Monitoring Requirements

f. In the event that a Risk Level 3 discharger's effluent exceeds the daily average receiving water monitoring trigger of 500 NTU turbidity or the daily average pH range 6.0-9.0 contained in this General Permit and has a direct discharge into receiving waters, the Risk Level 3 discharger shall subsequently sample receiving waters (RWs) for turbidity, pH (if applicable), and SSC for the duration of coverage under this General Permit. If a Risk Level 3 discharger utilizing ATS with direct discharges into receiving waters discharges effluent that exceeds the NELs in this permit, the discharger shall subsequently sample RWs for turbidity, pH (if applicable), and SSC for the duration of coverage under this General Permit.

g. Risk Level 3 dischargers disturbing 30 acres or more of the landscape and with direct discharges into receiving waters shall conduct or participate in benthic macroinvertebrate bioassessment of RWs prior to commencement of construction activity (See Appendix 3).

h. Risk Level 3 dischargers shall obtain RW samples in accordance with the Receiving Water sampling location section (Section I.5), below.

5. **Risk Level 3 – Storm Water Discharge Water Quality Sampling Locations**

Effluent Sampling Locations

a. Risk Level 3 dischargers shall perform sampling and analysis of storm water discharges to characterize discharges associated with construction activity from the entire project disturbed area.

b. Risk Level 3 dischargers shall collect effluent samples at all discharge points where storm water is discharged off-site.

c. Risk Level 3 dischargers shall ensure that storm water discharge collected and observed represent[5] the effluent in each drainage area based on visual observation of the water and upstream conditions.

d. Risk Level 3 dischargers shall monitor and report site run-on from surrounding areas if there is reason to believe run-on may contribute to an exceedance of NALs.

e. Risk Level 3 dischargers who deploy an ATS on their site, or a portion on their site, shall collect ATS effluent samples and measurements from the discharge pipe or another location representative of the nature of the discharge.

f. Risk Level 3 dischargers shall select analytical test methods from the list provided in Table 3 below.

g. All storm water sample collection preservation and handling shall be conducted in accordance with Section I.7 “Storm Water Sample Collection and Handling Instructions” below.

Receiving Water Sampling Locations

h. **Upstream/up-gradient RW samples**: Risk Level 3 dischargers shall obtain any required upstream/up-gradient receiving water samples from a representative and accessible location as close as possible and upstream from the effluent discharge point.

i. **Downstream/down-gradient RW samples**: Risk Level 3 dischargers shall obtain any required downstream/down-gradient receiving water samples from a representative and accessible location as close as possible and downstream from the effluent discharge point.

j. If two or more discharge locations discharge to the same receiving water, Risk Level 3 dischargers may sample the receiving water at a single upstream and downstream location.

[5] For example, if there has been concrete work recently in an area, or drywall scrap is exposed to the rain, a pH sample shall be taken of drainage from the relevant work area. Similarly, if sediment-laden water is flowing through some parts of a silt fence, samples shall be taken of the sediment laden water even if most water flowing through the fence is clear.

6. **Risk Level 3 – Visual Observation and Sample Collection Exemptions**

   a. Risk Level 3 dischargers shall be prepared to collect samples and conduct visual observation (inspections) until the minimum requirements of Sections I.3 and I.4 above are completed. Risk Level 3 dischargers are not required to physically collect samples or conduct visual observation (inspections) under the following conditions:

      i. During dangerous weather conditions such as flooding and electrical storms.

      ii. Outside of scheduled site business hours.

   b. If no required samples or visual observation (inspections) are collected due to these exceptions, Risk Level 3 dischargers shall include an explanation in their SWPPP and in the Annual Report documenting why the sampling or visual observation (inspections) were not conducted.

7. **Risk Level 3 – Storm Water Sample Collection and Handling Instructions**

   a. Risk Level 3 dischargers shall refer to Table 3 below for test methods, detection limits, and reporting units.

   b. Risk Level 3 dischargers shall ensure that testing laboratories will receive samples within 48 hours of the physical sampling (unless otherwise required by the laboratory), and shall use only the sample containers provided by the laboratory to collect and store samples.

   c. Risk Level 3 dischargers shall designate and train personnel to collect, maintain, and ship samples in accordance with the Surface Water Ambient Monitoring Program's (SWAMP) 2008 Quality Assurance Program Plan (QAPrP).[6]

[6] Additional information regarding SWAMP's QAPrP can be found at http://www.waterboards.ca.gov/water_issues/programs/swamp/.
QAPrP:http://www.waterboards.ca.gov/water_issues/programs/swamp/docs/qapp/swamp_qapp_master090108a.pdf

8. **Risk Level 3 – Monitoring Methods**

   a. Risk Level 3 dischargers shall include a description of the following items in the CSMP:

      i. Visual observation locations, visual observation procedures, and visual observation follow-up and tracking procedures.

      ii. Sampling locations, and sample collection and handling procedures. This shall include detailed procedures for sample collection, storage, preservation, and shipping to the testing lab to assure that consistent quality control and quality assurance is maintained. Dischargers shall attach to the monitoring program an example Chain of Custody form used when handling and shipping samples.

      iii. Identification of the analytical methods and related method detection limits (if applicable) for each parameter required in Section I.4 above.

   b. Risk Level 3 dischargers shall ensure that all sampling and sample preservation are in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a discharger's own field instruments for measuring pH and turbidity) should be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. Risk Level 3 dischargers shall ensure that all laboratory analyses are conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. With the exception of field analysis conducted by the discharger for turbidity and pH, all analyses should be sent to and conducted at a laboratory certified for such analyses by the State Department of Health Services (SSC exception). Risk Level 3 dischargers shall conduct their own field analysis of pH and may conduct their own field analysis of turbidity if the discharger has sufficient capability (qualified and trained employees, properly calibrated and maintained field instruments, etc.) to adequately perform the field analysis.

9. **Risk Level 3 – Analytical Methods**

   a. Risk Level 3 dischargers shall refer to Table 3 below for test methods, detection limits, and reporting units.

b. **pH**: Risk Level 3 dischargers shall perform pH analysis on-site with a calibrated pH meter or a pH test kit. Risk Level 3 dischargers shall record pH monitoring results on paper and retain these records in accordance with Section I.14, below.

c. **Turbidity**: Risk Level 3 dischargers shall perform turbidity analysis using a calibrated turbidity meter (turbidimeter), either on-site or at an accredited lab. Acceptable test methods include Standard Method 2130 or USEPA Method 180.1. The results will be recorded in the site log book in Nephelometric Turbidity Units (NTU).

d. **Suspended sediment concentration (SSC)**: Risk Level 3 dischargers that exceed the turbidity Receiving Water Monitoring Trigger shall perform SSC analysis using ASTM Method D3977-97.

e. **Bioassessment**: Risk Level 3 dischargers shall perform bioassessment sampling and analysis according to Appendix 3 of this General Permit.

10. **Risk Level 3 - Non-Storm Water Discharge Monitoring Requirements**

a. Visual Monitoring Requirements:

i. Risk Level 3 dischargers shall visually observe (inspect) each drainage area for the presence of (or indications of prior) unauthorized and authorized non-storm water discharges and their sources.

ii. Risk Level 3 dischargers shall conduct one visual observation (inspection) quarterly in each of the following periods: January-March, April-June, July-September, and October-December. Visual observation (inspections) are only required during daylight hours (sunrise to sunset).

iii. Risk Level 3 dischargers shall ensure that visual observations (inspections) document the presence or evidence of any non-storm water discharge (authorized or unauthorized), pollutant characteristics (floating and suspended material, sheen, discoloration, turbidity, odor, etc.), and source. Risk Level 3 dischargers shall maintain on-site records indicating the personnel performing the visual observation (inspections), the dates and approximate time each drainage area and non-storm water discharge was observed, and the response taken to eliminate unauthorized non-storm water discharges and to

reduce or prevent pollutants from contacting non-storm water discharges.

b. Effluent Sampling Locations:

i. Risk Level 3 dischargers shall sample effluent at all discharge points where non-storm water and/or authorized non-storm water is discharged off-site.

ii. Risk Level 3 dischargers shall send all non-storm water sample analyses to a laboratory certified for such analyses by the State Department of Health Services.

iii. Risk Level 3 dischargers shall monitor and report run-on from surrounding areas if there is reason to believe run-on may contribute to an exceedance of NALs.

11. **Risk Level 3 – Non-Visible Pollutant Monitoring Requirements**

a. Risk Level 3 dischargers shall collect one or more samples during any breach, malfunction, leakage, or spill observed during a visual inspection which could result in the discharge of pollutants to surface waters that would not be visually detectable in storm water.

b. Risk Level 3 dischargers shall ensure that water samples are large enough to characterize the site conditions.

c. Risk Level 3 dischargers shall collect samples at all discharge locations that can be safely accessed.

d. Risk Level 3 dischargers shall collect samples during the first two hours of discharge from rain events that occur during business hours and which generate runoff.

e. Risk Level 3 dischargers shall analyze samples for all non-visible pollutant parameters (if applicable) - parameters indicating the presence of pollutants identified in the pollutant source assessment required (Risk Level 3 dischargers shall modify their CSMPs to address these additional parameters in accordance with any updated SWPPP pollutant source assessment).

f. Risk Level 3 dischargers shall collect a sample of storm water that has not come in contact with the disturbed soil or the materials stored or used on-site (uncontaminated sample) for comparison with the discharge sample.

g. Risk Level 3 dischargers shall compare the uncontaminated sample to the samples of discharge using field analysis or through laboratory analysis.[7]

h. Risk Level 3 dischargers shall keep all field /or analytical data in the SWPPP document.

12. **Risk Level 3 – Watershed Monitoring Option**

Risk Level 3 dischargers who are part of a qualified regional watershed-based monitoring program may be eligible for relief from the requirements in Sections I.5. The Regional Water Board may approve proposals to substitute an acceptable watershed-based monitoring program by determining if the watershed-based monitoring program will provide substantially similar monitoring information in evaluating discharger compliance with the requirements of this General Permit.

13. **Risk Level 3 – Particle Size Analysis for Project Risk Justification**

Risk Level 3 dischargers justifying an alternative project risk shall report a soil particle size analysis used to determine the RUSLE K-Factor. ASTM D-422 (Standard Test Method for Particle-Size Analysis of Soils), as revised, shall be used to determine the percentages of sand, very fine sand, silt, and clay on the site.

14. **Risk Level 3 – Records**

Risk Level 3 dischargers shall retain records of all storm water monitoring information and copies of all reports (including Annual Reports) for a period of at least three years. Risk Level 3 dischargers shall retain all records on-site while construction is ongoing. These records include:

a. The date, place, time of facility inspections, sampling, visual observation (inspections), and/or measurements, including precipitation.

b. The individual(s) who performed the facility inspections, sampling, visual observation (inspections), and or measurements.

c. The date and approximate time of analyses.

[7] For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field discharge samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed.

d. The individual(s) who performed the analyses.

e. A summary of all analytical results from the last three years, the method detection limits and reporting units, the analytical techniques or methods used, and the chain of custody forms.

f. Rain gauge readings from site inspections.

g. Quality assurance/quality control records and results.

h. Non-storm water discharge inspections and visual observation (inspections) and storm water discharge visual observation records (see Sections I.3 and I.10 above).

i. Visual observation and sample collection exception records (see Section I.6 above).

j. The records of any corrective actions and follow-up activities that resulted from analytical results, visual observation (inspections), or inspections.

15. **Risk Level 3 – NAL Exceedance Report**

a. Risk Level 3 dischargers shall electronically submit all storm event sampling results to the State Water Board no later than 10 days after the conclusion of the storm event. The Regional Boards have the authority to require the submittal of an NAL Exceedance Report.

b. Risk Level 3 dischargers shall certify each NAL Exceedance Report in accordance with the Special Provisions for Construction Activity In this General Permit.

c. Risk Level 3 dischargers shall retain an electronic or paper copy of each NAL Exceedance Report for a minimum of three years after the date the annual report is filed.

d. Risk Level 3 dischargers shall include in the NAL Exceedance Report:

i. The analytical method(s), method reporting unit(s), and method detection limit(s) of each analytical parameter (analytical results that are less than the method detection limit shall be reported as “less than the method detection limit”).

ii. The date, place, time of sampling, visual observation (inspections), and/or measurements, including precipitation.

iii. A description of the current BMPs associated with the effluent sample that exceeded the NAL and the proposed corrective actions taken.

16. **Risk Level 3 – Bioassessment**

a. Risk Level 3 dischargers with a total project-related ground disturbance exceeding 30 acres shall:

i. Conduct bioassessment monitoring, as described in Appendix 3.

ii. Include the collection and reporting of specified in stream biological data and physical habitat.

iii. Use the bioassessment sample collection and Quality Assurance & Quality Control (QA/QC) protocols developed by the State of California's Surface Water Ambient Monitoring Program (SWAMP).[8]

b. Risk Level 3 dischargers qualifying for bioassessment, where construction commences out of an index period for the site location shall:

i. Receive Regional Board approval for the sampling exception.

ii. Conduct bioassessment monitoring, as described in Appendix 3.

iii. Include the collection and reporting of specified instream biological data and physical habitat.

iv. Use the bioassessment sample collection and Quality Assurance & Quality Control (QA/QC) protocols developed by the State of California's Surface Water Ambient Monitoring Program (SWAMP).

OR

v. Make a check payable to: Cal State Chico Foundation (SWAMP Bank Account) or San Jose State Foundation (SWAMP Bank Account) and include the WDID# on the check for the amount calculated for the exempted project.

[8] http://www.waterboards.ca.gov/water_issues/programs/swamp/.

vi. Send a copy of the check to the Regional Water Board office for the site's region.

vii. Invest $**7,500.00 X The number of samples required** into the SWAMP program as compensation (upon regional board approval).

Table 3 – Risk Level 3 Test Methods, Detection Limits, Reporting Units and Applicable NALs

Parameter	Test Method / Protocol	Discharge Type	Min. Detection Limit	Reporting Units	Numeric Action Level	Numeric Effluent Limitation	Receiving Water Monitoring Trigger
pH	Field test with calibrated portable instrument	Risk Level 3 Discharges	0.2	pH units	lower NAL = 6.5 upper NAL = 8.5	N/A	lower limit = 6.0 upper limit = 9.0
Turbidity	EPA 0180.1 and/or field test with calibrated portable instrument	Risk Level 3 Discharges other than ATS	1	NTU	250 NTU	N/A	500 NTU
		For ATS discharges	1	NTU	N/A	10 NTU for Daily Weighted Average & 20 NTU for Any Single Sample	10 NTU for Daily Weighted Average & 20 NTU for Any Single Sample
SSC	ASTM Method D 3977-97[9]	Risk Level 3 (if Receiving Water Monitoring Trigger exceeded)	5	mg/L	N/A	N/A	N/A
Bioassessment	(STE) Level I of (SAFIT),[10] fixed-count of 600 org/sample	Risk Level 3 projects> 30 acres	N/A	N/A	N/A	N/A	N/A

[9] ASTM, 1999, Standard Test Method for Determining Sediment Concentration in Water Samples: American Society of Testing and Materials, D 3977-97, Vol. 11.02, pp. 389-394.

[10] The current SAFIT STEs (28 November 2006) list requirements for both the Level I and Level II taxonomic effort, and are located at: http://www.swrcb.ca.gov/swamp/docs/safit/ste_list.pdf. When new editions are published by SAFIT, they will supersede all previous editions. All editions will be posted at the State Water Board's SWAMP website.

ATTACHMENT F:
Active Treatment System (ATS) Requirements

Table 1 – Numeric Effluent Limitations, Numeric Action Levels, Test Methods, Detection Limits, and Reporting Units

Parameter	Test Method	Discharge Type	Min. Detection Limit	Units	Numeric Action Level	Numeric Effluent Limitation
Turbidity	EPA 0180.1 and/or field test with a calibrated portable instrument	For ATS discharges	1	NTU	N/A	10 NTU for Daily Flow-Weighted Average & 20 NTU for Any Single Sample

A. Dischargers choosing to implement an Active Treatment System (ATS) on their site shall comply with all of the requirements in this Attachment.

B. The discharger shall maintain a paper copy of each ATS specification onsite in compliance with the record retention requirements in the Special Provisions of this General Permit.

C. ATS Design, Operation and Submittals

1. The ATS shall be designed and approved by a Certified Professional in Erosion and Sediment Control (CPESC), a Certified Professional in Storm Water Quality (CPSWQ); a California registered civil engineer; or any other California registered engineer.

2. The discharger shall ensure that the ATS is designed in a manner to preclude the accidental discharge of settled floc[1] during floc pumping or related operations.

3. The discharger shall design outlets to dissipate energy from concentrated flows.

4. The discharger shall install and operate an ATS by assigning a lead person (or project manager) who has either a minimum of five years construction storm

[1] Floc is defined as a clump of solids formed by the chemical action in ATS systems.

water experience or who is a licensed contractors specifically holding a California Class A Contractors license.[2]

5. The discharger shall prepare an ATS Plan that combines the site-specific data and treatment system information required to safely and efficiently operate an ATS. The ATS Plan shall be electronically submitted to the State Water Board at least 14 days prior to the planned operation of the ATS and a paper copy shall be available onsite during ATS operation. At a minimum, the ATS Plan shall include:

   a. ATS Operation and Maintenance Manual for All Equipment.

   b. ATS Monitoring, Sampling & Reporting Plan, including Quality Assurance/Quality Control (QA/QC).

   c. ATS Health and Safety Plan.

   d. ATS Spill Prevention Plan.

6. The ATS shall be designed to capture and treat (within a 72-hour period) a volume equivalent to the runoff from a 10-year, 24-hour storm event using a watershed runoff coefficient of 1.0.

D. Treatment – Chemical Coagulation/Flocculation

1. Jar tests shall be conducted using water samples selected to represent typical site conditions and in accordance with ASTM D2035-08 (2003).

2. The discharger shall conduct, at minimum, six site-specific jar tests (per polymer with one test serving as a control) for each project to determine the proper polymer and dosage levels for their ATS.

3. Single field jar tests may also be conducted during a project if conditions warrant, for example if construction activities disturb changing types of soils, which consequently cause change in storm water and runoff characteristics.

E. Residual Chemical and Toxicity Requirements

1. The discharger shall utilize a residual chemical test method that has a method detection limit (MDL) of 10% or less than the maximum allowable threshold

[2] Business and Professions Code Division 3, Chapter 9, Article 4, Class A Contractor: A general engineering contractor is a contractor whose principal contracting business is in connection with fixed works requiring specialized engineering knowledge and skill. [http://www.cslb.ca.gov/General-Information/library/licensing-classifications.asp].

concentration[3] (MATC) for the specific coagulant in use and for the most sensitive species of the chemical used.

2. The discharger shall utilize a residual chemical test method that produces a result within one hour of sampling.

3. The discharger shall have a California State certified laboratory validate the selected residual chemical test. Specifically the lab will review the test protocol, test parameters, and the detection limit of the coagulant. The discharger shall electronically submit this documentation as part of the ATS Plan.

4. If the discharger cannot utilize a residual chemical test method that meets the requirements above, the discharger shall operate the ATS in Batch Treatment[4] mode.

5. A discharger planning to operate in Batch Treatment mode shall perform toxicity testing in accordance with the following:

   a. The discharger shall initiate acute toxicity testing on effluent samples representing effluent from each batch prior to discharge[5]. All bioassays shall be sent to a laboratory certified by the Department of Health Services (DHS) Environmental Laboratory Accreditation Program (ELAP). The required field of testing number for Whole Effluent Toxicity (WET) testing is E113.[6]

   b. Acute toxicity tests shall be conducted with the following species and protocols. The methods to be used in the acute toxicity testing shall be those outlined for a 96-hour acute test in "Methods for Measuring the Acute Toxicity of Effluents and Receiving Water to Freshwater and Marine Organisms, USEPA-841-R-02-012" for Fathead minnow, *Pimephales promelas* (fathead minnow). Acute toxicity for *Oncorhynchus mykiss* (Rainbow Trout) may be used as a substitute for testing fathead minnows.

   c. All toxicity tests shall meet quality assurance criteria and test acceptability criteria in the most recent versions of the EPA test method for WET testing.

   d. The discharger shall electronically report all acute toxicity testing.

[3] The Maximum Allowable Threshold Concentration (MATC) is the allowable concentration of residual, or dissolved, coagulant/flocculant in effluent. The MATC shall be coagulant/flocculant-specific, and based on toxicity testing conducted by an independent, third-party laboratory. A typical MATC would be:
The MATC is equal to the geometric mean of the NOEC (No Observed Effect Concentration) and LOEC (Lowest Observed Effect Concentration) Acute and Chronic toxicity results for most sensitive species determined for the specific coagulant. The most sensitive species test shall be used to determine the MATC.
[4] Batch Treatment mode is defined as holding or recirculating the treated water in a holding basin or tank(s) until treatment is complete or the basin or storage tank(s) is full.
[5] This requirement only requires that the test be initiated prior to discharge.
[6] http://www.dhs.ca.gov/ps/ls/elap/pdf/FOT_Desc.pdf.

F. Filtration

1. The ATS shall include a filtration step between the coagulant treatment train and the effluent discharge. This is commonly provided by sand, bag, or cartridge filters, which are sized to capture suspended material that might pass through the clarifier tanks.

2. Differential pressure measurements shall be taken to monitor filter loading and confirm that the final filter stage is functioning properly.

G. Residuals Management

1. Sediment shall be removed from the storage or treatment cells as necessary to ensure that the cells maintain their required water storage (i.e., volume) capability.

2. Handling and disposal of all solids generated during ATS operations shall be done in accordance with all local, state, and federal laws and regulations.

H. ATS Instrumentation

1. The ATS shall be equipped with instrumentation that automatically measures and records effluent water quality data and flow rate.

2. The minimum data recorded shall be consistent with the Monitoring and Reporting requirements below, and shall include:

    a. Influent Turbidity

    b. Effluent Turbidity

    c. Influent pH

    d. Effluent pH

    e. Residual Chemical

    f. Effluent Flow rate

    g. Effluent Flow volume

3. Systems shall be equipped with a data recording system, such as data loggers or webserver-based systems, which records each measurement on a frequency no longer than once every 15 minutes.

4. Cumulative flow volume shall be recorded daily. The data recording system shall have the capacity to record a minimum of seven days continuous data.

5. Instrumentation systems shall be interfaced with system control to provide auto shutoff or recirculation in the event that effluent measurements exceed turbidity or pH.

6. The system shall also assure that upon system upset, power failure, or other catastrophic event, the ATS will default to a recirculation mode or safe shut down.

7. Instrumentation (flow meters, probes, valves, streaming current detectors, controlling computers, etc.) shall be installed and maintained per manufacturer's recommendations, which shall be included in the QA/QC plan.

8. The QA/QC plan shall also specify calibration procedures and frequencies, instrument method detection limit or sensitivity verification, laboratory duplicate procedures, and other pertinent procedures.

9. The instrumentation system shall include a method for controlling coagulant dose, to prevent potential overdosing. Available technologies include flow/turbidity proportional metering, periodic jar testing and metering pump adjustment, and ionic charge measurement controlling the metering pump.

I. ATS Effluent Discharge

1. ATS effluent shall comply with all provisions and prohibitions in this General Permit, specifically the NELs.

2. NELs for discharges from an ATS:

   a. Turbidity of all ATS discharges shall be less than 10 NTU for daily flow-weighted average of all samples and 20 NTU for any single sample.

   b. Residual Chemical shall be < 10% of MATC[7] for the most sensitive species of the chemical used.

[7] The Maximum Allowable Threshold Concentration (MATC) is the allowable concentration of residual, or dissolved, coagulant/flocculant in effluent. The MATC shall be coagulant/flocculant-specific, and based on toxicity testing conducted by an independent, third-party laboratory. The MATC is equal to the geometric mean of the NOEC (No Observed Effect Concentration) and LOEC (Lowest Observed Effect Concentration) Acute and Chronic toxicity results for most sensitive species determined for the specific coagulant. The most sensitive species test shall be used to determine the MATC.

3. If an analytical effluent sampling result exceeds the turbidity NEL (as listed in Table 1), the discharger is in violation of this General Permit and shall electronically file the results in violation within 24-hours of obtaining the results.

4. If ATS effluent is authorized to discharge into a sanitary sewer system, the discharger shall comply with any pre-treatment requirements applicable for that system. The discharger shall include any specific criteria required by the municipality in the ATS Plan.

5. Compliance Storm Event:

   Discharges of storm water from ATS shall comply with applicable NELs (above) unless the storm event causing the discharges is determined after the fact to be equal to or larger than the Compliance Storm Event (expressed in inches of rainfall). The Compliance Storm Event for ATS discharges is the 10 year, 24 hour storm, as determined using these maps:

   http://www.wrcc.dri.edu/pcpnfreq/nca10y24.gif
   http://www.wrcc.dri.edu/pcpnfreq/sca10y24.gif

   This exemption is dependent on the submission of rain gauge data verifying the storm event is equal to or larger than the Compliance Storm.

J. Operation and Maintenance Plan

1. Each Project shall have a site-specific Operation and Maintenance (O&M) Manual covering the procedures required to install, operate and maintain the ATS.[8]

2. The O&M Manual shall only be used in conjunction with appropriate project-specific design specifications that describe the system configuration and operating parameters.

3. The O&M Manual shall have operating manuals for specific pumps, generators, control systems,and other equipment.

K. Sampling and Reporting Quality Assurance/ Quality Check (QA/QC) Plan

4. A project-specific QA/QC Plan shall be developed for each project. The QA/QC Plan shall include at a minimum:

   a. Calibration – Calibration methods and frequencies for all system and field instruments shall be specified.

[8] The manual is typically in a modular format covering generalized procedures for each component that is utilized in a particular system.

b. Method Detection Limits (MDLs) – The methods for determining MDLs shall be specified for each residual coagulant measurement method. Acceptable minimum MDLs for each method, specific to individual coagulants, shall be specified.

c. Laboratory Duplicates – Requirements for monthly laboratory duplicates for residual coagulant analysis shall be specified.

L. Personnel Training

1. Operators shall have training specific to using an ATS and liquid coagulants for storm water discharges in California.

2. The training shall be in the form of a formal class with a certificate and requirements for testing and certificate renewal.

3. Training shall include a minimum of eight hours classroom and 32 hours field training. The course shall cover the following topics:

   a. Coagulation Basics –Chemistry and physical processes

   b. ATS System Design and Operating Principles

   c. ATS Control Systems

   d. Coagulant Selection – Jar testing, dose determination, etc.

   e. Aquatic Safety/Toxicity of Coagulants, proper handling and safety

   f. Monitoring, Sampling, and Analysis

   g. Reporting and Recordkeeping

   h. Emergency Response

M. Active Treatment System (ATS) Monitoring Requirements

Any discharger who deploys an ATS on their site shall conduct the following:

1. Visual Monitoring

   a. A designated responsible person shall be on site daily at all times during treatment operations.

b. Daily on-site visual monitoring of the system for proper performance shall be conducted and recorded in the project data log.

   i. The log shall include the name and phone number of the person responsible for system operation and monitoring.

   ii. The log shall include documentation of the responsible person's training.

2. Operational and Compliance Monitoring

   a. Flow shall be continuously monitored and recorded at not greater than 15-minute intervals for total volume treated and discharged.

   b. Influent and effluent pH must be continuously monitored and recorded at not greater than 15-minute intervals.

   c. Influent and effluent turbidity (expressed in NTU) must be continuously monitored and recorded at not greater than 15-minute intervals.

   d. The type and amount of chemical used for pH adjustment, if any, shall be monitored and recorded.

   e. Dose rate of chemical used in the ATS system (expressed in mg/L) shall be monitored and reported 15-minutes after startup and every 8 hours of operation.

   f. Laboratory duplicates – monthly laboratory duplicates for residual coagulant analysis must be performed and records shall be maintained onsite.

   g. Effluent shall be monitored and recorded for residual chemical/additive levels.

   h. If a residual chemical/additive test does not exist and the ATS is operating in a batch treatment mode of operation refer to the toxicity monitoring requirements below.

3. Toxicity Monitoring

   A discharger operating in batch treatment mode shall perform toxicity testing in accordance with the following:

   a. The discharger shall initiate acute toxicity testing on effluent samples representing effluent from each batch prior to discharge.[9] All bioassays shall be sent to a laboratory certified by the Department of Health Services (DHS)

[9] This requirement only requires that the test be initiated prior to discharge.

Environmental Laboratory Accreditation Program (ELAP). The required field of testing number for Whole Effluent Toxicity (WET) testing is E113.[10]

b. Acute toxicity tests shall be conducted with the following species and protocols. The methods to be used in the acute toxicity testing shall be those outlined for a 96-hour acute test in "Methods for Measuring the Acute Toxicity of Effluents and Receiving Water to Freshwater and Marine Organisms, USEPA-841-R-02-012" for Fathead minnow, *Pimephales promelas or* Rainbow trout *Oncorhynchus mykiss* may be used as a substitute for fathead minnow.

c. All toxicity tests shall meet quality assurance criteria and test acceptability criteria in the most recent versions of the EPA test method for WET testing.[11]

4. Reporting and Recordkeeping

At a minimum, every 30 days a LRP representing the discharger shall access the State Water Boards Storm Water Mulit-Application and Report Tracking system (SMARTS) and electronically upload field data from the ATS. Records must be kept for three years after the project is completed .

5. Non-compliance Reporting

a. Any indications of toxicity or other violations of water quality objectives shall be reported to the appropriate regulatory agency as required by this General Permit.

b. Upon any measurements that exceed water quality standards, the system operator shall immediately notify his supervisor or other responsible parties, who shall notify the Regional Water Board.

c. If any monitoring data exceeds any applicable NEL in this General Permit, the discharger shall electronically submit a NEL Violation Report to the State Water Board within 24 hours after the NEL exceedance has been identified.

i. ATS dischargers shall certify each NEL Violation Report in accordance with the Special Provisions for Construction Activity in this General Permit.

ii. ATS dischargers shall retain an electronic or paper copy of each NEL Violation Report for a minimum of three years after the date the annual report is filed.

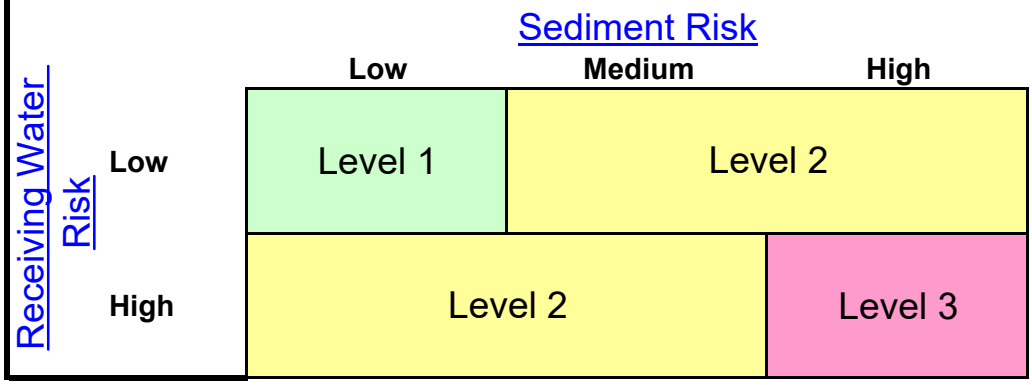
iii. ATS dischargers shall include in the NEL Violation Report:

[10] http://www.dhs.ca.gov/ps/ls/elap/pdf/FOT_Desc.pdf.
[11] http://www.epa.gov/waterscience/methods/wet/.

(1) The analytical method(s), method reporting unit(s), and method detection limit(s) of each analytical parameter (analytical results that are less than the method detection limit shall be reported as “less than the method detection limit”);

(2) The date, place, time of sampling, visual observation (inspections), and/or measurements, including precipitation; and

(3) A description of the current onsite BMPs, and the proposed corrective actions taken to manage the NEL exceedance.



iv. Compliance Storm Exemption - In the event that an applicable NEL has been exceeded during a storm event equal to or larger than the Compliance Storm Event, ATS dischargers shall report the on-site rain gauge reading and nearby governmental rain gauge readings for verification.

	A	B	C
1	**Sediment Risk Factor Worksheet**		**Entry**
2	**A) R Factor**		
3	Analyses of data indicated that when factors other than rainfall are held constant, soil loss is directly proportional to a rainfall factor composed of total storm kinetic energy (E) times the maximum 30-min intensity (I30) (Wischmeier and Smith, 1958). The numerical value of R is the average annual sum of EI30 for storm events during a rainfall record of at least 22 years. "Isoerodent" maps were developed based on R values calculated for more than 1000 locations in the Western U.S. Refer to the link below to determine the R factor for the project site.		
4	http://cfpub.epa.gov/npdes/stormwater/LEW/lewCalculator.cfm		
5	**R Factor Value**		0
6	**B) K Factor (weighted average, by area, for all site soils)**		
7	The soil-erodibility factor K represents: (1) susceptibility of soil or surface material to erosion, (2) transportability of the sediment, and (3) the amount and rate of runoff given a particular rainfall input, as measured under a standard condition Fine-textured soils that are high in clay have low K values (about 0.05 to 0.15) because the particles are resistant to detachment. Coarse-textured soils, such as sandy soils, also have low K values (about 0.05 to 0.2) because of high infiltration resulting in low runoff even though these particles are easily detached. Medium-textured soils, such as a silt loam, have moderate K values (about 0.25 to 0.45) because they are moderately susceptible to particle detachment and they produce runoff at moderate rates. Soils having a high silt content are especially susceptible to erosion and have high K values, which can exceed 0.45 and can be as large as 0.65. Silt-size particles are easily detached and tend to crust, producing high rates and large volumes of runoff. Use Site-specific data must be submitted.		
8	Site-specific K factor guidance		
9	**K Factor Value**		0
10	**C) LS Factor (weighted average, by area, for all slopes)**		
11	The effect of topography on erosion is accounted for by the LS factor, which combines the effects of a hillslope-length factor, L, and a hillslope-gradient factor, S. Generally speaking, as hillslope length and/or hillslope gradient increase, soil loss increases. As hillslope length increases, total soil loss and soil loss per unit area increase due to the progressive accumulation of runoff in the downslope direction. As the hillslope gradient increases, the velocity and erosivity of runoff increases. Use the LS table located in separate tab of this spreadsheet to determine LS factors. Estimate the weighted LS for the site prior to construction.		
12	LS Table

Soil Erodibility Factor (K)

The K factor can be determined by using the nomograph method, which requires that a particle size analysis (ASTM D-422) be done to determine the percentages of sand, very fine sand, silt and clay. Use the figure below to determine appropriate K value.

Erickson triangular nomograph used to estimate soil erodibility (K) factor.
The figure above is the USDA nomograph used to determine the K factor for a soil, based on its texture (% silt plus very fine sand, % sand, % organic matter, soil structure, and permeability). *Nomograph from Erickson 1977 as referenced in Goldman et. al., 1986.*

LS Factors for Construction Sites. *Table from Renard et. al., 1997.*

APPENDIX 2:
Post-Construction Water Balance Performance Standard Spreadsheet

The discharger shall submit with their Notice of Intent (NOI) the following information to demonstrate compliance with the New and Re-Development Water Balance Performance Standard.

Map Instructions

The discharger must submit a small-scale topographic map of the site to show the existing contour elevations, pre- and post-construction drainage divides, and the total length of stream in each watershed area. Recommended scales include 1 in. = 20 ft., 1 in. = 30 ft., 1 in. = 40 ft., or 1 in = 50 ft. The suggested contour interval is usually 1 to 5 feet, depending upon the slope of the terrain. The contour interval may be increased on steep slopes. Other contour intervals and scales may be appropriate given the magnitude of land disturbance.

Spreadsheet Instructions

The intent of the spreadsheet is to help dischargers calculate the project-related increase in runoff volume and select impervious area and runoff reduction credits to reduce the project-related increase in runoff volume to pre-project levels.

The discharger has the option of using the spreadsheet (**Appendix 2.1)** or a more sophisticated, watershed process-based model (e.g. Storm Water Management Model, Hydrological Simulation Program Fortran) to determine the project-related increase in runoff volume.

In* Appendix 4.1**, ***you must complete the worksheet for each land use/soil type combination for each project sub-watershed.

Steps 1 through 9 pertain specifically to the Runoff Volume Calculator:

Step 1: Enter the county where the project is located in cell H3.

Step 2: Enter the soil type in cell H6.

Step 3: Enter the existing pervious (dominant) land use type in cell H7.

Step 4: Enter the proposed pervious (dominant) land use type in cell H8.

Step 5: Enter the total project site area in cell H11 or J11.

Step 6: Enter the sub-watershed area in cell H12 or J12.

Step 7: Enter the existing rooftop area in cell H17 or J17, the existing non-rooftop impervious area in cell H18 or J18, the proposed rooftop area in cell H19 or J19, and the proposed non-rooftop impervious area in cell H20 or J20

Step 8: Work through each of the impervious area reduction credits and claim credits where applicable. Volume that cannot be addressed using non-structural practices must be captured in structural practices and approved by the Regional Water Board.

Step 9: Work through each of the impervious volume reduction credits and claim credits where applicable. Volume that cannot be addressed using non-structural practices must be captured in structural practices and approved by the Regional Water Board.

Non-structural Practices Available for Crediting

- ***Porous Pavement***
- ***Tree Planting***
- ***Downspout Disconnection***
- ***Impervious Area Disconnection***

Downspout Disconnection Credit Worksheet

Please fill out a downspout disconnection credit worksheet for each project subwatershed. If you answer yes to all questions, all rooftop area draining to each downspout will be subtracted from your proposed rooftop impervious coverage.

Downspout Disconnection Credit Criteria					
Do downspouts and any extensions extend at least six feet from a basement and two feet from a crawl space or concrete slab?				○ Yes	◉ No
Is the area of rooftop connecting to each disconnected downspout 600 square feet or less?				○ Yes	◉ No
Is the roof runoff from the design storm event fully contained in a raised bed or planter box or does it drain as sheet flow to a landscaped area large enough to contain the roof runoff from the design storm event?				○ Yes	◉ No
The Stream Buffer and/or Vegetated Swale credits **will not** be taken in this sub-watershed area?				○ Yes	◉ No
Percentage of existing	0.00	Acres	of rooftop surface has disconnected downspouts		
Percentage of the proposed	0.00	Acres	of rooftop surface has disconnected downspouts	50	
				Return to Calculator	

Impervious Area Disconnection Credit Worksheet

Please fill out an impervious area disconnection credit worksheet for each project sub-watershed. If you answer yes to all questions, all non-rooftop impervious surface area will be subtracted from your proposed non-rooftop impervious coverage.

Non-Rooftop Disconnection Credit Criteria	Response
Is the maximum contributing impervious flow path length less than 75 feet or, if equal or greater than 75 feet, is a storage device (e.g. French drain, bioretention area, gravel trench) implemented to achieve the required disconnection length?	◉ Yes ○ No
Is the impervious area to any one discharge location less than 5,000 square feet?	◉ Yes ○ No
The Stream Buffer credit **will not** be taken in this sub-watershed area?	◉ Yes ○ No

Percentage of existing	0.00	Acres non-rooftop surface area disconnected	
Percentage of the proposed	0.00	Acres non-rooftop surface area disconnected	70

Return to Calculator

Green Roof Credit Worksheet

Please fill out a greenroof credit worksheet for each project sub-watershed. If you answer yes to all questions, 70% of the greenroof area will be subtracted from your proposed rooftop impervious coverage.

Green Roof Credit Criteria				Response
Is the roof slope less than 15% or does it have a grid to hold the substrate in place until it forms a thick vegetation mat?				◉ Yes ○ No
Has a professional engineer assessed the necessary load reserves and designed a roof structure to meet state and local codes?				◉ Yes ○ No
Is the irrigation needed for plant establishment and/or to sustain the green roof during extended dry periods, is the source from stored, recycled, reclaimed, or reused water?				◉ Yes ○ No
Percentage of existing	0.00	Acres	rooftop surface area in greenroof	
Percentage of the proposed	0.00	Acres	rooftop surface area in greenroof	

Return to Calculator

Stream Buffer Credit Worksheet

Please fill out a stream buffer credit worksheet for each project sub-watershed. If you answer yes to all questions, you may subtract all impervious surface draining to each stream buffer that has not been addressed using the Downspout and/or Impervious Area Disconnection credits.

Stream Buffer Credit Criteria				Response
Does runoff enter the floodprone width* or within 500 feet (whichever is larger) of a stream channel as sheet flow**?				○ Yes ◉ No
Is the contributing overland slope 5% or less, or if greater than 5%, is a level spreader used?				○ Yes ◉ No
Is the buffer area protected from vehicle or other traffic barriers to reduce compaction?				○ Yes ◉ No
Will the stream buffer be maintained in an ungraded and uncompacted condition and will the vegetation be maintained in a natural condition?				○ Yes ◉ No
Percentage of existing	0.00	Acres	impervious surface area draining into a stream buffer:	
Percentage of the proposed	0.00	Acres	impervious surface area that will drain into a stream buffer:	
Please describe below how the project will ensure that the buffer areas will remain in ungraded and uncompacted condition and that the vegetation will be maintained in a natural condition.				

Return to Calculator

* floodprone width is the width at twice the bankfull depth.
** the maximum contributing length shall be 75 feet for impervious area

Vegetated Swale Credit Worksheet

Please fill out a vegetated swale worksheet for each project subwatershed. If you answer yes to all questions, you may subtract all impervious surface draining to each stream buffer that has not been addressed using the Downspout Disconnection credit.

Vegetated Swale Credit Criteria

Have all vegetated swales been designed in accordance with Treatment Control BMP 30 (TC-30 - Vegetated Swale) from the California Stormwater BMP Handbook, New Development and Redevelopment (available at www.cabmphandbooks.com)?	○ Yes ◉ No
Is the maximum flow velocity for runoff from the design storm event less than or equal to 1.0 foot per second?	○ Yes ◉ No

Percentage of existing	0.00	Acres of impervious area draining to a vegetated swale	
Percentage of the proposed	0.00	Acres of impervious area draining to a vegetated swale	

Return to Calculator

Rain Barrel/Cistern Credit Worksheet

Please fill out a rain barrel/cistern worksheet for each project sub-watershed.

Rain Barrel/Cistern Credit Criteria	Response
Total number of rain barrel(s)/cisterns	
Average capacity of rain barrel(s)/cistern(s) (in gallons)	
Total capacity rain barrel(s)/cistern(s) (in cu ft) [1]	0

[1] accounts for 10% loss

Return to Calculator

Please fill out a soil quality worksheet for each project sub-watershed.

	Response
Will the landscaped area be lined with an impervious membrane?	
Will the soils used for landscaping meet the ideal bulk densities listed in Table 1 below? [1]	○ Yes ◉ No
If you answered yes to the question above, and you know the area-weighted bulk density within the top 12 inches for soils used for landscaping (in g/cm^3)* , fill in the cell to the right and skip to cell G11. If not select from the drop-down menu in G10.	1.3
If you answered yes to the question above, but you do not know the exact bulk density, which of the soil types in the drop down menu to the right best describes the top 12 inches for soils used for landscaping (in g/cm^3).	Sandy loams, loams
What is the average depth of your landscaped soil media meeting the above criteria (inches)?	12
What is the total area of the landscaped areas meeting the above criteria (in acres)?	2.97

Return to Calculator

Table 1

Sands, loamy sands	<1.6
Sandy loams, loams	<1.4
Sandy clay loams, loams, clay loams	<1.4
Silts, silt loams	<1.3
Silt loams, silty clay loams	<1.1
Sandy clays, silty clays, some clay loams (35-45% clay)	<1.1
Clays (>45% clay)	<1.1

Porosity (%) 50.94%

Mineral grains in many soils are mainly quartz and feldspar, so 2.65 a good average for particle density. To determine percent porosity, use the formula: Porosity (%) = (1-Bulk Density/2.65) X 100

* To determine how to calculate density see: http://www.globe.gov/tctg/bulkden.pdf?sectionID=94

APPENDIX 3
Bioassessment Monitoring Guidelines

Bioassessment monitoring is required for projects that meet all of the following criteria:

1. The project is rated Risk Level 3 or LUP Type 3
2. The project directly discharges runoff to a freshwater wadeable stream (or streams) that is either: (a) listed by the State Water Board or USEPA as impaired due to sediment, and/or (b) tributary to any downstream water body that is listed for sediment; and/or have the beneficial use SPAWN & COLD & MIGRATORY
3. Total project-related ground disturbance exceeds 30 acres.

For all such projects, the discharger shall conduct bioassessment monitoring, as described in this section, to assess the effect of the project on the biological integrity of receiving waters.
Bioassessment shall include:

1. The collection and reporting of specified instream biological data
2. The collection and reporting of specified instream physical habitat data

<u>Bioassessment Exception</u>
If a site qualifies for bioassessment, but construction commences out of an index period for the site location, the discharger shall:

1. Receive Regional Water Board approval for the sampling exception
2. Make a check payable to: Cal State Chico Foundation (SWAMP Bank Account) or San Jose State Foundation (SWAMP Bank Account) and include the WDID# on the check for the amount calculated for the exempted project.
3. Send a copy of the check to the Regional Water Board office for the site's region
4. Invest **7,500.00 X The number of samples required** into the SWAMP program as compensation (upon Regional Water Board approval).
5. Conduct bioassessment monitoring, as described in Appendix 4
6. Include the collection and reporting of specified instream biological data and physical habitat
7. Use the bioassessment sample collection and Quality Assurance & Quality Control (QA/QC) protocols developed by the State of California's Surface Water Ambient Monitoring Program (SWAMP)

<u>Site Locations and Frequency</u>
Macroinvertebrate samples shall be collected both before ground disturbance is initiated and after the project is completed. The "after" sample(s) shall be collected after at least one winter season resulting in surface runoff has transpired after project-related ground disturbance has ceased. "Before" and "after" samples shall be collected both upstream and downstream of the project's

discharge. Upstream samples should be taken immediately before the sites outfall and downstream samples should be taken immediately after the outfall (when safe to collect the samples). Samples should be collected for each freshwater wadeable stream that is listed as impaired due to sediment, or tributary to a water body that is listed for sediment. Habitat assessment data shall be collected concurrently with all required macroinvertebrate samples.

Index Period (Timing of Sample Collection)
Macroinvertebrate sampling shall be conducted during the time of year (i.e., the "index period") most appropriate for bioassessment sampling, depending on ecoregion. This map is posted on the State Water Board's Website: http://www.waterboards.ca.gov/water_issues/programs/stormwater/construction.shtml

Field Methods for Macroinvertebrate Collections
In collecting macroinvertebrate samples, the discharger shall use the "Reachwide Benthos (Multi-habitat) Procedure" specified in *Standard Operating Procedures for Collecting Benthic Macroinvertebrate Samples and Associated Physical and Chemical Data for Ambient Bioassessments in California* (Ode 2007).[1]

Physical - Habitat Assessment Methods
The discharger shall conduct, concurrently with all required macroinvertebrate collections, the "Full" suite of physical habitat characterization measurements as specified in *Standard Operating Procedures for Collecting Benthic Macroinvertebrate Samples and Associated Physical and Chemical Data for Ambient Bioassessments in California* (Ode 2007), and as summarized in the Surface Water Ambient Monitoring Program's *Stream Habitat Characterization Form — Full Version*.

Laboratory Methods
Macroinvertebrates shall be identified and classified according to the Standard Taxonomic Effort (STE) Level I of the Southwestern Association of Freshwater Invertebrate Taxonomists (SAFIT),[2] and using a fixed-count of 600 organisms per sample.

Quality Assurance
The discharger or its consultant(s) shall have and follow a quality assurance (QA) plan that covers the required bioassessment monitoring. The QA plan shall include, or be supplemented to include, a specific requirement for external QA checks (i.e., verification of taxonomic identifications and correction of data where

[1] This document is available on the Internet at: ~~http://www.swrcb.ca.gov/swamp/docs/phab_sopr6.pdf~~. http://swamp.mpsl.mlml.calstate.edu/wp-content/uploads/2009/04/swamp_sop_bioassessment_collection_020107.pdf.

[2] The current SAFIT STEs (28 November 2006) list requirements for both the Level I and Level II taxonomic effort, and are located at: ~~http://www.swrcb.ca.gov/swamp/docs/safit/ste_list.pdf~~ http://www.safit.org/Docs/ste_list.pdf. When new editions are published by SAFIT, they will supersede all previous editions. All editions will be posted at the State Water Board's SWAMP website.

errors are identified). External QA checks shall be performed on one of the discharger's macroinvertebrate samples collected per calendar year, or ten percent of the samples per year (whichever is greater). QA samples shall be randomly selected. The external QA checks shall be paid for by the discharger, and performed by the California Department of Fish and Game's Aquatic Bioassessment Laboratory. An alternate laboratory with equivalent or better expertise and performance may be used if approved in writing by State Water Board staff.

Sample Preservation and Archiving

The original sample material shall be stored in 70 percent ethanol and retained by the discharger until: 1) all QA analyses specified herein and in the relevant QA plan are completed; and 2) any data corrections and/or re-analyses recommended by the external QA laboratory have been implemented. The remaining subsampled material shall be stored in 70 percent ethanol and retained until completeness checks have been performed according to the relevant QA plan. The identified organisms shall be stored in 70 percent ethanol, in separate glass vials for each final ID taxon. (For example, a sample with 45 identified taxa would be archived in a minimum of 45 vials, each containing all individuals of the identified taxon.) Each of the vials containing identified organisms shall be labeled with taxonomic information (i.e., taxon name, organism count) and collection information (i.e., site name/site code, waterbody name, date collected, method of collection). The identified organisms shall be archived (i.e., retained) by the discharger for a period of not less than three years from the date that all QA steps are completed, and shall be checked at least once per year and "topped off" with ethanol to prevent desiccation. The identified organisms shall be relinquished to the State Water Board upon request by any State Water Board staff.

Data Submittal

The macroinvertebrate results (i.e., taxonomic identifications consistent with the specified SAFIT STEs, and number of organisms within each taxa) shall be submitted to the State Water Board in electronic format. The State Water Board's Surface Water Ambient Monitoring Program (SWAMP) is currently developing standardized formats for reporting bioassessment data. All bioassessment data collected after those formats become available shall be submitted using the SWAMP formats. Until those formats are available, the biological data shall be submitted in MS-Excel (or equivalent) format.[3]

The physical/habitat data shall be reported using the standard format titled *SWAMP Stream Habitat Characterization Form — Full Version*.[4]

[3] Any version of Excel, 2000 or later, may be used.
[4] Available at: http://www.waterboards.ca.gov/water_issues/programs/swamp/docs/reports/fieldforms_fullversion052908.pdf

Invasive Species Prevention

In conducting the required bioassessment monitoring, the discharger and its consultants shall take precautions to prevent the introduction or spread of aquatic invasive species. At minimum, the discharger and its consultants shall follow the recommendations of the California Department of Fish and Game to minimize the introduction or spread of the New Zealand mudsnail.[5]

[5] Instructions for controlling the spread of NZ mudsnails, including decontamination methods, can be found at: http://www.dfg.ca.gov/invasives/mudsnail/

General Construction Storm Water Permits:
Waste load allocations will be incorporated into the State Board general permit upon renewal or into a watershed-specific general permit developed by the Regional Board.

- Dry-weather Implementation Non-storm water flows authorized by the General Permit for Storm Water Discharges Associated with Construction Activity (Water Quality Order No. 99-08 DWQ), or any successor order, are exempt from the dry-weather waste load allocation equal to zero as long as they comply with the provisions of sections C.3 and A.9 of the Order No. 99-08 DWQ, which state that these authorized non-storm discharges shall be:
  (1) infeasible to eliminate
  (2) comply with BMPs as described in the Storm Water Pollution Prevention Plan prepared by the permittee, and
  (3) not cause or contribute to a violation of water quality standards, or comparable provisions in any successor order.
  Unauthorized non-storm water flows are already prohibited by Order No. 99-08 DWQ.
- Wet-weather Implementation Within seven years of the effective date of the TMDL, the construction industry will submit the results of BMP effectiveness studies to determine BMPs that will achieve compliance with the final waste load allocations assigned to construction storm water permittees.
- Regional Board staff will bring the recommended BMPs before the Regional Board for consideration within eight years of the effective date of the TMDL.
- General construction storm water permittees will be considered in compliance with final waste load allocations if they implement these Regional Board approved BMPs. All permittees must implement the approved BMPs within nine years of the effective date of the TMDL. If no effectiveness studies are conducted and no BMPs are approved by the Regional Board within eight years of the effective date of the TMDL, each general construction storm water permit holder will be subject to site-specific BMPs and monitoring requirements to demonstrate compliance with final waste load allocations.

Pleasant Valley (Revolon)	230.0	1720.0	1289.0	1.3

- General Construction permittees are assigned a dry weather wasteload allocation equal to the average dry weather critical condition flow rate multiplied by the numeric target for each constituent. Waste load allocations apply in the receiving water at the base of each subwatershed. Dry weather allocations apply when instream flow rates are below the 86th percentile flow and there has been no measurable precipitation in the previous 24 hours.
- Because wet weather flows transport a large mass of salts at low concentrations, these dischargers meet water quality objectives during wet weather.
- Interim limits are assigned for dry weather discharges from areas covered by NPDES stormwater permits to allow time to implement appropriate actions. The interim limits are assigned as concentration based receiving water limits set to the 95th percentile of the discharger data as a monthly average limit except for chloride. The 95th percentile for chloride was 267 mg/L which is higher than the recommended criteria set forth in the Basin Plan for protection of sensitive beneficial uses including aquatic life. Therefore, the interim limit for chloride for Permitted Stormwater Dischargers is set equal to 230 mg/L to ensure protection of sensitive beneficial uses in the Calleguas Creek watershed.

Region 4 San Gabriel River and Tributaries-Metals and Selenium

Region 4 San Gabriel River and Tributaries Source: Construction Stormwater Dischargers TMDL Completion Date: 3 2007 TMDL Type: Creek	**Pollutant Stressor**	**Wet weather Allocations**	**Dry Weather Allocations**	**% of Watershed**

San Gabriel Reach 2	Lead (Pb)	0.7% * 166 µg/l * Daily Storm Vol	N/A	0.7%
San Gabriel Reach 2	Lead (Pb) Mass based	0.8 kg/d	N/A	0.7%
Coyote Creek	Copper (Cu)	0.285 kg/d	0	5.0%
Coyote Creek	Lead (Pb)	1.70 kg/d	N/A	5.0%
Coyote Creek	Zinc (Zn)	2.4 kg/d	N/A	5.0%
San Jose Creek Reach 1 and 2	Selenium	5 µg/L	5 µg/L	5.0%

Wet-weather allocations for lead in San Gabriel River Reach 2. Concentration-based allocations apply to non-stormwater NPDES discharges. Stormwater allocations are expressed as a percent of load duration curve. Mass-based values presented in table are based on a flow of 260 cfs (daily storm volume = 6.4 $x10^{8}$ liters).

There are 1555 acres of water in the entire watershed, 37.4 acres of water in the Reach 1 subwatershed (2.4%), and 269 acres in the Coyote Creek subwatershed (17%).

General Construction Storm Water Permits

Waste load allocations for the general construction storm water permits may be incorporated into the State Board general permit upon renewal or into a watershed-specific general permit developed by the Regional Board. An estimate of direct atmospheric deposition is developed based on the percent area of surface water in the watershed. Approximately 0.4% of the watershed area draining to San Gabriel River Reach 2 is comprised of water and approximately 0.2% of the watershed area draining to Coyote Creek is comprised of water.

Region 4 The Harbor Beaches of Ventura County-Bacteria

The TMDL has a multi-part numeric target based on the bacteriological water quality objectives for marine water to protect the water contact recreation use. These targets are the most appropriate indicators of public health risk in recreational waters. Bacteriological objectives are set forth in Chapter 3 of the Basin Plan. The objectives are based on four bacteria indicators and include both geometric mean limits and single sample limits. The Basin Plan objectives that serve as the numeric targets for this TMDL are:

The General NPDES Construction permit is seen as a minor contributor and is given no allocation

General NPDES permits, individual NPDES permits, the Statewide Industrial Storm Water General Permit, the Statewide Construction Activity Storm Water General Permit, and WDR permittees in the Channel Islands Harbor subwatershed are assigned WLAs of zero (0) days of allowable exceedances for all three time periods and for the single sample limits and the rolling 30-day geometric mean. Any future enrollees under a general NPDES permit, individual NPDES permit, the Statewide Industrial Storm Water General Permit, the Statewide Construction Activity Storm Water General Permit, and WDR will also be subject to a WLA of zero (0) days of allowable exceedances.

Region 4 Resolution No. 03-009 Los Angeles River and Tributaries-Nutrients

Minor Point Sources
Waste loads are allocated to minor point sources enrolled under NPDES or WDR permits including but not limited to Tapia WRP, Whittier Narrows WRP, Los Angeles Zoo WRP, industrial and construction stormwater, and municipal storm water and urban runoff from municipal separate storm sewer systems (MS4s)

Malibu Creek Attachment A to Resolution No. 2004-019R-Bacteria

12 13 2004 The WLAs for permittees under the NPDES General Stormwater Construction Permit are zero (0) days of allowable exceedances for all three time periods and for the single sample limits and the rolling 30-day geometric mean.

Region 4 Marina del Rey Harbor, Mothers' Beach and Back Basins

Attachment A to Resolution No. 2003-012-Bacteria

8 7 2003 As discussed in "Source Analysis", discharges from general NPDES permits, general industrial storm water permits and general construction storm water permits are not expected to be a significant source of bacteria. Therefore, the WLAs for these discharges are zero (0) days of allowable exceedances for all three time periods and for the single sample limits and the rolling 30-day geometric mean. Any future enrollees under a general NPDES permit, general industrial storm water permit or general construction storm water permit within the MdR Watershed will also be subject to a WLA of zero days of allowable exceedances.

Region 4 San Gabriel River and Tributaries-Metals and Selenium

Dry Weather Selenium WLA
A zero WLA is assigned to the industrial and construction stormwater permits during dry weather. Non-storm water discharges are already prohibited or restricted by existing general permits.

Region 4 General Construction Permittees TMDL Completion Date: 7 13 2006 TMDL Type: River	**Total Recoverable Metals (kg/day)**		
	Copper (Cu) Kg/day	**Lead (Pb) Kg/day**	**Zinc (Zn) Kg/day**
San Gabriel River Reach 2 and upstream reaches/tributaries	**XXXX**	Daily storm volume x 1.24 µg/L	**XXXX**
Coyote Creek and Tributaries	Daily storm volume x 0.7 µg/L	Daily storm volume x 4.3 µg/L	Daily storm volume x 6.2 µg/L

Each enrollee under the general construction stormwater permit receives a WLA on a per acre basis

Region 4 General Construction Permittees TMDL Completion Date: 7 13 2006 TMDL Type: River	**Total Recoverable Metals (kg/day/acre)**		
	Copper (Cu) Kg/acre/day	**Lead (Pb) Kg/acre/day**	**Zinc (Zn) Kg/acre/day**
San Gabriel River Reach 2 and upstream reaches/tributaries	**XXXX**	Daily storm volume x 0.56 µg/L	**XXXX**

Coyote Creek and Tributaries	Daily storm volume x 0.12 µg/L	Daily storm volume x 0.70 µg/L	Daily storm volume x 1.01 µg/L

For the general industrial and construction storm water permits, the daily storm volume is measured at USGS station 11085000 for discharges to Reach 2 and above and at LACDPW flow gauge station F354-R for discharges to Coyote Creek.

General construction storm water permits
WLAs will be incorporated into the State Board general permit upon renewal or into a watershed-specific general permit developed by the Regional Board.

Dry-weather implementation
Non-storm water flows authorized by the General Permit for Storm Water Discharges Associated with Construction Activity (NPDES Permit No. CAS000002), or any successor permit, are exempt from the dry-weather WLA equal to zero as long as they comply with the provisions of sections C.3.and A.9 of the Order No. 99-08 DWQ, which state that these authorized non-storm discharges shall be (1) infeasible to eliminate (2) comply with BMPs as described in the Storm Water Pollution Prevention Plan prepared by the permittee, and (3) not cause or contribute to a violation of water quality standards, or comparable provisions in any successor order. Unauthorized non-storm water flows are already prohibited by Permit No. CAS000002.

Upon permit issuance, renewal, or re-opener
Non-storm water flows not authorized by Order No. 99-08 DWQ, or any successor order, shall achieve dry-weather WLAs. WLAs shall be expressed as NPDES water quality-based effluent limitations specified in accordance with federal regulations and state policy on water quality control. Effluent limitations may be expressed as permit conditions, such as the installation, maintenance, and monitoring of Regional Board-approved BMPs.

Six years from the effective date of the TMDL
The construction industry will submit the results of wet-weather BMP effectiveness studies to the Los Angeles Regional Board for consideration. In the event that no effectiveness studies are conducted and no BMPs are approved, permittees shall be subject to site-specific BMPs and monitoring to demonstrate BMP effectiveness.

Seven years from the effective date of the TMDL
The Los Angeles Regional Board will consider results of the wet weather BMP effectiveness studies and consider approval of BMPs.

Eight years from the effective date of the TMDL
All general construction storm water permittees shall implement Regional Board-approved BMPs.

Organochlorine Compounds TMDLs Implementation Tasks and Schedule

Regional Board staff shall develop a SWPPP Improvement Program that identifies the Regional Board's expectations with respect to the content of SWPPPs, including documentation regarding the selection and implementation of BMPs, and a sampling and analysis plan. The Improvement Program shall include specific guidance regarding the development and implementation of monitoring plans, including the constituents to be monitored, sampling frequency and analytical protocols. The SWPPP Improvement Program shall be completed by (*the date of OAL approval of this BPA*). ***No later than two months*** from completion of the Improvement Program, Board staff shall assure that the requirements of the Program are communicated to interested parties, including dischargers with existing authorizations under the General Construction Permit. Existing, authorized dischargers shall revise their project SWPPPs as needed to address the Program requirements as soon as possible but ***no later than (three months of completion of the SWPPP Improvement Program)***. Applicable SWPPPs that do not adequately address the Program requirements shall be considered inadequate and enforcement by the Regional Board shall proceed accordingly. The Caltrans and Orange County MS4 permits shall be revised as needed to assure that the permittees communicate the Regional Board's SWPPP expectations, based on the SWPPP Improvement Program, with the Standard Conditions of Approval.

Appendix 4 Sediment TMDLs

Implemented Sediment TMDLs in California. Construction was listed as a source in all fo these TMDLs in relation to road construction. Although construction was mentioned as a source, it was not given a specific allocation amount. The closest allocation amount would be for the road activity management WLA. **Implementation Phase** – Adoption process by the Regional Board, the State Water Resources Control Board, the Office of Administrative Law, and the US Environmental Protection Agency completed and TMDL being implemented.

APPENDIX 5:
Glossary

Active Areas of Construction
All areas subject to land surface disturbance activities related to the project including, but not limited to, project staging areas, immediate access areas and storage areas. All previously active areas are still considered active areas until final stabilization is complete. [The construction activity Phases used in this General Permit are the Preliminary Phase, Grading and Land Development Phase, Streets and Utilities Phase, and the Vertical Construction Phase.]

Active Treatment System (ATS)
A treatment system that employs chemical coagulation, chemical flocculation, or electrocoagulation to aid in the reduction of turbidity caused by fine suspended sediment.

Acute Toxicity Test
A chemical stimulus severe enough to rapidly induce a negative effect; in aquatic toxicity tests, an effect observed within 96 hours or less is considered acute.

Air Deposition
Airborne particulates from construction activities.

Approved Signatory
A person who has been authorized by the Legally Responsible Person to sign, certify, and electronically submit Permit Registration Documents, Notices of Termination, and any other documents, reports, or information required by the General Permit, the State or Regional Water Board, or U.S. EPA. The Approved Signatory must be one of the following:

1. For a corporation or limited liability company: a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: (a) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation or limited liability company; or (b) the manager of the facility if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

2. For a partnership or sole proprietorship: a general partner or the proprietor, respectively;

3. For a municipality, State, Federal, or other public agency: a principal executive officer, ranking elected official, city manager, council president, or any other authorized public employee with managerial responsibility over the

construction or land disturbance project (including, but not limited to, project manager, project superintendent, or resident engineer);

4. For the military: any military officer or Department of Defense civilian, acting in an equivalent capacity to a military officer, who has been designated;

5. For a public university: an authorized university official;

6. For an individual: the individual, because the individual acts as both the Legally Responsible Person and the Approved Signatory; or

7. For any type of entity not listed above (e.g. trusts, estates, receivers): an authorized person with managerial authority over the construction or land disturbance project.

Beneficial Uses
As defined in the California Water Code, beneficial uses of the waters of the state that may be protected against quality degradation include, but are not limited to, domestic, municipal, agricultural and industrial supply; power generation; recreation; aesthetic enjoyment; navigation; and preservation and enhancement of fish, wildlife, and other aquatic resources or preserves.

Best Available Technology Economically Achievable (BAT)
As defined by USEPA, BAT is a technology-based standard established by the Clean Water Act (CWA) as the most appropriate means available on a national basis for controlling the direct discharge of toxic and nonconventional pollutants to navigable waters. The BAT effluent limitations guidelines, in general, represent the best existing performance of treatment technologies that are economically achievable within an industrial point source category or subcategory.

Best Conventional Pollutant Control Technology (BCT)
As defined by USEPA, BCT is a technology-based standard for the discharge from existing industrial point sources of conventional pollutants including biochemical oxygen demand (BOD), total suspended sediment (TSS), fecal coliform, pH, oil and grease.

Best Professional Judgment (BPJ)
The method used by permit writers to develop technology-based NPDES permit conditions on a case-by-case basis using all reasonably available and relevant data.

Best Management Practices (BMPs)
BMPs are scheduling of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants. BMPs also include treatment requirements, operating procedures,

and practices to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

Chain of Custody (COC)
Form used to track sample handling as samples progress from sample collection to the analytical laboratory. The COC is then used to track the resulting analytical data from the laboratory to the client. COC forms can be obtained from an analytical laboratory upon request.

Coagulation
The clumping of particles in a discharge to settle out impurities, often induced by chemicals such as lime, alum, and iron salts.

Common Plan of Development
Generally a contiguous area where multiple, distinct construction activities may be taking place at different times under one plan. A plan is generally defined as any piece of documentation or physical demarcation that indicates that construction activities may occur on a common plot. Such documentation could consist of a tract map, parcel map, demolition plans, grading plans or contract documents. Any of these documents could delineate the boundaries of a common plan area. However, broad planning documents, such as land use master plans, conceptual master plans, or broad-based CEQA or NEPA documents that identify potential projects for an agency or facility are not considered common plans of development.

Daily Average Discharge
The discharge of a pollutant measured during any 24-hour period that reasonably represents a calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged during the day. For pollutants with limitations expressed in other units of measurement (e.g., concentration) the daily discharge is calculated as the average measurement of the pollutant throughout the day (40 CFR 122.2). In the case of pH, the pH must first be converted from a log scale.

Debris
Litter, rubble, discarded refuse, and remains of destroyed inorganic anthropogenic waste.

Direct Discharge
A discharge that is routed directly to waters of the United States by means of a pipe, channel, or ditch (including a municipal storm sewer system), or through surface runoff.

Discharger
The Legally Responsible Person (see definition) or entity subject to this General Permit.

Dose Rate (for ATS)
In exposure assessment, dose (e.g. of a chemical) per time unit (e.g. mg/day), sometimes also called dosage.

Drainage Area
The area of land that drains water, sediment, pollutants, and dissolved materials to a common outlet.

Effluent
Any discharge of water by a discharger either to the receiving water or beyond the property boundary controlled by the discharger.

Effluent Limitation
Any numeric or narrative restriction imposed on quantities, discharge rates, and concentrations of pollutants which are discharged from point sources into waters of the United States, the waters of the contiguous zone, or the ocean.

Erosion
The process, by which soil particles are detached and transported by the actions of wind, water, or gravity.

Erosion Control BMPs
Vegetation, such as grasses and wildflowers, and other materials, such as straw, fiber, stabilizing emulsion, protective blankets, etc., placed to stabilize areas of disturbed soils, reduce loss of soil due to the action of water or wind, and prevent water pollution.

Field Measurements
Testing procedures performed in the field with portable field-testing kits or meters.

Final Stabilization
All soil disturbing activities at each individual parcel within the site have been completed in a manner consistent with the requirements in this General Permit.

First Order Stream
Stream with no tributaries.

Flocculants
Substances that interact with suspended particles and bind them together to form flocs.

Good Housekeeping BMPs
BMPs designed to reduce or eliminate the addition of pollutants to construction site runoff through analysis of pollutant sources, implementation of proper handling/disposal practices, employee education, and other actions.

Grading Phase (part of the Grading and Land Development Phase)
Includes reconfiguring the topography and slope including; alluvium removals; canyon cleanouts; rock undercuts; keyway excavations; land form grading; and stockpiling of select material for capping operations.

Hydromodification
Hydromodification is the alteration of the hydrologic characteristics of coastal and non-coastal waters, which in turn could cause degradation of water resources. Hydromodification can cause excessive erosion and/or sedimentation rates, causing excessive turbidity, channel aggradation and/or degradation.

Identified Organisms
Organisms within a sub-sample that is specifically identified and counted.

Inactive Areas of Construction
Areas of construction activity that are not active and those that have been active and are not scheduled to be re-disturbed for at least 14 days.

Index Period
The period of time during which bioassessment samples must be collected to produce results suitable for assessing the biological integrity of streams and rivers. Instream communities naturally vary over the course of a year,and sampling during the index period ensures that samples are collected during a time frame when communities are stable so that year-to-year consistency is obtained. The index period approach provides a cost-effective alternative to year-round sampling. Furthermore, sampling within the appropriate index period will yield results that are comparable to the assessment thresholds or criteria for a given region, which are established for the same index period. Because index periods differ for different parts of the state, it is essential to know the index period for your area.

K Factor
The soil erodibility factor used in the Revised Universal Soil Loss Equation (RUSLE). It represents the combination of detachability of the soil, runoff potential of the soil, and the transportability of the sediment eroded from the soil.

Legally Responsible Person
The Legally Responsible Person (LRP) will typically be the project proponent. The categories of persons or entities that are eligible to serve as the LRP are set forth below. For any construction or land disturbance project where multiple persons or entities are eligible to serve as the LRP, those persons or entities

shall select a single LRP. In exceptional circumstances, a person or entity that qualifies as the LRP may provide written authorization to another person or entity to serve as the LRP. In such a circumstance, the person or entity that provides the authorization retains all responsibility for compliance with the General Permit. Except as provided in category 2(d), a contractor who does not satisfy the requirements of any of the categories below is not qualified to be an LRP.

The following persons or entities may serve as an LRP:

1. A person, company, agency, or other entity that possesses a real property interest (including, but not limited to, fee simple ownership, easement, leasehold, or other rights of way) in the land upon which the construction or land disturbance activities will occur for the regulated site.

2. In addition to the above, the following persons or entities may also serve as an LRP:

    a. For linear underground/overhead projects, the utility company, municipality, or other public or private company or agency that owns or operates the LUP;

    b. For land controlled by an estate or similar entity, the person who has day-to-day control over the land (including, but not limited to, a bankruptcy trustee, receiver, or conservator);

    c. For pollution investigation and remediation projects, any potentially responsible party that has received permission to conduct the project from the holder of a real property interest in the land; or

    d. For U.S. Army Corp of Engineers projects, the U.S. Army Corps of Engineers may provide written authorization to its bonded contractor to serve as the LRP, provided, however, that the U.S. Army Corps of Engineers is also responsible for compliance with the general permit, as authorized by the Clean Water Act or the Federal Facilities Compliance Act.

Likely Precipitation Event
Any weather pattern that is forecasted to have a 50% or greater chance of producing precipitation in the project area. The discharger shall obtain likely precipitation forecast information from the National Weather Service Forecast Office (e.g., by entering the zip code of the project's location at http://www.srh.noaa.gov/forecast).

Maximum Allowable Threshold Concentration (MATC)
The allowable concentration of residual, or dissolved, coagulant/flocculant in effluent. The MATC shall be coagulant/flocculant-specific, and based on toxicity

testing conducted by an independent, third-party laboratory. A typical MATC would be:

The MATC is equal to the geometric mean of the NOEC (No Observed Effect Concentration) and LOEC (Lowest Observed Effect Concentration) Acute and Chronic toxicity results for most sensitive species determined for the specific coagulant. The most sensitive species test shall be used to determine the MATC.

Natural Channel Evolution
The physical trend in channel adjustments following a disturbance that causes the river to have more energy and degrade or aggrade more sediment. Channels have been observed to pass through 5 to 9 evolution types. Once they pass though the suite of evolution stages, they will rest in a new state of equilibrium.

Non-Storm Water Discharges
Discharges are discharges that do not originate from precipitation events. They can include, but are not limited to, discharges of process water, air conditioner condensate, non-contact cooling water, vehicle wash water, sanitary wastes, concrete washout water, paint wash water, irrigation water, or pipe testing water.

Non-Visible Pollutants
Pollutants associated with a specific site or activity that can have a negative impact on water quality, but cannot be seen though observation (ex: chlorine). Such pollutants being discharged are not authorized.

Numeric Action Level (NAL)
Level is used as a warning to evaluate if best management practices are effective and take necessary corrective actions. Not an effluent limit.

Original Sample Material
The material (i.e., macroinvertebrates, organic material, gravel, etc.) remaining after the subsample has been removed for identification.

pH
Unit universally used to express the intensity of the acid or alkaline condition of a water sample. The pH of natural waters tends to range between 6 and 9, with neutral being 7. Extremes of pH can have deleterious effects on aquatic systems.

Post-Construction BMPs
Structural and non-structural controls which detain, retain, or filter the release of pollutants to receiving waters after final stabilization is attained.

Preliminary Phase (Pre-Construction Phase - Part of the Grading and Land Development Phase)
Construction stage including rough grading and/or disking, clearing and grubbing operations, or any soil disturbance prior to mass grading.

Project

Qualified SWPPP Developer
Individual who is authorized to develop and revise SWPPPs.

Qualified SWPPP Practitioner
Individual assigned responsibility for non-storm water and storm water visual observations, sampling and analysis, and responsibility to ensure full compliance with the permit and implementation of all elements of the SWPPP, including the preparation of the annual compliance evaluation and the elimination of all unauthorized discharges.

Qualifying Rain Event
Any event that produces 0.5 inches or more precipitation with a 48 hour or greater period between rain events.

R Factor
Erosivity factor used in the Revised Universal Soil Loss Equation (RUSLE). The R factor represents the erosivity of the climate at a particular location. An average annual value of R is determined from historical weather records using erosivity values determined for individual storms. The erosivity of an individual storm is computed as the product of the storm's total energy, which is closely related to storm amount, and the storm's maximum 30-minute intensity.

Rain Event Action Plan (REAP)
Written document, specific for each rain event, that when implemented is designed to protect all exposed portions of the site within 48 hours of any likely precipitation event.

Remaining Sub sampled Material
The material (e.g., organic material, gravel, etc.) that remains after the organisms to be identified have been removed from the subsample for identification. (Generally, no macroinvertebrates are present in the remaining subsampled material, but the sample needs to be checked and verified using a complete Quality Assurance (QA) plan)

Routine Maintenance
Activities intended to maintain the original line and grade, hydraulic capacity, or original purpose of a facility.

Runoff Control BMPs
Measures used to divert runon from offsite and runoff within the site.

Run-on
Discharges that originate offsite and flow onto the property of a separate project site.

Revised Universal Soil Loss Equation (RUSLE)
Empirical model that calculates average annual soil loss as a function of rainfall and runoff erosivity, soil erodibility, topography, erosion controls, and sediment controls.

Sampling and Analysis Plan
Document that describes how the samples will be collected, under what conditions, where and when the samples will be collected, what the sample will be tested for, what test methods and detection limits will be used, and what methods/procedures will be maintained to ensure the integrity of the sample during collection, storage, shipping and testing (i.e., quality assurance/quality control protocols).

Sediment
Solid particulate matter, both mineral and organic, that is in suspension, is being transported, or has been moved from its site of origin by air, water, gravity, or ice and has come to rest on the earth's surface either above or below sea level.

Sedimentation
Process of deposition of suspended matter carried by water, wastewater, or other liquids, by gravity. It is usually accomplished by reducing the velocity of the liquid below the point at which it can transport the suspended material.

Sediment Control BMPs
Practices that trap soil particles after they have been eroded by rain, flowing water, or wind. They include those practices that intercept and slow or detain the flow of storm water to allow sediment to settle and be trapped (e.g., silt fence, sediment basin, fiber rolls, etc.).

Settleable Solids (SS)
Solid material that can be settled within a water column during a specified time frame. It is typically tested by placing a water sample into an Imhoff settling cone and then allowing the solids to settle by gravity for a given length of time. Results are reported either as a volume (mL/L) or a mass (mg/L) concentration.

Sheet Flow
Flow of water that occurs overland in areas where there are no defined channels where the water spreads out over a large area at a uniform depth.

Site

Soil Amendment
Any material that is added to the soil to change its chemical properties, engineering properties, or erosion resistance that could become mobilized by storm water.

Streets and Utilities Phase
Construction stage including excavation and street paving, lot grading, curbs, gutters and sidewalks, public utilities, public water facilities including fire hydrants, public sanitary sewer systems, storm sewer system and/or other drainage improvements.

Structural Controls
Any structural facility designed and constructed to mitigate the adverse impacts of storm water and urban runoff pollution

Suspended Sediment Concentration (SSC)
The measure of the concentration of suspended solid material in a water sample by measuring the dry weight of all of the solid material from a known volume of a collected water sample. Results are reported in mg/L.

Total Suspended Solids (TSS)
The measure of the suspended solids in a water sample includes inorganic substances, such as soil particles and organic substances, such as algae, aquatic plant/animal waste, particles related to industrial/sewage waste, etc. The TSS test measures the concentration of suspended solids in water by measuring the dry weight of a solid material contained in a known volume of a sub-sample of a collected water sample. Results are reported in mg/L.

Toxicity
The adverse response(s) of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies.

Turbidity
The cloudiness of water quantified by the degree to which light traveling through a water column is scattered by the suspended organic and inorganic particles it contains. The turbidity test is reported in Nephelometric Turbidity Units (NTU) or Jackson Turbidity Units (JTU).

Vertical Construction Phase
The Build out of structures from foundations to roofing, including rough landscaping.

Waters of the United States
Generally refers to surface waters, as defined by the federal Environmental Protection Agency in 40 C.F.R. § 122.2.[1]

Water Quality Objectives (WQO)
Water quality objectives are defined in the California Water Code as limits or levels of water quality constituents or characteristics, which are established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area.

[1] The application of the definition of "waters of the United States" may be difficult to determine; there are currently several judicial decisions that create some confusion. If a landowner is unsure whether the discharge must be covered by this General Permit, the landowner may wish to seek legal advice.

APPENDIX 6:
Acronym List

ASBS	Areas of Special Biological Significance
ASTM	American Society of Testing and Materials; Standard Test Method for Particle-Size Analysis of Soils
ATS	Active Treatment System
BASMAA	Bay Area Storm water Management Agencies Association
BAT	Best Available Technology Economically Achievable
BCT	Best Conventional Pollutant Control Technology
BMP	Best Management Practices
BOD	Biochemical Oxygen Demand
BPJ	Best Professional Judgment
CAFO	Confined Animal Feeding Operation
CCR	California Code of Regulations
CEQA	California Environmental Quality Act
CFR	Code of Federal Regulations
CGP	NPDES General Permit for Storm Water Discharges Associated with Construction Activities
CIWQS	California Integrated Water Quality System
CKD	Cement Kiln Dust
COC	Chain of Custody
CPESC	Certified Professional in Erosion and Sediment Control
CPSWQ	Certified Professional in Storm Water Quality
CSMP	Construction Site Monitoring Program
CTB	Cement Treated Base
CTR	California Toxics Rule
CWA	Clean Water Act
CWC	California Water Code
CWP	Center for Watershed Protection
DADMAC	Diallyldimethyl-ammonium chloride
DDNR	Delaware Department of Natural Resources
DFG	Department of Fish and Game
DHS	Department of Health Services
DWQ	Division of Water Quality
EC	Electrical Conductivity
ELAP	Environmental Laboratory Accreditation Program
EPA	Environmental Protection Agency
ESA	Environmentally Sensitive Area
ESC	Erosion and Sediment Control
HSPF	Hydrologic Simulation Program Fortran
JTU	Jackson Turbidity Units
LID	Low Impact Development
LOEC	Lowest Observed Effect Concentration
LRP	Legally Responsible Person
LUP	Linear Underground/Overhead Projects

MATC	Maximum Allowable Threshold Concentration
MDL	Method Detection Limits
MRR	Monitoring and Reporting Requirements
MS4	Municipal Separate Storm Sewer System
MUSLE	Modified Universal Soil Loss Equation
NAL	Numeric Action Level
NEL	Numeric Effluent Limitation
NICET	National Institute for Certification in Engineering Technologies
NOAA	National Oceanic and Atmospheric Administration
NOEC	No Observed Effect Concentration
NOI	Notice of Intent
NOT	Notice of Termination
NPDES	National Pollutant Discharge Elimination System
NRCS	Natural Resources Conservation Service
NTR	National Toxics Rule
NTU	Nephelometric Turbidity Units
O&M	Operation and Maintenance
PAC	Polyaluminum chloride
PAM	Polyacrylamide
PASS	Polyaluminum chloride Silica/sulfate
POC	Pollutants of Concern
PoP	Probability of Precipitation
POTW	Publicly Owned Treatment Works
PRDs	Permit Registration Documents
PWS	Planning Watershed
QAMP	Quality Assurance Management Plan
QA/QC	Quality Assurance/Quality Control
REAP	Rain Event Action Plan
Regional Board	Regional Water Quality Control Board
ROWD	Report of Waste Discharge
RUSLE	Revised Universal Soil Loss Equation
RW	Receiving Water
SMARTS	Storm water Multi Application Reporting and Tracking System
SS	Settleable Solids
SSC	Suspended Sediment Concentration
SUSMP	Standard Urban Storm Water Mitigation Plan
SW	Storm Water
SWARM	Storm Water Annual Report Module
SWAMP	Surface Water Ambient Monitoring Program
SWMM	Storm Water Management Model
SWMP	Storm Water Management Program
SWPPP	Storm Water Pollution Prevention Plan
TC	Treatment Control
TDS	Total Dissolved Solids

TMDL	Total Maximum Daily Load
TSS	Total Suspended Solids
USACOE	U.S. Army Corps of Engineers
USC	United States Code
USEPA	United States Environmental Protection Agency
USGS	United States Geological Survey
WDID	Waste Discharge Identification Number
WDR	Waste Discharge Requirements
WLA	Waste Load Allocation
WET	Whole Effluent Toxicity
WRCC	Western Regional Climate Center
WQBEL	Water Quality Based Effluent Limitation
WQO	Water Quality Objective
WQS	Water Quality Standard

SECTION 3
Comment Letters

The City of Los Angeles Department of Water and Power (LADWP), Department of Public Works Bureau of Engineering (BOE) and Bureau of Sanitation (LASAN), and Department of Recreation and Parks (RAP), are collectively referred to herein as the "City." LADWP acting as Lead Agency circulated the Draft Initial Study/Mitigated Negative Declaration (Draft IS/MND) for the Stormwater Capture Parks Program (Program) for public review for 30 days (January 7, 2021 through February 7, 2021) in accordance with the requirements of the California Environmental Quality Act (CEQA) Guidelines Section 15072(a). BOE, LASAN, and RAP will act as Responsible Agencies. The City received a total of eight comment letters during the public review period, which are listed in **Table 3-1** and are included within this chapter. The letters have been marked with brackets that delineate comments pertaining to environmental issues and the information and analysis contained in the Draft IS/MND. Responses to such comments are provided in Section 4.

TABLE 3-1
COMMENT LETTERS RECEIVED

Comment Letter No.	Commenter	Date of Comment
1	California Department of Transportation	January 13, 2021
2	Luis Suarez	January 15, 2021
3	Marie Gordon	January 22, 2021
4	Brenda Dalusong	February 2, 2021
5	California Department of Fish and Wildlife	February 5, 2021
6	Diana Nicole, Sunshine Hills Residents Association	February 8, 2021
7	County of Los Angeles Fire Department	February 9, 2021
8	Joanne D'Antonio	February 8, 2021

SECTION 4
Response to Comments

4.1 Comments on the Draft IS/MND and Response to Comments

The responses to comments included in this section correspond to each comment letter outlined in Section 3.

Letter 1: Miya Edmonson (California Department of Transportation)

Comment 1-A

The commenter summarizes the project description.

Response 1-A

The comment is noted and will be included in the project record.

Comment 1-B

The commenter states that an encroachment permit would likely be required for any project work, including road closures, done on or near California Department of Transportation's (Caltrans) right of way.

Response 1-B

As noted on page 33 of the Draft IS/MND, the City and/or its contractors will coordinate with Caltrans and will obtain all necessary permits prior to construction activities. In addition, Caltrans is an active partner in the Program, providing some funding and assisting with project level designs.

Comment 1-C

The commenter states that a Caltrans transportation permit is required for transporting any heavy construction equipment and/or materials with oversized-transport vehicles on State Highways.

Response 1-C

The City and/or its contractors will coordinate with Caltrans and will obtain all necessary permits prior to construction activities.

Comment 1-D

The commenter recommends that project construction traffic is limited to off-peak periods to minimize potential impacts on State facilities.

Response 1-D

As outlined in Mitigation Measure TR-1, the City and/or its contractors will coordinate with Los Angeles Department of Transportation (LADOT) in order to prepare a construction traffic management plan (CTMP) for the Program which will include time of day restrictions, and time limitations for construction traffic.

Comment 1-E

The commenter requests submission of a construction traffic management plan to Caltrans for review if State facilities are expected to have delays. The commenter request that the traffic management plan includes details on any traffic delays that would occur on State facilities during construction, and alternate bicycle and pedestrian routes for any routes that would be affected during construction.

Response 1-E

The City will submit the CTMP to Caltrans for review if delays are expected on State facilities.

Comment 1-F

The commenter expresses support for Transportation Demand Management (TDM) strategies which the City has incorporated into the Program and recommends additional options to further reduce Vehicle Miles Traveled (VMT) and greenhouse gas emissions impacts.

Response 1-F

The Draft IS/MND concluded that Program impacts to VMT and greenhouse gas emissions would occur at levels that are below CEQA significance thresholds, without implementation of any mitigation measures.

Letter 2: Luis Suarez

Comment 2-A

The commenter requests more information regarding the environmental impacts that would occur on homes surrounding Fernangeles Park.

Response 2-A

Residents in the vicinity of Program sites may experience temporary impacts related to construction. The City and its construction contractors are required to implement mitigation measures to ensure that nearby residents are notified of tentative construction schedules and that Program impacts remain below the specific impact thresholds identified in Appendix G of the

CEQA Guidelines. For a detailed discussion of anticipated environmental impacts, please refer to the Draft IS/MND. With respect to neighborhood impacts, the IS/MND describes effects to aesthetics on page 46, air quality on page 51, biological resources on page 72, noise on page 122, recreational resources on page 138, and traffic on page 140.

Comment 2-B

The commenter expresses concern regarding the potential for groundwater saturation in surrounding neighborhoods as a result of the proposed infiltration galleries at Fernangeles Park.

Response 2-B

The Program would include construction of underground infiltration galleries, which would capture surface flow and divert stormwater runoff from the Caltrans pump discharge to recharge the San Fernando Groundwater Basin. The infiltration galleries will be constructed of concrete and are designed to retain flows for percolation into the San Fernando Groundwater Basin. The ground surface surrounding the park would be restored to support recreational uses similar to current conditions. The Draft IS/MND evaluates the potential for groundwater mounding to occur that could affect surface infrastructure. A technical analysis prepared by Todd Groundwater Consultants is included as Appendix E. As noted in Table 1 of Appendix E, the infiltration galleries would range from 16 to 29 feet below ground surface and the groundwater levels in the area range from 105 to 335 feet below the ground surface. Mitigation measure GEO-1 has been included to monitor groundwater levels and reduce flow diversions when groundwater is within 50 feet of the surface. With mitigation implemented, the Draft IS/MND concludes that the potential for elevated groundwater levels would be minimized.

Letter 3: Marie Gordon

Comment 3-A

The commenter requests information regarding start and end dates for Program construction activities that would occur near two senior citizen apartment buildings located along Vanowen Street, between Whitsett Avenue and Rhodes Avenue, just south of Whitsett Fields Park North.

Response 3-A

As noted in Table 1-6 on page 40 of the Draft IS/MND, construction activities at Whitsett Fields Park North are expected to take approximately 18 months, starting in June 2025 and ending in November 2026. Construction at Valley Plaza Park North, located east of I-170 on Vanowen Street, is expected to take approximately 17 months, starting in November 2023 and ending in March 2025. Construction work hours would generally be restricted to times between 7 A.M. and 7 P.M., Monday through Friday.

Comment 3-B

The commenter expresses concern regarding construction mitigation measures and their potential to minimize environmental impacts on senior citizens living in nearby apartments. The commenter states that the environmental impacts of prior projects were not effectively mitigated.

Response 3-B

Residents in the vicinity of Program sites may experience temporary impacts related to construction. The City and its construction contractors are required to implement mitigation measures to ensure that nearby residents are notified of tentative construction schedules, and that Program impact levels remain below the specific thresholds identified in Appendix G of the CEQA Guidelines. For a detailed discussion of anticipated environmental impacts, please refer to the Draft IS/MND. With respect to neighborhood impacts, the IS/MND describes effects to aesthetics on page 46, air quality on page 51, biological resources on page 72, noise on page 122, recreational resources on page 138, and traffic on page 140.

Comment 3-C

Commenter states that the Notice of Intent (NOI) for the Program is dated January 7, 2021 but was not received until January 20, 2021.

Response 3-C

The comment is noted and will be included in the project record. The public review period for the Draft IS/MND was from January 7, 2021, to February 7, 2021. The commenter received the NOI within the public review period of the Draft IS/MND in compliance with CEQA.

Letter 4: Brenda Dalusong

Comment 4-A

The commenter requests that the City consider construction of sidewalks around the perimeter of Fernangeles Park as part of the Program's proposed recreational facilities enhancements. The commenter states concern for pedestrian/motor vehicle safety around the park due to the lack of sidewalks available for pedestrian use.

Response 4-A

Figures 1-4 through 1-12 provide architectural drawings for each of the proposed parks that include public access and pedestrian circulation to support existing recreational uses.

Letter 5: Erinn Wilson-Olgin (California Department of Fish and Wildlife)

Comment 5-A

The comment acknowledges that California Department of Fish and Wildlife (CDFW) received the Draft IS/MND for review and to provide comments.

Response 5-A

Comment noted.

Comment 5-B

CDFW disagrees with the City's impact analysis, which finds that the Project's diversion of water would not impact biological resources

The Project would divert dry season flow and stormwater totaling 3,010 acre-feet per year (AFY). The water would otherwise proceed downstream via concrete channels to the Los Angeles River. The Draft IS/MND concluded that "no beneficial uses would be impacted." However, flow reduction could have a significant impact on downstream biological resources, especially during the dry season proceeding after a below-average water year.

Response 5-B

The Draft IS/MND on pages 74 and 77 describes that the Program would reduce dry season flows from the Tujunga Central Branch channel that would reduce water in the Los Angeles River. In response to the comment the sentence on page 77 of the Draft IS/MND has been revised as follows:

> The Los Angeles River currently discharges an average of over 100 cubic feet per second (cfs) to the ocean during dry weather (City of Los Angeles 2018). The volume of water diverted during dry weather flow by the proposed Program would be a small percentage of the current downstream flows (1.4 percent of total annual flow or approximately 4 percent of dry weather flow), and as a result no beneficial uses, including biological resources, would be significantly impacted.

As noted in the comment, the reduction of dry weather flows is itself an impact. Therefore, the changes to the text provided above as requested in the comment are appropriate. The Draft IS/MND identifies the reduced flow impact on page 74, but concludes that no riparian or aquatic habitat would be removed or adversely affected within the downstream reaches of the Los Angeles River. Therefore, since no habitat would be lost or stressed, the flow reduction would be a less than significant impact. The analysis relies on a de minimis impact conclusion. That is, the reduction of 1.4 percent of total flow and approximately 4 percent of dry weather flow in the river would not result in loss of habitat or result in reduced habitat quality. Rather, diverting dry-weather urban runoff would benefit water quality. The Draft IS/MND describes on pages 74 and 77 how beneficial uses are well supported by the remaining dry season flows. This evidence is outlined further below.

The Draft IS/MND describes in Section 1.5 that six of the nine Program sites (see table below) would require insertion of diversion structures within underground storm drain pipes. No habitat values exist within the buried storm drain pipes. The remaining four Program sites would require installation of diversion structures within existing Tujunga Central Branch concrete box channel or reinforced concrete box culvert. The watershed drained by this Tujunga Central Branch

channel is a small portion of the San Fernando Valley adjacent to but outside of the Tujunga Wash drainage area, representing 1.7 percent of the total Los Angeles River watershed.

Infiltration Gallery Location	Diversion Structure Installation
David M. Gonzales Recreation Center	Underground Storm Drain Pipe
FernAngeles Park	Underground Storm Drain Pipe
Whitsett Fields Park North	Underground Storm Drain Pipe
Strathern Park North	Underground Storm Drain Pipe
Valley Plaza Park North	Underground Reinforced Concrete Box Culvert
Valley Plaza Park South	Concrete Channel
Alexandria Park	Concrete Channel
North Hollywood Park	Concrete Channel
Valley Village Park	Underground Storm Drain Pipe

The Draft IS/MND describes on page 74 that the Tujunga Central Branch channel is concrete-lined with no ecological value. As a result, direct impacts to habitat values from installing diversion structures would not adversely affect biological resources. Furthermore, the Draft IS/MND concludes on pages 74 and 77 that the proposed diversions would result in a small reduction of the flow in the Los Angeles River compared to the current flow, including in the dry season, and would not result in measurable effects to biological resources. The Draft IS/MND references the hydrological analysis conducted by the City for the One Water LA Program and cites that currently an average of 100 cubic feet per second (cfs) reaches the ocean in the concrete channel of the Los Angeles River during dry weather (City of Los Angeles 2018). The Program diversions represent an annual average flow of approximately 4 cfs or 4 percent of the dry weather flows to the ocean. The Draft IS/MND concludes on page 77 that the reduction caused by the project would represent 1.4 percent of the total flow in the river on an annual average. Since the river discharges substantial flow to the ocean in the dry season (>100 cfs), the Draft IS/MND concludes that the proposed project's 1.4 percent diversion of total flows and 4 percent of dry season flows would not result in significant impacts to biological resources.

The Draft IS/MND also concludes on page 153 that the flow reductions would not result in a cumulatively significant reduction, including in the dry season. This conclusion is consistent with the One Water LA Study, which provides an overview of stormwater flows in Chapter 3and the Los Angeles River in Chapter 4. (City of Los Angeles 2018).

In addition to the published One Water LA study, the City has been participating in the Los Angeles River Flows Project, a comprehensive new hydrologic study of the river led by the Southern California Coastal Watershed Research Project (SCCWRP) in partnership with the State Water Resources Control Board (SWRCB). This new study is called the Los Angeles River Flows Project and is sponsored by the City of Los Angeles (by and through LADWP and LASAN), Los Angeles Regional Water Quality Control Board (LARWQCB), and the Los Angeles County Sanitation Districts (LACSD). SCCWRP is a quasi-public agency established to

support Southern California governmental agencies with third-party, science-based analysis. The Los Angeles River Flows Project was initiated in 2019 expressly to evaluate potential effects of cumulative flow reductions in the Los Angeles River, including reductions in WRP discharges and future stormwater capture projects such as the proposed Project. CDFW has been actively participating in the Project as a member of the Technical Advisory Committee (TAC).

In May 2021, SCCWRP published a report titled Process and Decision Support Tools for Evaluating Flow Management Targets to Support Aquatic Life and Recreational Beneficial Uses of the Los Angeles River as part of the Los Angeles River Flows Project (LA River Flows Project Final Report) (SCCWRP, 2021b). This new Final report, included by reference with this Final IS/MND, characterizes the environmental attributes of the river channel and evaluates flows that support those attributes, providing flow-ecology relationships helpful in understanding dry season flow reduction impacts on ecological values. The report develops a set of tools to evaluate future flow management scenarios. One of the three objectives noted in the report is to:

> "Produce tools and approaches to help evaluate how potential modified flow regimes in the LA River may affect the likelihood of supporting aquatic life and recreational beneficial uses" (SCCWRP, 2021b)

The results of this study directly confirm the conclusions outlined in the IS/MND, including an evaluation of the effects to focal species of reduced storm flows during the dry season. See response to comment 5-I for more discussion on the new study and the conclusions regarding impacts to ecological values from reduced dry weather flow.

Comment 5-C

The Draft IS/MND does not provide sufficient analysis of the Project's potential biological impacts to allow CDFW to determine the Project's significance or need for mitigation.

Data Source: The Draft IS/MND uses data from the 2015 *Los Angeles River Ecosystem Restoration Integrated Feasibility Report* (USACE 2015). The U.S. Army Corp of Engineers (USACE) report analyzes the feasibility of restoring an 11-mile stretch of the Los Angeles River from Pollywog Park to Downtown Los Angeles, referred to in the report as the ARBOR reach (Area with Restoration Benefits and Opportunities for Revitalization) (USACE 2015). Citing the USACE report, page 77 of the Draft IS/MND states, "USACE estimated that existing water sources provide 211,348 AFY of flow within the Los Angeles River watershed on an annual basis. The proposed diversion would be approximately 1.4 percent of the existing water source […]. The volume of water diverted during dry weather flow by the proposed Program would be a small percentage of the current downstream flows (1.4 percent), and no beneficial uses would be impacted.

The Draft IS/MND may have underestimated the percentage of water diverted from the Los Angeles River in using 211,348 AFY as the basis for deriving 1.4 percent. After factoring in water demand (e.g., infiltration, evaporation, evapotranspiration), the USACE estimated that flow would be reduced from 211,348 AFY to 143,793 AFY annually and 29,166 AFY in the summer

(April through September) (USACE 2015). Based on reduced volumes, the Project's proposed diversion would be approximately 2.2 percent annually, an increase from 1.4 percent. During the summer, diversion would be approximately 10.3 percent. Based on the above, the Draft IS/MND's impact analysis may not have accurately estimated the proportion of water the Project would divert from the Los Angeles River.

Response 5-C

The calculation in the comment asserting a 10.3 percent reduction is inaccurate in that it assumes the entire diversion estimate of the proposed Program (3,010 AFY) will occur between April and September. It would be more appropriate when calculating the six-month dry season percentage from the 29,166 AFY flow assumption to compare half the annual anticipated diversion, which would be 1,505 AFY, calculated as 5.14 percent of the total dry season flow. A different way of calculating the contribution of flows attributed to the Tujunga Central Branch channel is to compare the project's diversion estimates with flow estimates at the ocean. The One Water LA Report (City of Los Angeles 2018) estimates that the river discharges 100 cfs to the ocean during summer months. The Program's proposed diversion of 3,010 AFY would constitute approximately 4 percent of the existing flow to the ocean during the summer months. This would be a conservative assumption since it does not attribute any stormwater capture to the proposed Program. The Draft IS/MND concludes that the contribution of flow to the Los Angeles River from the Tujunga Central Branch channel during the dry season is small (1.4 percent of the total volume and 4 percent of dry weather flow) compared to other sources. Furthermore, the watershed represents only 1.7 percent of the total watershed feeding stormwater to the Los Angeles River. Based on these flow estimates, the Draft IS/MND concludes that the proposed project would not significantly affect the ecology of the river.

The City, including LADWP, is participating in the Los Angeles River Flows Project in partnership with the SWRCB, and in close coordination with CDFW. The Los Angeles River Flows Project has been initiated by SWRCB to better understand the water demands of beneficial uses in the river, and to support future flow management priorities with science-based demand characterizations. See response to comment 5-I for more discussion on the new study.

Comment 5-D

Seasonality: The Draft IS/MND does not thoroughly analyze the potential significance of water diversion depending on the season. During the dry season, typically April through September in southern California, the Los Angeles River is largely maintained by urban runoff and discharge from WRPs. Diverting water could be significant during the dry season and could either significantly reduce water flow or result in complete loss of water flow from the Tujunga Central Branch channel to the Los Angeles River.

Response 5-D

The Draft IS/MND does evaluate the seasonality of the potential effects of the Program on page 74. The assessment describes the effects of the proposed Program on both dry weather flows and

wet weather flows. The Draft IS/MND notes on pages 74 and 77 that dry weather flows would be reduced slightly but would not result in loss of habitat. This is substantiated by the fact that 100 cfs currently discharges to the ocean in dry weather indicating a surplus of flow. Furthermore, the Draft IS/MND also points out that the ecological values of the river would be enhanced with the reduction of pollutant daily loads conveyed in dry weather flow. The water quality benefits of stormwater capture on downstream habitat values are described further in One Water LA, Chapter 4 Los Angeles River Study (City of Los Angeles 2018), as a fundamental benefit of the City's Program, and supports the water quality objectives of the regional Municipal Separate Storm Sewer System (MS4) stormwater NPDES permit of which the City is a participating permittee. See response to comments 5-C and 5-G.

Comment 5-E

Drought: The Draft IS/MND does not analyze the potential significance of water diversion during a below-normal water year. Since 2000, the longest duration of drought in California lasted between 2011 and 2019 (USGS 2021) and in southern California, between 2012 through 2016 (Los Angeles Almanac 2021). The 2017-2018 rainfall season was below normal and the driest for Los Angeles since 2006-2007 (Los Angeles Almanac 2021). Diverting water during a below normal rainfall year may significantly reduce water flow or result in complete loss of water flow.

Response 5-E

Annual rainfall amounts vary in the Los Angeles River watershed, with multi-year droughts likely becoming more common. The City's Stormwater Capture Master Plan states that "although the average annual precipitation in downtown Los Angeles is 15.3 inches, it ranges from a low of 4.69 inches (2007) to a high of 30.6 (1998). The mountains that surround the coastal plain, and are tributary to the City, experience considerably more rainfall than downtown Los Angeles. For example, in Big Tujunga Canyon, annual rainfall ranged from 9.62 inches in 1989 to 53.93 in 1998." (LADWP Stormwater Capture Master Plan, 2015; p. 3) The watershed represents only 1.7 percent of the total LA River watershed. The reduction would not significantly reduce dry season flows. The comment does not provide any additional information not already considered in the Draft IS/MND. See response to comment 5-I.

Comment 5-F

Beneficial Uses: The concrete lined portions of the Los Angeles River support wildlife. These portions of the Los Angeles River are regionally significant, especially in a dense urban environment with substantial loss or alteration of the natural hydrologic regime and river ecosystems. A reduction of flow, especially dry season flow, could directly or indirectly impact biological resources through habitat modifications. Where the Los Angeles River overtops the concrete-lined channel, the resulting sheet flows allow phytoplankton (algae and cyanobacteria), microorganisms, and herbaceous vegetation to establish. The algae provide habitat and a food source for benthic invertebrates, a vital food source for wading birds. The Los Angeles River provides habitat for hundreds of bird species, making these areas birding hotspots. The least Bell's vireo (*Vireo bellii pusillus*), an Endangered Species Act and CESA-listed endangered

species, has been documented within the Glendale Narrows area. Least Bell's vireo depends on willow (*Salix* genus) riparian habitat. The ARBOR reach examined in the USACE report contains soft-bottom channels that support herbaceous and woody vegetation. Dominant species include black willow (*Salix gooddingii*), Fremont cottonwood (*Populus fremontii*), and arroyo willow (*Salix laevigata*) (USACE 2015). The middle reach of the Los Angeles River, specifically Glendale Narrows, supports anadromous fish that includes the Pacific lamprey (*Entosphenus tridentatus*), a California Species of Special Concern.

The Draft IS/MND concludes that "no beneficial uses would be impacted." The Draft IS/MND does not offer a quantitative analysis as to how it determined no impacts would occur. Moreover, the Draft IS/MND does not define what it considered to be "beneficial uses." Diverting water during the dry season could reduce the availability and extent of shallow water sheet flow downstream. This could potentially impact algae, benthic invertebrates, and birds. Willow riparian habitat may be impacted if reduction in flow leads to receding shoreline or lower water depth. Preliminary work of the Los Angeles River Flows Project show that black willow (*Salix gooddingii*) seedling mortality increases as water depth decreases (SWRCB 2019). Loss of suitable habitat may impact sensitive species such as least Bell's vireo. Anadromous fish have specific habitat requirements including water depth, velocity, and vegetation.

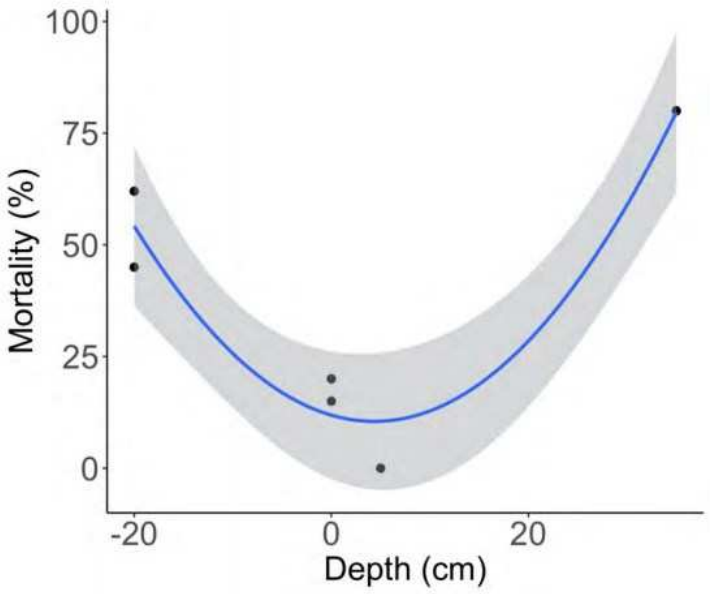
Response 5-F

The Draft IS/MND on pages 74-78 describes the valuable biological resources existing in the Los Angeles River that are supported by consistent surface flow. The Draft IS/MND cites the One Water LA Program to substantiate the values found in the river, including all the species described in the comment. The 4 percent reduction of the current 100 cfs in the lower river channel would not reduce habitat from sheet flow in the lower reaches of the river since the flows would continue to be greater than the low flow channel and would continue to overflow and maintain the sheetflow condition. Phytoplankton and herbaceous vegetation would continue to provide a food source for benthic invertebrates, and for wading birds, as noted in the comment. The Draft IS/MND does provide a quantitative assessment of the potential effect of the proposed Program by estimating a 1.4 percent flow reduction. This small average flow reduction would not result in measurable effects to habitat values in the concrete-lined Los Angeles River either in the Arbor Reach or in the concrete-lined portion of the lower river. Furthermore, the Draft IS/MND cites the One Water LA Study that states that far more water exits the Arbor Reach under current conditions than is proposed to be diverted by the proposed Program. That is to say, since more water exits the system than is contributed by stormwater, there would be sufficient quantity of flow to meet the existing ecological demand. The Draft IS/MND concludes that the calculated flow reductions would not impact beneficial uses.

The comment cites information from a report published for the Los Angeles River Flows Project in January 2021 that provides a habitat suitability assessment for species known to occur in the Los Angeles River. The citation notes that black willow seedling mortality increases with water depth reduction. This information is extracted from a life stage suitability curve provided in the report. The Assessment Report does not provide a conclusion on the optimal water flow depth in

the Los Angeles River. Rather, the Habitat Assessment Report (SCCWRP 2021a) provides suitability curves that show a relationship with water depth and different life cycle stages for various species.

The figure below taken from that report shows that willow seedling mortality is more complex than stated in the comment: mortality is at a minimum at mean depths of around 5 cm and then increases with both reductions and increases in flow depth. In other words, germination occurs within a specific range of flow depth.



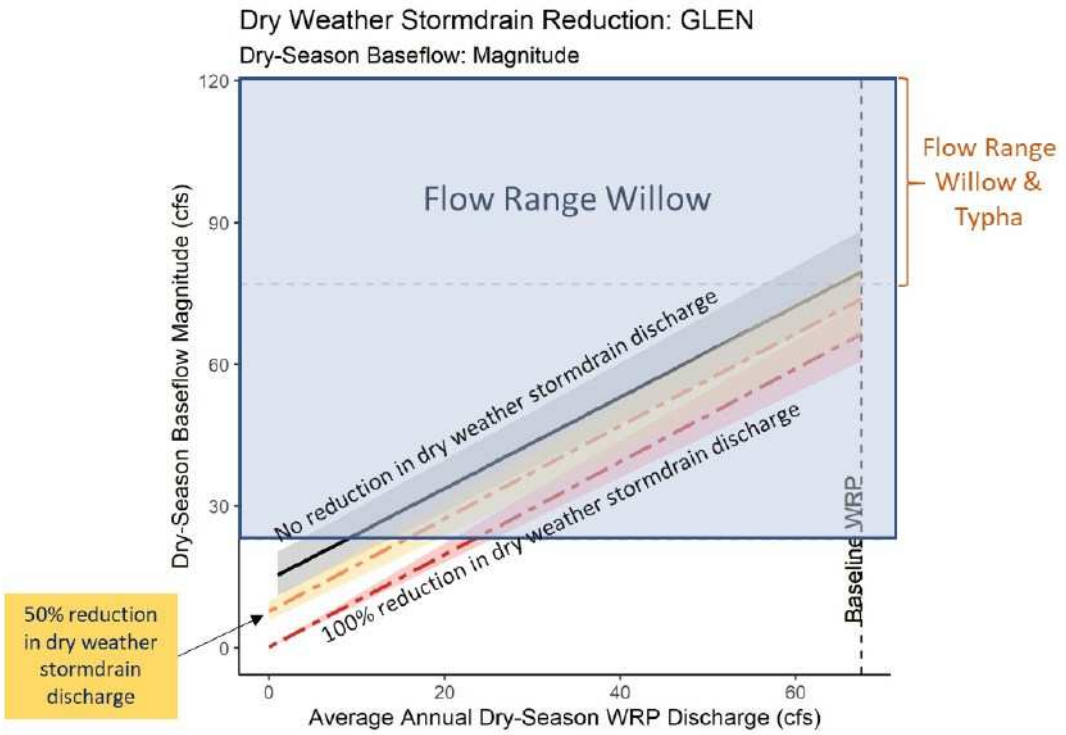


Figure 35. Habitat suitability curve of seedling mortality as a function of inundation/depth from water surface of Salix Gooddingii calculated through quadratic linear regression. Depth is defined as depth from surface i.e., -20 cm = 20 cm below surface, 20 cm = 20 cm above surface. Mean = 5 cm, p = 0.002, n=5.

The second figure, taken from the recently published SCCWRP flow study (SCCWRP 2021b) shows that willow in the Glendale Narrows area of the Los Angeles River can sustain a wide range of flow conditions. The graph shown below from the study shows that WRP discharges could be reduced by 80 percent and still support the existing willow. The WRP flow reduction of 80 percent illustrated, from 75 cfs to 15 cfs, is an order of magnitude greater than the proposed flow reduction from the proposed Program. The graph also shows that if all urban baseflows were captured, WRP discharges could be reduced by up to 68 percent and the existing willow habitat would be maintained. That is to say, a 100 percent reduction in urban baseflow across the Los Angeles River watershed (of which the proposed Program watershed comprises 1.7 percent by area) would still allow for a 68 percent reduction in WRP flow and continue to support willow habitat. This substantiates the conclusion that the proposed Program dry weather flow reductions would not affect downstream beneficial uses significantly, and that it would be unreasonable to assume otherwise.

The effect of stormwater diversion would reduce Los Angeles River flows less than 4 cfs in the dry season, compared to the current dry season average of 75 cfs in the Arbor Reach and 100 cfs where the Los Angeles River confluences with the Pacific Ocean. The remaining flow would provide for the needs of willow and other riparian vegetation. The conclusions illustrated in the SCCWRP study for black willow show that surface water depth is not a driving factor in the suitability of black willow habitat in the Los Angeles River. The comment does not identify any other citation supporting water needs for the riparian habitats See response to comment 5-I.

Comment 5-G

Cumulative Flow Reductions: The Draft IS/MND does not analyze whether the Program would result in significant impacts when considered with other existing or proposed water diversion projects in the Los Angeles River watershed. The cities of Burbank, Glendale, and Los Angeles plan to recycle more wastewater and reduce their discharges to the Los Angeles River for this purpose (SWRCB 2019).

Response 5-G

The Draft IS/MND concludes on page 153 that the proposed Program would not result in cumulatively significant effects to the environment. This conclusion is based on the quantitative analysis that 4 percent of dry weather flow (1.4 percent of total annual flow) is too small an amount to result in an appreciable, or measurable change in the habitat values currently exhibited in the Los Angeles River. Furthermore, the City has acknowledged that cumulative flow reductions in the future may include potential reductions in WRP discharges to support regional

recycled water program objectives. To evaluate the effects of cumulative reductions in future flows that may include future diversions of WRP discharges, the SWRCB has conducted the Los Angeles River Flows Project. The study published by SCCWRP through the Los Angeles River Flows Project (SCCWRP 2021b) provides tools to all the river stakeholders to best manage the resource's beneficial uses. Future projects that may propose further diversions in dry weather flow may rely on this study to assess potential direct and cumulative effects of WRP discharge diversions. These future WRP diversions will be subject to Water Code Section 1211 Petitions, approved by the SWRCB.

In January 2021, SCCWRP published a report titled the Assessment of Aquatic Life Use Needs for the Los Angeles River Report (Assessment of Aquatic Life Report) (SCCWRP 2021a). This report characterizes habitat values in the river, and evaluates water demands of riparian and aquatic species known to occur in the river system. Habitat suitability curves have been developed for certain focal species based on the assessment. Habitat suitability curves were developed as part of a technical tool to assist the SWRCB in assessing potential WRP flow reductions in the Los Angeles River, but are not themselves flow recommendations.

The Assessment of Aquatic Life Report outlines habitat suitability criteria for three species: black willow, cattails (*Typha sp.*), and algae (*Cladophora sp.*). The study provides an overview of the cumulative effects of stormwater diversions to the overall flow in the Los Angeles River. The graphic provided in response to comment 5-F above summarizing the relationship between flow in the river and ecological water demands of willow substantiates the conclusion that the proposed Program dry weather flow reductions would not affect downstream beneficial uses significantly, and that it would be unreasonable to assume otherwise.

The City, including LADWP, is committed to maintaining a supportive role in the Los Angeles River Flows Project. See response to comment 5-I.

Comment 5-H

Diverting water from the Los Angeles River may impact biological resources downstream, especially during the dry season proceeding after a below-average water year. Impacts to any sensitive or special status species should be considered significant under CEQA unless they are clearly mitigated below a level of significance. Inadequate avoidance, minimization, and mitigation measures for impacts to sensitive or special status species will result in the Project continuing to have a substantial adverse direct, indirect, and cumulative effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special-status species by CDFW or U.S. Fish and Wildlife Service.

Response 5-H

See responses to comments 5-G and 5-I.

Comment 5-I

Mitigation Measure #1: CDFW recommends LADWP provide additional analysis and evaluation of potential impacts on biological resources as part of the final environmental document. At a minimum, an additional analysis and report should provide the following:

Study Reach

1. CDFW recommends LADWP define the study area as a 15-mile reach of the Los Angeles River, bounded by the Los Angeles River's confluence with the Tujunga Wash tributary and proceeding downstream to the river's confluence with the Arroyo Seco tributary. LADWP should identify all sources of flow input within the study area to estimate the total annual and dry season flow. LADWP should assess potential Project related impacts on biological resources within this study reach.

Changes to Hydrology and Hydraulics

1. Under pre-Project (i.e., baseline) conditions, the volume of water flow from the Tujunga Central Branch channel into the 15-mile study reach during a) the wet (November through March); b) the dry season (April through October); and c) above-average and below-average water year (i.e., wet season/above-average water year, wet season/below-average water year, dry season/above-average water year, and dry season/below-average water year). LADWP should clearly define what it would consider to be above-average or below-average rainfall year.

2. Under proposed Project conditions, the percent reduction in flow from 1) the Tujunga Central Branch channel tributary and 2) 15-mile study reach for a wet season/above-average water year, wet season/below-average water year, dry season/above-average water year, and dry season/below-average water year.

3. An analysis of potential Project-related changes to river hydraulics in both concrete and soft-bottom reaches. This includes water depth (percent change), wetted perimeter (acres gained/lost), and velocity (percent change). CDFW requests a map modeling potential changes to channel hydraulics overlain on a map of plant communities and habitat for sensitive wildlife species and birds.

4. A quantitative analysis comparing the flow from the Tujunga Wash, Burbank Wastewater Reclamation Plant (WRP), Tillman WRP, Verdugo Wash, and Glendale WRP, and their relative contribution to the hydrograph of the 15-mile study reach.

Biological Resources Impact Assessment

5. A map of plant communities and important bird foraging and nesting habitat occurring in the 15-mile study reach. Plant communities should be mapped at the alliance/association level using the Manual of California Vegetation, second edition (Sawyer et al. 2009). Also, CDFW recommends an updated and thorough floristic-based assessment of plant communities, following CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018).

6. A comprehensive list of sensitive and special status plant and wildlife species, and sensitive plant communities, occurring in the 15-mile study reach. CDFW recommends a nine-quad

search of the California Natural Diversity Database (CNDDB) for sensitive and special status biological resources that could occur downstream. For each biological resource, provide:

a. A summary of species-specific habitat requirements;

b. A discussion as to how the species or plant community may be significantly impacted directly or indirectly through habitat modification, as result of changes to hydrology (reduced flow) and hydraulics (water depth, wetted perimeter, velocity); and,

c. A quantitative analysis and/or adequate discussion to evaluate whether the Project would result in those significant impacts.

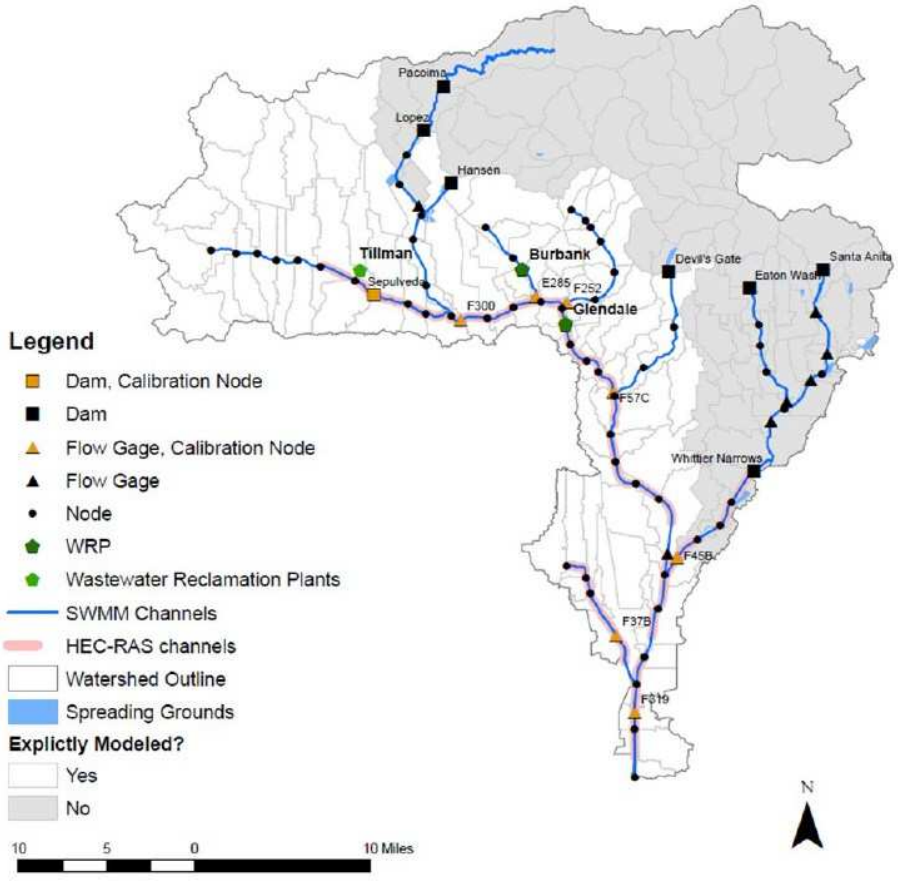
7. A discussion of whether diversion devices such as rubber dams would have direct and/or indirect impact on biological resources.

8. An adequate discussion to address how the Project may potentially affect on-going habitat recovery and restoration efforts.

9. An adequate discussion of Project-related impacts on biological resources in relation to cumulative flow reductions.

Response 5-I

The IS/MND concludes that based on the evidence provided in the existing literature, the proposed Program would not result in significant impacts to biological resources in the Los Angeles River considering the small contribution of flow provided by the Tujunga Central Branch channel, and that it would be unreasonable to assume otherwise. The IS/MND concludes that since the Program's effects would not result in a significant impact directly or cumulatively, no mitigation is required. However, in response to the comment and request for mitigation, the Los Angeles River Flows Project Final report (LA River Flows Project Final Report), published after the Draft IS/MND was published is incorporated by reference into this Final IS/MND. This robust hydrological, hydraulic, and ecological study of the Los Angeles River conducted by SCCWRP for SWRCB is designed to develop a set of tools and approaches to help evaluate future flow management scenarios. The Project applies the California Environmental Flow Framework (CEFF) approach to evaluating ecological flow relationships in California streams. The City is participating in the Los Angeles River Flows Project to assess how future flow diversions from WRPs may be best managed to support beneficial uses and management priorities in the river.



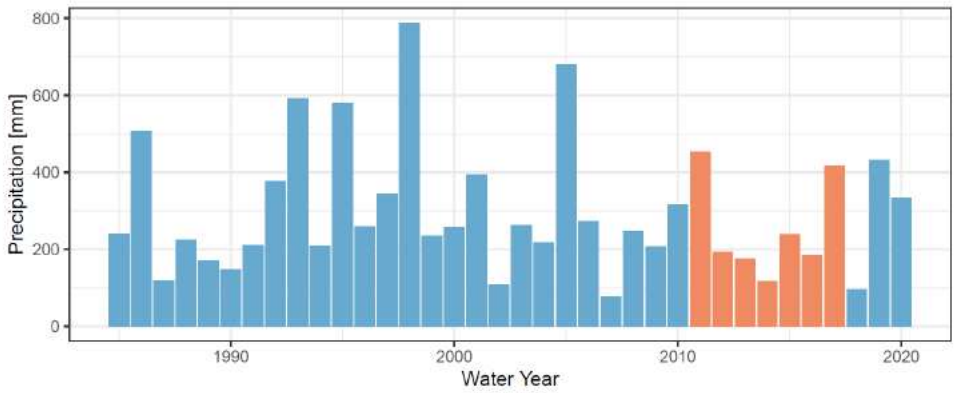
The LA River Flows Project Final Report is presented in this Final IS/MND to respond to this detailed comment. The Report was conducted over a two-year period, including input from numerous stakeholders including both LADWP and CDFW. The Report assists in evaluating the potential significance of the impacts of stormwater capture projects, such as the proposed Project, and includes all of the elements proposed in the comment and recommended mitigation measure. The following responses address each point in the comment:

Comment 5-Ia: Study Reach

1. CDFW recommends LADWP define the study area as a 15-mile reach of the Los Angeles River, bounded by the Los Angeles River's confluence with the Tujunga Wash tributary and proceeding downstream to the river's confluence with the Arroyo Seco tributary. LADWP should identify all sources of flow input within the study area to estimate the total annual and dry season flow. LADWP should assess potential Project related impacts on biological resources within this study reach.

Response to Comment 5-Ia

With respect to the Study Reach, the Los Angeles River Flows Project includes assessments of habitat values in the entire Los Angeles River from the Sepulveda Dam to the Pacific Ocean. This study area is larger than requested in the comment. The model domain included as Figure 5 in the study is included below. The Tujunga Central Branch channel confluences with the Los Angeles River at approximately node F300 shown in in the figure.



Comment 5-Ib: Hydrology and Hydraulics

2. Under pre-Project (i.e., baseline) conditions, the volume of water flow from the Tujunga Central Branch channel into the 15-mile study reach during a) the wet (November through March); b) the dry season (April through October); and c) above-average and below-average water year (i.e., wet season/above-average water year, wet season/below-average water year, dry season/above-average water year, and dry season/below-average water year). LADWP should clearly define what it would consider to be above-average or below-average rainfall year.

Response to Comment 5-Ib

With respect to Changes to Hydrology and Hydraulics, the Los Angeles River Flows Project includes results from a comprehensive modelling effort that meets all the parameters in the comment. As noted on pages 7 through 9 of the study, estimated flow conditions were modeled using a coupled hydrologic-hydraulic model created in EPA's Storm Water Management Model (SWMM) and the Hydrology Engineering Center's River Analysis System (HEC-RAS). The hydrologic model simulates discharge on the mainstem of the LA River, Compton Creek, and Rio Hondo at an hourly time step from WY 2011 through 2017. The model includes wet season and dry season discharges and uses a dry period to represent conservative flow estimates as shown in the figure below taken from Figure 3 of the study.

The one-dimensional hydraulic model was created by combining existing HEC-RAS models for the LA River and updating channel geometry and Manning's roughness based on field observations and calibration. The hydraulic model was run under steady-state conditions, which were used to develop rating curves to apply to the simulated hydrographs, producing time series hydraulic data for velocity, maximum channel depth, and shear stress.

Some excerpts from the SCCWRP 2021 report that describes the Flows Project are included here:

> *"We estimated current flow condition in the study area using a coupled hydrologic-hydraulic model created in EPA SWMM and HEC-RAS (ES-2). Current hydrologic conditions are defined as the flows and operations that occurred during water year (WY) 2011 to 2017." (SCCWRP, 2021; p ii)*

"Calculated ranges for the wet season and dry season baseflow metrics increase downstream of the three water reclamation plants, illustrating the contributions of discharges from the water reclamation plants…. The wet season metrics, baseflows from the start of the storm season to the start of the dry season, and dry season metrics, base flows from the start of the dry season to the start of the following wet season, are calculated on an annual basis. Typically, the start of the wet season is between November to January and the start of the dry season is between May to July depending on the climatic conditions for a given water year. The broader ranges and higher values of wet season baseflow metrics reflects the contribution of residual stormdrain discharge following storm events. Rio Hondo and Compton Creek both have the lowest wet season and dry season baseflow magnitudes compared to all other reporting nodes on the mainstem." (SCCWRP, 2021; p iv.)

Comment 5-Ic: Hydrology and Hydraulics

3. Under proposed Project conditions, the percent reduction in flow from 1) the Tujunga Central Branch channel tributary and 2) 15-mile study reach for a wet season/above-average water year, wet season/below-average water year, dry season/above-average water year, and dry season/below-average water year.

Response to Comment 5-Ic

As noted Figure ES-5 of the LA River Flows Project Final Report and excerpted below, dry weather storm flow contributions are a key consideration in the study. The graph illustrates average baseline flows with the black line accompanied by a grey band that indicates the 10 percent and 90 percent percentiles. This grey shading following the black line accounts for extremely dry years. In other words, the analysis represented by this graph takes dry year and wet year flows into consideration.

The graph compares potential future combined flow reductions of both dry weather runoff and WRP reductions with habitat value impacts. The large grey box represents habitat suitability for black willow habitat. The graph shows that a small percentage decline in dry weather storm channel flows (even in very dry years) would not reduce flows in the river below suitability thresholds for willow habitat, resulting in no reductions in habitat acreage or habitat quality. (The flow range for typha [cattails] is also included in the graph to show flow requirements for typha across the entire channel width. The flow rate is needed due to the wide channel width. Less flow could support typha within a narrower side channel such as shown in the HEC-RAS cross section provided in response to comment 5-!d below)As a result, the impact would be less than significant from a direct, indirect and cumulative perspective.

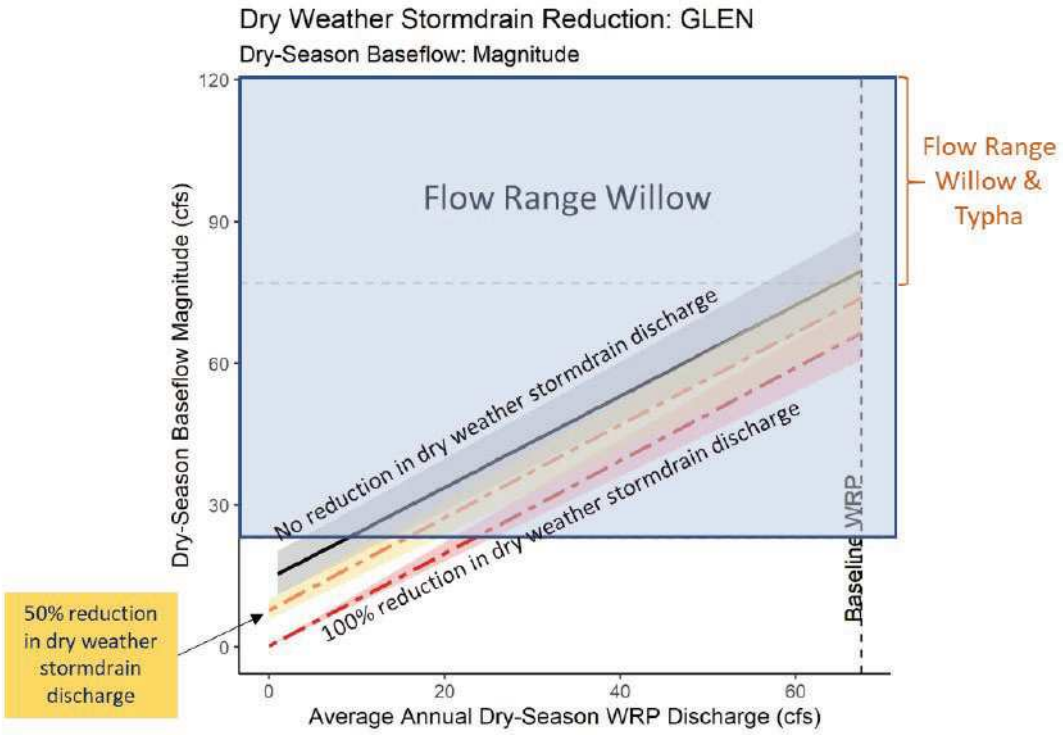


Figure ES-5. Flow-based sensitivity curves illustrating the combined effects of change in WRP discharge and 50% (yellow) and 100% reduction (red) in dry weather stormdrain discharge at GLEN reporting node. Solid and dashed lines represent median values; bounds of the gray and colored bands are the 10th and 90th percentile dry-season instream flows across the modeled period. Optimal flow range in this example is based on a 50% (medium) probability of occurrence of Willow and Typha.

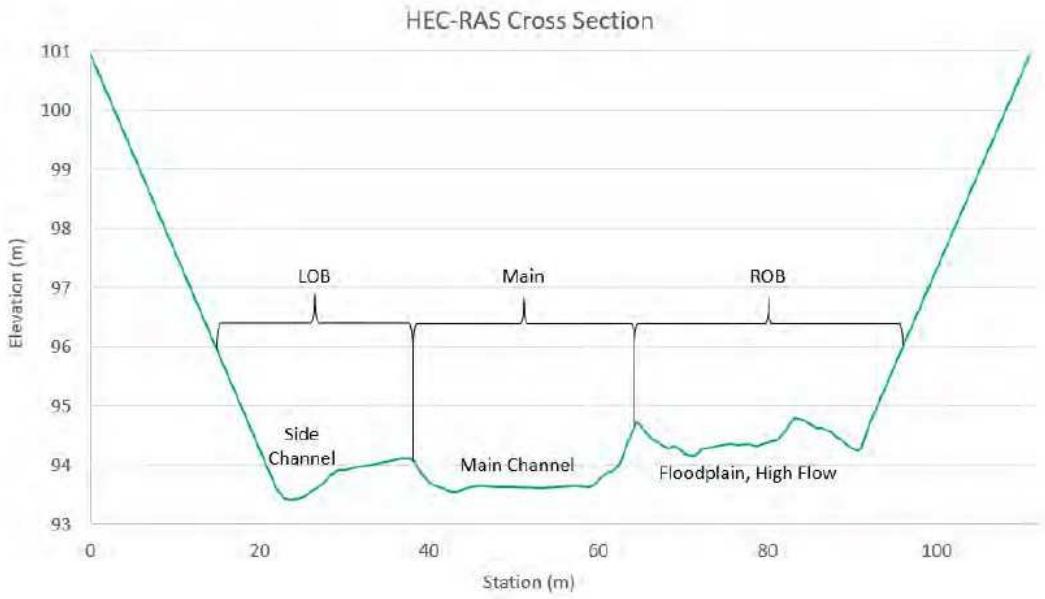
Comment 5-Id: Hydrology and Hydraulics



4. An analysis of potential Project-related changes to river hydraulics in both concrete and soft-bottom reaches. This includes water depth (percent change), wetted perimeter (acres gained/lost), and velocity (percent change). CDFW requests a map modeling potential changes to channel hydraulics overlain on a map of plant communities and habitat for sensitive wildlife species and birds.

Response to Comment 5-Id

The Los Angeles River Flows Project published the "Assessment of Aquatic Life Use Needs for the Los Angeles River" (Assessment of Aquatic Life Report) in February 2021 (Stein, 2021). This document provides a detailed summary of hydraulic HEC-RAS modeling done to support the overall program objectives. Over 1,000 cross sections were generated by the HEC-RAS model in the river that show impacts of flow reductions to depth and wetted perimeter (as requested in the comment). Since the roughness of the Los Angeles river changes over time and greatly influences depth and wetted perimeter in specific locations, the model characterized typical channel dimensions and roughnesses to provide meaningful ecological-flow relationships. An excerpt from page 15 of this study is included below:

> *"Channel hydraulics (i.e., maximum channel depth, velocity, and shear stress) can vastly differ across different sections of the channel at a single site. For every soft-bottom output node in the HEC-RAS model, three output locations were selected at the three most significant morphological zones to capture the variability in hydraulics for each node and were designated as left overbank (LOB), center channel (Main), and right overbank (ROB)"*

The figure below provided on page 15 of the Assessment of Aquatic Life Report shows how channel characteristics were accommodated in the ecological-flow relationship analysis provided in the report. Habitat suitability curves were developed to reflect water depth and velocity requirements of existing habitat within these three different parts of the channel: side channel, main channel, and high floodplain. Although the Assessment of Aquatic Life Report does not provide a map of the habitat within the Los Angeles River associated with each of these cross sections, it does inventory the species and habitat values that occur within the soft-bottom portion of the river (the 15-mile segment highlighted in the comment) and presents a detailed HEC-RAS model that provides depth and width impacts associated with flow reductions at specific cross section locations that were also measured in the field for model calibration purposes. The evaluation of habitat suitability within this segment of the river (see graph provided in response to comment 5-F) is then expressed in cubic feet per second (cfs) impacts rather than depth and width in order to provide a meaningful model for the total 15 miles of the soft-bottom segment.

Comment 5-Ie: Hydrology and Hydraulics

5. A quantitative analysis comparing the flow from the Tujunga Wash, Burbank Wastewater Reclamation Plant (WRP), Tillman WRP, Verdugo Wash, and Glendale WRP, and their relative contribution to the hydrograph of the 15-mile study reach.

Response to Comment 5-Ie

As described in responses above, the Assessment of Aquatic Life Report as well as the LA River Flows Project Final Report provide a comprehensive assessment of flow in the Los Angeles River including each of the flow sources noted in the comment. The Assessment of Aquatic Life Report describes average dry season river flows in each segment of the river accounting for contributions from WRPs, groundwater, and storm drain channel inputs.

Comment 5-If: Biological Resources Impact Assessment

1. A map of plant communities and important bird foraging and nesting habitat occurring in the 15-mile study reach. Plant communities should be mapped at the alliance/association level using the Manual of California Vegetation, second edition (Sawyer et al. 2009). Also, CDFW recommends an updated and thorough floristic-based assessment of plant communities, following CDFW's Protocols for Surveying and Evaluating Impacts to Special Status Native Plant Populations and Sensitive Natural Communities (CDFW 2018).

Response to Comment 5-If

The Assessment of Aquatic Life Report provides an inventory of habitat and species occurrences within the 15-mile segment mentioned in the comment. Figure 34 of the Assessment of Aquatic Life Report reproduced below illustrates which reaches exhibit aquatic and riparian habitat values. Habitat mapping was not conducted as part of the study. Rather, flow ranges supporting habitat suitability for all aquatic values were developed, assuming that the entire 15-mile river segment may exhibit habitat values.

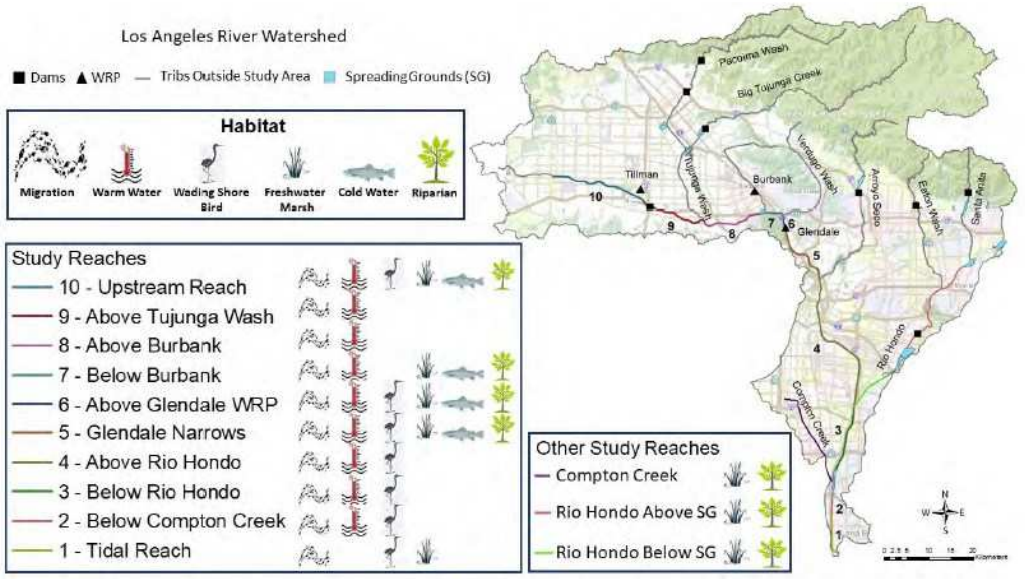


Figure 34. Map of study reaches with identified habitats that could potentially be supported in each reach.

Comment 5-Ig: Biological Resources Impact Assessment

2. A comprehensive list of sensitive and special status plant and wildlife species, and sensitive plant communities, occurring in the 15-mile study reach. CDFW recommends a nine-quad search of the California Natural Diversity Database (CNDDB) for sensitive and special status biological resources that could occur downstream. For each biological resource, provide:

    d. A summary of species-specific habitat requirements;

    e. A discussion as to how the species or plant community may be significantly impacted directly or indirectly through habitat modification, as result of changes to hydrology (reduced flow) and hydraulics (water depth, wetted perimeter, velocity); and,

    f. A quantitative analysis and/or adequate discussion to evaluate whether the Project would result in those significant impacts.

Response to Comment 5-Ig

The Los Angeles River Flows Project Final Report includes a comprehensive inventory and assessment of biological habitat values in the Los Angeles River:

> *"The overarching goal of this project is to consider potential effects of reduced WRP discharge and increased stormwater capture on existing and potential future beneficial uses. Therefore, our analysis included characterizing species and habitats that current occur and those that could reasonably occur in the future (based on a comparison to similar southern California watersheds). "(SCCWRP, 2021; p vii)*
>
> *"The aquatic life use assessment began with a compilation of observational data from the LA River and surrounding watersheds which was used to identify priority focal habitats and endmember species that represent a range of tolerances for each habitat. We then determined the flow conditions necessary to support the life history needs of each species and used those to create "flow-ecology" curves or models relating key hydrologic, hydraulic, and temperature conditions to the probability of occurrence for each focal species, or the probably of being able to complete specific life-history requirements." (SCCWRP, 2021; p vii)*

The Assessment of Aquatic Life Report provides the CNDDB listed species of concern in a concise map excerpted below. Beginning on page 38, the Assessment of Aquatic Life Report provides a summary of "life history needs" for key species within the habitat types. Habitat suitability curves are prepared based on the target vegetation's needs for water as measured by flow in the river (ie., cfs). This analysis defines future water flow reductions as the impact, and provides suitability curves to evaluate significance of the impact. The graph included in response to comment 5-F summarizes the relationship of flow in the river with habitat suitability for willow habitat. Since willow habitat (the key indicator species for riparian values in Southern California) is sustained with substantially less flow than currently exists or is projected to exist with future flow reductions, the contribution of 4 percent flow reduction resulting from the proposed project is considered cumulatively less than significant. That is to say, the scientific analysis contained in the LA Rivers Flows Project Final Report and companion study Assessment of Aquatic Life Report provide the information requested in this comment and support the conclusions of the IS/MND.

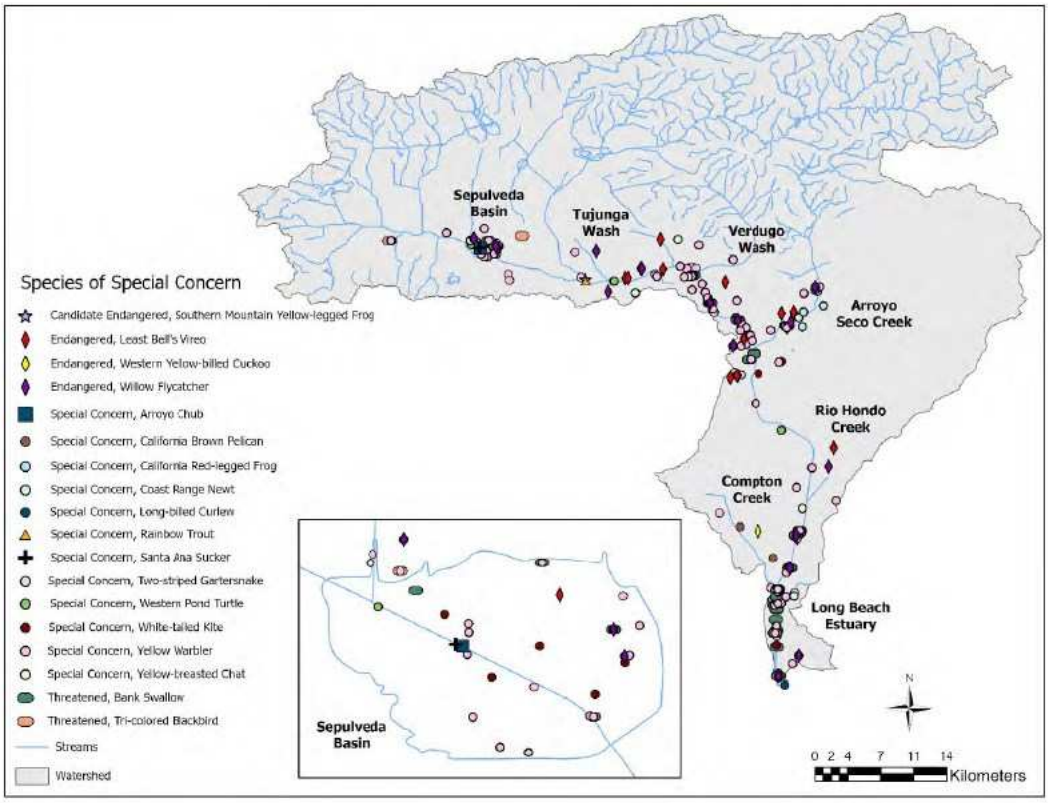

Figure 33. Species observations along the mainstem of the LA River and tributaries included in this study.

Comment 5-Ii: Biological Resources Impact Assessment

3. A discussion of whether diversion devices such as rubber dams would have direct and/or indirect impact on biological resources.

Response to Comment 5-Ii

As described on page 74 of the IS/MND, the proposed diversion structures would not impact any biological resources since they would be installed within either underground storm drain pipes or concrete box channels. The only effect to biological resources that could occur would result from reduced flow to downstream resources. No habitat would be removed as a result of the Project. As described in detail in this response to comment 5-I those effects are determined to be less than significant.

Comment 5-Ij: Biological Resources Impact Assessment

4. An adequate discussion to address how the Project may potentially affect on-going habitat recovery and restoration efforts.

Response to Comment 5-Ij

As described in this response to comment 5-I, the proposed Project would not significantly affect the habitat values within the Los Angeles River. No restoration projects are currently occurring within the river channel that would be adversely affected by the proposed Project.

Comment 5-Ik: Biological Resources Impact Assessment

5. An adequate discussion of Project-related impacts on biological resources in relation to cumulative flow reductions.

Response to Comment 5-Ik

As described in responses to comments 5-F and 5-I, the proposed Project would not significantly affect the habitat values within the Los Angeles River. The LA Flows Project Final Report provides ecology-flow relationship analysis for cumulative reductions including incremental storm flow and WRP reductions. The Project would not contribute to a cumulative reduction in habitat acreage or quality.

Comment 5-J

Mitigation Measure #2: CDFW recommends LADWP develop a discharge operation plan that would always allow sufficient water to pass downstream. CDFW also recommends LADWP develop an Adaptive Management Plan that would direct LADWP to reduce or suspend water diversion if at any point the Project may impact biological resources downstream exceeding a defined threshold/trigger.

Response 5-J

The IS/MND concludes that based on the evidence provided in the existing literature, the proposed Program would not result in significant impacts to biological resources in the Los Angeles River considering the small contribution of flow provided by the Tujunga Central Branch channel. Downstream ecological values would not be measurably affected by the Project. The IS/MND concludes that since the Program's effects would not result in a significant impact directly or cumulatively, no mitigation is required.

LADWP recognizes that the placement of diversion structures within streams and drainages must comply with Fish and Game Code Section 5901 which prohibits installing "any device or contrivance that prevents, impedes, or tends to prevent or impede, the passing of fish up and down stream." Fish and Game Code 5937 requires that operators of dams "allow sufficient water to pass over, around or through the dam, to keep in good condition any fish that may be planted or exist below the dam." Currently, no fish exist within the underground urban storm collection system or concrete box channel. The Tujunga Central Branch channel does not lead to natural stream resources at higher elevation. As a result, the channel would not provide a migratory route for steelhead spawning grounds now or in the future. The entire watershed area is urbanized, mostly within underground storm drain pipes with no ecological values. Future fish migration in the channel is highly unlikely. Furthermore, the instream diversion structures have been designed and operated to allow for storm flows to bypass the diversion mechanism. Each of the diversion structures would include a slide gate. If fish re-colonized the channel in the future these slide gates would be able to allow bypass flows. Therefore, based on the ability to allow for storm flows, the diversion structures would also be able to accommodate fish passage during periods of receding flow when migration opportunities exist, if fish were present. The project would not prevent future habitat restoration or fish occupation in the drainage. The proposed designs would

be compliant with California Fish and Game Code 5901 and 5937. Since no fish are currently in the concrete channel and dry weather flow depths do not accommodate ponding sufficient for fish to survive, there is no reason to prepare a discharge operation plan or adaptive management plan at this time.

See responses to comments 5-G and 5-I.

Comment 5-K

Mitigation Measure #3: CDFW recommends LADWP provide compensatory mitigation at no less than 3:1 for permanent impacts to the concrete-lined Tujunga Central Branch channel due to the installation of diversion structures including (but not limited to) rubber dams and channel drop inlets. CDFW also recommends LADWP provide compensatory mitigation commensurate with the permanent diversion of discharge from Los Angeles River.

Response 5-K

The IS/MND concludes that based on the evidence provided in the existing literature, the proposed Program would not result in significant impacts to biological resources in the Los Angeles River considering the small contribution of flow provided by the Tujunga Central Branch channel. The IS/MND concludes that since the Program's effects would not result in a significant impact directly or cumulatively, no mitigation is required.

The purpose of compensatory mitigation for impacts to waters of the State is to ensure that habitat values and hydrologic functions are maintained at least at the level of the system prior to the initiation of the project. The current concrete channel into which the diversion structures will be placed currently provides no habitat value. Six of the diversion structures will be placed in underground reinforced concrete pipe. The City does not believe that compensation is required for placing diversion structures in underground concrete pipes or concrete channels. As noted on page 74 of the Draft IS/MND, the City will be required to obtain a Lake and Streambed Alteration Agreement (LSAA) from CDFW for the three park projects that will place diversion structures within concrete channels. See response to comment 5-N.

Comment 5-L

Recommendation #1: CDFW recommends the following data and information sources:

- Stream gage data available from Los Angeles County Public Works (LADPW 2021);
- Los Angeles River Master Plan (Geosyntec et al. 2020); and,
- Los Angeles River Flows Project (SWRCB 2019).

Response 5-L

The IS/MND (on page 74) includes annual flow estimates for the Los Angeles River provided by USACE. The data provided in the Draft IS/MND regarding flows is consistent with the river flow data provided in the references cited in the comment. The City is participating in the Los

Angeles River Flows Project which has compiled hydrologic and hydraulic data for the river. The data mentioned in the comment from the County are continuously collected and are indicative of the flow data used by the USACE to ensure flood protection for the City of Los Angeles. The recently published Los Angeles River Master Plan compiles historic river flow data consistent with the USACE and County data. All of this data is consistent with the annual flow totals cited in the IS/MND that document the percentage of flow from the Tujunga Central Branch channel. See response to comments 5-C and 5-G.

Comment 5-M

Recommendation #2: Based on the inadequacy of the Draft IS/MND as elaborated in our preceding comments, CDFW recommends that LADWP revise and recirculate the Draft IS/MND so CDFW may provide more appropriate comments on avoidance, minimization, and mitigation measures (CEQA Guidelines, § 15073.5).

Response 5-M

The comment provides no new information supporting the inadequacy of the analysis in the Draft IS/MND. Re-circulation of the Draft IS/MND is not necessary since existing evidence supports a conclusion that impacts would be less than significant, and that it would be unreasonable to assume otherwise. Furthermore, the study recently published by SCCWRP (SCCWRP 2021b) provides all of the hydrology and hydraulics data and analysis requested in the comment. The study substantiates the conclusions made in the Draft IS/MND, and satisfies CDFW's request for additional information.

Comment 5-N

The Project would potentially alter streams. The Project would divert dry season flow and stormwater. In addition, the Project proposes to install devices within and adjacent to a stream to facilitate water diversion.

The Project would divert water from the Tujunga Central Branch channel and Los Angeles River. The Project proposes to install water diversion structures within or adjacent to the Tujunga Central Branch channel. This includes inflatable rubber dams. Accordingly, the Project may obstruct water flow and change the bed and channel of a stream (confinement).

Fish and Game Code section 1602 requires any person, state or local governmental agency, or public utility to notify CDFW prior to beginning any activity that may do one or more of the following:

- Divert or obstruct the natural flow of any river, stream, or lake;
- Change the bed, channel, or bank of any river, stream, or lake;
- Use material from any river, stream, or lake; or,
- Deposit or dispose of material into any river, stream, or lake.

Response 5-N

The Draft IS/MND states on page 74 that the City would be required to obtain a Streambed Alteration Agreement pursuant to the California Fish and Game Code section 1602. The City will consult with CDFW to obtain a 1602 LSAA for the Program sites that include construction of diversions structures at the Tujunga Central Branch channel. Installation of diversion structures into underground storm drain pipes may require notification, but would not likely result in the need for a full LSAA. The table below identifies LADWP's assumptions of which Program sites may require a LSAA LADWP understands that CDFW will ultimately determine which of these sites will require a LSAA based on information in the initial notification.

Infiltration Gallery Location	Diversion Structure Installation	LSAA Required?
David M. Gonzales Recreation Center	Underground Storm Drain Pipe	No
FernAngeles Park	Underground Storm Drain Pipe	No
Whitsett Fields Park North	Underground Storm Drain Pipe	No
Strathern Park North	Underground Storm Drain Pipe	No
Valley Plaza Park North	Underground Reinforced Concrete Box Culvert	No
Valley Plaza Park South	Concrete Channel	Yes
Alexandria Park	Concrete Channel	Yes
North Hollywood Park	Concrete Channel	Yes
Valley Village Park	Underground Storm Drain Pipe	No

Comment 5-O

Mitigation Measure #1: CDFW has concluded that the [Program] may result in the alteration of streams. As such, the applicant (or "entity") must provide notification to CDFW pursuant to Fish and Game Code, section 1600 *et seq*. Based on this notification and other information, CDFW determines whether an LSAA with the applicant is required prior to conducting the proposed activities. Please visit CDFW's Lake and Streambed Alteration Program webpage to for information about LSAA Notification and online submittal through the Environmental Permit Information Management System Permitting Portal (CDFW 2021a).

Response 5-O

The Draft IS/MND states on page 74 that the City would be required to obtain a LSAA pursuant to the California Fish and Game Code section 1602. A new mitigation measure requiring compliance with regulations is not needed. The City will consult with CDFW to obtain a 1602 LSAA for the Program sites that include construction of diversions structures at the Tujunga Central Branch channel (see table in response 5-N).

Comment 5-P

Mitigation Measure #2: CDFW recommends the LSAA Notification include a hydrological evaluation of the 200, 100, 50, 25, 10, 5, and 2-year frequency storm event for existing and proposed conditions.

Recommendation: CDFW's issuance of an LSAA for a Project that is subject to CEQA will require CEQA compliance actions by CDFW as a Responsible Agency. As a Responsible Agency, CDFW may consider the CEQA document from LADWP for the Project. To minimize additional requirements by CDFW pursuant to Fish and Game Code section 1600 *et seq*. and/or under CEQA, the CEQA document should fully identify the potential impacts to the stream or riparian resources and provide adequate avoidance, mitigation, monitoring, and reporting commitments for issuance of the LSAA. As such, CDFW recommends LADWP consider CDFW's comments and revise the Draft IS/MND. To compensate for any on- and off-site impacts to aquatic and riparian resources, additional mitigation conditioned in any LSAA may include the following: erosion and pollution control measures, avoidance of resources, protective measures for downstream resources, on and/or off-site habitat creation, enhancement or restoration, and/or protection, and management of mitigation lands in perpetuity.

Response 5-P

The Draft IS/MND states on page 74 that the City would be required to obtain a LSAA pursuant to the California Fish and Game Code section 1602(See response to comment 5-N). Hydrologic assessments have been conducted for each of these park projects to determine the capacity of the infiltration galleries and the quantity of feasible wet weather diversions. The rubber dam diversion structures would be lowered when flow rates exceeded the diversion capacity, allowing most of the storm flows in larger storms (including the 2, 5, 10, 25, 50, 100, and 200 year storms) to bypass the diversions. Additional modeling is not necessary to make this conclusion.

Comment 5-Q

CDFW is concerned that the Program may result in significant impacts to bats, including hoary bat (*Lasiurus cinereus*) and silver haired bat (*Lasionycteris Octavian's*).

The Program may result in direct and indirect impacts to bats. Direct impacts include removal of trees and that may provide roosting habitat. Indirect impacts to bats and roosts could result from increased human activity, noise disturbances, dust, vegetation clearing, ground-disturbing activities (e.g., staging, mobilizing, excavating, and grading), and vibrations caused by heavy equipment.

Native and non-native ornamental trees at each park could provide potential roosting habitat for bats. Bats can fit into very small seams, as small as a ¼ inch. Therefore, crevices in buildings and other man-made structures within and adjacent to each park could provide roosting habitat for bats. Despite the availability of potential roosting habitat, the Program concludes that there would not be significant impacts to bats.

Page 60 of Appendix B concludes that while bats "may use western sycamore trees to roost, special-status bat species including hoary bat and silver-haired bat have low potential to occur within all of the project locations, since they are situated in an urban environment with constant ambient nighttime lighting (e.g., street lights, baseball field lights)." The presence of constant ambient lighting may be insufficient to conclude that bats do not occur. Bat response to artificial lighting could vary between species and not all bat species are repelled by light (Longcore and Rich 2004; Opéra et al. 2009). Faster-flying species of bats are attracted to insects that congregate around light sources (Longcore and Rich 2004). Foraging is still possible in the presence of ambient lighting, although forging may be reduced. Also, based on Program site photos in Appendix B, it appears that not all areas within certain parks are illuminated, for instance Valley Plaza North and Valley Plaza South. Based on the above, the probability of bats occurring within each park could be higher than previously concluded.

Accordingly, if bats are present, extra noise, vibration, or the reconfiguration of large objects can lead to the disturbance of roosting bats. Human disturbance can also lead to a change in humidity, temperatures, or the approach to a roost that could force the animals to change their mode of egress and/or ingress to a roost. Modifications to roost sites can have significant impacts on the bats' usability of the roost and can impact the bats' fitness and survivability (Johnston et al. 2004). Although temporary, such disturbances can lead to the abandonment of a maternity roost (Johnston et al. 2004).

Response 5-Q

The Draft IS/MND identifies on page 73 that removal of trees may affect wildlife commonly found in the parks, including bat species, although the Draft IS/MND concludes that the potential for encountering bat roosts in the affected trees is low. Nonetheless, in response to this comment, Mitigation Measure BIO-1 has been modified to require that bat surveys be conducted at each of the Program sites to ascertain whether bats are utilizing the trees to be removed by the Program. With this modification to the BIO-1 mitigation measure, impacts to bats would remain less than significant.

The following text is added to Mitigation Measure BIO-1:

- Prior to removal of trees in any of the Program sites, the City shall retain a qualified bat specialist to conduct bat surveys to confirm whether bats are using the trees as roosting sites. The surveys should encompass a minimum buffer area of 100 feet around the Program sites. The results of the surveys will be provided to CDFW. In the event that bat roosts are identified, an additional bat species survey will be conducted using acoustic survey techniques necessary to confirm the species of bat using the area. If the species survey concludes that sensitive bat species are present, the City shall consult with CDFW pursuant to the California Fish and Game Code section 2081. Removal of special status bats would not be conducted without prior approval from CDFW.

Comment 5-R

Bats are considered non-game mammals and are afforded protection by State law from take and/or harassment (Fish & G. Code, § 4150; Cal. Code of Regs, § 251.1). Additionally, several bat species are considered Species of Special Concern and meet the CEQA definition of rare, threatened, or endangered species (CEQA Guidelines, § 15380). Take of SSC could require a mandatory finding of significance by the Lead Agency (CEQA Guidelines, § 15065).

Response 5-R

See response to comment 5-Q.

Comment 5-S

Mitigation Measure #1: Where Program-related implementation, construction, and activities would occur near potential roosting habitat for bats, CDFW recommends a qualified bat specialist conduct bat surveys within these areas (plus a 100-foot buffer as access allows) in order to identify potential habitat that could provide daytime and/or nighttime roost sites, and any maternity roosts. CDFW recommends using acoustic recognition technology to maximize detection of bats. A discussion of survey results, including negative findings should be provided to LADWP. Depending on the survey results, a qualified bat specialist should discuss potentially significant effects of the Project on bats and include species specific mitigation measures to reduce impacts to below a level of significance (CEQA Guidelines, § 15125). Surveys, reporting, and preparation of robust mitigation measures by a qualified bat specialist should be completed and submitted to the LADWP prior to any Project-related ground-disturbing activities or vegetation removal at or near locations of roosting habitat for bats.

Response 5-S

Mitigation Measure BIO-1 has been modified to accommodate CDFW suggested mitigation requirements. See response to comment 5-Q.

Comment 5-T

Mitigation Measure #2: If bats are not detected, but the bat specialist determines that roosting bats may be present at any time of year and could roost in trees at a given location, during tree removal, trees should be pushed down using heavy machinery rather than felling with a chainsaw. To ensure the optimum warning for any roosting bats that may still be present, trees should be pushed lightly two or three times, with a pause of approximately 30 seconds between each nudge to allow bats to become active. The tree should then be pushed to the ground slowly and remain in place until it is inspected by a bat specialist. Trees that are known to be bat roosts should not be bucked or mulched immediately. A period of at least 24 hours, and preferable 48 hours, should elapse prior to such operations to allow bats to escape.

Response 5-T

Mitigation Measure BIO-1 provides for bat surveys to confirm that bats are not using the trees. If bats are encountered the City will consult with CDFW to ensure an effective bat removal effort in compliance with the California Fish and Game Code. Bats will not be removed from the Program sites without prior CDFW approval. No additional tree removal techniques would be required. No new mitigation is required.

Comment 5-U

Mitigation Measure #3: If maternity roosts are found, to the extent feasible, work should be scheduled between October 1 and February 28, outside of the maternity roosting season when young bats are present but are yet ready to fly out of the roost (March 1 to September 30).

Response 5-U

Mitigation measure BIO-1 has been modified to require approval from CDFW if bats are found to be using the affected trees. As part of any bat removal effort that may be necessary, seasonality of the removal will be a consideration. No additional mitigation measure is required.

Comment 5-V

Mitigation Measure #4: If maternity roosts are found and LADWP determines that impacts are unavoidable, a qualified bat specialist should conduct a preconstruction survey to identify those trees proposed for disturbance that could provide hibernacula or nursery colony roosting habitat. Acoustic recognition technology should be used to maximize the detection of bats. Each tree identified as potentially supporting an active maternity roost should be closely inspected by the bat specialist no more than 7 days prior to tree disturbance to determine the presence or absence of roost bats more precisely. If maternity roosts are detected, trees determined to be maternity roosts should be left in place until the end of the maternity season. Work should not occur within 100 feet of or directly under or adjacent to an active roost. Work should also not occur between 30 minutes before subset and 30 minutes after sunrise.

Response 5-V

As noted in response to comment 5-Q, mitigation measure BIO-1 has been modified to include bat presence surveys. If bats are found, the mitigation measure would require that the City implement a bat removal program in consultation with CDFW.

Comment 5-W

Devices Impeding Fish. The Program includes installation of rubber dams in the stream channel. Per California Fish and Game Code section 5901, it is unlawful to construct or maintain in any stream any device or contrivance the prevents, impedes, or tends to prevent or impeded, the passing of fish up and downstream. Accordingly, LADWP should coordinate with CDFW prior to commencing the Program to ensure that the Program would comply with Fish and Game Code section 5901.

Response 5-W

The concrete pipeline and channel do not support fish species. The Program would not install any devices that would impede fish migration since fish do not occur in the concrete channel and underground pipeline associated with the Tujunga Central Branch channel. The primary impediment for migrating fish under existing conditions is the velocity of the fast-moving storm water in confined pipelines and channels and the lack of refugia habitat at the channel edges. Nonetheless, the in-channel devices for four of the Program sites will require an LSAA from CDFW. The City will consult with CDFW to ensure diversion structures are compliant with Fish and Game Code section 5901.

Comment 5-X

Southern California Black Walnut Tree (*Juglans californica*). According to page 73 in the Draft IS/MND, one Southern California black walnut tree may be removed at North Hollywood Park. Southern California black walnut is a California Rare Plant Rank 4.2 species. If removal of Southern California black walnut is required, CDFW recommends LADWP replace each tree at no less than 3:1 in consideration of the species rarity, temporal loss of black walnut tree canopy and structure while the tree grows, and potential attrition associated with transplanting. Southern California black walnut trees should be replaced with trees of the same species.

Response 5-X

As noted on pages 78-80 of the Draft IS/MND, any protected tree required to be removed would be replaced with 24-inch box size specimens of the same tree species at a ratio of 4:1 in accordance with the City's Tree Protection Ordinance (No.177404) and the RAP's Tree Preservation Policy.

Comment 5-Y

Tree Replacement. In the greater Los Angeles, urban forests and street trees, both native and some non-native species, provide habitat for a high diversity of birds (Wood and Esaian 2020). Some species of raptors have adapted to and exploited urban areas for breeding and nesting (Cooper et al. 2020). For example, raptors (Accipitridae, Falconidae) such as red-tailed hawks (*Buteo jamaicensis*) and Cooper's hawks (*Accipiter cooperii*) can nest successfully in urban sites. Red-tailed hawks commonly nest in ornamental vegetation such as eucalyptus (Cooper et al. 2020). CDFW recommends planting native tree species preferred by birds. This includes coast live oak (*Quercus agrifolia*) and California sycamore (*Platanus racemosa*) (Wood and Esaian 2020). CDFW recommends Audubon Society's Plants for Birds for more information (Audubon Society 2020).

Response 5-Y

The proposed Program would require the removal of existing trees; however, the removal of trees would be replaced on a trunk caliper size basis, 1-inch replaced to 1-inch removed. As noted on pages 78-80 of the Draft IS/MND, any protected tree required to be removed would be replaced

with 24-inch box size specimens at a ratio of 4:1 in accordance with the City's Tree Protection Ordinance (No.177404) and RAP's Tree Preservation Policy. The replacement trees would be planted near the original tree's location, but if there is not adequate space, the City would coordinate with RAP to identify the closest appropriate locations for new plantings. Mitigation Measure BIO-1 is included in the Draft IS/MND to ensure construction activities do not disturb nesting birds. The requirement to replace mature trees would encourage future nesting opportunities for raptors.

Comment 5-Z

Landscaping. CDFW strongly recommends avoiding non-native, invasive plants. CDFW recommends LADWP restrict use of any species, particularly 'Moderate' or 'High' listed by the California Invasive Plant Council (Cal-IPC 2020a). CDFW recommends LADWP use native species found in naturally occurring vegetation communities within or adjacent to the Program sites. Information on alternatives for invasive, non-native, or landscaping plants may be found on the California Invasive Plant Council's, Don't Plant a Pest webpage for southern California (CalIPC 2020b). The California Native Plant Society's Gardening and Xerces Society's PollinatorFriendly Native Plant Lists webpage has information on native plant species that invite insects and pollinators (CNPS 2020; Xerces Society 2020).

Response 5-Z

As noted in the project description, each of the Program sites will be re-landscaped following the installation of the stormwater capture infrastructure. The landscaping plans will use primarily native species to the extent feasible, per RAP landscaping guidelines.

Comment 5-AA

Move Out of Harm's Way. The proposed Program is anticipated to result in clearing of habitats that support wildlife species common in developed areas. CDFW recommends a qualified biological monitor be on site during initial ground disturbing activities and vegetation removal. The qualified biological monitor should move wildlife of low mobility out of harm's way to avoid wildlife injury or mortality.

Response 5-AA

Mitigation Measure BIO-1 would ensure that impacts to any avian species currently utilizing the Program sites would be avoided. As required in mitigation measure BIO-1, contractors will be encouraged to remove vegetation outside of the affected avian or bat nesting seasons. If nesting season cannot be avoided, the mitigation measure provides for measures to ensure impacts to nesting birds is avoided, including delaying activities if necessary. Since the Program sites do not support any native habitat values, a biological monitor is not recommended other than for nesting birds as required in mitigation measure BIO-1.

Comment 5-AB

Data. CEQA requires that information developed in environmental impact reports and negative declarations be incorporated into a database (i.e., California Natural Diversity Database) which may be used to make subsequent or supplemental environmental determinations [Pub. Resources Code, § 21003, subd. (e)]. Accordingly, please report any special status species detected by completing and submitting CNDDB Field Survey Forms (CDFW 2020b). LADWP should ensure the data has been properly submitted, with all data fields applicable filled out, prior to finalizing/adopting the environmental document. LADWP should provide CDFW with confirmation of data submittal.

Response 5-AB

The City acknowledges that survey data identifying special status species should be provided to the CDFW. Appendix B of the Draft IS/MND includes a Biological Technical Report prepared for the Program.

Comment 5-AC

Mitigation and Monitoring Reporting Plan. CDFW recommends LADWP update the Program's proposed Biological Resources Mitigation Measures and condition the environmental document to include mitigation measures recommended in this letter. CDFW provides comments to assist LADWP in developing mitigation measures that are specific, detailed (i.e., responsible party, timing, specific actions, location), and clear in order for a measure to be fully enforceable and implemented successfully via a mitigation monitoring and/or reporting program (CEQA Guidelines, § 15097; Pub. Resources Code, § 21081.6). LADWP is welcome to coordinate with CDFW to further review and refine the Program's mitigation measures. Per Public Resources Code section 21081.6(a)(1), CDFW has provided LADWP with a summary of our suggested mitigation measures and recommendations in the form of an attached Draft Mitigation and Monitoring Reporting Plan (MMRP; Attachment A).

Response 5-AC

The City will adopt the MMRP when approving the Final IS/MND that will include implementation of Mitigation Measure BIO-1.

Comment 5-AD

The Project, as proposed, would have an impact on fish and/or wildlife, and assessment of filing fees is necessary. Fees are payable upon filing of the Notice of Determination by LADWP and serve to help defray the cost of environmental review by CDFW. Payment of the fee is required for the underlying Project approval to be operative, vested, and final (Cal. Code Regs., tit. 14, § 753.5; Fish & G. Code, § 711.4; Pub. Resources Code, § 21089).

Response 5-AD

The City recognizes that the CDFW filing fee for this IS/MND is applicable and the appropriate funds will be included with the Notice of Determination (NOD) when filed with the County Clerk as required by the CEQA Guidelines Section 15094.

Comment 5-AE

The comment includes a table with all of the CDFW proposed Mitigation Measures outlined in the letter.

Response 5-AE

As discussed in the responses to comments 5-A through 5-AE, no new mitigation measures are needed to ensure less than significant effects to biological resources. The MMRP will include the modified Mitigation Measure BIO-1 that reflects CDFW's comments on bat species.

Letter 6: Diana Nicole (Sunshine Hills Residents Association)

Comment 6-A

The commenter expresses concern regarding the diversion of City plans, codes, and funds from parks and tree-oriented initiatives toward green infrastructure.

Response 6-A

The comment does not state a specific concern about the adequacy of the Draft IS/MND or otherwise comment on the contents of the Draft IS/MND analysis. The comment is noted and will be included in the Program record, but a response is not required pursuant to CEQA.

Comment 6-B

The commenter expresses concern regarding the depletion of existing trees/urban forest resources as a result of the Program.

Response 6-B

Once the stormwater capture infiltration galleries are installed, the Program sites will be returned to preconstruction condition with park improvements. The park improvements will include but are not limited to, the addition of green infrastructure elements such as landscape areas with California native drought-tolerant plant material, new irrigation system, shade trees, new lighting. The proposed Program would require the removal of existing trees; however, the removal of trees would be replaced on a trunk caliper size basis, 1-inch replaced to 1-inch removed. Any protected tree required to be removed would be replaced with 24-inch box trees at a ratio of 4:1 in accordance with the City's Tree Protection Ordinance (No.177404) and the RAP's Tree Preservation Policy. The replacement trees would be planted near the original tree's location, but if there is not adequate space, the City would coordinate with RAP to identify the closest appropriate locations for new plantings.

Comment 6-C

The commenter states that the City's protected trees, groves, and related habitat should be subject to higher conservation standards than those that are provided in the Draft IS/MND.

Response 6-C

The City would comply with the existing tree ordinance. See response to 6-B above.

Letter 7: County of Los Angeles Fire Department

Comment 7-A

The commenter provides introduction of the County of Los Angeles Fire Department.

Response 7-A

The comment is noted and will be included in the Program record.

Comment 7-B

The commenter states that since the Program is within the City, the Program would not impact the County of Los Angeles Fire Department.

Response 7-B

The comment is noted and will be included in the Program record.

Comment 7-C

The commenter states that the Program would not have an impact on the County Fire Department Land Development Unit.

Response 7-C

The comment is noted and will be included in the Program record.

Comment 7-D

The comment states that under the Los Angeles County Oak Tree Ordinance, a permit is required to cut, destroy, remove, relocate, inflict damage or encroach into the protected zone of any tree of the Oak genus which is 25 inches or more in circumference (eight inches in diameter), as measured 4 1/2 feet above mean natural grade.

Response 7-D

The Draft IS/MND describes the Oak Tree Ordinance in detail on pages 78-81. The Draft IS/MND concludes that compliance with the ordinance and RAP's Tree Preservation Policy would ensure that impacts to mature trees would not result in significant impacts.

Comment 7-E

The commenter states that the Program would not impact the Health Hazardous Materials Division.

Response 7-E

The comment is noted and will be included in the project record.

Letter 8: Joanne D'Antonio

Comment 8-A

The commenter raises objection to the proposed removal of any mature and healthy trees, most notably the eucalyptus grove at North Hollywood Park. The commenter states that this park has experienced great tree loss during the drought and that all parks are important for the physical and psychological health of residents. They provide much needed shade in the heat-island-effect-plagued San Fernando Valley. The commenters asks where the wildlife will go during construction and how disruptive construction noise may be.

Commenter would like to see the project redesigned to not remove any trees and references several reports on biodiversity and the loss of trees and tree canopy by the City of Los Angeles and Tree People.

Response 8-A

All nine project sites are currently located within developed City parks containing active recreational facilities or open disturbed areas. All nine park project sites will undergo some enhancements and improvements to the park aesthetic and recreational facilities after the installation of the projects. As stated in the IS/MND page 7, park enhancements and improvements are being designed with input from RAP and the community. The City has been coordinating the design effort with RAP and has engaged the local community through several community meetings to solicit input. Conceptual design drawings were included in the IS/MND as Figures 1-4 through 1-12 to depict the current preliminary design associated with each park project site. The stormwater capture facilities are mainly being placed beneath existing ball fields, where feasible, to minimize impacts to landscaped areas within the park. The designs for each park attempt to minimize tree removal where feasible, but as stated in section 2.4, Biological Resources, some trees will be removed in compliance with the City of Los Angeles Tree Protection Ordinance and the RAP Tree Preservation Policy for protection of native and non-native trees. The City has been in coordination with the RAP Forestry Division and none of the parks' mature or healthy trees will be removed without their approval. Revisions to the park designs are being made in coordination with RAP in order to preserve mature trees and any other trees deemed sacred by RAP. RAP has identified two eucalyptus trees at North Hollywood Park that have died and have requested these be removed as part of the project. Tree surveys will be conducted at each part project site prior to tree removal to determine which trees are protected and which trees would need replacement under the RAP Tree Preservation Policy. Further, Mitigation Measure BIO-1was included to protect wildlife species from impacts during

construction. This mitigation measure will require construction activities to occur outside of the nesting bird season or to avoid or minimize impacts to nesting birds and raptors by requiring preconstruction surveys and nest avoidance and/or monitoring during construction.

The City acknowledges that the City of Los Angeles is considered a biodiversity hotspot. As stated in the 2020 Biodiversity Report prepared by the City of Los Angeles and referenced by the commenter, the Program area would fall primarily within Ecotope 20: Los Angeles River Alluvial Plain. As shown in Appendix B, page 428 of the report, only 0.5 percent of the natural vegetation remains across the ecotope, mostly within the Sepulveda Basin. Riparian vegetation is the dominant remaining type of vegetation and provides nesting habitat for the federally endangered least Bell's vireo (*Vireo bellii pusillus*) and potentially the southwestern willow flycatcher (*Empidonax traillii extimus*). The Program site does not include riparian vegetation and is located in an area that is surrounded by a vegetation alliance characterized by urban/developed, and falls mostly within areas characterized by non-native alliances. In addition, the program site is not located within an area characterized as a natural area by the study, and it is located within areas with higher pollution and population percentiles and a lower habitat quality score due to the urban nature of its location. (City of Los Angeles 2020, pages 436 through 442) As such, although the City of Los Angeles is rich in biodiversity, construction within the Program area would not add to the decline of biodiversity in the area.

Comment 8-B

The commenter requests that all trees in the vicinity of construction be protected with orange fencing and no construction material placed under the drip line.

Response 8-B

The construction impact areas will be clearly delineated and trees to be retained will be clearly marked to avoid any impacts to them. As stated in Response 8-A, the City will comply with the City of Los Angeles Tree Protection Ordinance and the RAP Tree Preservation Policy for protection of native and non-native trees that are being retained onsite and/or are being removed.

The RAP Tree Preservation Policy is the primary regulatory tool that gives direction for orderly protection of specified trees, maintains their value, and avoids significant negative effects to the ecosystem. By assuring preservation and protection through regulation and standards of care, these resources will remain significant contributions to the environment and landscape, and continue to add to the unique character of Los Angeles City Parks. (RAP 2004).

As outlined in the Policies for the Installation and Preservation of Landscaping Trees on Public Property of Recreation and Parks Department, included as Appendix M of the City of Los Angeles RAP Urban Forest Program (RAP 2004), "whenever trees are removed, the existing trees' aggregate diameter, measured at breast height (DBH [diameter at breast height], or 4.5-feet above the ground; multi-trunk trees are to be measured immediately below the lowest trunk) shall be replaced at an equal or greater rate of caliper of new trees. Each one-inch DBH of existing tree shall be replaced with a minimum one-inch caliper new tree." For example, if an existing tree with a DBH of 24 inches is removed, the City would need to replace that tree with a newly

planted trees with a total DBH of 24 inches. The replacement tree can have a DBH of 24 inches or if smaller trees are planted, with a DBH of 2 inches, then 12 trees would be planted, or any combination that equates to the 24-inch DBH being replaced.

Comment 8-C

The commenter is concerned about imported soil and improper soil being substituted for naturally occurring soil which create the best environment for replanting. The commenter asks if there is a plan for replanting at the parks to be done with viable new trees. The commenter states that ideally construction projects such as these would not be happening in our parks.

Response 8-C

As stated on page 38 of the IS/MND, once installation of the stormwater system is complete, soils excavated from the site that are stockpiled on-site would be used to backfill the impact areas. Additional imported soils would be used to regrade as needed to return the project impact areas to pre-project conditions. The City will ensure that the soil to backfill the impacted areas would be suitable for the required design elements as shown on preliminary Figures 1-4 through 1-12 of the IS/MND including landscape planting. The City is coordinating with RAP to ensure compliance with park requirements.

Comment 8-D

The commenter states that a one-month comment period is too short to get input from neighborhood councils.

Response 8-D

The comment is noted and will be included in the project record. The CEQA Guidelines require that MNDs be circulated for a total of 30 days per Section 15105(b).

4.2 Changes Made to the Draft IS/MND

The City has made the following changes to the Draft IS/MND and has incorporated them into the Final IS/MND. These modifications clarify, amplify, or make minor changes to the Draft IS/MND. Revisions to the Draft IS/MND have not resulted in new significant impacts or increased the severity of an impact.

Where the responses indicate additions or deletions to the text of the Draft IS/MND, additions are included as <u>underlined text</u>, deletions as ~~stricken text~~. The changes are listed by section and page number.

4.2.1 Changes Made in Response to Comments

Clarification/Revision

The following modifications have been made to page 75 of the Draft IS/MND to augment Mitigation Measure BIO-1 for the inclusion of bat surveys.

Section 2.4, Biological Resources – Page 75

Mitigation Measure

BIO-1: Special-Status Wildlife Species. Construction activities at any of the nine park project sites could result in impacts to the Cooper's hawk (*Accipiter cooperii*), a California Species of Special Concern, where mature trees are present. Similarly, construction activities may also impact other nesting bird species that may nest in a variety of vegetation as well as man-made structures. Construction activities should occur outside of the avian nesting season. If the avian nesting season cannot be avoided and construction or vegetation removal occurs from February 1 to September 1, the City ~~project~~ shall implement the following to avoid and minimize impacts to nesting birds and raptors:

- During the avian breeding season, a qualified biologist shall conduct a preconstruction avian nesting survey no more than 7 days prior to vegetation disturbance or ground-disturbing activities. If construction begins in the non-breeding season and proceeds continuously into the avian nesting season, no surveys are required. However, if there is a break of 7 days or more in construction activities during the nesting season, a new nesting bird survey shall be conducted before construction begins again.
- The preconstruction survey shall cover all reasonably potential nesting locations on and within 100 feet of the construction areas. A 300-foot radius shall be surveyed in areas containing suitable habitat for nesting raptors, such as trees and utility poles.
- If an active nest is found during the preconstruction avian nesting survey, a qualified biologist shall designate a suitable buffer for all passerine birds and raptor species. The nest site area shall not be disturbed until the nest becomes inactive, the young have fledged, the young are no longer being fed by the parents, the young have left the area, and the young will no longer be impacted by the project. Buffer areas may be increased upon recommendation of a qualified biologist if any endangered, threatened, California Fully Protected, or California Species of Special Concern are identified during preconstruction surveys.
- If the nest(s) are found in an area where ground disturbance is scheduled to occur, the City or its contractor shall avoid the area by delaying ground disturbance in the area until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival.
- Prior to removal of trees in any of the Program sites, the City shall retain a qualified bat specialist to conduct bat surveys to confirm whether bats are using the trees as roosting sites. The surveys should encompass a minimum buffer area of 100 feet around the Program sites. The results of the surveys will be provided to CDFW. In the event that bat roosts are identified, an additional bat species survey will be conducted using acoustic survey techniques necessary to confirm the species of bat using the area. If the species survey concludes that sensitive bat species are present, the City shall consult with CDFW pursuant to the California Fish and Game Code section 2081. Removal of special status bats would not be conducted without prior approval from CDFW.

4.2.2 Changes Made by the Lead Agency

Clarification/Revision

The following modifications have been made to page 1 of the Draft IS/MND to include The Metropolitan Water District of Southern California (Metropolitan) as a Responsible Agency of the Program.

Section 1.0, Project Description – Page 1

1.1 Introduction

The City of Los Angeles Department of Water and Power (LADWP), Department of Public Works (Bureau of Engineering [BOE]), Los Angeles Sanitation and Environment (LASAN), and City of Los Angeles Department of Recreation and Parks (RAP), collectively referred to herein as the City, propose to implement the Stormwater Capture Parks Program (Program). The Program would include construction of stormwater capture facilities at nine City-owned parks to help capture surface flow and divert stormwater runoff from the Tujunga Wash Central Branch storm drain to recharge the San Fernando Groundwater Basin. All nine parks are located in the east San Fernando Valley along State Route (SR) 170 (**Figure 1-1**); these parks include: David M. Gonzales Recreation Center; Fernangeles Park; Strathern Park North; Whitsett Fields Park North; Valley Plaza Park North; Valley Plaza Park South; Alexandria Park; North Hollywood Park; and Valley Village Park (**Figure 1-2**).

The City is proposing to obtain financial assistance for the park projects through the Stormwater for Recharge Pilot Program (Recharge Pilot) that is administered by The Metropolitan Water District of Southern California (Metropolitan). The Recharge Pilot encourages development and monitoring of new and existing stormwater recharge projects by providing financial incentives for construction and/or monitoring equipment installation of project and supplemental reporting costs.

Metropolitan offers different incentive amounts for the Recharge Pilot based on project type (New Construction or Monitoring Equipment Installation):

<table>
<tr><td>PROJECT TYPE</td><td colspan="2">FUNDING COMPONENTS</td></tr>
<tr><td></td><td>Construction/Installation</td><td>Monitoring & Reporting</td></tr>
<tr><td rowspan="2">Monitoring Equipment Installation</td><td>Up to $350,000 reimbursement for eligible costs</td><td>$50,000/report</td></tr>
<tr><td colspan="2">Maximum of $500,000</td></tr>
<tr><td rowspan="2">New Construction</td><td>Up to 50% reimbursement of eligible costs, max of $850,000</td><td>$50,000/report</td></tr>
<tr><td colspan="2">Maximum of $1 million</td></tr>
</table>

The City has chosen the New Construction Project Type.

As a Responsible Agency, Metropolitan's Board of Directors will review and consider the proposal and environmental documentation prepared by the City in determining whether or not to approve financial assistance for the Program within the Recharge Pilot administrative process.

The Program would be consistent with Metropolitan's commitment to develop Recharge Pilot activities that would provide a better understanding of the connection between captured stormwater and water supply yield.

Clarification/Revision

The following modifications have been made to pages 82 and 83 of the Draft IS/MND to update the name of the library.

Section 2.5, Cultural Resources – Pages 82 and 83

Page 82

Less than Significant Impact with Mitigation. The cultural resources assessment identified three historic architectural resources within the Program area. These resources include: the David M. Gonzales Recreation Center featuring a clubhouse building dating to the park's period of significance of 1950 located approximately 65 feet from the Program construction footprint; North Hollywood Park featuring a maintenance building and pool house (65 feet and 100 feet from the Program construction footprint, respectively) and the North Hollywood Amelia Earhart Regional ~~Branch~~ Library (located 100 feet from the Program construction footprint) dating to the park's period of significance of 1928–1931; and the 170 Freeway Pedestrian Overpass connecting Valley Plaza Park North and Whitsett Fields Park North located approximately 90 feet from a proposed diversion structure in Valley Plaza Park North. The North Hollywood Amelia Earhart Regional ~~Branch~~ Library is National Register of Historic Places (NRHP)-listed and, therefore qualifies as a historical resource.

Page 83

Mitigation Measures

CUL-1: In the event Program designs are further refined and individual Program site components change to encroach more closely than 50 feet to the North Hollywood Amelia Earhart Regional ~~Branch~~ Library (P-19-167303), the pool house and maintenance building associated with North Hollywood Park, the clubhouse associated with the David M. Gonzales Recreation Center, and/or the 170 Freeway Pedestrian Overpass, the City shall retain a qualified architectural historian meeting the Secretary of the Interior's Standards for Architectural History to review design plans for conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties (Standards). Should potential Program redesign not conform to the Standards, the City shall work with the qualified architectural historian to mitigate impacts to these resources. Should Program redesign place Program components within 50 feet of these resources, the qualified architectural historian shall also assess potential construction-related impacts resulting from ground-borne vibration. Should ground-borne vibrations have the potential to impact the historical resources, the City and the qualified architectural historian shall develop a plan to monitor ground-borne vibration during construction to ensure it does not exceed thresholds that could damage, or otherwise alter the historical resources.

SECTION 5
Mitigation Monitoring and Reporting Program

The Mitigation Monitoring and Reporting Program (MMRP) for the proposed Program has been prepared in accordance with Public Resources Code section 21081.6 and State CEQA Guidelines section 15091(d). The City will use this MMRP to track compliance with the Program mitigation measures. The City will consider the MMRP during the certification hearing for the Final IS/MND. The MMRP will incorporate all mitigation measures adopted for the proposed Program.

This MMRP summarizes potentially significant impacts and mitigation commitments identified in the Stormwater Capture Parks Program IS/MND. Table 5-1 provides the MMRP which includes all mitigation measures, monitoring/reporting action, monitoring timing, and responsible person(s) for implementation. Impacts and mitigation measures are presented in the same order as in the IS/MND. The columns in the table provide the following information:

- **Mitigation Measures:** The action(s) that will be taken to reduce the impact to a less-than-significant level.
- **Monitoring /Reporting Action:** This column outlines the appropriate steps to implement and verify compliance with the mitigation measures.
- **Monitoring Timing:** This column indicates the general schedule for conducting each monitoring task, either prior to construction, during construction, and/or after construction.
- **Responsible Person(s):** This column lists the agency responsible for ensuring implementation of the mitigation measure.

TABLE 5-1
MITIGATION MONITORING AND REPORTING PROGRAM - STORMWATER CAPTURE PARKS PROGRAM

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
Air Quality			
AQ-1: Construction of the Program shall incorporate the following conditions: a. For all Program sites: The Program shall use off-road diesel-powered construction equipment that meets or exceeds the CARB and USEPA Tier 4 off-road emissions standards for equipment rated at 50 horsepower or greater and not identified under b or c. below. Such equipment will be outfitted with Best Available Control Technology (BACT) devices, including a CARB-certified Level 3 Diesel Particulate Filter or equivalent. These requirements shall be included in applicable bid documents and successful contractor(s) must demonstrate the ability to supply such equipment. b. All dumpers/tenders used on-site shall either be certified Tier 3 with a CARB-certified Level 3 Diesel Particulate Filter or equivalent; certified Tier 4 with a CARB-certified Level 3 Diesel Particulate Filter or equivalent, or alternatively fueled (e.g., gasoline, electric, CNG). c. At a minimum, the following equipment shall be electric: air compressors, cement and mortar mixers, concrete saws, forklifts, pumps. Diesel generators shall be replaced with electricity from the grid either permanent or temporary, or replaced with alternative (non-diesel) fuels. d. Equipment requirements identified under a, b, and c above shall be included in applicable bid documents and successful contractor(s) must demonstrate the ability to supply such equipment. A copy of each unit's certified tier specification or model year specification and CARB or SCAQMD operating permit (if applicable) shall be available upon request at the time of mobilization of each applicable unit of equipment. e. During the site clearing and preparation, grading and excavation, and soil filling, revegetation, and park improvement phases, watering must be conducted a minimum of 4 times per day during dry weather. f. For Valley Plaza Park North only 2 dozers are allowed to operate on any portion of the site at one time. g. The City shall ensure: i. On-road haul trucks including delivery and those conveying excavated material do not exceed the following daily truck limits: 1. 185 trucks when 2 parks are concurrently under construction; 2. 180 trucks when 3 parks are currently under construction; 3. 170 trucks when 4 parks are concurrently under construction; 4. 160 trucks when 5 parks are concurrently under construction; 5. 150 trucks when 6 parks are concurrently under construction; 6. 140 trucks when 7 parks are concurrently under construction. Or;	Site Monitoring	Prior to Construction During Construction	The City Construction Contractor

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
ii. If the fleet is composed of a mix of 2014 or newer trucks, the City shall ensure that on-road haul trucks including delivery and those conveying excavated material do not exceed the following daily truck limits: 1. 240 trucks when 2 parks are concurrently under construction; 2. 230 trucks when 3 parks are concurrently under construction; 3. 220 trucks when 4 parks are concurrently under construction; 4. 210 trucks when 5 parks are concurrently under construction; 5. 200 trucks when 6 parks are concurrently under construction; 6. 190 trucks when 7 parks are concurrently under construction.			
Biological Resources			
BIO-1: Special-Status Wildlife Species. Construction activities at any of the nine park project sites could result in impacts to the Cooper's hawk (*Accipiter cooperii*), a California Species of Special Concern, where mature trees are present. Similarly, construction activities may also impact other nesting bird species that may nest in a variety of vegetation as well as man-made structures. Construction activities should occur outside of the avian nesting season. If the avian nesting season cannot be avoided and construction or vegetation removal occurs from February 1 to September 1, the City shall implement the following to avoid and minimize impacts to nesting birds and raptors: ● During the avian breeding season, a qualified biologist shall conduct a preconstruction avian nesting survey no more than 7 days prior to vegetation disturbance or ground-disturbing activities. If construction begins in the non-breeding season and proceeds continuously into the avian nesting season, no surveys are required. However, if there is a break of 7 days or more in construction activities during the nesting season, a new nesting bird survey shall be conducted before construction begins again. ● The preconstruction survey shall cover all reasonably potential nesting locations on and within 100 feet of the construction areas. A 300-foot radius shall be surveyed in areas containing suitable habitat for nesting raptors, such as trees and utility poles. ● If an active nest is found during the preconstruction avian nesting survey, a qualified biologist shall designate a suitable buffer for all passerine birds and raptor species. The nest site area shall not be disturbed until the nest becomes inactive, the young have fledged, the young are no longer being fed by the parents, the young have left the area, and the young will no longer be impacted by the Program. Buffer areas may be increased upon recommendation of a qualified biologist if any endangered, threatened, California Fully Protected, or California Species of Special Concern are identified during preconstruction surveys. ● If the nest(s) are found in an area where ground disturbance is scheduled to occur, the City or its contractor shall avoid the area by delaying ground disturbance in the area until a qualified biologist has determined that the birds have fledged and are no longer reliant upon the nest or parental care for survival. ● Prior to removal of trees in any of the parks, the City shall retain a qualified bat specialist to conduct bat surveys to confirm whether bats are using the trees as roosting sites. The	Site Survey by a Qualified Biologist	Prior to Construction During Construction	The City

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
surveys should encompass a minimum buffer area of 100 feet around the parks. The results of the surveys will be provided to CDFW. In the event that bat roosts are identified, an additional bat species survey will be conducted using acoustic survey techniques necessary to confirm the species of bat using the area. If the species survey concludes that sensitive bat species are present, the City shall consult with CDFW pursuant to the California Fish and Game Code section 2081. Removal of special status bats would not be conducted without prior approval from CDFW.			
Cultural Resources			
CUL-1: In the event Program designs are further refined and individual park project components change to encroach more closely than 50 feet to the North Hollywood Amelia Earhart Regional Library (P-19-167303), the pool house and maintenance building associated with North Hollywood Park, the clubhouse associated with the David M. Gonzales Recreation Center, and/or the 170 Freeway Pedestrian Overpass, the City shall retain a qualified architectural historian meeting the Secretary of the Interior's Standards for Architectural History to review design plans for conformance with the Secretary of the Interior's Standards for the Treatment of Historic Properties (Standards). Should potential Program redesign not conform to the Standards, the City shall work with the qualified architectural historian to mitigate impacts to these resources. Should Program redesign place Program components within 50 feet of these resources, the qualified architectural historian shall also assess potential construction-related impacts resulting from ground-borne vibration. Should ground-borne vibrations have the potential to impact the historical resources, the City and the qualified architectural historian shall develop a plan to monitor ground-borne vibration during construction to ensure it does not exceed thresholds that could damage, or otherwise alter the historical resources.	Plan Preparation Site Monitoring by a Qualified Archeologist Historian	Prior to Construction During Construction	The City
CUL-2: Prior to the start of ground-disturbing activities, the City shall retain a qualified archaeologist meeting the Secretary of the Interior's Professional Qualifications Standards for archaeology (U.S. Department of the Interior, 2008) to carry out the following cultural resources mitigation measures.	Site Monitoring by a Qualified Archeologist	Prior to Construction During Construction	The City
CUL-3: Prior to start of ground-disturbing activities, the qualified archaeologist shall prepare a cultural resources sensitivity training module to be used as part of the City's Worker Environmental Awareness Program (WEAP) training. All construction personnel shall receive sensitivity training prior to beginning work onsite. Construction personnel should be informed of the types of archaeological resources that may be encountered, and of the proper procedures to be enacted in the event of an inadvertent discovery of archaeological resources or human remains. The City should ensure that construction personnel are made available for and attend the training and retain documentation demonstrating attendance.	Personnel Training by a Qualified Archeologist	Prior to Construction During Construction	The City Construction Contractor
CUL-4: Prior to the start of any project-related ground-disturbing activities, the qualified archaeologist shall prepare a Cultural Resources Monitoring Plan (CRMP) in consultation with Tribes that requested consultation under AB52. The CRMP shall stipulate the location and timing of archaeological and Native American monitoring, which shall include all ground-disturbing activities in each of the nine parks that exceed the depths of undocumented fill as documented by geotechnical testing. The qualified archaeologist shall review engineering plans for each of the nine parks to determine where ground-disturbing activities will exceed the depths of undocumented fill at each park to determine the timing and locations of monitoring to be included in the CRMP. The CRMP shall include monitoring protocols to be carried out during Program-related construction. The CRMP shall stipulate that Native	Plan Preparation Site Monitoring by a Qualified Archeologist	Prior to Construction During Construction Post Construction	The City

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
American monitors associated with any of the Tribes that have been consulted with under AB52 be retained to monitor Program-related ground disturbance stipulated in the CRMP. The CRMP shall contain an allowance that the Qualified Archaeologist, based on observations of subsurface soil stratigraphy or other factors during initial grading, and in coordination with the Native American monitor(s) and the City, may reduce or discontinue monitoring as warranted if it is determined that the possibility of encountering archaeological deposits is low. The CRMP shall outline the appropriate measures to be followed in the event of unanticipated discovery of cultural resources during Program implementation, including that all ground disturbance within 100 feet of an unanticipated discovery shall cease until a treatment plan is developed by the qualified archaeologist in coordination with the City and the Native American monitor(s) and which will consider the resources archaeological and tribal value. The CRMP shall identify avoidance as the preferred manner of mitigating impacts to cultural resources. The CRMP shall establish the criteria utilized to evaluate the significance (per CEQA) of the discoveries, methods of avoidance consistent with CEQA Guidelines Section 15126.4(b)(3), as well as identify the appropriate treatment to mitigate the effect of the Program if avoidance of a significant resource is determined to be infeasible. The CRMP will also include provisions for the treatment of archaeological sites that qualify as unique archaeological resources pursuant to Public Resources Code Section 21083.2, which places limits on the costs of mitigation for unique archaeological resources. The plan shall also require the preparation of a monitoring report following the completion. The monitoring report will be submitted to the City for review and comment and a final copy will be filed at the SCCIC. The CRMP shall be submitted to the City and the appropriate Native American representatives who have been consulted with under AB52 for review prior to the start of Program-related ground disturbance.			
CUL-5: In the event of the unanticipated discovery of archaeological materials during Program implementation, all work shall immediately cease in the area (within approximately 100 feet) of the discovery until it can be evaluated by the qualified archaeologist. Construction shall not resume until the qualified archaeologist has conferred with the City and the Native American monitors on the significance of the resource. If it is determined that the discovered archaeological resource constitutes a significant resource, avoidance and preservation in place is the preferred manner of mitigation. Preservation in place may be accomplished by, but is not limited to, avoidance, incorporating the resource into open space, capping, or deeding the site into a permanent conservation easement. In the event that preservation in place is demonstrated to be infeasible and data recovery through excavation is the only feasible mitigation available, a Cultural Resources Treatment Plan shall be prepared and implemented by the qualified archaeologist in consultation with the City and Native American monitors that provides for the adequate recovery of the scientifically consequential information contained in the archaeological resource. The City shall consult the appropriate Native American representatives in determining treatment and disposition for prehistoric or Native American resources to ensure cultural values ascribed to the resource beyond those that are scientifically important are considered.	Site Monitoring by a Qualified Archeologist	During Construction	The City Construction Contractor
CUL-6: If human remains are encountered, all work shall halt in the vicinity (within 100 feet) of the find and the Los Angeles County Coroner shall be contacted in accordance with PRC Section 5097.98 and Health and Safety Code Section 7050.5. If the County Coroner determines that the remains are Native American, the NAHC will be notified in accordance with Health and Safety Code Section 7050.5, subdivision (c), and PRC Section 5097.98 (as amended by Assembly Bill 2641). The NAHC will designate a Most Likely Descendent (MLD) for the remains per PRC Section 5097.98. Until the landowner has conferred with the MLD, the City shall ensure that the immediate vicinity where the discovery occurred is not disturbed by further activity, is adequately protected according to generally	Site Inspection	During Construction	The City

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
accepted cultural or archaeological standards or practices, and that further activities take into account the possibility of multiple burials.			
Geology and Soils			
GEO-1: The City shall implement the recommendations provided in the geotechnical investigations for each of the park project sites. In the event that the depth to groundwater rises to less than 50 feet bgs as measured in nearby wells, the stormwater infiltration process shall be stopped and the stormwater routed to the surface storm drain system until groundwater depths decrease to below 50 bgs.	Site Monitoring	During Construction Post Construction	The City
GEO-2: Prior to the start of construction activities, the City shall retain a Qualified Paleontologist that meets the standards of the Society of Vertebrate Paleontology (2010) to carry out all mitigation measures related to paleontological resources.	Site Monitoring	Prior to Construction During Construction	The City
GEO-3: Prior to start of any ground-disturbing activities, the Qualified Paleontologist shall contribute to any construction worker cultural resources sensitivity WEAP training materials outlined in Mitigation Measure CUL-2, either in person or via a training module provided to the Qualified Archaeologist. This training shall include information on what types of paleontological resources could be encountered during excavations, what to do in case an unanticipated discovery is made by a worker, and laws protecting paleontological resources. All construction personnel shall be informed of the possibility of encountering fossils and instructed to immediately inform the construction foreman or supervisor if any fossils are unexpectedly unearthed in an area where a paleontological monitor is not present. The City shall ensure that construction personnel are made available for and attend the training and retain documentation demonstrating attendance.	Personnel Training by a Qualified Paleontologist	Prior to Construction During Construction	The City
GEO-4: The Qualified Paleontologist shall supervise a paleontological monitor meeting the Society for Vertebrate Paleontology standards (2010) who shall be present during all excavations exceeding 15 feet. Monitoring shall consist of visually inspecting fresh exposures of rock for larger fossil remains and, where appropriate, collecting wet or dry screened sediment samples of promising horizons for smaller fossil remains. Monitoring can be reduced to part-time inspections or ceased entirely if determined adequate by the Qualified Paleontologist in consultation with the City. Monitoring activities shall be documented in a Paleontological Resources Monitoring Report to be prepared by the Qualified Paleontologist at the completion of construction and shall be provided to the City and filed with the Natural History Museum of Los Angeles County within 6 months of Program completion.	Site Monitoring by a Qualified Paleontologist	During Construction	The City
GEO-5: If a unique geologic feature or paleontological resource is discovered during construction, the paleontological monitor shall be empowered to temporarily divert or redirect grading and excavation activities in the area of the exposed fossil to facilitate evaluation of the discovery. An appropriate buffer area shall be established by the Qualified Paleontologist around the find where construction activities shall not be allowed to continue. Work shall be allowed to continue outside of the buffer area. At the Qualified Paleontologist's discretion and to reduce any construction delay, the grading and excavation contractor shall assist in removing rock samples for initial processing and evaluation of the find. All significant fossils shall be collected by the paleontological monitor and/or the Qualified Paleontologist. Collected fossils shall be prepared to the point of identification and catalogued before they are submitted to their final repository. Any fossils collected shall be curated at a public, non-profit institution with a research interest in the materials, such as the Los Angeles County Natural History	Site Monitoring by a Qualified Paleontologist	During Construction	The City

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
Museum, if such an institution agrees to accept the fossils. If no institution accepts the fossil collection, they shall be donated to a local school in the area for educational purposes. Accompanying notes, maps, and photographs shall also be filed at the repository and/or school.			
Hazards and Hazardous Materials			
HAZ-1: The City or its construction contractor shall ensure that fueling of vehicles or storage of fuel or other chemicals would occur at the furthest extent possible from an existing school site.	Site Monitoring	During Construction	The City Construction Contractor
HAZ-2: For all schools located adjacent to a proposed work area, the City shall coordinate school safety routes, which should include, but not be limited to: ● Maintaining in place all crosswalks along the safe routes to and from the school (for Pacoima Charter School these would include Norris Avenue, Van Nuys Boulevard, Pierce Street, and Herrick Avenue). ● Designating a safe location for school buses and parents to drop off and pick up students. ● Designating a safe parking area for parents to wait for/pick up school children. ● Maintaining sidewalks open to pedestrian traffic during construction. ● Additional safety measures must be adopted during construction to protect the students and the public, including k-railing, secured fencing with screen, clear signing, temporary striping, and a flagger for trucks entering and existing the construction zone. Flaggers should also be considered at crosswalks while students are present. ● Close coordination with the impacted school and the Los Angeles Unified School District for input on the school safety route design and frequent communication during construction. ● Extensive outreach program for the school and the community describing safety measures and construction schedules. ● Restrict construction times to avoid before and after school timeframes while children may be walking to and from school, and while school is in session, as feasible.	Safety Planning Notification Site Monitoring	During Construction	The City Construction Contractor
HAZ-3: The City and its contractor shall conduct further investigation of the nature and extent of landfill materials and contaminated soil at the Strathern Park North site, under the oversight of the City of Los Angeles Local Enforcement Agency (LEA). Undocumented waste shall be delineated and sampled for chemicals of concern related to waste materials. The project shall avoid construction within the delineated waste mass, as feasible. If avoidance of the waste mass is not feasible, the City shall submit a work plan to the LEA that documents the results of the waste delineation, details the specifics of the construction project and how it relates to the onsite waste, describes the procedures for dealing with the waste, and outlines the environmental monitoring procedures that would be implemented during construction. Upon approval of the work plan, the City and its contractor shall remove the landfill materials and any soil with chemical concentrations above regulatory action levels to the satisfaction of the LEA and properly dispose of it at a permitted facility. An as-built report shall be submitted to the LEA after completion of the project.	Site Survey Plan Preparation	Prior to Construction During Construction Post Construction	The City

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
Noise			
NOI-1: For construction activities adjacent to noise-sensitive receptors (e.g., residences and schools), the contractor shall ensure that all construction equipment, fixed or mobile, are equipped with properly operating and maintained noise shielding and muffling devices, consistent with manufacturers' standards. The contractor shall use muffler systems (e.g., absorptive mufflers) that provide a minimum reduction of 5 dBA compared to the same equipment without an installed muffler system, reducing maximum construction noise levels. The contractor shall keep documentation on-site demonstrating that the equipment has been maintained in accordance with the manufacturers' specifications. The contractor shall also keep documentation on-site verifying compliance with this measure.	Site Monitoring	During Construction	The City Construction Contractor
NOI-2: For construction activities adjacent to noise-sensitive receptors (e.g., residences and schools), where physically and technically feasible, the contractor shall provide an 8-foot-tall to 20-foot-tall temporary fence or other barrier placed between the project construction area and the sensitive receptor with a performance standard of achieving a 15 dBA noise level reduction at the sensitive receptors. The temporary fence or barrier shall be used during peak noise-generating construction phases when the use of heavy equipment is prevalent. A noise barrier is not required if it would pose a safety risk or unreasonably prevent access to the construction area as deemed by the on-site construction manager, such as in areas that have limited equipment maneuvering space or access.	Temporary Fence/Barrier Site Monitoring	During Construction	The City Construction Contractor
NOI-3: Limit engine idling of construction equipment (e.g., haul trucks, loaders) to a minimum of 200 feet from any boundary of the nearest sensitive receptors.	Site Monitoring	During Construction	The City Construction Contractor
NOI-4: Prior to commencement of construction activities, the City shall notify in writing adjacent residents, schools and businesses near the various park project sites, of proposed construction activities and the tentative schedule. The notices shall also provide a contact person and hotline where local residents, schools, or business owners can call during active construction with questions or comments. The City shall respond to inquiries regarding construction noise and vibration. Notices and construction signs will include a website address which will be updated quarterly and will include Program-related information.	Notification	Prior to Construction	The City
NOI-5: The operation of construction equipment that generates high levels of vibration, such as large bulldozers and loaded trucks, shall be prohibited within 45 feet of the property lines of existing residential and school uses adjacent to the various park project sites. Instead, rubber-tired equipment not exceeding 247 horsepower shall be used in these areas during construction within 45 feet from the sensitive receptor locations.	Site Monitoring	During Construction	The City Construction Contractor
Transportation			
TR-1: For parks where construction would occur outside of park facilities or that may impact roadways surrounding park areas, a CTMP shall be developed by the City or its contractor and approved by LADOT prior to the start of construction. The CTMP may include, but is not limited to the following:	Plan Preparation Site Survey Notification	Prior to Construction During Construction	The City Construction Contractor

Mitigation Measure	Monitoring / Reporting Action	Monitoring Timing	Responsible Person(s)
• Work area traffic control plans for all in-street construction sites to the satisfaction of LADOT, as appropriate prior to the start of any construction work. The plans shall include such elements as the location of any lane closures, restricted hours during which lane closures would not be allowed, local traffic detours, protective devices and traffic controls (such as pavement markings, barricades, cones, flagmen, lights, warning beacons, temporary traffic signals, turning movement restrictions, warning signs), access to abutting properties, and provisions to maintain emergency access through construction work areas. • The dates and locations where in-street and off-street construction activities are planned. • If any street segments will be limited to one-way traffic, prepare detour plans over parallel routes. • Require signage indicated alternative routes where construction will occur. • Identify and consolidate staging areas for equipment and materials, as feasible. • Consolidate truck trips, such that multiple worksites can be served, as feasible. • Promote carpooling among workers. • Contact emergency service providers in the project vicinity to notify of the location, hours, and duration of in-street construction. Provide advance notice of any lane closures and changes to local access and identity alternative routes where appropriate.

CITY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
BUREAU OF ENGINEERING

Date: November 1, 2021

The Department of Public Works is scheduling the following improvements:

Project Title: **FERNANGELES RECREATION CENTER STORMWATER CAPTURE PROJECT**
Work Order No.: **EW40079D** **Job ID:** **1455**

Work to Be Performed: The Project consists of installing a 1.7-acre underground infiltration gallery to capture and infiltrate stormwater. Construction of the underground infiltration gallery will include installation of three catch basin inlets, pipes, a cross gutter, a pretreatment device, a flow measuring device, level sensors, and educational signage. Runoff will be collected from approximately 317-acre tributary areas and diverted into the infiltration gallery. The galleries shall be sized to store approximately 1,008,000 cf.

The project will include restoration of existing park components as well as new improvements. Park improvements include park improvements such as two (2) improved baseball fields with the following amenities: backstops, dugouts, player benches, batting cage, bullpens, sports lighting, and bleachers. Other improvements include a walking path around the park, landscaping, hydration stations, and an improved irrigation system.

Please fill out the following and return one copy to the Utility Coordination Group by **December 2, 2021**.
PLEASE UPLOAD A COPY OF YOUR AS-BUILT PLANS, IN THE LINK PROVIDED IN THE EMAIL, SHOWING THE LOCATION OF YOUR FACILITIES (IN OR AROUND THE PROJECT AREA).

Your replies will be transmitted to prospective bidders and used in coordinating this project. Please note proper location of any facilities, live or abandoned, that are not shown or are shown incorrectly on the attached plans. The City will not be responsible for any damage to facilities that are not shown or are shown incorrectly on the plans. Failure to reply may deprive you of the protection provided for in the Standard Specifications. Construction delays and/or expenses due to failure in providing accurate information shall result in an assessment of costs to you, per Los Angeles Municipal Code (LAMC) 62.01 or your Franchise Agreement with the City.

Upon receipt and review of your response(s), the City will contact you to formalize your utility relocation (or protect-in-place) plan, with a utility relocation agreement if necessary.

For questions, please contact the Project Manager **Bryan Powell** at (213) 485-5908 or **bryan.powell**@lacity.org .

Subject: [EXTERNAL] First Notice: WO # EW40079D - Fernangeles Park Stormwater Capture Project

*** EXTERNAL EMAIL - Be cautious of attachments, web links, and requests for information ***

Hello SCG-Distribution,

Please find the proposed project above with the link below and download the Notice and plans. Please investigate your utility in the vicinity of this project and mark up the Notice accordingly. Access the link **using only the email address at which you are receiving this link, and according to the directions in the attached PDF. Be sure to sign out of any Microsoft accounts as well as out of any email addresses other than the one to which the link was sent for OneDrive to work properly.**

https://engsvcs.sharepoint.com/:f:/s/UtilityNotices/EkczGFdeQLxDlGnQOTsZtIBB-g-V0ziyRNVNQaR3EqhWQ?e=ThtvRi [engsvcs.sharepoint.com]

The next link below directs you to a folder to upload the marked-up Notice and any additional correspondence, plans, etc. Access the link **using only the email address at which you are receiving this link, and according to the directions in the attached PDF. Be sure to sign out of any Microsoft accounts as well as out of any email addresses other than the one to which the link was sent.**

https://engsvcs.sharepoint.com/:f:/s/UtilityNotices/Ekeear8enOlNtEfbedb_-3UBhFm2CWdKr2OjUSMG3OWt9g?e=gpJ9uy [engsvcs.sharepoint.com]

After clicking on the above links, a new tab will open and will ask to email you the code to access the folder. The code will be sent to the same utility email used here. After clicking "Send Code" and receiving the code via email, enter this code to gain access. It is possible the code number may go to your spam folder so please check this folder as well if you do not see the email in your inbox for a few seconds.

The links above will only be effective for 30 days. Do not forward the links to anyone, as they do not have permission to access the folders for which the links are created.

Thank you

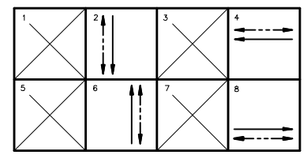
NOTICE TO CONTRACTOR

1. EXCEPT WHERE OTHERWISE INDICATED, MATERIALS AND INSTALLATION METHODS SHALL CONFORM TO THE LATEST EDITION WITH SUPPLEMENTS, OF THE STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION, ADOPTED BY THE CITY OF LOS ANGELES BOARD OF PUBLIC WORKS (LABPW), INCLUDING THE LATEST VERSION OF STANDARD PLAN S-610 ISSUED BY THE LABPW, AND THE LATEST EDITION, WITH AMENDMENTS OF THE SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS, ISSUED BY THE CITY OF LOS ANGELES DEPARTMENT OF TRANSPORTATION (L.A.D.O.T.).



2. THE ATSAC PROJECT ENGINEER, DEPARTMENT OF TRANSPORTATION, CITY OF LOS ANGELES, AT (213) 972-8664 SHALL BE NOTIFIED THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION.

3. REGULAR TRAFFIC SIGNAL CONTROL SHALL BE MAINTAINED FROM 6:00 A.M. TO 9:00 A.M. AND 3:00 P.M. TO 7:00 P.M. ON WEEKDAYS, EXCEPT NATIONAL HOLIDAYS. FLASHING, DEACTIVATION, AND ACTIVATION OF SIGNALS SHALL BE ACCOMPLISHED ONLY BY A L.A.D.O.T. TRAFFIC SIGNAL ELECTRICIAN. ALL ARRANGEMENTS SHALL BE MADE ONE (1) WORKING DAY PRIOR TO THE START OF ANY CONSTRUCTION BY CONTACTING THE ATSAC PROJECT ENGINEER AT (213) 972-8664 BETWEEN 7:00 A.M. AND 9:00 A.M. WEEKDAYS.

4. ARRANGEMENTS FOR OBTAINING ANY MATERIALS IDENTIFIED TO BE SUPPLIED BY THE L.A.D.O.T. SHALL BE MADE TEN (10) WORKING DAYS IN ADVANCE BY CONTACTING THE L.A.D.O.T. FIELD OPERATIONS AT (213) 928-9620, HOWEVER, TRAFFIC SIGNAL CONTROLLERS REQUIRE THIRTY (30) CALENDAR DAYS ADVANCE NOTICE, AND MUST BE PICKED UP WITHIN FIFTEEN (15) CALENDAR DAYS AFTER NOTIFICATION.

5. ALL SALVAGED TRAFFIC SIGNAL EQUIPMENT SHALL BE RETURNED TO THE L.A.D.O.T. ARRANGEMENTS FOR RETURNING IDENTIFIED SALVAGED EQUIPMENT TO THE L.A.D.O.T. SHALL BE MADE FIVE (5) WORKING DAYS IN ADVANCE BY CONTACTING THE L.A.D.O.T. MATERIAL CONTROL DIVISION AT (213) 928-9639.

6. ALL EXISTING TRAFFIC CONTROL SIGNING SHALL BE MAINTAINED WITH STANDARD SIGN BRACKETS BY THE CONTRACTOR. EXCEPT WHERE OTHERWISE INDICATED, EXISTING LARGE STREET NAME SIGN ON MAST ARM TYPE STANDARD SHALL BE RELOCATED FROM THE VERTICAL POLE TO THE MAST ARM AS PER THE L.A.D.O.T. STANDARD DRAWING NO.S-457.0. ANY TRAFFIC CONTROL SIGNING DAMAGED OR LOST BY THE CONTRACTOR SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. ARRANGEMENTS FOR OBTAINING REPLACEMENT SIGNING (WITH SUBSEQUENT BILLING) SHALL BE MADE WITH THE L.A.D.O.T. MATERIAL CONTROL DIVISION AT (213) 928-9639.

ESTIMATED SALVAGE MATERIAL TO BE RETURNED TO LADOT

UNITS	MATERIAL
1	2070 Controller
2	APS

NOTES (CONT'D 2):

9. CONTRACTOR SHALL INSTALL ITERIS VIDEO DETECTION SYSTEM (VDS). CONTACT LADOT COMMUNICATION ENGINEER AT (213) 978-0150 PRIOR TO PURCHASE FOR VDS SPECIFICATIONS. INSTALL VDS CAMERA ON MAST ARM AS SHOWN. CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLETE INSTALLATION OF VDS SYSTEM. INSTALLATION SHALL BE DONE BY ITERIS OR ITERIS CERTIFIED TECHNICIAN.

   VDS EQUIPMENT FOR EACH APPROACH/DIRECTION:
   * 1-17" RACK MOUNT LCD/LED THIN SPACE MONITOR
   * 2 – VANTAGE EDGE 2, QUAD VIDEO PROCESSORS
   * 2 – RZ-4 ADVANCED WDR OR SIMILAR ITERIS VDS CAMERA (MAY NEED ADDITIONAL CAMERA TO CAPTURE ALL ADVANCED LOOPS)
   * 1 – VANTAGE EDGE 2 EXTENSION MODULE

10. CONFIGURE VIDEO DETECTION ZONE(S) AS SHOWN.

11. RELOCATE STREET-NAME SIGN TO NEW MAST ARM/STANDARD.

12. INSTALL SIGN(S), OR SIGN(S) AND POST(S) AS SHOWN.

13. INSTALL DETECTOR LOOP(S) PER LADOT STD. DWG. NO. S-70.1A. CONTRACTOR SHALL OBTAIN APPROVAL FROM LADOT INSPECTOR PRIOR TO INSTALLATION OF ANY LOOPS.

14. REMOVE MAST ARM VEHICLE HEAD(S) AND MAST ARM.

15. ABANDON AND DISCONNECT DETECTOR LOOP(S) IN PULLBOX AS SHOWN.

16. RENUMBER SYSTEM LOOP(S) AS SHOWN.

17. CONTRACTOR SHALL CONTACT LADOT SIGNAL DESIGN SECTION AT (213) 928-9640 FOR ANY SIGNAL RELATED PROBLEMS ENCOUNTERED DURING CONSTRUCTION.

18. SEE STREET LIGHTING SHEET FOR WORK ON STREET LIGHTING FACILITIES.

19. ALL NEW VEHICLE AND COUNTDOWN PEDESTRIAN TRAFFIC SIGNAL HEADS SHALL BE LED MODULES PER LADOT SPECIFICATION 92-088-07 (LATEST EDITION).

20. ALL VEHICLE HEADS SHOWN ARE 12-INCH UNLESS OTHERWISE NOTED.

21. THIS PLAN ASSUMES COMPLETION OF SIGNAL MODIFICATION, PROJECT NO. BR-205815 AND GEOMETRIC DESIGN PLAN A-8118.

NOTE: FOR EXISTING CONDUIT RUNS DESIGNATED WITH AN "*" (ABOVE), THE CONTRACTOR SHALL ADD/INSTALL NEW CONDUCTORS/CABLES AND PROTECT AND MAINTAIN ALL EXISTING CONDUCTORS/CABLES.

NOTICE TO CONTRACTOR

1. EXCEPT WHERE OTHERWISE INDICATED, MATERIALS AND INSTALLATION METHODS SHALL CONFORM TO THE LATEST EDITION, WITH SUPPLEMENTS, OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ADOPTED BY THE CITY OF LOS ANGELES BOARD OF PUBLIC WORKS (LABPW), INCLUDING THE LATEST VERSION OF THE "BROWN BOOK" ISSUED BY THE LABPW, AND THE LATEST EDITION, WITH AMENDMENTS, OF THE SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS, ISSUED BY THE CITY OF LOS ANGELES DEPARTMENT OF TRANSPORTATION (LADOT).

2. ALL TRAFFIC SIGNAL AND/OR RELATED ELECTRICAL WORK SHALL BE PERFORMED AND INSPECTED UNDER THE CONDITIONS OF THE MOST CURRENT AMENDED BOARD OF PUBLIC WORKS "ENHANCED ELECTRICAL SAFETY POLICY" AS REQUIRED IN LADOT'S SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS (RED BOOK), REGARDLESS OF CONTRACT COST.

3. THE LADOT TRAFFIC SIGNAL INSPECTOR AT (818) 779-7433 SHALL BE NOTIFIED THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION. FOR WORK IN THE AUTOMATED TRAFFIC SURVEILLANCE AND CONTROL (ATSAC) PROJECT AREA, A FIELD MEETING SHALL BE SCHEDULED WITH THE SIGNAL SYSTEM SUPERVISOR AT (213) 473-8286 AND THE SIGNAL MAINTENANCE SUPERVISOR AT (818) 779-7437 THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION. FULL RESTORATION OF THE ATSAC SYSTEM MUST OCCUR WITHIN FIVE (5) WORKING DAYS AFTER SHUT DOWN.

4. REGULAR TRAFFIC SIGNAL CONTROL SHALL BE MAINTAINED FROM 6:00 A.M. TO 9:00 A.M. AND 3:00 P.M. TO 7:00 P.M. ON WEEKDAYS, EXCEPT NATIONAL HOLIDAYS. FLASHING, DEACTIVATION AND ACTIVATION OF SIGNALS SHALL BE ACCOMPLISHED ONLY BY A LADOT TRAFFIC SIGNAL ELECTRICIAN. ALL ARRANGEMENTS TO DEACTIVATE SIGNALS SHALL BE MADE 24 HOURS IN ADVANCE BY CONTACTING THE LADOT TRAFFIC SIGNAL DEDICATED LINE AT (213) 473-8478 BEFORE 9:00 A.M. ON NON-HOLIDAY WEEKDAYS. THE LADOT PROJECT NUMBER MUST BE GIVEN AT THIS TIME. THE CONTRACTOR WILL BE CHARGED FOR ALL ELECTRICAL AND TRAFFIC CONTROL SERVICE PROVIDED BY LADOT.

5. ARRANGEMENTS FOR OBTAINING ANY MATERIALS IDENTIFIED TO BE SUPPLIED BY LADOT SHALL BE MADE TEN (10) WORKING DAYS IN ADVANCE BY CONTACTING THE LADOT FIELD OPERATIONS DIVISION AT (213) 216-4677. HOWEVER, TRAFFIC SIGNAL CONTROLLERS REQUIRE THIRTY (30) WORKING DAYS ADVANCE NOTICE AND MUST BE PICKED UP WITHIN FIFTEEN (15) WORKING DAYS AFTER NOTIFICATION. CONTACT LADOT SIGNAL SHOP AT (213) 473-8468 TO COORDINATE CONTROLLER DELIVERY AND/OR PICKUP.

6. ALL IDENTIFIED TRAFFIC SIGNAL EQUIPMENT SHALL BE RETURNED TO LADOT. ARRANGEMENTS FOR RETURNING IDENTIFIED EQUIPMENT TO LADOT SHALL BE MADE FIVE (5) WORKING DAYS IN ADVANCE BY CONTACTING THE LADOT MATERIAL CONTROL DIVISION AT (213) 928-9636.

7. ALL EXISTING TRAFFIC CONTROL SIGNING SHALL BE MAINTAINED WITH STANDARD SIGN BRACKETS BY THE CONTRACTOR. EXCEPT WHERE OTHERWISE INDICATED, EXISTING LARGE STREET NAME SIGNS ON MAST ARM TYPE STANDARDS SHALL BE RELOCATED FROM THE VERTICAL POLE TO THE MAST ARM PER LADOT STANDARD DRAWING NO. S-457.0 AND S-486.0. THE CONTRACTOR SHALL COORDINATE WITH LADOT SIGN SHOP AT (213) 473-7954 FOR ANY REQUIRED LARGE STREET NAME SIGNS. ANY TRAFFIC CONTROL SIGNING DAMAGED OR LOST BY THE CONTRACTOR SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. SIGNAL CONTRACTOR SHALL INSTALL MAST ARM MOUNTED SIGNS. FOR THE INSTALLATION OF A STREET NAME SIGN ON A TYPE 1 POLE, THE CONTRACTOR SHALL FURNISH AND INSTALL A POLE EXTENSION AS NEEDED.

8. THE CONTRACTOR SHALL FURNISH AND INSTALL, AS SHOWN ON THE PLANS, ALL TRAFFIC SIGNAL EQUIPMENT SUCH AS STANDARDS, MAST ARMS, SIGNAL HEADS, AND OTHER EQUIPMENT AS REQUIRED. ALL SUCH EQUIPMENT SHALL BE NEW. ALL VEHICLE HEAD EQUIPMENT SUPPLIED BY THE CONTRACTOR SHALL HAVE 1-1/2 INCH DIAMETER PIPE FIT MOUNTING HARDWARE, INCLUDING ALL TOP POST MOUNT HEADS. PED HEAD MODULE REPLACEMENTS SHOWN ON THE PLAN SHALL REQUIRE A COMPLETE INSTALLATION, INCLUDING NEW PED HEAD AND TERMINAL COMPARTMENT.

NOTICE OF PROPOSED PROJECT **FIRST NOTICE**

CITY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
BUREAU OF ENGINEERING

Date: November 1, 2021

The Department of Public Works is scheduling the following improvements:

Project Title: **FERNANGELES RECREATION CENTER STORMWATER CAPTURE PROJECT**
Work Order No.: **EW40079D** **Job ID:** **1455**

Work to Be Performed: The Project consists of installing a 1.7-acre underground infiltration gallery to capture and infiltrate stormwater. Construction of the underground infiltration gallery will include installation of three catch basin inlets, pipes, a cross gutter, a pretreatment device, a flow measuring device, level sensors, and educational signage. Runoff will be collected from approximately 317-acre tributary areas and diverted into the infiltration gallery. The galleries shall be sized to store approximately 1,008,000 cf.

The project will include restoration of existing park components as well as new improvements. Park improvements include park improvements such as two (2) improved baseball fields with the following amenities: backstops, dugouts, player benches, batting cage, bullpens, sports lighting, and bleachers. Other improvements include a walking path around the park, landscaping, hydration stations, and an improved irrigation system.

Please fill out the following and return one copy to the Utility Coordination Group by **December 2, 2021**.
PLEASE UPLOAD A COPY OF YOUR AS-BUILT PLANS, IN THE LINK PROVIDED IN THE EMAIL, SHOWING THE LOCATION OF YOUR FACILITIES (IN OR AROUND THE PROJECT AREA).

Your replies will be transmitted to prospective bidders and used in coordinating this project. Please note proper location of any facilities, live or abandoned, that are not shown or are shown incorrectly on the attached plans. The City will not be responsible for any damage to facilities that are not shown or are shown incorrectly on the plans. Failure to reply may deprive you of the protection provided for in the Standard Specifications. Construction delays and/or expenses due to failure in providing accurate information shall result in an assessment of costs to you, per Los Angeles Municipal Code (LAMC) 62.01 or your Franchise Agreement with the City.

Upon receipt and review of your response(s), the City will contact you to formalize your utility relocation (or protect-in-place) plan, with a utility relocation agreement if necessary.

For questions, please contact the Project Manager **Bryan Powell** at (213) 485-5908 or **bryan.powell@lacity.org** .

Re: Fernangeles Recreation Center Stormwater Capture Project –EW40079D

Mr. Mandalia,

The following is the list of plan(s) that would show the street-lighting facilities at your project location:

D16644
D19806
D30359
M2427
P20173
P23835
P26338
P33950
SL10992

D and P plans are available online at http://boe.lacity.org/epps/. I have attached the M and SL plans for your reference. Feel free to contact me if you need any further assistance or have any questions.

SUMMARY OF FIRST NOTICE REPLIES

Date: December 6, 2021

CITY OF LOS ANGELES
DEPARTMENT OF PUBLIC WORKS
BUREAU OF ENGINEERING

SUMMARY OF FIRST NOTICE REPLIES

W.O. No.:	Job ID.:	Project Title:
EW40079D	**1455**	**FERNANGELES RECREATION CENTER STORMWATER CAPTURE PROJECT**

Bidders are advised that project plans usually depict the location of substructures as they existed when the project was designed. Present-day information may indicate that new facilities may have been added or are going to be added. Some of those substructures may now be or will be relocated, abandoned, removed, lowered, raised, blanketed, encased, enlarged, protected, or altered in some other way. Bidders are urged to carefully examine the proposed construction site for any evidence of recent surfacing of excavations, or the possible conflict with surface or aerial installations. Contractor should use the latest substructure maps and prepare their bid accordingly. If further information or clarification is desired, bidders are urged to immediately contact the appropriate utility company or the appropriate District Office of the Bureau of Engineering. Contractors may also contact the Utility Coordination Group, 1149 S. Broadway Street, Suite 140, Los Angeles, CA 90015, naajia.jami@lacity.org. The contractor will need to coordinate work with utility companies during construction if necessary.

Based on the confirmation from the following utility companies, they have facilities within the improvement area that will definitely be affected.

LADOT	Max Eftekhari	(213) 972 – 8684

Based on the confirmation from the following utility companies, they have facilities within the improvement area that may not require relocation but will mark them upon request. Notify Underground Service Alert at 1-800-227-2600 two working days prior to excavation to have facilities marked:

BUREAU OF STREET LIGHTING	Daniel Ordonia	(213) 847 – 1568
SOUTHERN CALIFORNIA GAS – DISTRIBUTION	Art Alfaro	(213) 231 – 7808

Based on the confirmation from the following utility companies, there are no facilities within the improvement area that will be affected:

INFORMATION TECHNOLOGY AGENCY	Frank Gonzalez	(213) 978 – 4032
SOUTHERN CALIFORNIA GAS – TRANSMISSION	Ron Silver	(818) 701 – 4536

The following utility companies have not responded to the First Utility Notice, but they may have facilities within the improvement area.

LADWP – POWER	Gibson Phan	(213) 367 – 2715

LADWP – WATER – EAST VALLEY	Glenn Micko	(213) 367 – 1211
ANDEAVOR LOGISTICS CORP.	Cynthia A. Smith	(714) 880 – 1687
AT&T CALIFORNIA	Cathy Hurtado	(626) 817 – 4263
CHARTER COMMUNICATIONS	Lisa N. Law Patrick Houston	(972) 537 – 5323 (972) 537 – 5394

ELECTRIC POWER AND WATER DISTRIBUTION MAPPING

NOTICE TO CONTRACTORS

GENERAL NOTES:

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "STANDARD SPECIFICATIONS" FOR PUBLIC WORKS CONSTRUCTION AS MODIFIED BY THE CORRESPONDING ISSUE OF STANDARD PLAN S-610, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTERLINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE RELOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIER DOORS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED ON THIS PLAN SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THIS PLAN SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4743) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD. SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREETS SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 16430 AND 2100 OF THE SPECIAL SPECIFICATIONS.
16. "DELETED"
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. ON ALL STREETS POSTED "NO STOPPING", EITHER CONTINUOUSLY OR FOR SPECIFIED HOURS OF THE DAY, THE CONTRACTOR SHALL SCHEDULE HIS OPERATIONS SO AS TO AVOID CONSTRUCTION OR STORAGE OF EQUIPMENT AND MATERIAL WITHIN THE ROADWAY BETWEEN THE HOURS OF 7:00A.M. AND 9:00A.M., AND 4:00P.M. AND 6:00P.M. OR FOR THE SPECIFIED HOURS WHEN STOPPING IS PROHIBITED.
20. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
21. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
22. ALL ELECTROLIERS SPECIFIED HEREON SHALL INCLUDE A TYPE 2 PULLBOX, TO BE SUPPLIED AND INSTALLED, UNLESS OTHERWISE SPECIFIED.
23. STREET LIGHTING CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT ENDS THAT ARE WITHIN 12" OF THE SURFACE SHALL BE CUT AND REMOVED. BOTH ENDS OF THE REMAINING ABANDONED CONDUIT SHALL BE CRIMPED.

CIRCUIT DIAGRAM LEGEND:

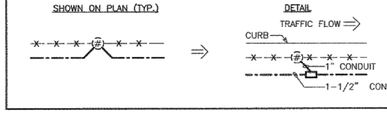
NEW WIRE — NEW LAMP
EXISTING WIRE — EXISTING LAMP
DISCONNECT AND REMOVE WIRE. — REMOVE EXISTING LAMP.
CONNECT WIRE

SERIES CIRCUIT NOTES:

1. WARNING: CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY (213)367-9908, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF THE SPECIAL SPECIFICATIONS.
2. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG SOLID COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN, AND ORANGE SHALL NOT BE USED.
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE: 323-913-4743) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING CIRCUIT.

MULTIPLE CIRCUIT NOTES:

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY (213)367-9908 BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF THE SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 6 AWG STRANDED COPPER CONDUCTOR, TYPE THWN/THHN INSULATION. UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON. "END RUN" CONDUITS SHALL HAVE ONLY TWO WIRES INSTALLED UNLESS OTHERWISE NOTED. SEE NOTE 4 BELOW.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES, AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)



LEGEND:

(R) — EXISTING ELECTROLIER TO BE RELOCATED.
EXISTING UTILITARIAN LIGHT ON WOODEN POLE WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED.
PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (STANDARD DRAWING NO. L-201-0). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED.
EXISTING PULLBOX.
EXISTING CONDUIT.
NEW 1" CONDUIT.
EXISTING 1" CONDUIT.
NEW 1-1/2" CONDUIT.
EXISTING 1-1/2" CONDUIT.
NEW 2" CONDUIT.

PROPOSED CATCH BASIN.

ELECTROLIER-PULLBOX DETAIL

PLAN DOES NOT DEPICT PULLBOX REQUIRED WITH NEW CONDUIT INSTALLATION. CONTRACTOR SHALL INSTALL ELECTROLIER PULLBOX WITH NEW STUBOUT TO ELECTROLIER PER ELECTROLIER-PULLBOX DETAIL. (CONTRACTOR MAY USE OTHER METHOD OF CONNECTING CONDUIT SUBJECT TO APPROVAL OF THE CONSTRUCTION ENGINEER).

SHOWN ON PLAN (TYP.) ⇒ DETAIL

NOTICE TO CONTRACTORS

MATERIAL LIST

FOLLOWING IS A SUMMARY OF LUMINAIRES, CONVERSION KITS, AND OTHER EQUIPMENT WHICH SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR. THIS IS NOT INTENDED TO BE A COMPLETE LIST OF ALL MATERIALS REQUIRED. REFER TO THE SPECIAL PROVISIONS FOR A LIST OF EQUIPMENT APPROVED FOR USE ON THIS PROJECT.

SYMBOL	ITEM	QUANTITY	DESCRIPTION	
L1	LUMINAIRE	56	35W LEOTEK GREENCOBRA 20F	49, 50
L3	LUMINAIRE	166	89W LEOTEK ECOBRA 11M	49, 50
L6	LUMINAIRE	1	163W LEOTEK ECOBRA 18M @ 700mA	49, 50
T2	LAMP	49	36W, 2600K TRULY GREEN SOLUTIONS	49
	LAMP SOCKET	49	E40 BASE MOGUL LAMPHOLDER	26, 49
LS	SOFFIT	55	45W LUMEC SOFFIT	49

TOTAL : 327 LUMINAIRES

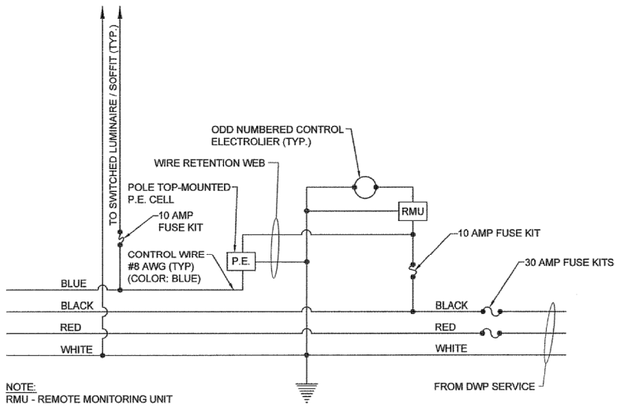
REMOTE MONITORING NODE	TOTAL: 223 UNITS
* PE CELL	TOTAL: 4 UNITS

* ELECTROLIER NOS. 121 (SHEET 7), 140 (SHEET 7), 163 (SHEET 10), 186 (SHEET 11) SHALL HAVE PE CELLS INSTALLED IN ADDITION TO REMOTE MONITORING NODES (SEE DETAIL "A" ON SHEET 2).

NOTE:
CONTRACTOR SHALL COORDINATE WITH THE DEPT. OF WATER & POWER TO OBTAIN QUADRANT LOCATIONS FOR MULTIPLE STREET LIGHTING SERVICES PRIOR TO START OF CONSTRUCTION. ANY WORK DONE PRIOR TO RECEIVING QUADRANT LOCATIONS WILL BE AT CONTRACTOR'S OWN RISK.

47 — INSTALL 1-1/2" CONDUIT WITH SEVEN MULTIPLE WIRES: (COLOR CODE: 3-RED, 3-BLACK, 1-WHITE)
46 — INSTALL 1-1/2" CONDUIT WITH FIVE MULTIPLE WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)
45 — INSTALL 1-1/2" CONDUIT WITH THREE MULTIPLE WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)
44 — SERVICE COMPANY TO PROVIDE AND INSTALL BYPASS CONTROL LINE, P.E. & MRWI ON TOP OF POWER POLE FOR MULTI-MULTIPLE SERVICE. INSTALL TWO ADDITIONAL # 10 AWG CONTROL WIRES IN RISER (110' EACH) FOR BYPASS CONTROL, COLOR CODE (1) RED, (1) BLK. INSTALL ONE APPROVED 10 AMP FUSE HOLDER (WITHOUT FUSE) BETWEEN THE TWO WIRES IN THE SERVICE PULLBOX. ROLL AND TAPE LOOSE WIRES AT TOP OF RISER FOR OTHERS. SERVICE COMPANY WILL CONNECT THE OPEN ENDS TO MRWI FOR TESTING BYPASS CONTROL (SEE DETAIL "B" ON SHEET 2). ATTACH W.H. BRADY SELF LAMINATING LABEL ON THE FUSE WITH THIS NOTE; "NORMALLY EMPTY. INSERT FUSE FOR TEST ONLY."
NOTE: FUSE IS TO BE INSTALLED ONLY DURING TESTING WHEN P.E. NEEDS TO BE BYPASSED - EX. FOR DAYTIME BURN TEST.
43 — TEMPORARY TRAFFIC SIGNAL SHUTDOWN MAY BE REQUIRED DURING UPGRADING OF ELECTRICAL SERVICE. CONTRACTOR SHALL NOTIFY AND COORDINATE WITH THE DEPARTMENT OF TRANSPORTATION, TRAFFIC SIGNAL SUPERINTENDENT (TEL. NO. 213-485-2261) 3 WORKING DAYS PRIOR TO START OF CONSTRUCTION AT THIS LOCATION.
42 — BUS SHELTER COORDINATION REQUIREMENTS-- WHEN A CIRCUIT IS CONVERTED FROM SERIES OPERATION TO MULTIPLE, CONTRACTOR SHALL NOTIFY SHELTER MEDIA INC. AT (818) 762-1385, 48 HOURS IN ADVANCE OF WORK ON THE CIRCUIT- SERVICE CHANGES AT SHELTER WILL BE CONSTRUCTED BY SHELTER MEDIA.
41 — LUMINAIRE SHALL PROVIDE A MEDIUM, SEMI-CUTOFF, TYPE 1 DISTRIBUTION.
40 — REMOVE AND DISPOSE OF EXISTING POT HEAD.
39 — DWP TO REMOVE SERVICE. CONTRACTOR SHALL REMOVE EXISTING SERIES SERVICE EQUIPMENT (SERVICE RISER AND PULLBOX).
38 — INTERCEPT EXISTING CONDUIT AND INSTALL TYPE 3 PULLBOX.
37 — REMOVE EXISTING TYPE 2 PULLBOX AND INSTALL NEW TYPE 3 PULLBOX.
36 — REMOVE TWO EXISTING MULTIPLE WIRES AND INSTALL THREE MULTIPLE CIRCUIT WIRES (COLOR CODE : 1-RED, 1-BLACK, 1-WHITE).
35 — REMOVE EXISTING TYPE 2 PULLBOX AND INSTALL NEW TYPE 3 SERVICE PULLBOX.
34 — INSTALL CONNECTING DEVICE PER DELTA NOTE 28, EXCEPT TO ACCOMMODATE FIVE (5) CIRCUITS INSTEAD OF FOUR (4) CIRCUITS - CIRCUITS "A", "B", "C", "D" & "E".
33 — BALLAST SHALL BE DESIGNED TO PROVIDE THE ELECTRICAL CHARACTERISTICS RECOMMENDED BY APPROVED LAMP MANUFACTURERS FOR PROPER STARTING AND OPERATION OF THE DESIGNATED LAMPS. BE LOW LOSS HIGH POWER FACTOR BALLASTED AND WATERPROOFED SATISFACTORY TO THE ENGINEER. PRIMARY LEADS SHALL BE No. 8 A.W.G. AND INSULATED FOR 5000 VOLT OPERATION. SECONDARY LEADS SHALL BE No. 10 A.W.G. AND INSULATED FOR 600 VOLT OPERATION. LEADS SHALL EXTEND AT LEAST 12 INCHES BEYOND THE INSULATED CAPSULE. IF BALLAST IS ENCASED IN METAL, A SATISFACTORY MEANS OF GROUNDING SHALL BE PROVIDED. BALLASTS SHALL BE CAPABLE OF WITHSTANDING A 10,500 VOLT HIGH POTENTIAL TEST.
32 — REMOVE EXISTING WIRES AND INSTALL NEW MULTIPLE CIRCUIT WIRE TO FACILITATE CONVERSION OF SERIES TO MULTIPLE (SEE MULTIPLE CIRCUIT NOTES).
31 — PROVIDE AND INSTALL A LAMP SIZED TO MATCH CONVERSION KIT FOR EACH CONVERSION KIT SPECIFIED.
30 — THE CONTRACTOR SHALL INSTALL ALL REQUIRED PHOTOELECTRIC CONTROLS. THE CONTROLS SHALL BE OBTAINED FROM THE DEPT. OF WATER AND POWER (D.W.P.) STREET LIGHTING MAINTENANCE HEADQUARTER, 611 NORTH HOOVER ST. , AT NO COST TO THE CONTRACTOR. A MINIMUM OF 15 DAYS ADVANCE NOTICE IS REQUIRED TO BE GIVEN TO THE D.W.P. STREET LIGHTING SUPERINTENDENT AT 213-481-4836. THE CONTRACTOR SHALL BE RESPONSIBLE FOR KEEPING ALL PHOTOELECTRIC CONTROLS ISSUED BY THE D.W.P. IN OPERATING CONDITION UNTIL SATISFACTORY COMPLETION OF THE BURN TEST. THE INSTALLED CONTROLS SHALL BE ORIENTED IN THE NORTHERLY DIRECTION.
29 — CONTRACTOR SHALL MODIFY OR REMOVE EXISTING SOCKETS, BRACKET OR TRANSFORMER AS REQUIRED FOR INSTALLATION OF CONVERSION KIT. NEW WIRES IN ELECTROLIER SHALL BE INSTALLED AND CONNECTED WHERE EXISTING WIRES CAN NOT BE USED.
28 — CONTRACTOR SHALL REMOVE EXISTING LUMINAIRE MOUNTING ARM FROM POLE IN ORDER TO OBTAIN THE NECESSARY WIRE WITH WHICH TO CONNECT NEW WIRES TO LUMINAIRE. MOUNTING ARM IS THEN REINSTALLED.
27 — CONTRACTOR SHALL REPLACE EXISTING SERIES EXTERNAL BALLAST OR TRANSFORMER WITH SPECIFIED SERIES EXTERNAL BALLAST AT ITS EXISTING LOCATION (EITHER POST BASE OR PULLBOX).
26 — INSTALLATION OF NEW LAMP SOCKET REQUIRES FABRICATION AND INSTALLATION OF MOUNTING BRACKET. SEE BID PACKAGE FOR ADDITIONAL INFORMATION AND REQUIREMENTS. ANY ADDITIONAL WORK REQUIRED TO COMPLETE INSTALLATION OF MOUNTING BRACKET AND SOCKET SHALL BE DONE BY THE CONTRACTOR. ASSOCIATED COSTS SHALL BE INCLUDED IN THE BID FOR THE "LED POST TOP LAMP" BID ITEM. ADDITIONAL WORK MAY INCLUDE (BUT NOT LIMITED TO):
1. REMOVE EXISTING CONVERSION KIT.
2. FABRICATE NEW MOUNTING BRACKETS AT PROPER HEIGHTS TO MATCH GLOBE SIZE TO ACHIEVE PROPORTIONAL LAMP CENTER HEIGHT AND FIRMLY SECURE TO GLOBE/LANTERN BASE.
3. DRILL OR ENLARGE HOLES AND FURNISH LONGER SCREWS.
4. MODIFY GLOBE OR LANTERN FITTER (BASE SUPPORT)
25 — MULTIPLE COMBINED STREET LIGHTING AND TRAFFIC SIGNAL SERVICE LOCATION. INSTALL SEPARATE TYPE 3 SERVICE PULLBOX FOR STREET LIGHTING WITH 2" CONDUIT CONNECTING EXISTING TRAFFIC SERVICE PULLBOX. INTERCEPT SERVICE WIRES FROM EXISTING TRAFFIC SIGNAL PULLBOX.
24 — TAPE ENDS OF SPARE WIRE.
23 — INSTALL THREE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)
22 — REMOVE EXISTING STREET LIGHTING WIRES.
21 — MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT. PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION, PHONE: (213) 367-3003.
20 — TRIM TREE (SEE SUPPLEMENTAL NOTE NO. 20).
19 — INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1 (CIRCUITS "A", "B", & "C").
18 — INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1 (CIRCUITS "A", "B", "C", & "D").
17 — MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.
16 — INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)
15 — INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)
14 — INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)
13 — INSTALL 1" CONDUIT BEND.
12 — INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.
11 — INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OR SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.
10 — JOIN CONDUIT.
9 — MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.
8 — SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX PER STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.
7 — CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.
6 — CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.
5 — INTERCEPT CONDUIT AND INSTALL PULLBOX.
4 — THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.
3 — INSTALL CONDUIT ONLY.
2 — CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).
1 — TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.

THE ABOVE NOTES ARE APPLICABLE ONLY WHERE SPECIFIED ON THIS PLAN.



DELTA NOTES:

53 — INSTALL PE COLLAR GLOBE HOLDER ASSEMBLY ON EXISTING POLE. SEE DETAIL "C" ON SHEET 2.
52 — PHOTOELECTRIC CONTROL ELECTROLIER, USE PE CONTROLLED WIRE (BLUE) TO SWITCH "SSRE" RELAY, SEE DETAIL "B" ON SHEET 2. CONTRACTOR SHALL REPLACE EXISTING POLE CAP WITH MODIFIED PHOTOELECTRIC CONTROL (PE) RECEPTACLE MOUNTED POLE CAP KIT (INCLUDING WIRE RETENTION WEB). CONTRACTOR CAN PICK UP THE KIT AT BSL COUNTER, 1149 S. BROADWAY, 2ND FLOOR AT THE COST OF $50 PER KIT. REFER TO DELTA NOTE 30 FOR PE PICKUP.
51 — PHOTOELECTRIC CONTROL ELECTROLIER, USE PE CONTROLLED WIRE (BLUE) TO POWER ADJACENT LIGHTS, SEE DETAIL "A" ON SHEET 2. CONTRACTOR SHALL REPLACE EXISTING POLE CAP WITH MODIFIED PHOTOELECTRIC CONTROL (PE) RECEPTACLE MOUNTED POLE CAP KIT (INCLUDING WIRE RETENTION WEB). CONTRACTOR MAY PURCHASE THE KIT AT BSL COUNTER, 1149 S. BROADWAY, 2ND FLOOR FOR A NON-REFUNDABLE COST (SEE BID SHEET FOR PRICES). A SEVEN WORKING DAYS NOTICE TO THE CONSTRUCTION ENGINEER IS REQUIRED PRIOR TO PICKING UP THE KITS. REFER TO DELTA NOTE 30 FOR PE PICKUP.
50 — ALL COBRAHEAD LUMINAIRES (REGARDLESS OF WATTAGE) ON LOW VOLTAGE MULTIPLE CIRCUITS SHALL BE EQUIPPED WITH A REMOTE MONITORING NODE. THE UNIT SHOULD BE PICKED UP AT THE BUREAU'S PLAN COUNTER AT 1149 S. BROADWAY STE 200, LOS ANGELES, CA 90015. THE UNIT WILL BE PROVIDED FOR A NON-REFUNDABLE FEE (APPROXIMATELY $155 PER UNIT). THE CONTRACTOR SHALL GIVE SEVEN WORKING DAYS NOTICE (PHONE 213-847-1492) PRIOR TO PICKING UP THE REMOTE MONITORING UNITS. NODES SHALL BE INSTALLED INTO PHOTOELECTRIC CONTROL STANDARD SOCKET PER ANSI/NEMA C-136.10 AND SHALL BE ORIENTED IN A NORTHERLY DIRECTION. A SEPARATE P.E. CELL IS NOT NEEDED FOR LUMINAIRES EQUIPPED WITH A REMOTE MONITORING NODE.
49 — THE CATALOG NUMBERS ARE AS SHOWN BELOW OR BSL APPROVED EQUAL:
LEOTEK GREENCOBRA 20F: GC1-20F-MV-NW-2-GY-530-PCR7
LEOTEK ECOBRA 11M: EC3-11M-MV-NW-3-GY-650-PCR7
LEOTEK ECOBRA 18M @ 700mA: EC7-18M-MV-NW-3-GY-700-PCR7
LUMEC SOFFIT: [RETRO-479]-65W42LED4K-R-LE5F-120-[FAWS-012]-BKTX
TRULY GREEN SOLUTIONS LAMP: 31082, 2600K - 36W NO CHIP TOP E40 BASE
LEVITON E40 BASE MOGUL LAMPHOLDER: 8783-002
THE LUMINAIRES SPECIFIED ON THIS PLAN ARE VALID FOR ONLY 6 MONTHS FROM FINAL PLAN APPROVAL. THE CONTRACTOR SHALL VALIDATE THE CATALOG NUMBERS WITH THE BUREAU OF STREET LIGHTING PRIOR TO CONSTRUCTION.
48 — INSTALL 2" CONDUIT WITH NINE MULTIPLE WIRES: (COLOR CODE: 4-RED, 4-BLACK, 1-WHITE)

ALL CONSTRUCTION IS PROHIBITED ON MAJOR AND SECONDARY STREETS BETWEEN: 6:00 A.M. TO 9:00 A.M. AND 3:30 P.M. TO 7:00 P.M.

SUPPLEMENTAL NOTES:

1. IN THE EVENT THE WORK IS NOT COMPLETED WITHIN SUCH TIME AS SPECIFIED IN THE CONTRACT, LIQUIDATED DAMAGES IN THE AMOUNT STATED THEREIN WILL BE DEDUCTED FROM THE AMOUNT TO BE PAID TO THE CONTRACTOR.
2. TIME SPECIFIED IN THE "PROPOSAL" FOR COMPLETION OF THE WORK INCLUDES TIME FOR PROCUREMENT AND TESTING OF EQUIPMENT TO BE INSTALLED. NOTWITHSTANDING SECTION 6-8.1 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, NO MATERIAL DELAY WILL BE GRANTED ON THIS PROJECT.
3. ALL ELECTROLIER LOCATIONS ARE AT OR DIMENSIONED FROM BCR UNLESS OTHERWISE SHOWN ON THE PLAN.
4. ALL ELECTROLIER DIMENSIONS SHOWN ON PLAN ARE MEASURED ALONG THE CURB FACE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING FOUNDATIONS AND PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. PULLBOXES SHALL NOT BE PLACED IN ALLEYS. ALL SERVICE PULLBOXES OR OTHER PULLBOXES REQUIRED NEAR ALLEY APPROACHES SHALL BE INSTALLED IN ACCORDANCE WITH GENERAL NOTE NO. 11 HEREON.
7. CONTRACTOR SHALL MAKE ARRANGEMENTS TO DE-ENERGIZE EXISTING STREET LIGHTING SYSTEM AT THE TIME THE NEW SYSTEM IS ENERGIZED.
8. TOTAL UNIT NUMBERS OF EQUIPMENT SPECIFIED TO BE REMOVED AND DISPOSED OF ARE AN APPROXIMATION. ACTUAL NUMBERS SHALL BE VERIFIED BY CONTRACTOR'S FIELD INVESTIGATION.
9. EQUIPMENT IDENTIFIED TO BE SALVAGED IS EXTREMELY FRAGILE. CONTRACTOR SHALL USE EXTREME CARE IN REMOVING AND TRANSPORTING SALVAGE EQUIPMENT. DAMAGED EQUIPMENT WILL NOT BE ACCEPTED TO MEET CONTRACTOR'S SALVAGE REQUIREMENT AND THE REPLACEMENT COST OF SUCH EQUIPMENT WILL BE DEDUCTED FROM CONTRACT COST.
10. TRAFFIC SIGNAL WORK TO BE PERFORMED BY THE CONTRACTOR. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING TRAFFIC SIGNAL WORK WITH THE DEPARTMENT OF TRANSPORTATION AND SHALL TAKE THIS INTO CONSIDERATION WHEN SCHEDULING WORK AND MAKING COST ESTIMATES (SEE SUPPLEMENTAL NOTE NO. 12).
11. THE CONTRACTOR SHALL GIVE THE TRAFFIC SIGNAL SUPERINTENDENT (TELEPHONE: 213-485-2261) THREE WORKING DAYS NOTICE BEFORE SCHEDULING WORK THAT WILL REQUIRE COORDINATION WITH THE DEPARTMENT OF TRANSPORTATION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, SPECIFIC WORK LOCATIONS INDICATED ON THESE PLANS.
12. CONTRACTOR SHALL BE RESPONSIBLE FOR THE SALVAGE AND REINSTALLATION OF ALL STREET NAME AND NEIGHBORHOOD WATCH SIGNS ON THE PROJECT.
13. CONTRACTOR SHALL PROTECT OR REMOVE AND REPLACE ALL EXISTING IMPROVEMENTS NEAR EXISTING/NEW FOUNDATIONS (i.e., FENCES, BRICK WORK, LANDSCAPING, TERRAZO AND BLOCKWALLS).
14. UTILITIES: UTILITY LINES S

DELTA NOTES

1. INSTALL MODIFIED FOUNDATION PER DETAIL AS SHOWN ON SHEET 2. CAP AT&T STUB-OUT 6" OUTSIDE FOUNDATION AT "6:00" POSITION.
2. INSTALL NEW TYPE 2 PULLBOX.
3. TERMINATE CONDUIT IN EXISTING STREET LIGHTING PULLBOX. REPLACE EXISTING PULLBOX COVER WITH NEW ARMORCAST VANDAL PROOF PULLBOX RETROFIT KIT.
4. JOIN CONDUIT.
5. INSTALL PHILIPS CITY TOUCH OUTDOOR LUMINAIRE CONTROLLER LLC726D OR BSL APPROVED EQUAL.

LEGEND

- EXISTING 1" CONDUIT.
- EXISTING 1 1/2" CONDUIT.
- EXISTING 2" CONDUIT.
- ABANDON EXISTING CONDUIT.
- INSTALL NEW 1" CONDUIT.
- INSTALL NEW 1 1/2" CONDUIT.
- INSTALL NEW 2" CONDUIT.
- EXISTING PULLBOX.
- REMOVE EXISTING PULLBOX.
- NEW TYPE 2 PULLBOX PER STD PLAN NO L-201-0.
- EXISTING ELECTROLIER. (NOT TO BE REMOVED OR MODIFIED).
- (R) RELOCATE EXISTING ELECTROLIER TO NEW LOCATION AS SHOWN ON PLAN. RE-USE EXISTING LUMINAIRE.
- REMOVE EXISTING LAMP.
- (R) EXISTING ELECTROLIER INSTALL SAME LOCATION AS SHOWN ON PLAN. RE-USE EXISTING LUMINAIRE.

GENERAL NOTES TO THE CONTRACTOR

1) STREET LIGHTING WORK TO BE DONE BY THE BUREAU OF STREET LIGHTING FIELD OPERATIONS DIVISION.
2) WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM DWP (TEL: 213-367-9966) BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT.
3) ELECTROLIERS SPECIFIED TO BE MAINTAINED IN SERVICE. THE FOD MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER IN SERVICE PROVIDED SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
4) ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS ", AND THE SPECIAL PROVISIONS.

NOTICE TO CONTRACTORS

GENERAL NOTES:

1. ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "STANDARD SPECIFICATIONS" FOR PUBLIC WORKS CONSTRUCTION AS MODIFIED BY THE CORRESPONDING ISSUE OF STANDARD PLAN S-610, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS", AND THE SPECIAL PROVISIONS.
2. ELECTROLIERS SHALL BE INSTALLED WITH CENTERLINE 30" BEHIND THE CURB FACE, AND WITH LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO ITS CENTERLINE, EXCEPT AS OTHERWISE SPECIFIED HEREON.
3. ELECTROLIERS SPECIFIED TO BE RELOCATED INSIDE OF THE CURB RETURN SHALL BE INSTALLED WITH THE CENTER OF THE ELECTROLIER 30 INCHES BEHIND THE CURB FACE MEASURED RADIALLY, AND WITH THE LUMINAIRE ARM ORIENTED OVER THE STREET AND PERPENDICULAR TO THE STREET CENTERLINE.
4. ELECTROLIERS SHALL BE ERECTED SO THAT THE BASE DOOR IS PERPENDICULAR TO THE CURB AND LOCATED ON THE SIDE OF THE ELECTROLIER AWAY FROM ONCOMING TRAFFIC.
5. ALL EXISTING ELECTROLIERS SPECIFIED TO BE REMOVED OR MODIFIED ON THIS PLAN SHALL BE MAINTAINED IN SERVICE UNTIL THE NEW ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE, UNLESS OTHERWISE SPECIFIED HEREON. ALL OTHER ELECTROLIERS ON CIRCUITS AFFECTED BY THIS PLAN SHALL BE MAINTAINED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
6. ALL EQUIPMENT REQUIRED HEREON FOR FURNISHING ELECTRICAL SERVICE FOR EACH CIRCUIT SHALL BE INSTALLED AND INSPECTED PRIOR TO ANY OTHER CONSTRUCTION ON THAT CIRCUIT UNLESS OTHERWISE APPROVED BY THE ENGINEER.
7. THE CONTRACTOR SHALL GIVE WRITTEN NOTICE, 72 HOURS IN ADVANCE OF THE REMOVAL OF AN ELECTROLIER, TO ANY PUBLIC AGENCY MAINTAINING EQUIPMENT SUPPORTED BY THAT ELECTROLIER.
8. FOUNDATIONS AND PULLBOXES NOT REMAINING IN SERVICE SHALL BE REMOVED. THE RESULTING EXCAVATION SHALL BE FILLED WITH MATERIAL SIMILAR TO ADJACENT MATERIAL AND SATISFACTORILY COMPACTED WITH A MECHANICAL COMPACTOR IN LAYERS NOT EXCEEDING 12 INCHES. THE SURFACE SHALL BE FINISHED TO MATCH THE ADJACENT SURFACE.
9. THE CONTRACTOR SHALL REQUEST A BURN TEST BY NOTIFYING THE BUREAU OF CONTRACT ADMINISTRATION PROJECT INSPECTOR A MINIMUM OF 7 CALENDAR DAYS IN ADVANCE OF THE DATE ON WHICH A BURN TEST IS DESIRED.
10. CONTRACTOR SHALL GIVE THREE WORKING DAYS NOTICE (PHONE 323-913-4743) PRIOR TO DELIVERY OF ANY EQUIPMENT SPECIFIED TO BE DELIVERED TO THE BUREAU OF STREET LIGHTING YARD AT 4550 SANTA MONICA BLVD. SUCH DELIVERIES SHALL BE BETWEEN 8:30 AM AND 3:00 PM AND SHALL INCLUDE ALL HANDLING AND LOADING FROM THE TRUCK BY THE CONTRACTOR.
11. PULLBOXES LOCATED ADJACENT TO DRIVEWAYS AND ALLEYS SHALL BE INSTALLED AT A MINIMUM DISTANCE OF FIVE FEET FROM THE TOP OF THE "X" OF A CASE 1 OR CASE 2 DRIVEWAY OR AT A MINIMUM DISTANCE OF TWO FEET FROM THE B.C. OF A CASE 3 OR CASE 4 DRIVEWAY OR FIVE FEET FROM TRAVELED WAY OF THE ALLEY.
12. PULLBOXES INSTALLED AT INTERSECTIONS OF LOCAL STREETS SHALL BE INSTALLED NO CLOSER TO THE INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 25' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER. PULLBOXES INSTALLED AT INTERSECTIONS WHICH INVOLVE ONE OR MORE MAJOR OR SECONDARY STREETS SHALL BE INSTALLED NO CLOSER TO INTERSECTIONS THAN THE B.C.R. OF AN ASSUMED FUTURE 35' RADIUS CURB RETURN UNLESS OTHERWISE APPROVED BY THE ENGINEER.
13. CONDUIT SHALL BE INSTALLED AROUND ALL EXISTING AND/OR PROPOSED CATCH BASINS PER BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-304-0 UNLESS OTHERWISE SPECIFIED.
14. ALL SCREWS PROVIDED FOR ELECTROLIER STANDARD BASE DOORS AND BASE COVERS SHALL BE CADMIUM PLATED STEEL, 1/4-20NC MACHINE SCREWS, WITH PHILLIPS RECESSED ROUND HEADS.
15. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE AFFECTED UTILITY COMPANY BEFORE DOING ANY WORK IN CLOSE PROXIMITY TO ANY OVERHEAD ELECTRIC LINE. SEE SECTIONS 16430 AND 2100 OF THE SPECIAL SPECIFICATIONS.
16. "DELETED"
17. CONTRACTOR SHALL BE RESPONSIBLE FOR PRESERVING THE CONDITION OF ALL EXISTING EQUIPMENT TO BE REUSED, MODIFIED OR RETURNED TO THE BUREAU OF STREET LIGHTING YARD.
18. EQUIPMENT INDICATED "DISPOSE" SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND BE DISPOSED OF BY THE CONTRACTOR.
19. ON ALL STREETS POSTED "NO STOPPING", EITHER CONTINUOUSLY OR FOR SPECIFIED HOURS OF THE DAY, THE CONTRACTOR SHALL SCHEDULE HIS OPERATIONS SO AS TO AVOID CONSTRUCTION OR STORAGE OF EQUIPMENT AND MATERIAL WITHIN THE ROADWAY BETWEEN THE HOURS OF 7:00A.M. AND 9:00A.M., AND 4:00P.M. AND 6:00P.M. OR FOR THE SPECIFIED HOURS WHEN STOPPING IS PROHIBITED.
20. STREET LIGHTING CONDUIT SHALL BE INSTALLED BY JACKING OR DRILLING METHODS. INSTALLATION OF CONDUIT BY OPEN TRENCHING IS NOT PERMITTED UNLESS APPROVED BY THE DIRECTOR, BUREAU OF STREET LIGHTING.
21. CONTRACTOR SHALL REPAIR AT HIS COST, THE DAMAGE CAUSED TO EXISTING SPRINKLER SYSTEMS DURING THE CONSTRUCTION OF THIS PROJECT. REPAIRS SHALL BE MADE WITHIN 5 WORKING DAYS AFTER DAMAGE OCCURS.
22. ALL ELECTROLIERS SPECIFIED HEREON SHALL INCLUDE A TYPE 2 PULLBOX, TO BE SUPPLIED AND INSTALLED, UNLESS OTHERWISE SPECIFIED.
23. STREET LIGHTING CONDUIT THAT IS TO BE ABANDONED SHALL HAVE WIRES REMOVED. THE CONDUIT ENDS THAT ARE WITHIN 12" OF THE SURFACE SHALL BE CUT AND REMOVED. BOTH ENDS OF THE REMAINING ABANDONED CONDUIT SHALL BE CRIMPED.

CIRCUIT DIAGRAM LEGEND:

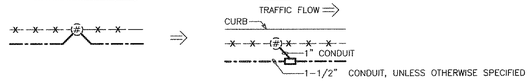
- NEW WIRE
- EXISTING WIRE
- DISCONNECT AND REMOVE WIRE.
- CONNECT WIRE
- NEW LAMP
- EXISTING LAMP
- REMOVE EXISTING LAMP.

SERIES CIRCUIT NOTES:

1. WARNING: CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY (213)367-9908, AND "MEN AT WORK" SIGNS SHALL BE POSTED AT THE SERVICE POINT BEFORE ANY WORK IS DONE OR ANY CONNECTIONS MADE ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF THE SPECIAL SPECIFICATIONS.
2. SERIES CIRCUIT WIRE SHALL BE NO. 8 AWG SOLID COPPER CONDUCTOR, INSULATED WITH 0.110" APPROVED POLYETHYLENE COMPOUND RATED FOR 5,000 VOLT OPERATION.
3. TWO OR MORE TURNS OF SELF-ADHESIVE COLORED TAPE WITH A MINIMUM WIDTH OF 1/2 INCH SHALL BE APPLIED TO EACH CABLE IN ALL SERIES CIRCUITS WHERE WORK IS BEING DONE AND WHERE TWO OR MORE CIRCUITS EXIST IN A COMMON PULLBOX OR POST BASE. THE TAPE SHALL BE APPLIED ON THE CABLE BETWEEN THE SPLICES AND THE CONDUIT, USING ONE COLOR FOR EACH CIRCUIT. THE COLORS WHITE, GRAY, GREEN, AND ORANGE SHALL NOT BE USED.
4. CONTRACTOR SHALL GIVE THE BUREAU OF STREET LIGHTING YARD (PHONE: 323-913-4743) TWO WORKING DAYS NOTICE BEFORE ANY WORK IS DONE ON AN EXISTING CIRCUIT.

MULTIPLE CIRCUIT NOTES:

1. WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM THE SERVING COMPANY (213)367-9908 BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT. SEE SECTIONS 16430 AND 2100 OF THE SPECIAL SPECIFICATIONS.
2. MULTIPLE CIRCUIT WIRE SHALL BE NO. 6 AWG STRANDED COPPER CONDUCTOR, TYPE THWN/THHN INSULATION, UL APPROVED FOR 600 VOLT OPERATION UNLESS OTHERWISE SPECIFIED HEREON.
3. THREE WIRES (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE) SHALL BE INSTALLED IN ALL MULTIPLE CIRCUIT CONDUIT UNLESS OTHERWISE PROVIDED FOR HEREON. "END RUN" CONDUITS SHALL HAVE ONLY TWO WIRES INSTALLED UNLESS OTHERWISE NOTED. SEE NOTE 4 BELOW.
4. EVEN NUMBERED ELECTROLIERS SHALL BE CONNECTED TO RED AND WHITE WIRES, AND ODD NUMBERED ELECTROLIERS SHALL BE CONNECTED TO BLACK AND WHITE WIRES.
5. ELECTROLIERS SHALL BE WIRED PER TYPICAL MULTIPLE CIRCUIT ELECTROLIER WIRING DETAIL, BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1, UNLESS OTHERWISE SPECIFIED.
6. MULTIPLE CIRCUITS IN CONDUITS CONTAINING MORE THAN THREE CONDUCTORS SHALL BE APPROPRIATELY IDENTIFIED BY LABELING CONDUCTORS "A", "B", ETC. WITH APPROVED SELF-LAMINATING LETTER TAPE WRAPPED AT LEAST TWICE AROUND THE CONDUCTOR IN EACH PULLBOX. (W.H. BRADY, SPECIAL SELF-LAMINATING WIRE MARKERS OR EQUIVALENT)



LEGEND:

- (R) EXISTING ELECTROLIER TO BE RELOCATED.
- EXISTING UTILITARIAN LIGHT ON WOODEN POLE WHICH SHALL BE MAINTAINED IN SERVICE UNTIL THE PERMANENT ELECTROLIER LIGHTING SYSTEM IS PLACED IN SERVICE. CONTRACTOR MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING UTILITARIAN LIGHTS IN SERVICE PROVIDED THAT SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
- EXISTING ELECTROLIER, NOT TO BE REMOVED OR MODIFIED.
- PULLBOX TYPE 2 UNLESS OTHERWISE SHOWN HEREON. (STANDARD DRAWING NO. L-201-0). ADDITIONAL PULLBOXES SHALL BE REQUIRED AS SPECIFIED.
- EXISTING PULLBOX.
- EXISTING CONDUIT.
- NEW 1" CONDUIT.
- EXISTING 1" CONDUIT.
- NEW 1-1/2" CONDUIT.
- EXISTING 1-1/2" CONDUIT.
- NEW 2" CONDUIT.
- EXISTING 2" CONDUIT.
- ABANDON CONDUIT. (SEE GENERAL NOTE NO. 8 AND NO. 23)
- EXISTING ELECTROLIER FOUNDATION.
- FUTURE ELECTROLIER FOUNDATION.
- PROPOSED CATCH BASIN.

ELECTROLIER-PULLBOX DETAIL

PLAN DOES NOT DEPICT PULLBOX REQUIRED WITH NEW CONDUIT INSTALLATION. CONTRACTOR SHALL INSTALL ELECTROLIER PULLBOX WITH NEW STUBOUT TO ELECTROLIER PER ELECTROLIER-PULLBOX DETAIL. (CONTRACTOR MAY USE OTHER METHOD OF CONNECTING CONDUIT SUBJECT TO APPROVAL OF THE CONSTRUCTION ENGINEER).

SHOWN ON PLAN (TYP.) ⇒ DETAIL

NOTICE TO CONTRACTORS

MATERIAL LIST

FOLLOWING IS A SUMMARY OF LUMINAIRES, CONVERSION KITS, AND OTHER EQUIPMENT WHICH SHALL BE SUPPLIED AND INSTALLED BY THE CONTRACTOR. THIS IS NOT INTENDED TO BE A COMPLETE LIST OF ALL MATERIALS REQUIRED. REFER TO THE SPECIAL PROVISIONS FOR A LIST OF EQUIPMENT APPROVED FOR USE ON THIS PROJECT.

SYMBOL	ITEM	QUANTITY	DESCRIPTION
L1	LUMINAIRE	56	35W LEOTEK GREENCOBRA 20F 49,50
L3	LUMINAIRE	166	89W LEOTEK ECOBRA 11M 49,50
L6	LUMINAIRE	1	163W LEOTEK ECOBRA 18M @ 700mA 49,50
T2	LAMP	49	36W, 2600K TRULY GREEN SOLUTIONS 49
	LAMP SOCKET	49	E40 BASE MOGUL LAMPHOLDER 28,49
LS	SOFFIT	55	45W LUMEC SOFFIT 49

TOTAL : 327 LUMINAIRES

REMOTE MONITORING NODE	TOTAL: 223 UNITS
* PE CELL	TOTAL: 4 UNITS

* ELECTROLIER NOS. 121 (SHEET 7), 140 (SHEET 7), 163 (SHEET 10), 186 (SHEET 11) SHALL HAVE PE CELLS INSTALLED IN ADDITION TO REMOTE MONITORING NODES (SEE DETAIL "A" ON SHEET 2).

NOTE:

CONTRACTOR SHALL COORDINATE WITH THE DEPT. OF WATER & POWER TO OBTAIN QUADRANT LOCATIONS FOR MULTIPLE STREET LIGHTING SERVICES PRIOR TO START OF CONSTRUCTION. ANY WORK DONE PRIOR TO RECEIVING QUADRANT LOCATIONS WILL BE AT CONTRACTOR'S OWN RISK.

47 INSTALL 1-1/2" CONDUIT WITH SEVEN MULTIPLE WIRES: (COLOR CODE: 3-RED, 3-BLACK, 1-WHITE)

46 INSTALL 1-1/2" CONDUIT WITH FIVE MULTIPLE WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)

45 INSTALL 1-1/2" CONDUIT WITH THREE MULTIPLE WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)

44 SERVICE COMPANY TO PROVIDE AND INSTALL BYPASS CONTROL LINE, P.E. & MRWI ON TOP OF POWER POLE FOR MULTI-MULTIPLE SERVICE. INSTALL TWO ADDITIONAL # 10 AWG CONTROL WIRES IN RISER (110' EACH) FOR BYPASS CONTROL, COLOR CODE (1) RED, (1) BLK. INSTALL ONE APPROVED 10 AMP FUSE HOLDER (WITHOUT FUSE) BETWEEN THE TWO WIRES IN THE SERVICE PULLBOX. ROLL AND TAPE LOOSE WIRES AT TOP OF RISER FOR OTHERS. SERVICE COMPANY WILL CONNECT THE OPEN ENDS TO MRWI FOR TESTING BYPASS CONTROL. (SEE DETAIL "B" ON SHEET 2). ATTACH W.H. BRADY SELF LAMINATING LABEL ON THE FUSE WITH THIS NOTE: "NORMALLY EMPTY. INSERT FUSE FOR TEST ONLY."
NOTE: FUSE IS TO BE INSTALLED ONLY DURING TESTING WHEN P.E. NEEDS TO BE BYPASSED - EX. FOR DAYTIME BURN TEST.

43 TEMPORARY TRAFFIC SIGNAL SHUTDOWN MAY BE REQUIRED DURING UPGRADING OF ELECTRICAL SERVICE. CONTRACTOR SHALL NOTIFY AND COORDINATE WITH THE DEPARTMENT OF TRANSPORTATION, TRAFFIC SIGNAL SUPERINTENDENT (TEL. NO. 213-485-2261) 3 WORKING DAYS PRIOR TO START OF CONSTRUCTION AT THIS LOCATION.

42 BUS SHELTER COORDINATION REQUIREMENTS- WHEN A CIRCUIT IS CONVERTED FROM SERIES OPERATION TO MULTIPLE, CONTRACTOR SHALL NOTIFY SHELTER MEDIA INC. AT (818) 762-1385, 48 HOURS IN ADVANCE OF WORK ON THE CIRCUIT- SERVICE CHANGES AT SHELTER WILL BE CONSTRUCTED BY SHELTER MEDIA.

41 LUMINAIRE SHALL PROVIDE A MULTIPLE, SEMI-CUTOFF, TYPE 1 DISTRIBUTION.

40 REMOVE AND DISPOSE OF EXISTING POT HEAD.

39 DWP TO REMOVE SERVICE. CONTRACTOR SHALL REMOVE EXISTING SERIES SERVICE EQUIPMENT (SERVICE RISER AND PULLBOX).

38 INTERCEPT EXISTING CONDUIT AND INSTALL TYPE 3 PULLBOX.

37 REMOVE EXISTING TYPE 2 PULLBOX AND INSTALL NEW TYPE 3 PULLBOX.

36 REMOVE TWO EXISTING MULTIPLE WIRES AND INSTALL THREE MULTIPLE CIRCUIT WIRES (COLOR CODE : 1-RED, 1-BLACK, 1-WHITE).

35 REMOVE EXISTING TYPE 2 PULLBOX AND INSTALL NEW TYPE 3 SERVICE PULLBOX.

34 INSTALL CONNECTING DEVICE PER DELTA NOTE 18, EXCEPT TO ACCOMMODATE FIVE (5) CIRCUITS INSTEAD OF FOUR (4) CIRCUITS - CIRCUITS "A", "B", "C", "D" & "E".

33 BALLAST SHALL BE DESIGNED TO PROVIDE THE ELECTRICAL CHARACTERISTICS RECOMMENDED BY APPROVED LAMP MANUFACTURERS FOR PROPER STARTING AND OPERATION OF THE DESIGNATED LAMPS. BALLASTS SHALL BE ENCAPSULATED AND WATERPROOFED SATISFACTORY TO THE ENGINEER. PRIMARY LEADS SHALL BE No. 8 A.W.G. AND INSULATED FOR 5000 VOLT OPERATION. SECONDARY LEADS SHALL BE No. 10 A.W.G. AND INSULATED FOR 600 VOLT OPERATION. LEADS SHALL EXTEND AT LEAST 12 INCHES BEYOND THE BALLAST CAPSULE. IF BALLAST IS ENCASED IN METAL, A SATISFACTORY MEANS OF GROUNDING SHALL BE PROVIDED. BALLASTS SHALL BE CAPABLE OF WITHSTANDING A 10,500 VOLT HIGH POTENTIAL TEST.

32 REMOVE EXISTING WIRES AND INSTALL NEW MULTIPLE CIRCUIT WIRE TO FACILITATE CONVERSION OF SERIES TO MULTIPLE (SEE MULTIPLE CIRCUIT NOTES).

31 PROVIDE AND INSTALL A LAMP SIZED TO MATCH CONVERSION KIT FOR EACH CONVERSION KIT SPECIFIED.

30 THE CONTRACTOR SHALL INSTALL ALL REQUIRED PHOTOELECTRIC CONTROLS. THE CONTROLS SHALL BE OBTAINED FROM THE DEPT. OF WATER AND POWER (D.W.P.) STREET LIGHTING MAINTENANCE HEADQUARTER, 111 NORTH HOOVER ST., AT NO COST TO THE CONTRACTOR. A MINIMUM OF 15 DAYS ADVANCE NOTICE IS REQUIRED TO BE GIVEN TO THE D.W.P. STREET LIGHTING SUPERINTENDENT AT 213-481-4386. THE CONTRACTOR SHALL BE RESPONSIBLE FOR KEEPING ALL PHOTOELECTRIC CONTROLS ISSUED BY THE D.W.P. IN OPERATING CONDITION UNTIL SATISFACTORY COMPLETION OF THE BURN TEST. THE INSTALLED CONTROLS SHALL BE ORIENTED IN THE NORTHERLY DIRECTION.

29 CONTRACTOR SHALL MODIFY OR REMOVE EXISTING SOCKETS, BRACKET OR TRANSFORMER AS REQUIRED FOR INSTALLATION OF CONVERSION KIT. NEW WIRES IN ELECTROLIER SHALL BE INSTALLED AND CONNECTED WHERE EXISTING WIRES CAN NOT BE USED.

28 CONTRACTOR SHALL REMOVE EXISTING LUMINAIRE MOUNTING ARM FROM POLE IN ORDER TO OBTAIN THE NECESSARY WIRE LENGTH FOR CONNECTIONS TO NEW LUMINAIRE. MOUNTING ARM IS THEN REINSTALLED.

27 CONTRACTOR SHALL REPLACE EXISTING SERIES EXTERNAL BALLAST OR TRANSFORMER WITH SPECIFIED SERIES EXTERNAL BALLAST AT ITS EXISTING LOCATION (EITHER POST BASE OR PULLBOX).

26 INSTALLATION OF NEW LAMP SOCKET REQUIRES FABRICATION AND INSTALLATION OF MOUNTING BRACKET. SEE BID PACKAGE FOR ADDITIONAL INFORMATION AND REQUIREMENTS. ANY ADDITIONAL WORK REQUIRED TO COMPLETE INSTALLATION OF MOUNTING BRACKET AND SOCKET SHALL BE DONE BY THE CONTRACTOR. ASSOCIATED COSTS SHALL BE INCLUDED IN THE BID FOR THE "LED POST TOP LAMP" BID ITEM. ADDITIONAL WORK MAY INCLUDE (BUT NOT LIMITED TO):
1. REMOVE EXISTING CONVERSION KIT.
2. FABRICATE NEW MOUNTING BRACKETS AT PROPER HEIGHTS TO MATCH GLOBE SIZE TO ACHIEVE PROPORTIONAL LAMP CENTER HEIGHT AND FIRMLY SECURE TO GLOBE/LANTERN BASE.
3. DRILL AND ENLARGE HOLES AND FURNISH LONGER SCREWS.
4. MODIFY GLOBE OR LANTERN FITTER (BASE SUPPORT)

25 MULTIPLE COMBINED STREET LIGHTING AND TRAFFIC SIGNAL SERVICE LOCATION. INSTALL SEPARATE TYPE 3 SERVICE PULLBOX FOR STREET LIGHTING WITH 2" CONDUIT CONNECTING EXISTING TRAFFIC SERVICE PULLBOX. INTERCEPT SERVICE WIRES FROM EXISTING TRAFFIC SIGNAL PULLBOX.

24 TAPE ENDS OF SPARE WIRE.

23 INSTALL THREE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-BLACK, 1-WHITE)

22 REMOVE EXISTING STREET LIGHTING WIRES.

21 MULTIPLE SERVICE LOCATION. INTERCEPT CONDUIT INSTALLED BY OTHERS AND INSTALL TYPE 3 SERVICE PULLBOX. VERIFY EXACT LOCATION OF CONDUIT. PHONE DEPT. OF WATER AND POWER UNDERGROUND ENGINEERING FIVE DAYS PRIOR TO START OF WORK AT THIS LOCATION, PHONE: (213) 367-3003.

20 TRIM TREE (SEE SUPPLEMENTAL NOTE NO. 20).

19 INSTALL APPROVED CONNECTING DEVICES PER DETAIL "B", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1 (CIRCUITS "A", "B", & "C").

18 INSTALL APPROVED CONNECTING DEVICES PER DETAIL "A", BUREAU OF STREET LIGHTING STANDARD DRAWING NO. L-301-1 (CIRCUITS "A", "B", "C", & "D").

17 MULTIPLE SERVICE LOCATION. INSTALL 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. EXTEND CONDUIT TO THE ALLEY B.C. AND INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED. INSTALL PULLWIRE.

16 INSTALL FIVE MULTIPLE CIRCUIT WIRES: (COLOR CODE: 2-RED, 2-BLACK, 1-WHITE)

15 INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-BLACK, 1-WHITE)

14 INSTALL TWO MULTIPLE CIRCUIT WIRES: (COLOR CODE: 1-RED, 1-WHITE)

13 INSTALL 1" CONDUIT BEND.

12 INSTALL ADDITIONAL 2" CONDUIT BEND FOR TRAFFIC SIGNAL WIRING.

11 INSTALL ONE APPROVED FUSE HOLDER WITH 30 AMP FUSE BETWEEN EACH SERVICE WIRE (NOT NEUTRAL WIRE) OR SERVICE WIRE CONNECTING DEVICE AND STREET LIGHTING CIRCUIT WIRE. SERVING COMPANY WILL INSTALL SERVICE.

10 JOIN CONDUIT.

9 MULTIPLE SERVICE LOCATION. INSTALL TYPE 3 PULLBOX UNLESS OTHERWISE SPECIFIED AND 10' OF 2" GALVANIZED CONDUIT SERVICE RISER ON POLE. INSTALL PULLBOX NO CLOSER THAN 5' AND NO FARTHER THAN 15' FROM THE SERVICE POLE.

8 SERIES SERVICE POLE. INSTALL ONE TERMINAL CUTOFF BOX PER STANDARD PLAN B-3724 WITH ONE DISCONNECTING SWITCH FOR EACH CIRCUIT. SERVING COMPANY WILL INSTALL SERVICE.

7 CONSTRUCT CASE 4 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.

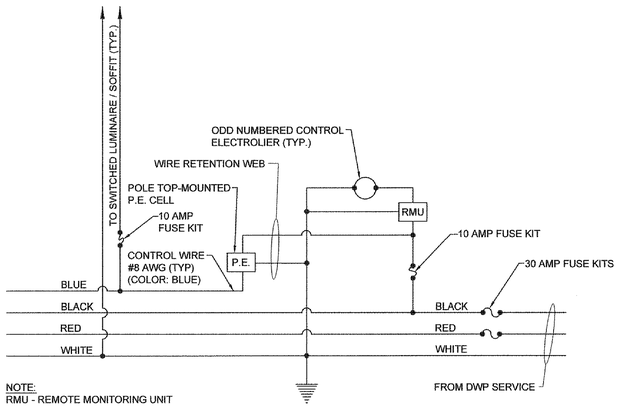
6 CONSTRUCT CASE 3 DRIVEWAY RETURN PER STANDARD PLAN NO. S-440.

5 INTERCEPT CONDUIT AND INSTALL PULLBOX.

4 THREAD AND CAP CONDUIT AT END OF IMPROVEMENT.

3 INSTALL CONDUIT ONLY.

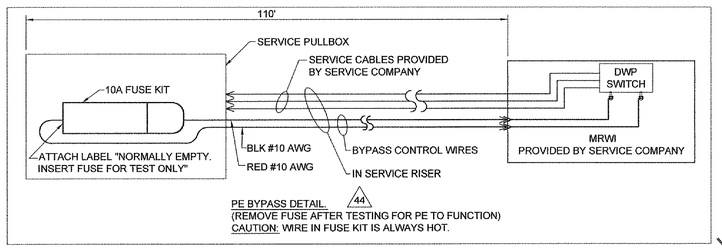
2 CONNECT WIRES (PER CIRCUIT DIAGRAM WHERE APPLICABLE).



1 TERMINATE CONDUIT IN STREET LIGHTING PULLBOX.

THE ABOVE NOTES ARE APPLICABLE ONLY WHERE SPECIFIED ON THIS PLAN.

DELTA NOTES:



SUPPLEMENTAL NOTES:

1. IN THE EVENT THE WORK IS NOT COMPLETED WITHIN SUCH TIME AS SPECIFIED IN THE CONTRACT, LIQUIDATED DAMAGES IN THE AMOUNT STATED THEREIN WILL BE DEDUCTED FROM THE AMOUNT TO BE PAID TO THE CONTRACTOR.
2. TIME SPECIFIED IN THE "PROPOSAL" FOR COMPLETION OF THE WORK INCLUDES TIME FOR PROCUREMENT AND TESTING OF EQUIPMENT TO BE INSTALLED. NOTWITHSTANDING SECTION 6-6.1 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, NO MATERIAL DELAY WILL BE GRANTED ON THIS PROJECT.
3. ALL ELECTROLIER LOCATIONS ARE AT OR DIMENSIONED FROM BCR UNLESS OTHERWISE SHOWN ON THE PLAN.
4. ALL ELECTROLIER DIMENSIONS SHOWN ON PLAN ARE MEASURED ALONG THE CURB FACE.
5. PROPOSED ELECTROLIER FOUNDATIONS AND PULLBOXES SHALL BE INSTALLED OUTSIDE OF ACCESS RAMP AREAS. EXISTING FOUNDATIONS AND PULLBOXES SHALL BE RECONSTRUCTED TO CLEAR ACCESS RAMPS BY A MINIMUM OF 12". EXISTING CONDUIT SHALL BE LOWERED AS NECESSARY PER SEC. 307-2.5 OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION.
6. PULLBOXES SHALL NOT BE PLACED IN ALLEYS. ALL SERVICE PULLBOXES OR OTHER PULLBOXES REQUIRED NEAR ALLEY APPROACHES SHALL BE INSTALLED IN ACCORDANCE WITH GENERAL NOTE NO. 11 HEREON.
7. CONTRACTOR SHALL MAKE ARRANGEMENTS TO DE-ENERGIZE EXISTING STREET LIGHTING SYSTEM AT THE TIME THE NEW SYSTEM IS ENERGIZED.
8. TOTAL UNIT NUMBERS OF EQUIPMENT SPECIFIED TO BE REMOVED AND DISPOSED OF ARE AN APPROXIMATION. ACTUAL NUMBERS SHALL BE VERIFIED BY CONTRACTOR'S FIELD INVESTIGATION.
9. EQUIPMENT IDENTIFIED TO BE SALVAGED IS EXTREMELY FRAGILE. CONTRACTOR SHALL USE EXTREME CARE IN REMOVING AND TRANSPORTING SALVAGE EQUIPMENT. DAMAGED EQUIPMENT WILL NOT BE ACCEPTED TO MEET CONTRACTOR'S SALVAGE REQUIREMENT AND THE REPLACEMENT COST OF SUCH EQUIPMENT WILL BE DEDUCTED FROM CONTRACT COST.
10. TRAFFIC SIGNAL WORK WILL BE PERFORMED BY THE CONTRACTOR. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING TRAFFIC SIGNAL WORK WITH THE DEPARTMENT OF TRANSPORTATION AND SHALL TAKE THIS INTO CONSIDERATION WHEN SCHEDULING WORK AND MAKING COST ESTIMATES (SEE SUPPLEMENTAL NOTE NO. 12).
11. THE CONTRACTOR SHALL GIVE THE TRAFFIC SIGNAL SUPERINTENDENT (TELEPHONE: 213-485-2261) THREE WORKING DAYS NOTICE BEFORE SCHEDULING WORK THAT WILL REQUIRE COORDINATION WITH THE DEPARTMENT OF TRANSPORTATION. THIS SHALL INCLUDE, BUT NOT BE LIMITED TO, SPECIFIC WORK LOCATIONS INDICATED ON THESE PLANS.
12. CONTRACTOR SHALL BE RESPONSIBLE FOR THE SALVAGE AND REINSTALLATION OF ALL STREET NAME AND NEIGHBORHOOD WATCH SIGNS ON THE PROJECT.
13. CONTRACTOR SHALL PROTECT OR REMOVE AND REPLACE ALL EXISTING IMPROVEMENTS NEAR EXISTING/NEW FOUNDATIONS (i.e., FENCES, BRICK WORK, LANDSCAPING, TERRAZO AND BLOCKWALLS).
14. UTILITIES: UTILITY LINES SHOWN ON THIS PLANS ARE FOR THE PURPOSE OF INFORMATION ONLY. THEY ARE SHOWN AT LOCATIONS WHERE THEY MAY BE CONFLICTS WITH THE PROPOSED STREET LIGHTING INSTALLATION. THESE LINES ARE LOCATED BY DIMENSION AND ARE NOT DRAWN TO SCALE.
15. IN THE EVENT OF OVERHEAD COMMUNICATION LINE CONFLICT WITH ELECTROLIERS, CONTRACTOR SHALL MAINTAIN A CLEARANCE OF A MINIMUM 12" CLEARANCE.
16. UNDERGROUND SERVICE ALERT: BEFORE COMMENCING ANY EXCAVATION, THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT INQUIRY I.D. NUMBER BY CALLING 1-800-422-4133. TWO WORKING DAYS SHALL BE ALLOWED AFTER THE I.D. NUMBER IS OBTAINED AND BEFORE THE EXCAVATION WORK IS STARTED. THE UTILITY OWNERS CAN BE NOTIFIED. THE I.D. NUMBER MUST BE REPORTED TO THE BUREAU OF CONTRACT ADMINISTRATION, WHEN CALLING FOR INSPECTION: METRO, (213) 580-5080; VALLEY, (818) 756-8335. I.D. NUMBERS WILL NOT BE GIVEN MORE THAN TEN CONSECUTIVE DAYS PRIOR TO STARTING EXCAVATION WORK.
17. UNDERGROUND UTILITIES: CONTRACTOR SHALL LOCATE, PROTECT AND MAINTAIN A MINIMUM 12" CLEARANCE FROM EDGE OF UTILITIES, VERTICAL AND HORIZONTAL. IF FIELD CONDITIONS VARY FROM THAT INDICATED, CONTRACTOR SHALL CONTACT STREET LIGHTING ENGINEER AT (213) 847-1568 FOR INSTRUCTIONS.
18. WHERE ELECTROLIERS ARE BEING CONVERTED FROM SERIES TO MULTIPLE OPERATION, THE NEUTRAL CONDUCTOR SHALL BE GROUNDED (PER MULT. CIRCUIT NOTE NO. 5) BY CLAMPING IT TO THE COPPER BONDING STRAP IN EVERY ELECTROLIER BASE OR ITS ADJACENT PULLBOX. CAUTION: MANY ELECTROLIERS (WITHOUT PULLBOXES) TO BE CONVERTED TO MULT. OPERATION HAVE SMALL HANDHOLES AND / OR LOW CONDUIT STUBS MAKING IT DIFFICULT TO CLAMP THE NEUTRAL CONDUCTOR TO THE COPPER BONDING STRAP. THE CONTRACTOR MAY ELECT TO USE AN ALTERNATE METHOD OF GROUNDING AT NO ADDITIONAL COST TO THE CITY. ALTERNATE METHODS OF GROUNDING SHALL BE APPROVED BY THE ENGINEER PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL TAKE THIS INTO ACCOUNT WHEN PREPARING HIS/HER BID (ALSO REFER TO ITEM 6 OF "INSTRUCTIONS TO BIDDERS" ON PAGE 1-2A OF THE BID PROPOSAL AS IT RELATES TO THE CONTRACTOR PERFORMING A FIELD CHECK PRIOR TO HIS/HER BID).
19. THE CONTRACTOR WILL BE HELD RESPONSIBLE WHEN WORK IS STARTED ON THE CIRCUIT (UNDER CIRCUIT CLEARANCE) OR WORK IS STARTED IN CLOSE PROXIMITY TO THE EXISTING STREET LIGHTING AND CIRCUIT COMPONENTS.
20. STREET TREE REQUIREMENTS:
   A. TREE TRIM PERMITS: CONTRACTOR SHALL REQUEST A PERMIT TO TRIM TREE(S) BY CALLING BUREAU OF STREET SERVICES, STREET TREE DIVISION AT (213) 485 - 5675. TRIMMING SHALL BE SUPERVISED BY A CERTIFIED ARBORIST AND MEET THE CITY OF LOS ANGELES STREET TREE DIVISION'S STANDARDS, THE INTERNATIONAL SOCIETY OF ARBORICULTURE'S PRUNING GUIDELINES (ISA), AND THE AMERICAN NATIONAL STANDARDS INSTITUTE'S TREE, SHRUB, AND OTHER WOODY PLANT MAINTENANCE STANDAR

   GOLDEN STATE FREEWAY CORRIDOR ATSAC SYSTEM ATSAC CABLE INTERCONNECT

2. REMOVE CONTROLLER AND CABINET; RETAIN FOUNDATION.

3. INSTALL ATSAC 2070 CONTROLLER IN 351 CABINET. THE CONTRACTOR SHALL PROVIDE A COMPLETE FUNCTIONING CONTROLLER ASSEMBLY AND CABINET CONFORMING TO THE LATEST LADOT SPECIFICATION FOR 2070 CONTROLLER AND 351 CABINET, AND SHALL INCLUDE ALL NECESSARY AUXILIARY EQUIPMENT TO PROVIDE A COMPLETE AND FUNCTIONING CONTROLLER. CONTRACTOR TO DELIVER COMPLETELY ASSEMBLED CONTROLLER FOR TESTING TO THE DEPARTMENT OF TRANSPORTATION GENERAL SHOP, PIPER TECHNICAL CENTER, 555 RAMIREZ STREET THIRTY (30) DAYS PRIOR TO INSTALLATION. CONTRACTOR TO PICK UP AND INSTALL CONTROLLER ASSEMBLY ON EXISTING F-332 FOUNDATION.

NOTES (CONT'D 1):

4. REMOVE EXISTING TRAFFIC SIGNAL EQUIPMENT, STANDARD, PULLBOX, FOUNDATION AND ABANDON EXISTING CONDUIT(S).

5. INSTALL ACCESSIBLE PEDESTRIAN SIGNAL (APS) AS PER LADOT STD. DWG. NO. S-73.2.

6. INSTALL DETECTOR LOOP(S) PER LADOT STD. DWG. NO. S-70.1.A & S-70.1.D, CASE II. CONTRACTOR SHALL OBTAIN APPROVAL FROM LADOT INSPECTOR PRIOR TO INSTALLATION OF ANY LOOPS.

7. CONTRACTOR SHALL RE-USE EXISTING STUB-OUT. IF STUB-OUT IS NOT IN PLACE. CONTRACTOR SHALL INSTALL NEW STUB-OUT PER LADOT STD. DWG. NO. S-70.1A.

8. CONTRACTOR MAY RE-USE THE EXISTING DLC IN THE PULLBOX AS DETERMINED BY THE TRAFFIC SIGNAL INSPECTOR. SHOULD THE CONTRACTOR DAMAGE THE EXISTING CABLE, NEW DLC CABLE SHALL BE INSTALLED FROM THE PULLBOX TO THE CONTROLLER AT THE CONTRACTOR'S EXPENSE.

NOTES (CONT'D 2):

9. CONTRACTOR SHALL INSTALL ITERIS VIDEO DETECTION SYSTEM (VDS). CONTACT LADOT COMMUNICATION ENGINEER AT (213) 978-0150 PRIOR TO PURCHASE FOR VDS SPECIFICATIONS. INSTALL VDS CAMERA ON MAST ARM AS SHOWN. CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLETE INSTALLATION OF VDS SYSTEM. INSTALLATION SHALL BE DONE BY ITERIS OR ITERIS CERTIFIED TECHNICIAN.

   VDS EQUIPMENT FOR EACH APPROACH/DIRECTION:
   * 1-17" RACK MOUNT LCD/LED THIN SPACE MONITOR
   * 2 – VANTAGE EDGE 2, QUAD VIDEO PROCESSORS
   * 2 – RZ-4 ADVANCED WDR OR SIMILAR ITERIS VDS CAMERA (MAY NEED ADDITIONAL CAMERA TO CAPTURE ALL ADVANCED LOOPS)
   * 1 – VANTAGE EDGE 2 EXTENSION MODULE

10. CONFIGURE VIDEO DETECTION ZONE(S) AS SHOWN.

11. RELOCATE STREET-NAME SIGN TO NEW MAST ARM/STANDARD.

12. INSTALL SIGN(S), OR SIGN(S) AND POST(S) AS SHOWN.

13. INSTALL DETECTOR LOOP(S) PER LADOT STD. DWG. NO. S-70.1A. CONTRACTOR SHALL OBTAIN APPROVAL FROM LADOT INSPECTOR PRIOR TO INSTALLATION OF ANY LOOPS.

14. REMOVE MAST ARM VEHICLE HEAD(S) AND MAST ARM.

15. ABANDON AND DISCONNECT DETECTOR LOOP(S) IN PULLBOX AS SHOWN.

16. RENUMBER SYSTEM LOOP(S) AS SHOWN.

17. CONTRACTOR SHALL CONTACT LADOT SIGNAL DESIGN SECTION AT (213) 928-9640 FOR ANY SIGNAL RELATED PROBLEMS ENCOUNTERED DURING CONSTRUCTION.

18. SEE STREET LIGHTING SHEET FOR WORK ON STREET LIGHTING FACILITIES.

19. ALL NEW VEHICLE AND COUNTDOWN PEDESTRIAN TRAFFIC SIGNAL HEADS SHALL BE LED MODULES PER LADOT SPECIFICATION 92-088-07 (LATEST EDITION).

20. ALL VEHICLE HEADS SHOWN ARE 12-INCH UNLESS OTHERWISE NOTED.

21. THIS PLAN ASSUMES COMPLETION OF SIGNAL MODIFICATION, PROJECT NO. BR-205815 AND GEOMETRIC DESIGN PLAN A-8118.

NOTICE TO CONTRACTOR

1. EXCEPT WHERE OTHERWISE INDICATED, MATERIALS AND INSTALLATION METHODS SHALL CONFORM TO THE LATEST EDITION, WITH SUPPLEMENTS, OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION ADOPTED BY THE CITY OF LOS ANGELES BOARD OF PUBLIC WORKS (LABPW), INCLUDING THE LATEST VERSION OF THE "BROWN BOOK" ISSUED BY THE LABPW, AND THE LATEST EDITION, WITH AMENDMENTS, OF THE SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS, ISSUED BY THE CITY OF LOS ANGELES DEPARTMENT OF TRANSPORTATION (LADOT).

2. ALL TRAFFIC SIGNAL AND/OR RELATED ELECTRICAL WORK SHALL BE PERFORMED AND INSPECTED UNDER THE CONDITIONS OF THE MOST CURRENT AMENDED BOARD OF PUBLIC WORKS "ENHANCED ELECTRICAL SAFETY POLICY" AS REQUIRED IN LADOT'S SPECIAL PROVISIONS AND STANDARD DRAWINGS FOR THE INSTALLATION AND MODIFICATION OF TRAFFIC SIGNALS (RED BOOK), REGARDLESS OF CONTRACT COST.

3. THE LADOT TRAFFIC SIGNAL INSPECTOR AT (818) 779-7433 SHALL BE NOTIFIED THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION. FOR WORK IN THE AUTOMATED TRAFFIC SURVEILLANCE AND CONTROL (ATSAC) PROJECT AREA, A FIELD MEETING SHALL BE SCHEDULED WITH THE SIGNAL SYSTEM SUPERVISOR AT (213) 473-8286 AND THE SIGNAL MAINTENANCE SUPERVISOR AT (818) 779-7437 THREE (3) WORKING DAYS PRIOR TO THE BEGINNING OF CONSTRUCTION. FULL RESTORATION OF THE ATSAC SYSTEM MUST OCCUR WITHIN FIVE (5) WORKING DAYS AFTER SHUT DOWN.

4. REGULAR TRAFFIC SIGNAL CONTROL SHALL BE MAINTAINED FROM 6:00 A.M. TO 9:00 A.M. AND 3:00 P.M. TO 7:00 P.M. ON WEEKDAYS, EXCEPT NATIONAL HOLIDAYS. FLASHING, DEACTIVATION AND ACTIVATION OF SIGNALS SHALL BE ACCOMPLISHED ONLY BY A LADOT TRAFFIC SIGNAL ELECTRICIAN. ALL ARRANGEMENTS TO DEACTIVATE SIGNALS SHALL BE MADE 24 HOURS IN ADVANCE BY CONTACTING THE LADOT TRAFFIC SIGNAL DEDICATED LINE AT (213) 473-8478 BEFORE 9:00 A.M. ON NON-HOLIDAY WEEKDAYS. THE LADOT PROJECT NUMBER MUST BE GIVEN AT THIS TIME. THE CONTRACTOR WILL BE CHARGED FOR ALL ELECTRICAL AND TRAFFIC CONTROL SERVICE PROVIDED BY LADOT.

5. ARRANGEMENTS FOR OBTAINING ANY MATERIALS IDENTIFIED TO BE SUPPLIED BY LADOT SHALL BE MADE TEN (10) WORKING DAYS IN ADVANCE BY CONTACTING THE LADOT FIELD OPERATIONS DIVISION AT (213) 216-4677. HOWEVER, TRAFFIC SIGNAL CONTROLLERS REQUIRE THIRTY (30) WORKING DAYS ADVANCE NOTICE AND MUST BE PICKED UP WITHIN FIFTEEN (15) WORKING DAYS AFTER NOTIFICATION. CONTACT LADOT SIGNAL SHOP AT (213) 473-8468 TO COORDINATE CONTROLLER DELIVERY AND/OR PICKUP.

6. ALL IDENTIFIED TRAFFIC SIGNAL EQUIPMENT SHALL BE RETURNED TO LADOT. ARRANGEMENTS FOR RETURNING IDENTIFIED EQUIPMENT TO LADOT SHALL BE MADE FIVE (5) WORKING DAYS IN ADVANCE BY CONTACTING THE LADOT MATERIAL CONTROL DIVISION AT (213) 928-9636.

7. ALL EXISTING TRAFFIC CONTROL SIGNING SHALL BE MAINTAINED WITH STANDARD SIGN BRACKETS BY THE CONTRACTOR, EXCEPT WHERE OTHERWISE INDICATED, EXISTING LARGE STREET NAME SIGNS ON MAST ARM TYPE STANDARDS SHALL BE RELOCATED FROM THE VERTICAL POLE TO THE MAST ARM PER LADOT STANDARD DRAWING NO. S-457.0 AND S-486.0. THE CONTRACTOR SHALL COORDINATE WITH LADOT SIGN SHOP AT (213) 473-7954 FOR ANY REQUIRED LARGE STREET NAME SIGNS. ANY TRAFFIC CONTROL SIGNING DAMAGED OR LOST BY THE CONTRACTOR SHALL BE REPLACED AT THE CONTRACTOR'S EXPENSE. SIGNAL CONTRACTOR SHALL INSTALL MAST ARM MOUNTED SIGNS. FOR THE INSTALLATION OF A STREET NAME SIGN ON A TYPE 1 POLE, THE CONTRACTOR SHALL FURNISH AND INSTALL A POLE EXTENSION AS NEEDED.

8. THE CONTRACTOR SHALL FURNISH AND INSTALL, AS SHOWN ON THE PLANS, ALL TRAFFIC SIGNAL EQUIPMENT SUCH AS STANDARDS, MAST ARMS, SIGNAL HEADS, AND OTHER EQUIPMENT AS REQUIRED. ALL SUCH EQUIPMENT SHALL BE NEW. ALL VEHICLE HEAD EQUIPMENT SUPPLIED BY THE CONTRACTOR SHALL HAVE 1-1/2 INCH DIAMETER PIPE FIT MOUNTING HARDWARE, INCLUDING ALL TOP POST MOUNT HEADS. PED HEAD MODULE REPLACEMENTS SHOWN ON THE PLAN SHALL REQUIRE A COMPLETE INSTALLATION, INCLUDING NEW PED HEAD AND TERMINAL COMPARTMENT.

W/S LAUREL CANYON BLVD. 1/S/O ALLEGHENY ST.
LOS ANGELES, CA. 91352
STREET LIGHT RELOCATION PLAN
SLID 122791

DELTA NOTES

1. INSTALL MODIFIED FOUNDATION PER DETAIL AS SHOWN ON SHEET 2. CAP AT&T STUB-OUT 6" OUTSIDE FOUNDATION AT **"6:00"** POSITION.
2. INSTALL NEW TYPE 2 PULLBOX.
3. TERMINATE CONDUIT IN EXISTING STREET LIGHTING PULLBOX. REPLACE EXISTING PULLBOX COVER WITH NEW ARMORCAST VANDAL PROOF PULLBOX RETROFIT KIT.
4. JOIN CONDUIT.
5. INSTALL PHILIPS CITY TOUCH OUTDOOR LUMINAIRE CONTROLLER LLC726D OR BSL APPROVED EQUAL.

LEGEND

- EXISTING 1" CONDUIT.
- EXISTING 1 1/2" CONDUIT.
- EXISTING 2" CONDUIT.
- ABANDON EXISTING CONDUIT.
- INSTALL NEW 1" CONDUIT.
- INSTALL NEW 1 1/2" CONDUIT.
- INSTALL NEW 2" CONDUIT.
- EXISTING PULLBOX.
- REMOVE EXISTING PULLBOX.
- NEW TYPE 2 PULLBOX PER STD PLAN NO L-201-0.
- EXISTING ELECTROLIER. (NOT TO BE REMOVED OR MODIFIED).
- RELOCATE EXISTING ELECTROLIER TO NEW LOCATION AS SHOWN ON PLAN. RE-USE EXISTING LUMINAIRE.
- REMOVE EXISTING LAMP.
- EXISTING ELECTROLIER INSTALL SAME LOCATION AS SHOWN ON PLAN. RE-USE EXISTING LUMINAIRE.

GENERAL NOTES TO THE CONTRACTOR

1) STREET LIGHTING WORK TO BE DONE BY THE BUREAU OF STREET LIGHTING FIELD OPERATIONS DIVISION.
2) WARNING: SAFETY CLEARANCE SHALL BE OBTAINED DAILY FROM DWP (TEL: 213-367-9966) BEFORE DOING ANY WORK OR MAKING ANY CONNECTIONS ON AN EXISTING CIRCUIT.
3) ELECTROLIERS SPECIFIED TO BE MAINTAINED IN SERVICE. THE FOD MAY PROVIDE ALTERNATE LIGHTING IN LIEU OF MAINTAINING EXISTING ELECTROLIER IN SERVICE PROVIDED SUCH ARRANGEMENTS ARE APPROVED BY THE ENGINEER.
4) ALL WORK SHALL CONFORM TO THE LATEST BOARD OF PUBLIC WORKS OF THE CITY OF LOS ANGELES ADOPTED EDITION AND SUPPLEMENTS TO THE "GREENBOOK STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION" AS MODIFIED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK, THE LATEST EDITION OF THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS ", AND THE SPECIAL PROVISIONS.

FERNANGELES TRANSFER AGREEMENT

TRANSFER AGREEMENT BETWEEN THE LOS ANGELES COUNTY FLOOD CONTROL DISTRICT AND LOS ANGELES DEPARTMENT OF WATER AND POWER AGREEMENT NO. 2020RPULAR04 SAFE, CLEAN WATER PROGRAM – REGIONAL PROGRAM

This Transfer Agreement, hereinafter referred to as "Agreement," is entered into as of October 29, 2020 by and between the Los Angeles County Flood Control District, hereinafter referred to as "District," and Los Angeles Department of Water and Power for Fernangeles Park Stormwater Capture Project, hereinafter referred to as "Recipient."

WHEREAS, District, pursuant to the Los Angeles Region Safe, Clean Water (SCW) Program ordinance (Chapter 16 of the Los Angeles County Flood Control District Code) and the SCW Program Implementation Ordinance (Chapter 18 of the Los Angeles County Flood Control District Code), administers the SCW Program for the purpose of funding Projects and Programs to increase stormwater and urban runoff capture and reduce stormwater and urban runoff pollution in the District;

WHEREAS, Recipient proposes to implement a Funded Activity (as hereafter defined) that is eligible for funding under the SCW Program;

WHEREAS, the Funded Activity is included in a Stormwater Investment Plan (SIP) that has been approved by the County of Los Angeles Board of Supervisors;

WHEREAS, the Board approved a standard template Agreement as required by and in accordance with Section 18.09 of the Los Angeles County Flood Control District Code;

NOW, THEREFORE, in consideration of the promises, mutual representations, covenants and agreements in this Agreement, the District and the Recipient, each binding itself, its successors and assigns, do mutually promise, covenant, and agree as follows:

I. Definitions

The definitions set forth in Sections 16.03 and 18.02 of the Los Angeles County Flood Control District Code shall apply to this Agreement. In addition, the following definitions shall also apply:

"Activity Completion" means that the Funded Activity is complete to the reasonable satisfaction of the District based on review of reports and other documentation as deemed appropriate by the District. If the Funded Activity is an Infrastructure Program Project on District Right-of-Way a separate use and maintenance agreement is required.

"Activity Costs" means the total costs necessary to achieve Activity Completion. The Activity Costs for the Funded Activity are described in Exhibit A.

"Agreement" means this Transfer Agreement, including all exhibits and attachments hereto.

"Budget Plan" means a Recipient's plan for funding Activity Completion, including a description of all sources of funds for Activity Costs and a description of how the SCW Program Contribution will be allocated among the tasks identified in the Scope of Work within each fiscal year. Recipient's Budget Plan is described in Exhibit A.

"Days" means calendar days unless otherwise expressly indicated.

"Fiscal Year" means the period of twelve (12) months terminating on June 30 of any year.

"Funded Activity" means the Infrastructure Program Project, or Scientific Study described in Exhibit A – Scope of Work, including the Stakeholder and Community Outreach Plan and all other tasks and activities described in Exhibit A.

"Safe Clean Water (SCW) Program Contribution" means the portion of the Activity Costs to be paid for with Regional Program funds provided by the District from the SCW Program as described in the Budget Plan.

"Year" means calendar year unless otherwise expressly indicated.

II. Party Contacts

The District and the Recipient designate the following individuals as the primary points of contact and communication regarding the Funded Activity and the administration and implementation of this Agreement.

Los Angeles County Flood Control District		Recipient: Los Angeles Department of Water and Power	
Name:	CJ Caluag	Name:	Peter Tonthat
Address:	11th Floor, PO Box 1460, Alhambra, CA 91802-1460	Address:	111 North Hope Street, Room 318, Los Angeles CA 90012
Phone:	(626) 458-4037	Phone:	213-367-1166
Email:	CCALUAG@dpw.lacounty.gov	Email:	peter.tonthat@ladwp.com

Either party to this Agreement may change the individual identified above by providing written notice of the change to the other party.

III. Exhibits Incorporated BY REFERENCE

The following exhibits to this Agreement, including any amendments and supplements hereto, are hereby incorporated herein and made a part of this Agreement:

EXHIBIT A – SCOPE OF WORK

EXHIBIT B – GENERAL TERMS AND CONDITIONS

EXHIBIT C – SPECIAL CONDITIONS

EXHIBIT D – ADDENDUM TO AGREEMENT

EXHIBIT E – NATURE-BASED SOLUTIONS (Best Management Practices)

EXHIBIT F – OPERATIONS AND MAINTENANCE GUIDANCE DOCUMENT

IV. Activity Completion

A. The Recipient shall implement and complete the Funded Activity in accordance with the work schedule described in Exhibit A,

B. The Recipient shall comply with the terms and conditions in Exhibits A, B, C, D, E, and F of this Agreement, and all applicable provisions of Chapters 16 and 18 of the Code.

C. The Recipient shall fulfill all assurances, declarations, representations, and commitments made by the Recipient in its application for SCW Program Contributions, accompanying documents, and communications filed in support of its application for SCW Program Contributions.

V. SCW PROGRAM FUNDING FOR FUNDED ACTIVITY

A. The District shall disburse the SCW Program Contribution for the 2020-2021 Fiscal Year as described in the corresponding approved Stormwater Investment Plan (SIP) within 45-days of receipt of the signed executed Agreement.

B. If the Funded Activity is included in a duly approved SIP for a subsequent Fiscal Year, the parties shall enter into an addendum to this Agreement, in the form attached as Exhibit D, regarding the disbursement of the SCW Program Contribution for that subsequent Fiscal Year. The Recipient expressly acknowledges and agrees that the District is not obligated to disburse any SCW Program Contributions to Recipient for any Fiscal Year beyond the 2020-21 Fiscal Year unless the Funded Activity is included in a duly approved SIP for a subsequent Fiscal Year , the Recipient has complied with the provisions related to the California Environmental Quality Act in Exhibit C, and the parties have duly executed an addendum to this Agreement for that Fiscal Year.

C. Notwithstanding any other provision of this Agreement, no disbursement shall be made at any time or in any manner that is in violation of or in conflict with federal, state, County laws, policies, or regulations.

D. All disbursements shall be subject to and be made in accordance with the terms and conditions in this Agreement and Chapters 16 and 18 of the Code.

E. The Recipient shall submit the scope of work described in Exhibit A 45-days after approval of the SIP. If the Funded Activity is included in a duly approved SIP for a subsequent Fiscal Year, and there are any changes to the Scope of Work, Budget Plan or any other portions of Exhibit A for that Fiscal Year, a revised Exhibit A will be required as part of the addendum to this Agreement for that Fiscal Year.

VI. Execution of Agreement

This Agreement may be executed simultaneously or in any number of counterparts, including both counterparts that are executed manually on paper and counterparts that are in the form of electronic records and are executed electronically, whether digital or

encrypted, each of which shall be deemed an original and together shall constitute one and the same instrument.

The District and the Recipient hereby agree to regard facsimile/electronic representations of original signatures of authorized officers of each party, when appearing in appropriate places on this Agreement and on any addenda or amendments thereto, delivered or sent via facsimile or electronic mail or other electronic means, as legally sufficient evidence that such original signatures have been affixed to this Agreement and any addenda or amendments thereto such that the parties need not follow up facsimile/electronic transmissions of such documents with subsequent (non-facsimile/electronic) transmission of "original" versions of such documents.

Further, the District and the Recipient: (i) agree that an electronic signature of any party may be used to authenticate this Agreement or any addenda or amendment thereto, and if used, will have the same force and effect as a manual signature; (ii) acknowledge that if an electronic signature is used, the other party will rely on such signature as binding the party using such signature, and (iii) hereby waive any defenses to the enforcement of the terms of this agreement based on the foregoing forms of signature.

IN WITNESS WHEREOF, this Agreement has been executed by the parties hereto.

EXHIBIT A – SCOPE OF WORK

A-1. Budget Plan

The Recipient shall submit a detailed Budget Plan for all eligible expenditures (those incurred after November 7, 2018) for all phases and tasks included in the work schedule for the Funded Activity. The Recipient shall include a summary of leveraged funds and in-kind services for the Funded Activity. For a Funded Activity that will be performed over more than one Fiscal Year, the Budget Plan must clearly identify the amount of SCW Program Contribution for each Fiscal Year.

A-2. Consistent with SCW Program Goals

By signing this Agreement, the Recipient shall provide certification that the Budget Plan is consistent with SCW Program Goals as described in Chapter 18.04 of the Code.

The Recipient shall include a summary of how the identified SCW Program Goals are expected to be achieved through the Funded Activity, including quantitative targets and corresponding metrics for subsequent reporting of all applicable parameters.

A-3. Estimated Reasonable Total Activity Cost

The Recipient shall submit a detailed estimate total Activity Cost for all phases and tasks included in the work schedule for the Funded Activity.

A-4. Funded Activity Description and Scope of Work

The Recipient shall provide a general description of the Funded Activity and a detailed scope of work. The scope of work may include:

1. Project Management, including required reporting
2. General Compliance Requirements/Project Effectiveness and Performance
3. Permitting and Environmental Compliance
4. Planning, Design, and Engineering
5. Stakeholder and Community Outreach/Engagement Activities
6. Right of Way Acquisition
7. Construction and Implementation
8. Operation and Maintenance

A-5. Operations and Maintenance (O&M) Plan

Where the Funded Activity is an Infrastructure Program Project, the Recipient shall submit a plan describing the activities that are expected to be necessary to perform O&M for the

Infrastructure Program Project to ensure it remains in good working order throughout the useful life of the Infrastructure Program Project using SCW Program Contributions. The O&M plan shall address the activities described in Exhibit F to the greatest extent feasible and in as much detail as possible based on the completeness of the Project design and construction. The Recipient shall update the O&M plan in connection with each Addenda until completion of the Infrastructure Program Project and the submittal of a final O&M plan.

The Recipient shall specifically identify the entity that will be performing the O&M for the lifetime of the Project. If this is not the Recipient, the Recipient shall submit a letter of commitment from the entity that will be performing the O&M (See Exhibit F, for example activities). The letter of commitment shall include details demonstrating how the provider is qualified and capable of providing the necessary ongoing O&M services.

The Recipient may elect to request the local Municipality or District to provide O&M for the useful life of the Infrastructure Program Project using SCW Program Contributions. If the Recipient does not elect to seek the District's services or if the District is unable to provide the services as requested, the Recipient shall include in the letter of commitment reference to the above details demonstrating how the provider is qualified and capable of providing the necessary ongoing O&M services.

A-6. Post-Construction Monitoring

Where the Funded Activity is an Infrastructure Program Project, stormwater quality monitoring data shall be collected and reported in a manner consistent with the SWRCB database, the CEDEN for a period of three years. The Recipient shall submit a post-construction monitoring plan when the design phase is complete. The post-construction monitoring plan will evaluate the effectiveness of stormwater treatment facilities and include the project description; quality objectives; sampling design; sampling procedures; quality control; data management verification, and reporting; data quality assessment; and data analysis procedures.

A-7. Sustainability Rating

Where the Funded Activity is an Infrastructure Program Project that has applied for Institute for Sustainable Infrastructure (ISI) verification, the Recipient shall submit the final score and Envision award level.

A-8. Stakeholder and Community Outreach/Engagement Plan

The Recipient shall submit a Stakeholder and Community Outreach/Engagement Plan for Infrastructure Program Projects and include a discussion of how local NGOs or CBOs will be involved, if applicable, and if not, why. Additional outreach/engagement activities, even if funded by other sources, should be referenced to provide an overview of anticipated overall project approach. The plan shall, at a minimum include:

1. Community outreach activities to provide information to residents and information about upcoming meetings or other engagement activity event is scheduled.

Outreach methods used should be appropriate in scale and type to the community being served. Outreach methods include but are not limited to: Online Media Outreach (email blasts, social media, publication on a website) Local Media Outreach (newsletters, local and regional newspapers, and local radio and television) and/or Grassroots Outreach (door-to-door canvassing, phone banking, surveys and focus groups, and distribution of flyers or other printed materials). The District will support outreach efforts through web-based platforms if requested at least four weeks prior to the requested publish date. The District should be included in all social media outreach and notified of all meetings and other engagement events.

2. Community engagement activities solicit, address and seek input from community members for Funded Activities. These events may occur as part of any public meeting with multiple agenda items such as council, commission or committee meetings where public input is invited; or at festivals, fairs, or open houses where a table or booth may be set up.

3. Stakeholder and Community Outreach/Engagement Plan requirements:

   Stakeholder and Community Outreach/Engagement Plan activities should occur at the onset of the project, during the design phase, and during construction.

Infrastructure Program Project Funds	Required Activity 1	Required Activity 2
Up to $2 M	Outreach or Engagement	
Up to $10 M	Outreach	≥1 Engagement
Over $10 M	Outreach	≥ 2 Engagements

4. If the Funded Activity is for the O&M of an Infrastructure Program Project Stakeholder and Community Outreach/Engagement Plan activities should occur biennially to remind communities of the SCW Program Contribution.

5. Activities and measures to mitigate against displacement and gentrification. This includes, as applicable, an acknowledgment that the Funded Activity will be fully subject to and comply with any County-wide displacement policies as well as with any specific anti-displacement requirements associated with other funding sources.

A-9. Tracking Infrastructure Program Project Benefits

The Recipient shall submit an overview of the benefits achieved upon the Activity Completion. SOW shall include quantitative targets and corresponding metrics for subsequent reporting of all applicable parameters.

A-10. Work Schedule and Completion Date

The Recipient shall submit a detailed schedule, including start and completion dates for all phases and tasks of the scope of work for the Funded Activity. For Funded Activities that will be performed over more than one Fiscal Year, the work schedule must clearly identify the phases and tasks that will be performed in each Fiscal Year.

EXHIBIT B – GENERAL TERMS AND CONDITIONS

B-1. Accounting and Deposit of Funding Disbursement

1. SCW Program Contributions distributed to the Recipient shall be held in a separate interest-bearing account and shall not be combined with other funds. Interest earned from each account shall be used by the Recipient only for eligible expenditures consistent with the requirements of the SCW Program.

2. The Recipient shall not be entitled to interest earned on undisbursed SCW Program Contributions; interest earned prior to disbursement is property of the District.

3. The Recipient shall operate in accordance with Generally Accepted Accounting Principles (GAAP).

4. The Recipient shall be strictly accountable for all funds, receipts, and disbursements related to all SCW Program Contributions made to the Recipient.

B-2. Acknowledgement of Credit and Signage

The Recipient shall include appropriate acknowledgement of credit to the District for its support when promoting the Funded Activity or using any data and/or information developed under this Agreement. When the Funded Activity involves the construction phase of an Infrastructure Program Project, signage shall be posted in a prominent location at Project site(s) or at the Recipients headquarters and shall include the Safe, Clean Water Program color logo and the following disclosure statement: "Funding for this project has been provided in full or in part from the Los Angeles County Flood Control District's Safe, Clean Water Program." At a minimum the sign shall be 2' x 3' in size. The Recipient shall also include in each of its contracts for work under this Agreement a provision that incorporates the requirements stated within this paragraph.

When the Funded Activity involves a scientific study, the Recipient shall include the following statement in the study report: "Funding for this study has been provided in full or in part from the Los Angeles County Flood Control District's Safe, Clean Water Program." The Recipient shall also include in each of its contracts for work under this Agreement a provision that incorporates the requirements stated within this paragraph.

B-3. Acquisition of Real Property – Covenant

Any real property acquired in whole or in part with SCW Program funds shall be used for Projects and Programs that are consistent with the SCW Program Goals and with the provisions of Chapter 16 and 18 of the Code.

Any Recipient that acquires the fee title to real property using, in whole or in part, SCW Program funds shall record a document in the office of the Registrar-Recorder/County Clerk containing a covenant not to sell or otherwise convey the real property without the prior express written consent of the District, which consent shall not be unreasonably withheld.

B-4. Amendment

Except as provided in Section II of the Agreement, no amendment or variation of the terms of this Agreement shall be valid unless made in writing and signed by the parties. No oral or written understanding or agreement not incorporated in this Agreement is binding on any of the parties.

B-5. Assignment

The Recipient will not assign this Agreement without the prior consent of the District.

B-6. Audit and Recordkeeping

1. The Recipient shall retain for a period of seven (7) years after Activity Completion, all records necessary in accordance with Generally Accepted Accounting Principles to determine the amounts expended, and eligibility of Projects implemented using SCW Program Contributions. The Recipient, upon demand by authorized representatives of the District, shall make such records available for examination and review or audit by the District or its authorized representatives. Records shall include accounting records, written policies and procedures, contract files, original estimates, correspondence, change order files, including documentation covering negotiated settlements, invoices, and any other supporting evidence deemed necessary to substantiate charges related to SCW Program Contributions and expenditures.

2. The Recipient is responsible for obtaining an independent audit to determine Funded Activity compliance with the terms and conditions of this Agreement and all requirements applicable to the Recipient contained in chapters 16 and 18 of the Code promptly upon Activity Completion. For a Funded Activity that will be performed over the course of a period exceeding three years, the District may also perform an interim independent audit every three (3) years until Activity Completion. Audits shall be funded with Regional Program funds.

3. Recipient shall file a copy of the Activity Completion audit report with the District by the end of the ninth (9^{th}) month from Activity Completion. Recipient shall file a copy of all interim audit reports by the ninth (9^{th}) month from the end of each three (3) year period. Audit reports shall be posted on the District's publicly accessible website.

End-of-Activity		Every Third Fiscal Year		
Projected End Date	**Audit Report Due to District**	**SIP Fiscal Year**	**Audit Period**	**Audit Report Due to District**
1/15/2022	No later than 10/31/2022	2020-21	7/1/2020 to 6/30/2023	No later than 3/31/2024

4. Upon reasonable advanced request, the Recipient shall permit the Chief Engineer, at the District's cost and expense, to examine the Funded Activity. The Recipient shall permit the authorized District representative, including the Auditor-Controller, at the District's cost and expense, to examine, review, audit, and transcribe any and all audit reports, other reports, books, accounts, papers, maps, and other records that relate to the Funded Activity.

5. Expenditures determined by an audit to be in violation of any provision of Chapters 16 or 18 of the Code, or of this Agreement, shall be subject to the enforcement and remedy provisions of Section 18.14 of the Code.

If at any time the Funded Activity cannot fulfill the provisions outlined in Exhibit A, the accounts and books of the Recipient may be reviewed or audited by the District.

B-7. Availability of Funds

District's obligation to disburse the SCW Program Contribution is contingent upon the availability of sufficient funds to permit the disbursements provided for herein. If sufficient funds are not available for any reason including, but not limited to, failure to fund allocations necessary for disbursement of the SCW Program Contribution, the District shall not be obligated to make any disbursements to the Recipient under this Agreement. This provision shall be construed as a condition precedent to the obligation of the District to make any disbursements under this Agreement. Nothing in this Agreement shall be construed to provide the Recipient with a right of priority for disbursement over any other recipient. If any disbursements due the Recipient under this Agreement are deferred because sufficient funds are unavailable, it is the intention of the District that such disbursement will be made to the Recipient when sufficient funds do become available, but this intention is not binding. If this Agreement's funding for any fiscal year is reduced or deleted by order of the Board, the District shall have the option to either cancel this Agreement with no liability occurring to the District or offer an amendment to the Recipient to reflect the reduced amount.

1. The Recipient will not seek disbursement of any Activity Costs that will be disbursed or reimbursed from other funding sources.

2. The Recipient agrees that it will not request a disbursement unless that cost is allowable, reasonable, and allocable.

B-8. Choice of Law

The laws of the State of California govern this Agreement.

B-9. Claims

Any claim of the Recipient is limited to the rights, remedies, and claims procedures provided to the Recipient under this Agreement. Recipient expenditures of a SCW Program Contribution that involves the District shall utilize a separate and specific

agreement to that Project that includes appropriate indemnification superseding that in this Agreement.

B-10. Completion of Funded Activity by the Recipient

The Recipient agrees to pay any and all Activity Costs in excess of the SCW Program Contribution necessary for Activity Completion. The Recipient expressly acknowledges and agrees that if the SCW Program Contribution is not sufficient to pay the Activity Costs in full, the Recipient shall nonetheless complete the Funded Activity and pay that portion of the Activity Costs in excess of the SCW Program Contribution, subject to the provisions of Exhibit C, as applicable.

B-11. Compliance with Law, Regulations, etc.

The Recipient shall, at all times, comply with and require its contractors and subcontractors to comply with all applicable County, state and federal laws, rules, guidelines, regulations, and requirements. Without limitation of the foregoing, the Recipient agrees that, to the extent applicable, the Recipient shall comply with the Code.

B-12. Competitive Bidding and Procurements

The Recipient's contracts with other entities for the acquisition of goods and services and construction of public works with SCW Program Contributions must be in writing and shall comply with all applicable laws and regulations regarding the securing of competitive bids and undertaking competitive negotiations. If the Recipient does not have a written policy to award contracts through a competitive bidding or sole source process, the State Contracting Manual rules must be followed and are available at: https://www.dgs.ca.gov/OLS/Resources/Page-Content/Office-of-Legal-Services-Resources-List-Folder/State-Contracting#@ViewBag.JumpTo

B-13. Continuous Use of Funded Activity; Lease or Disposal of Funded Activity

Where the Funded Activity involves an Infrastructure Program Project, the Recipient shall not abandon, substantially discontinue use of, lease, or dispose of all or a significant part or portion of the Funded Activity during the useful life of 30 years of the Funded Activity without prior written approval of the District. Such approval may be conditioned as determined to be appropriate by the District, including a condition requiring repayment of pro rata amount of all disbursed SCW Program Contributions together with interest on said amount accruing from the date of abandonment, substantial discontinuance, lease or disposal of the Project.

B-14. Default Provisions

The Recipient will be in default under this Agreement under any of the following circumstances:

1. The Recipient has made or makes any false warranty, representation, or statement with respect to this Agreement, any addendum or the application filed to obtain this Agreement;

2. The Recipient materially breaches this Agreement or any addendum, including but not limited to:

    a. Fails to operate or maintain Project in accordance with this Agreement;

    b. Fails to submit timely Quarterly Progress/Expenditure Reports.

    c. Fails to remain in Good Standing (see Section B-34, below).

    d. The Recipient fails to maintain reasonable progress toward SCW Program Goals as described in Section 18.04 of the Code, following an opportunity to cure.

    e. The Recipient fails to maintain reasonable progress toward Project Completion.

    f. Use of SCW Program Contributions for ineligible expenses and/or activities not consistent with the Agreement.

    g. Inappropriate use of SCW Program Contributions, as deemed by the District

Should an event of default occur, the District shall provide a notice of default to the Recipient and shall give the Recipient at least ten calendar days or such longer period as the District, in its reasonable discretion, may authorize, to cure the default from the date the notice is sent via first-class mail to the Recipient. If the Recipient fails to cure the default within the time prescribed by the District, the District may do any of the following:

1. Declare the SCW Program Contribution be immediately repaid, with interest, which shall be equal to the State of California general obligation bond interest rate in effect at the time of the default.

2. Terminate any obligation to make future payments to the Recipient.

3. Terminate the Agreement.

4. Take any other action that it deems necessary to protect its interests.

The Recipient shall not be in default under this Agreement as a result of any breach of this Agreement by the Recipient that is the direct result of the District's failure to make a SCW Program Contribution for any Fiscal Year. Under these circumstances the District may, in its reasonable discretion, terminate this Agreement by providing the Recipient with a written notice of termination. If this Agreement is terminated pursuant to this

paragraph, the parties shall thereafter have no further obligations to each other in connection with the Funded Activity except that the Recipient's indemnification obligations shall survive the termination of this Agreement and continue in full force and effect.

B-15. Disputes

Should a dispute arise between the parties, the party asserting the dispute will notify the other parties in writing of the dispute. The parties will then meet and confer within 21 calendar days of the notice in a good faith attempt to resolve the dispute.

If the matter has not been resolved through the process set forth in the preceding paragraph, any party may initiate mediation of the dispute. Mediation will be before a retired judge or mediation service mutually agreeable to the parties. All costs of the mediation, including mediator fees, will be paid one-half by the District and one-half by the Recipient. SCW Program Contributions shall not be used to pay for any costs of the mediation.

The parties will attempt to resolve any dispute through the process set forth above before filing any action relating to the dispute in any court of law.

B-16. Final Inspection and Certification of Registered Professional

Where the Funded Activity is an Infrastructure Program Project, upon completion of the design phase and before construction, the Recipient shall provide certification by a California Registered Professional (i.e., Professional Civil Engineer, Engineering Geologist) that the design has been completed.

Where the Funded Activity is an Infrastructure Program Project, upon completion of the Project, the Recipient shall provide for a final inspection and certification by a California Registered Professional (i.e., Professional Civil Engineer, Engineering Geologist), that the Project has been completed in accordance with submitted final plans and specifications and any modifications thereto and in accordance with this Agreement.

B-17. Force Majeure.

In the event that Recipient is delayed or hindered from the performance of any act required hereunder by reason of strikes, lockouts, labor troubles, inability to procure materials not related to the price thereof, riots, insurrection, war, or other reasons of a like nature beyond the control of the Recipient, then performance of such acts shall be excused for the period of the delay, and the period for the performance of any such act shall be extended for a period equivalent to the period of such delay.

B-18. Funded Activity Access

When the Funded Activity involves an Infrastructure Program Project the Recipient shall, upon receipt of reasonable advance notice from the District, ensure that the District or

any authorized representative of the foregoing, will have safe and suitable access to the site of the Funded Activity at all reasonable times through Activity Completion.

B-19. Funding Considerations and Exclusions

1. All expenditures of the SCW Program Contribution by Recipient must comply with the provisions of Chapters 16 and 18 of the Code, including but not limited to the provisions regarding eligible expenditures contained in Section 16.05.A.2 and the provision regarding ineligible expenditures contained in Section 16.05.A.3.

2. SCW Program Contributions shall not be used in connection with any Funded Activity implemented as an Enhanced Compliance Action ("ECA") and/or Supplemental Environmental Project ("SEP") as defined by State Water Resources Control Board Office of Enforcement written policies, or any other Funded Activity implemented pursuant to the settlement of an enforcement action or to offset monetary penalties imposed by the State Water Resources Control Board, a Regional Water Quality Control Board, or any other regulatory authority; provided, however, that SCW funds may be used for a Funded Activity implemented pursuant to a time schedule order ("TSO") issued by the Los Angeles Regional Water Quality Control Board if, at the time the TSO was issued, the Funded Activity was included in an approved watershed management program (including enhanced watershed management programs) developed pursuant to the MS4 Permit.

   Recipient certifies that: (a) the Funded Activity is not being implemented as an ECA or SEP; (b) the Funded Activity is not being implemented pursuant to the settlement of an enforcement action or to offset monetary penalties imposed by the State Water Resources Control Board, a Regional Water Quality Control Board, or any other regulatory authority; and (c) the Funded Activity is not being implemented pursuant to a TSO issued by the Los Angeles Regional Water Quality Control Board unless, at the time the TSO was issued, the Funded Activity was included in an approved watershed management program (including enhanced watershed management programs) developed pursuant to the MS4 Permit.

B-20. Indemnification

The Recipient shall indemnify, defend and hold harmless the District and their elected and appointed officers, agents, and employees from and against any and all liability and expense arising from any act or omission of the Recipient, its officers, employees, agents, or subconsultants or contractors in conjunction with Recipient's performance under or pursuant to this Agreement, including defense costs, legal fees, claims, actions, and causes of action for damages of any nature whatsoever, including but not limited to bodily injury, death, personal injury, or property damage.

B-21. Independent Actor

The Recipient, and its agents and employees, if any, in the performance of this Agreement, shall act in an independent capacity and not as officers, employees, or agents of the District.

The Recipient shall not contract work with a contractor who is in a period of debarment from any agency within the District. (LACC Chapter 2.202)

B-22. Integration

This is an integrated Agreement. This Agreement is intended to be a full and complete statement of the terms of the agreement between the District and Recipient, and expressly supersedes any and all prior oral or written agreements, covenants, representations and warranties, express or implied, concerning the subject matter of this Agreement.

B-23. Lapsed Funds

1. The Recipient shall be able to carry over uncommitted Special Parcel Tax funds for up to five (5) years from the end of the fiscal year in which those funds are transferred from the District to the Recipient.

2. If the Recipient is unable to expend the SCW Program Contribution within five (5) years from the end of the Fiscal Year in which those funds are transferred from the District to the Recipient, then lapsed funding procedures will apply. Lapsed funds are funds that were transferred to the Recipient but were not committed to eligible expenditures by the end of the fifth (5^{th}) fiscal year after the fiscal year in which those funds were transferred from the District.

3. Lapsed funds shall be allocated by the Watershed Area Steering Committee of the respective Watershed Area to a new Project with benefit to that Municipality or Watershed Area.

4. In the event that funds are to lapse, due to circumstances beyond the Recipient's control, then the Recipient may request an extension of up to twelve (12) months in which to commit the funds to eligible expenditures. Extension Requests must contain sufficient justification and be submitted to the District in writing no later than three (3) months before the funds are to lapse.

5. The decision to grant an extension is at the sole discretion of the District.

6. Funds still uncommitted to eligible expenditures after an extension is granted will be subject to lapsed funding procedures without exception.

7. Example:

Fiscal Year Transferred	Funds Lapse After	Extension Request Due	Commit By

2020–21	6/30/2026	No later than 3/31/2026	No later than 6/30/2027

B-24. Modification

This Agreement may be amended or modified only by mutual written consent of the Board and Recipient.

B-25. Non-Discrimination

The Recipient agrees to abide by all federal, state, and County laws, regulations, and policies regarding non-discrimination in employment and equal employment opportunity.

B-26. No Obligation of the District

The District will transfer the SCW Program Contribution to the Recipient for the funding of the Funded Activity. The District will have no further obligation, other than to transfer the funds, with respect to the Funded Activity itself.

B-27. No Third-Party Rights

The parties to this Agreement do not create rights in, or grant remedies to, any third party as a beneficiary of this Agreement, or of any duty, covenant, obligation, or undertaking established herein

B-28. Notice

1. The Recipient shall notify the District in writing within five (5) working days of the occurrence of the following:

    a. Bankruptcy, insolvency, receivership or similar event of the Recipient; or

    b. Actions taken pursuant to State law in anticipation of filing for bankruptcy.

2. The Recipient shall notify the District within ten (10) working days of any litigation pending or threatened against the Recipient regarding its continued existence, consideration of dissolution, or disincorporation.

3. The Recipient shall notify the District promptly of the following:

    a. Any significant deviation from in the submitted scope of the Funded Activity for the current Fiscal Year, including discussion of any major changes to the scope of the Funded Activity, noteworthy delays in implementation, anticipated reduction in benefits, and/or modifications that change the SCW Program Goals intended to be accomplished by the Funded Activity. Under no circumstances may the Recipient make changes to the scope of the Funded Activity without receiving prior approval.

b. Cessation of work on the Funded Activity where such cessation of work is expected to or does extend for a period of thirty (30) days or more;

c. Any circumstance, combination of circumstances, or condition, which is expected to or does delay Activity Completion;

d. Discovery of any potential archaeological or historical resource. Should a potential archaeological or historical resource be discovered during construction, the Recipient agrees that all work in the area of the find will cease until a qualified archaeologist has evaluated the situation and made recommendations regarding preservation of the resource. When the District is acting as the Lead Agency under CEQA for the Funded Activity, all work in the area of the find will remain suspended until the District has determined what actions should be taken to protect and preserve the resource and the Recipient agrees to implement appropriate actions as directed by the District;

e. Any public or media event publicizing the accomplishments and/or results of this Agreement and provide the opportunity for attendance and participation by District representatives with at least fourteen (14) days' notice to the District;

f. Activity completion.

B-29. Public Records

The Recipient acknowledges that, except for a subset of information regarding archaeological records, the Funded Activity records and locations are public records including, but not limited to, all of the submissions accompanying the application, all of the documents incorporated by reference into this Agreement, and all reports, disbursement requests, and supporting documentation submitted hereunder.

B-30. Recipient's Responsibility for Work

The Recipient shall be responsible for all work and for persons or entities engaged in work performed pursuant to this Agreement including, but not limited to, contractors, subcontractors, suppliers, and providers of services. The Recipient shall be responsible for responding to any and all disputes arising out of its contracts for work on the Project. The District will not mediate disputes between the Recipient and any other entity concerning responsibility for performance of work.

B-31. Related Litigation

The Recipient is prohibited from using the SCW Program Contribution to pay costs associated with any litigation described in Section 16.05.A.3. of the Code. Regardless of whether the Project or any eventual related project is the subject of litigation, the Recipient agrees to complete the Project funded by the Agreement or to repay all the SCW Program Contribution plus interest to the District.

B-32. Remaining Balance

In the event that the Recipient does not spend all the SCW Program Contribution disbursed for the Funded Activity, Recipient shall promptly return the unspent SCW Program Contribution to the District.

B-33. Reporting

The Recipient shall be subject to and comply with all applicable requirements of the District regarding reporting requirements. Recipients shall report available data through the SCW Reporting Module, once available.

- Quarterly Progress/Expenditure Reports. The Recipient shall submit Quarterly Progress/Expenditure Reports, using a format provided by the District, within forty-five (45) days following the end of the calendar quarter (March, June, September, and December) to the District. The Quarterly Progress/Expenditure Reports shall be posted on the District's publicly accessible website. The Quarterly Progress/Expenditure Report shall include:

    a. Amount of funds received;

    b. Percent overall Funded Activity completion estimate;

    c. Breakdown of how the SCW Program Contribution has been expended;

    d. Documentation that the SCW Program Contribution was used for eligible expenditures in accordance with Chapters 16 and 18 of the Code;

    e. Description of activities that have occurred, milestones achieved, and progress made to date, during the applicable reporting period including comparison to Exhibit A submission and corresponding metrics;

    f. Identification of any phases or tasks of the scope of work that were scheduled to be started or completed during the reporting period (according to the work schedule), but which were delayed, and a discussion of the reasons for the delay, and of lessons learned;

    g. Scheduling concerns and issues encountered that may delay completion of the task;

    h. Work anticipated for the next reporting period;

    i. Any anticipated schedule or budget modifications;

    j. Photo documentation (e.g. photos of community outreach events, stakeholder meetings, groundbreaking ceremonies, and project site that may be used on the publicly accessible District website) of the phases or tasks of the Project completed during the reporting period, as appropriate;

    k. Additional financial or project-related information as required by the District;

l. Certification from a California Registered Professional (Civil Engineer or Geologist, as appropriate), that the Project was conducted in accordance with Exhibit A;

m. Status of Recipient's insurance; and

n. Description of post-performance for each completed infrastructure project is required after the first operational year and for a total of three years after the project begins operation. Post-performance reports shall focus on how each project is actually performing compared to its expected performance; whether the project is operated and maintained and providing intended benefits as proposed. A post-performance template will be provided by the District.

- Quarterly Progress/Expenditure Reports shall be submitted to the District Program Manager no later than forty-five days following the end of the calendar quarter as follows:

Quarter	End of Quarter	Report Due
First Quarter	September	15 November
Second Quarter	December	15 February
Third Quarter	March	15 May
Fourth Quarter	June	15 August

- Annually, a summary of the Quarterly Progress/Expenditure Reports shall be submitted to the Watershed Area Steering Committees to explain the previous year's Quarterly Progress/Expenditure Reports by the Recipient. The summary report shall be submitted six (6) months after the close of the Fourth Quarter. The summary report shall include:

  - Description of the Water Quality Benefits, Water Supply Benefits, and Community Investment Benefits and a summary of how funds have been allocated to achieve SCW Program Goals as articulated in Chapter 18.04 of the Code for the prior year. This includes comparisons to Exhibit A and alignment with corresponding specific quantitative targets and metrics (note that SCW Reporting Module will facilitate graphical representation of pertinent data).

  - When the Funded Activity is an Infrastructure Program Project, include a description of how the County's Local and Targeted Worker Hire Policy has been applied and enforced; or if the Recipient is a Municipality and has adopted its own policy, include a description of how its policy was applied and enforced.

  - Where the Funded Activity is an Infrastructure Program Project that has applied for Institute for Sustainable Infrastructure (ISI) verification, include

a description of the final score and Envision award level. Annually, the Recipient shall prepare and provide members of the public with up-to-date information on the actual and budgeted use of the SCW Program Contribution.

- As Needed Information or Reports. The Recipient agrees to promptly provide such reports, data, and information as may be reasonably requested by the District including, but not limited to material necessary or appropriate for evaluation of the SCW Program or to fulfill any reporting requirements of the County, state or federal government.

B-34. Representations, Warranties, and Commitments

The Recipient represents, warrants, and commits as follows:

1. Authorization and Validity. The execution and delivery of this Agreement, including all incorporated documents, by the individual signing on behalf of Recipient, has been duly authorized by the governing individual(s), board or body of Recipient, as applicable. This Agreement constitutes a valid and binding obligation of the Recipient, enforceable in accordance with its terms, except as such enforcement may be limited by law.

2. No Violations. The execution, delivery, and performance by the Recipient of this Agreement, including all incorporated documents, do not violate any provision of any law or regulation in effect as of the date set forth on the first page hereof, or result in any breach or default under any contract, obligation, indenture, or other instrument to which the Recipient is a party or by which the Recipient is bound as of the date set forth on the first page hereof.

3. No Litigation. There are no pending or, to the Recipient's knowledge, threatened actions, claims, investigations, suits, or proceedings before any governmental authority, court, or administrative agency which affect the Recipient's ability to complete the Funded Activity.

4. Solvency. None of the transactions contemplated by this Agreement will be or have been made with an actual intent to hinder, delay, or defraud any present or future creditors of the Recipient. As of the date set forth on the first page hereof, the Recipient is solvent and will not be rendered insolvent by the transactions contemplated by this Agreement. The Recipient is able to pay its debts as they become due.

5. Legal Status and Eligibility. The Recipient is duly organized and existing and in good standing under the laws of the State of California and will remain so through Activity Completion. The Recipient shall at all times maintain its current legal existence and preserve and keep in full force and effect its legal rights and authority through Activity Completion.

6. Insurance. The Recipient shall follow the Insurance Manual prepared by the Risk Management Office of the Los Angeles County Chief Executive Office. For Infrastructure Program Projects the Recipient shall provide General Liability, Automobile Liability, Worker's Compensation and Employer's Liability, Builder's Risk Course of Construction Insurance, and Professional Liability as specified in the Insurance Manual: https://riskmanagement.lacounty.gov/wp-content/uploads/2019/06/Insurance-Manual-revised-May-2019.pdf

B-35. Requirements for Good Standing

The Recipient must currently be in compliance with the District requirements set forth in this Agreement. The Recipient must demonstrate it has not failed to comply with previous County and/or District audit disallowances within the preceding five years.

B-36. Requirements Related to Recipient's Contractors

1. The Recipient shall apply and enforce provisions mirroring those set forth in the then-current version of the County's Local and Targeted Worker Hire Policy (LTWHP) as to contractors performing work on such a Project. Alternatively, if the Recipient is a Municipality and has adopted its own policy that is substantially similar to the LTWHP, the Recipient may, at its election, choose to apply and enforce the provisions of its own such policy as to contractors performing work on such a Project in lieu of the provisions of the LTWHP.

2. The Recipient shall apply and enforce provisions mirroring those set forth in Los Angeles County Code (LACC) Chapter 2.211 (Disabled Veteran Business Enterprise Preference Program), LACC, Chapter 2.204 (Local Small Business Enterprise Preference Program), LACC, Chapter 2.205 (Social Enterprise Preference Program), LACC, Chapter 2.203 (Contractor Employee Jury Service Ordinance), LACC Chapter 2.206 (Defaulted Tax Program), LACC, Chapter 2.200 (Child Support Compliance Program, LACC, Chapter 2.160 (County Lobbyist Ordinance), Safely Surrendered Baby Law, and Zero Tolerance Policy on Human Trafficking, as to contractors performing work on such an Infrastructure Program Project, subject to statutory authorization for such preference program(s), and subject to applicable statutory limitations for such preference(s); and, furthermore, the Recipient shall take actions to promote increased contracting opportunities for Women-Owned Businesses on the Project, subject to applicable State or federal constitutional limitations.

3. The Recipient shall obtain all necessary approvals, entitlements, and permits required to implement the Project. Failure to obtain any necessary approval, entitlement, or permit shall constitute a breach of a material provision of this Agreement.

4. With respect to a Project funded with SCW Program Contributions through the Regional Program, if the Project has an estimated capital cost of over twenty-five million dollars ($25,000,000),as adjusted periodically by the Chief Engineer in

accordance with changes in the Consumer Price Index for all urban consumers in the Los Angeles area, or other appropriate index, a provision that the Infrastructure Program Project Developer for such a Project must require that all contractors performing work on such a Project be bound by the provisions of: (1) a County-wide Project Labor Agreement (Community Workforce Agreement), if such an agreement has been successfully negotiated between the County and the Trades and is approved by the Board, or (2) a Project Labor Agreement ("PLA") mirroring the provisions of such Community Workforce Agreement.

5. With respect to a Project funded with SCW Program Contributions through the Regional Program, if one or more of the Municipalities that is a financial contributor to a Project has its own PLA, a provision that the Infrastructure Program Project Developer for the Project must require that contractors performing work on the Project are bound to such PLA. If more than one of the contributing Municipalities to a capital project has a PLA, the Project Developer shall determine which of the PLAs will be applied to the Project.

6. Payment Bond. Payment bonds for exceeding twenty-five thousand dollars are required. A payment bond is defined as a surety bond posted by a contractor to guarantee that its subcontractors and material suppliers on the Project will be paid.

7. Performance Bond. Where contractors are used, the Recipient shall not authorize construction to begin until each contractor has furnished a performance bond in favor of the Recipient in the following amounts: faithful performance (100%) of contract value, and labor and materials (100%) of contract value. This requirement shall not apply to any contract for less than $25,000.00. Any bond issues pursuant to this paragraph must be issued by a California-admitted surety. (Pub. Contract Code, 7103; Code Civ. Proc. 995.311.)

8. Prevailing Wage. The Recipient agrees to be bound by all the provisions of Sections 1771 and 1774 of the California Labor Code regarding prevailing wages and requires each of subcontractors to also comply. The Recipient shall monitor all contracts resulting from this Agreement to assure that the prevailing wage provisions of the Labor Code are being met. The Recipient affirms that it is aware of the provisions of section 3700 of the Labor Code, which requires every employer to be insured against liability for workers' compensation or to undertake self-insurance, and the Recipient affirms that it will comply with such provisions before commencing the performance of the work under this Agreement and will make it contractors and subcontractors aware of this provision .

9. Public Funding. This Funded Activity is publicly funded. Any service provider or contractor with which the Recipient contracts must not have any role or relationship with the Recipient, that, in effect, substantially limits the Recipient's ability to exercise its rights, including cancellation rights, under the contract, based on all the facts and circumstances.

B-37. Travel

Any reimbursement for necessary ground transportation and lodging shall be at rates not to exceed those set by the California Department of Human Resources; per diem costs will not be eligible expenses. These rates may be found at http://www.calhr.ca.gov/employees/Pages/travel-reimbursements.aspx. Reimbursement will be at the State travel amounts that are current as of the date costs are incurred by the Recipient. No travel outside the Los Angeles County Flood Control District region shall be reimbursed unless prior written authorization is obtained from the Program Manager.

B-38. Unenforceable Provision

In the event that any provision of this Agreement is determined by a court of competent jurisdiction to be unenforceable, the parties agree that all other provisions of this Agreement have force and effect and shall not be affected thereby.

EXHIBIT C – SPECIAL CONDITIONS

[If the Recipient is a public agency]

C-1. The Recipient acknowledges and agrees that the Recipient is the "lead agency" regarding compliance with the California Environmental Quality Act (CEQA) in connection with the Funded Activity and shall be responsible for the preparation of all documentation, analysis and other work and any mitigation necessary to comply with CEQA in connection with the Funded Activity. By entering into this Agreement, the District is not approving any activity that would be considered a project under CEQA.

C-2. Upon the completion of the documentation, analysis and other work necessary to comply with CEQA as described in section C-1, the Recipient shall promptly provide such documentation, analysis and work to the District. The Recipient acknowledges that the District is a Responsible Agency under CEQA in connection with the Funded Activity and that the District will not disburse the SCW Program Contribution for any activities that meet the definition of a project under CEQA until the Recipient has provided such documentation, analysis and other work to the District and the District has complied with its obligations as a Responsible Agency under CEQA.

C-3. In addition to its other indemnification obligations pursuant to this Agreement, the Recipient hereby agrees to indemnify, defend, and hold harmless District, the County of Los Angeles and their officers, employees, and agents from and against any and all claims and/or actions related to the Funded Activity that may be asserted by any third party or public agency alleging violations of CEQA or the State CEQA Guidelines or the NEPA.

C-4. Notwithstanding any other provision of this Agreement, if any documentation or other analysis pursuant to CEQA discloses that the Funded Activity, or portion thereof, will have one or more significant environmental impacts that cannot be feasibly mitigated, the Recipient shall promptly notify and consult with the District. With the District's approval, the Recipient may determine to terminate or modify the implementation of all or any portion of the Funded Activity in order to avoid such environmental impacts.

C-5. In the event the parties, pursuant to the preceding paragraph, determine to terminate the implementation of the entirety of the Funded Activity, the Recipient shall promptly return all previously disbursed but unspent SCW Program Contributions and the Recipient shall thereafter have no further obligation under this Agreement to implement the Funded Activity. In the event the parties determine to terminate the implementation of a portion of the Funded Activity, the Recipient shall promptly return all previously disbursed but unspent SCW Program Contributions for the terminated portion of the Funded Activity and the Recipient shall thereafter have no further obligation under this Agreement to implement the terminated portion of the Funded Activity, but this Agreement shall remain in full force and effect as to the portion of the Funded Activity not terminated.

[If the Recipient is not a public agency]

C-1. The Recipient shall be responsible for the preparation of all documentation, analysis and other work including any mitigation, necessary to comply with the California Environmental Quality Act (CEQA) in connection with the Funded Activity. Environmental documentation prepared in connection with the Funded Activity will be subject to the review and analysis of the District. Any decisions based on the documentation prepared by the Recipient will reflect the independent judgment of District. By entering into this Agreement, the District is not approving any activity that would be considered a project under CEQA and the Recipient acknowledges that the District will not disburse the SCW Program Contribution for any activities that meet the definition of a project under CEQA until the Recipient has prepared the documentation, analysis and other work necessary to comply with CEQA to the District's satisfaction.

C-2. In addition to its other indemnification obligations pursuant to this Agreement, the Recipient hereby agrees to indemnify, defend, and hold harmless District, the County of Los Angeles and their officers, employees, and agents from and against any and all claims and/or actions related to the Funded Activity that may be asserted by any third party or public agency alleging violations of CEQA or the CEQA Guidelines or the NEPA.

C-3. Notwithstanding any other provision of this Agreement, if any documentation or other analysis pursuant to CEQA discloses that the Funded Activity or any portion thereof will have one or more significant environmental impacts that cannot be feasibly mitigated, the District, after consultation with the Recipient, may terminate the SCW Program Contribution for all or any portion of the Funded Activity or may request that the Funded Activity be modified in order to avoid such environmental impact(s).

C-4. In the event that the District terminates the SCW Program Contribution for the entirety of the Funded Activity, the Recipient shall promptly return all previously disbursed but unspent SCW Program Contributions and the Recipient shall thereafter have no further obligation under this Agreement to implement the Funded Activity. In the event the District terminates the SCW Program Contribution for a portion on of the Funded Activity, the Recipient shall promptly return all previously disbursed but unspent SCW Program Contributions for the terminated portion of the Funded Activity and the Recipient shall thereafter have no further obligation under this Agreement to implement the terminated portion of the Funded Activity, but this Agreement shall remain in full force and effect as to the portion of the Funded Activity for which the SCW Program Contribution was not terminated.

EXHIBIT D – ADDENDUM TO AGREEMENT

-DRAFT TEMPLATE-

ADDENDUM NO. ___ TO
TRANSFER AGREEMENT NO. _____ BETWEEN
THE LOS ANGELES COUNTY FLOOD CONTROL DISTRICT
AND (*INSERT PROJECT DEVELOPER*)
SAFE, CLEAN WATER PROGRAM – REGIONAL PROGRAM

This Addendum No. ___ to Transfer Agreement No. _____, hereinafter referred to as "Addendum No. ___", is entered into as of _____ by and between the Los Angeles County Flood Control District, hereinafter referred to as "District," and ___*(Project Developer/Scientific Studies Applicant)*___, hereinafter referred to as "Recipient."

WHEREAS, District and Recipient entered into Transfer Agreement No. _____, hereinafter referred to as "Agreement", pertaining generally to the transfer of a SCW Program Contribution (as therein defined) from District to Recipient for the implementation by Recipient of a Funded Activity (as therein defined) to increase stormwater and/or urban runoff capture and/or reduce stormwater and/or urban runoff pollution, on _____;

WHEREAS, the Agreement provides for the disbursement of the SCW Program Contribution for the 2020-21 Fiscal Year (as therein defined), and further provides that if the Funded Activity is included in a duly approved Stormwater Investment Plan (as therein defined) for a subsequent Fiscal Year, the parties shall enter into an addendum to the Agreement regarding the disbursement of the SCW Program Contribution for that subsequent Fiscal Year;

WHEREAS, the Funded Activity has been included in a duly approved Stormwater Investment Plan for Fiscal Year _____;

NOW, THEREFORE, in consideration of the promises, mutual representations, covenants and agreements in this Agreement, the District and the Recipient, each binding itself, its successors and assigns, do mutually promise, covenant, and agree as follows:

1. The definitions set forth in Sections 16.03 and 18.02 of the Los Angeles County Flood Control District Code together with the definitions set forth in the Agreement shall apply to this Addendum No. ___.

2. The District shall disburse the SCW Program Contribution for the _____ Fiscal Year as described in the Budget Plan within ___ days of the execution of this Addendum by the last party to sign.

3. All terms and conditions of the Agreement shall remain in full force and effect.

IN WITNESS WHEREOF, this Addendum No. ___ has been executed by the parties hereto.

EXHIBIT E – NATURE BASED SOLUTIONS (NBS) Best Management Practices

Nature-based solutions (NBS) refers to the sustainable management and use of nature for undertaking socio-environmental challenges, including climate change, water security, water pollution, food security, human health, and disaster risk management. As this environmental management practice is increasingly incorporated into projects for the SCW Program, this guidance document may be expanded upon to further quantify NBS practices based on benefits derived from their incorporation on projects.

The SCW Program defines NBS as a Project that utilizes natural processes that slow, detain, infiltrate or filter Stormwater or Urban Runoff. These methods may include relying predominantly on soils and vegetation; increasing the permeability of Impermeable Areas; protecting undeveloped mountains and floodplains; creating and restoring riparian habitat and wetlands; creating rain gardens, bioswales, and parkway basins; enhancing soil through composting, mulching; and, planting trees and vegetation, with preference for native species. NBS may also be designed to provide additional benefits such as sequestering carbon, supporting biodiversity, providing shade, creating and enhancing parks and open space, and improving quality of life for surrounding communities. NBS include Projects that mimic natural processes, such as green streets, spreading grounds and planted areas with water storage capacity. NBS may improve water quality, collect water for reuse or aquifer recharge, or to support vegetation growth utilizing natural processes.

Recipients are to consider using Nature-Based Solutions for infrastructure projects and include in each Quarterly Progress/Expenditure Report and annual summary whether and how their project achieves a good, better, or best for each of the 6 NBS methods in accordance with the guidance below. Additionally, Quarterly Progress/Expenditure Reports should include discussion on any considerations taken to maximize the class within each method. If at least 3 methods score within a single class, the overall project can be characterized as that class. Recipients must attach a copy of the matrix for each Project with the good, better, or best column indicated for each method, to facilitate District tracking of methods being utilized.

METHODS	GOOD	BETTER	BEST
Vegetation/Green Space	Use of climate-appropriate, eco-friendly vegetation (groundcover, shrubs, and trees) / green space 5%-15% covered by new climate-appropriate vegetation	Use of native, climate-appropriate, eco-friendly vegetation (groundcover, shrubs, and trees) / green space 16%-35% covered by new native vegetation	Establishment of plant communities with a diversity of native vegetation (groundcover, shrubs, and trees) / green space that is both native and climate-appropriate. More than 35% covered by new native vegetation
Increase of Permeability	Installation of vegetated landscape – 25%-49% paved area removed. Redesign of existing impermeable surfaces and/or installation of permeable surfaces (e.g. permeable pavement and infiltration trenches)	Installation of vegetated landscape – 50%-74% paved area removed. Improvements of soil health (e.g. compaction reduction)	Installation of vegetated landscape – 75%-100% paved area removed. Creation of well-connected and self-sustained natural landscapes with healthy soils, permeable surfaces, and appropriate vegetation.
Protection of Undeveloped Mountains & Floodplains	• Preservation of native vegetation • Minimal negative impact to existing drainage system	• Preservation of native vegetation • Installation of new feature(s) to improve existing drainage system	• Creation of open green space • Installation of features to improve natural hydrology
Creation & Restoration of Riparian Habitat & Wetlands	• Partial restoration of existing riparian habitat and wetlands • Planting of climate-appropriate vegetation between 5 and 15 different climate-appropriate or native plant species newly planted • No potable water used to sustain the wetland	• Full restoration of existing riparian habitat and wetlands • Planting of native vegetation – between 16 and 30 different native plant species newly planted • No potable water used to sustain the wetland	• Full restoration and expansion of existing riparian habitat and wetlands • Planting of plant communities with a diversity of native vegetation – greater than 31 native plant species newly planted • No potable water used to sustain the wetland

New Landscape Elements	Elements designed to capture runoff for other simple usage (e.g. rain gardens and cisterns), capturing the 85th percentile 24-hour storm event for at least 50% of the entire parcel	Elements that design to capture/redirect runoff and filter pollution (e.g. bioswales and parkway basins), capturing the 85th percentile 24-hour storm event from the entire parcel	Large sized elements that capture and treat runoff to supplement or replace existing water systems (e.g. wetlands, daylighting streams, groundwater infiltration, floodplain reclamation), capturing the 90th percentile 24-hour storm event from the entire parcel and/or capturing off-site runoff
Enhancement of Soil	Use of soil amendments such as mulch and compost to retain moisture in the soil and prevent erosion Planting of new climate-appropriate vegetation to enhance soil organic matter	Use of soil amendments such as mulch and compost that are locally generated to retain moisture in the soil, prevent erosion, and support locally based composting and other soil enhancement activities Planting of new native, climate-appropriate vegetation to enhance soil organic matter	Use of soil amendments such as mulch and compost that are locally generated, especially use of next-generation design with regenerative adsorbents (e.g. woodchips, biochar) to retain moisture in the soil, prevent erosion, and support on-site composting and other soil enhancement activities Planting of new native, climate appropriate vegetation to enhance soil organic matter

EXHIBIT F – OPERATIONS AND MAINTENANCE GUIDANCE DOCUMENT

Recipient or approved Project operator shall operate and maintain infrastructure projects for the useful life of the project and are to consider using the following guidance for operations and maintenance. Operational maintenance is the care and upkeep of Projects that may require detailed technical knowledge of the Project's function and design. Project specific operational and maintenance plans shall consider the activities listed below and set forth specific activities and frequencies (not limited to those below) as determined to be appropriate by the Municipalities and best practices, including stakeholder engagement as applicable. Operational maintenance is to be performed by the operator of the Project with a purpose to make the operator aware of the state of readiness of the Project to deliver stormwater and urban runoff benefits.

1. Litter Control
    - Regularly removal of litter, nonhazardous waste materials, and accumulated debris near planted areas, rock areas, decomposed granite areas, rest areas, fence perimeters, adjoining access roads and driveways, drains, pedestrian trails, viewing stations, shelter houses, and bicycle pathways.
    - Regularly inspection and maintenance of pet waste stations
    - Maintaining trash receptacles
    - Removal of trash, debris, and blockages from bioswales
    - Inspection and cleaning of trash booms
    - Inspection of weir gates and stop logs to clean debris, as required.

2. Vegetation Maintenance

    - Weed control
        - Recognition and removal of weeds, such as perennial weeds, morning glory, vine-type weeds, ragweed, and other underground spreading weeds.
        - Avoiding activities that result in weed seed germination (e.g. frequent soil cultivation near trees or shrubs)
        - Regularly removal of weeds from landscape areas, including from berms, painted areas, rock areas, gravel areas, pavement cracks along access roads and driveways, drains, pedestrian trails, viewing stations, park shelters, and bicycle paths.

    - Tree and shrubbery trimming and care
        - Removal of dead trees and elimination of diseased/damaged growth
        - Prevent encroachment of adjacent property and provide vertical clearance
        - Inspect for dead or diseased plants regularly

    - Wetland vegetation and landscape maintenance
        - Installation and maintenance of hydrophytic and emergent plants in perennially wet and seasonal, intermittent habitats.
        - Draining and drawdown of wetland and excessive bulrush removal

- Weed and nuisance plant control
- Removal of aquatic vegetation (e.g. algae and primrose) using appropriate watercraft and harvesting equipment
- Wildflower and meadow maintenance
- Grass, sedge, and yarrow management
- Removal of unwanted hydroseed

3. Wildlife Management

- Exotic species control
- Provide habitat management; promote growth of plants at appropriate densities and promote habitat structure for animal species
- Protect sensitive animal species (e.g. protection during critical life stages including breeding and migration)
- Avoid disturbances to nesting birds
- Avoid spread of invasive aquatic species

4. Facility Inspection

- Inspect project sites for rodent and insect infestations on a regular basis
- Inspect for and report graffiti in shelter houses, viewing stations, benches, paving surfaces, walls, fences, and educational and directional signs
- Inspect facilities for hazardous conditions on roads and trails (e.g. access roads and trails, decomposed granite pathways, and maintenance roads)
- Inspect shade structures for structural damage or defacement
- Inspect hardscapes
- Inspect and maintain interpretive and informational signs
- Inspect site furnishings (e.g. benches, hitching posts, bicycle racks)
- Maintain deck areas (e.g. benches, signs, decking surfaces)
- Visually inspect weirs and flap gates for damage; grease to prevent locking.
- Inspect all structures after major storm events, periodically inspect every 3 months, and operate gates through full cycles to prevent them from locking up.

5. Irrigation System Management

- Ensuring automatic irrigation controllers are functioning properly and providing various plant species with proper amount of water.
    - Cycle controller(s) through each station manually and automatically to determine if all facets are functioning properly.
    - Inspection should be performed at least monthly.
    - Recover, replace, or refasten displaced or damaged valve box covers.
    - Inspect and repair bubbler heads.

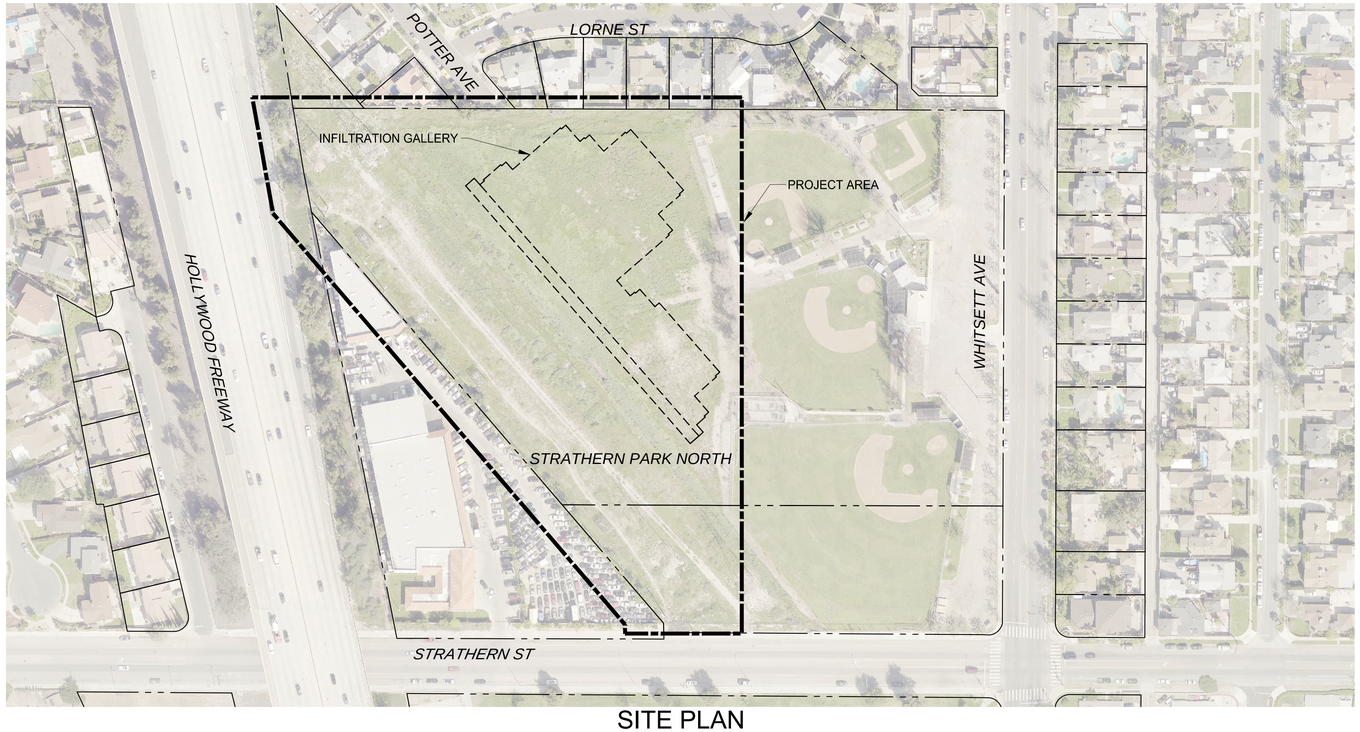
  - Repair and replace broken drip lines or emitters causing a loss of water (to prevent ponding and erosion).
  - Maintain drip system filters to prevent emitters from clogging. Inspection and cleaning should occur at least monthly.
  - Inspect and clean mainline filters, wye strainers, basket filters, and filters at backflow devices twice a year.
  - Maintain and check function of the drip system.

- Keeping irrigation control boxes clear of vegetation
- Operating irrigation system to ensure it does not cause excessively wet, waterlogged areas, and slope failure
- Utilizing infrequent deep watering techniques to encourage deep rooting, drought tolerant plant characteristics to promote a self-sustaining, irrigation free landscape
- Determine watering schedules based on season, weather, variation in plant size, and plant varieties. At least four times a year (e.g. change of season), reschedule controller systems.
- Turn off irrigation systems at the controller at the beginning of the rainy season, or when the soil has a high enough moisture content.
- Use moisture sensing devices to determine water penetration in soil.

6. Erosion Management and Control

- Inspect slopes for erosion during each maintenance activity
- Inspect basins for erosion
- Take corrective measures as needed, including filling eroded surfaces, reinstalling or extending bank protection, and replanting exposed soil.

7. Ongoing Monitoring Activities



- Monitor controllable intake water flow and water elevation
- Examine inflow and outflow structures to ensure devices are functioning properly and are free of obstructions.
- Water quality sampling (quarterly, unless justified otherwise)
- Checking telemetry equipment
- Tracking and reporting inspection and maintenance records

8. Vector and Nuisance Insect Control

- Monitoring for the presence of vector and nuisance insect species
- Adequate pretreatment of influent wastewater to lessen production of larval mosquitos
- Managing emergent vegetation
- Using hydraulic control structures to rapidly dewater emergent marsh areas
- Managing flow velocities to reduce propagation of vectors

CURRENT REFERENCE REPORT/LETTER(S)	REPORT No.	DATE OF DOCUMENT	PREPARED BY
Geology/Soils Report	211294001	08/31/2020	Ninyo & Moore

The Grading Division of the Department of Building and Safety has reviewed the referenced report that provides recommendations for a proposed stormwater capture and infiltration system to be constructed at Strathern Park North. According to the report, the proposed facility is intended to capture up to 968,000 cubic-feet of stormwater runoff by diversion structures, water storage structures and infiltration devices. Several alternative designs are being considered. The first of which is a subterranean infiltration gallery about 73,000 square feet in area with an internal height of 14 feet and an invert depth of about 18 feet.

The earth materials at the subsurface exploration locations consist of 3 to 13 feet of uncertified fill underlain by alluvium. The alluvium consists generally of poorly graded sand with variable silt and gravel. Exploration consisted of nine hollow-stem auger (HSA) borings from 17.5 to 70.5 feet in depth, six CPT soundings from about 48 to 50 feet in depth, and six test pits from 9.5 to 10 feet in depth. Six percolation tests were conducted in the borings. Percolation test results ranged from 11.2 to 41.5 inches/hour, based on constant head percolation tests. Given a long-term reduction factor, the design percolation rate is 4 inches/hour.

According to the consultants, groundwater was not encountered to the maximum depth explored of 70.5 feet, and historically highest groundwater level is between 110 and 120 feet below the ground surface. The site is relatively level.

The consultants recommend to support the proposed structure(s) on conventional and mat foundations bearing on native undisturbed soils and/or properly placed fill. Temporary excavations

of about 20 feet are to be trimmed at a gradient of 1.5:1 (H:V). Shoring recommendations are provided for deeper excavations.

The referenced report is acceptable, provided the following conditions are complied with during site development:

(Note: Numbers in parenthesis ( ) refer to applicable sections of the 2020 City of LA Building Code. P/BC numbers refer the applicable Information Bulletin. Information Bulletins can be accessed on the internet at LADBS.ORG.)

1. The geologist and soils engineer shall review and approve the detailed plans prior to issuance of any permits. This approval shall be by signature on the plans that clearly indicates the geologist and soils engineer have reviewed the plans prepared by the design engineer; and, that the plans include the recommendations contained in their reports (7006.1).
2. All recommendations of the report(s) that are in addition to or more restrictive than the conditions contained herein shall be incorporated into the plans.
3. A copy of the subject and appropriate referenced reports and this approval letter shall be attached to the District Office and field set of plans (7006.1). Submit one copy of the above reports to the Building Department Plan Checker prior to issuance of the permit.
4. A grading permit shall be obtained for all structural fill and retaining wall backfill (106.1.2).
5. All man-made fill shall be compacted to a minimum 90 percent of the maximum dry density of the fill material per the latest version of ASTM D 1557. Where cohesionless soil having less than 15 percent finer than 0.005 millimeters is used for fill, it shall be compacted to a minimum of 95 percent relative compaction based on maximum dry density. Placement of gravel in lieu of compacted fill is only allowed if complying with LAMC Section 91.7011.3.
6. If import soils are used, no footings shall be poured until the soils engineer has submitted a compaction report containing in-place shear test data and settlement data to the Grading Division of the Department; and, obtained approval (7008.2).
7. Compacted fill shall extend beyond the footings a minimum distance equal to the depth of the fill below the bottom of footings or a minimum of three feet, whichever is greater (7011.3).
8. Existing uncertified fill shall not be used for support of footings, concrete slabs or new fill (1809.2, 7011.3).
9. Drainage in conformance with the provisions of the Code shall be maintained during and subsequent to construction (7013.12).
10. Grading shall be scheduled for completion prior to the start of the rainy season, or detailed temporary erosion control plans shall be filed in a manner satisfactory to the Grading Division of the Department and the Department of Public Works, Bureau of Engineering, B-Permit Section, for any grading work in excess of 200 cubic yards (7007.1).

6262 Van Nuys Blvd. Ste 351, Van Nuys (818) 374-4605

11. **The applicant is advised that the approval of this report does not waive the requirements for excavations contained in the General Safety Orders of the California Department of Industrial Relations (3301.1).**
12. **Temporary excavations that remove lateral support to the public way, adjacent property, or adjacent structures shall be supported by shoring, as recommended. Note: Lateral support shall be considered to be removed when the excavation extends below a plane projected downward at an angle of 45 degrees from the bottom of a footing of an existing structure, from the edge of the public way or an adjacent property. (3307.3.1)**
13. **Prior to the issuance of any permit that authorizes an excavation where the excavation is to be of a greater depth than are the walls or foundation of any adjoining building or structure and located closer to the property line than the depth of the excavation, the owner of the subject site shall provide the Department with evidence that the adjacent property owner has been given a 30-day written notice of such intent to make an excavation (3307.1).**
14. **The soils engineer shall review and approve the shoring plans prior to issuance of the permit (3307.3.2).**
15. **Prior to the issuance of the permits, the soils engineer and/or the structural designer shall evaluate the surcharge loads used in the report calculations for the design of the retaining walls and shoring. If the surcharge loads used in the calculations do not conform to the actual surcharge loads, the soil engineer shall submit a supplementary report with revised recommendations to the Department for approval.**
16. **Unsurcharged temporary excavations up to 20 feet shall be trimmed back at a gradient not exceeding 1.5:1, as recommended.**
17. **Shoring shall be designed for the lateral earth pressures specified on Figures 9 and 10 of the 08/31/2020 report; all surcharge loads shall be included into the design. Total lateral load on shoring piles shall be determined by multiplying the recommended EFP by the pile spacing.**
18. **Shoring shall be designed for a maximum lateral deflection of 1 inch, provided there are no structures within a 1:1 plane projected up from the base of the excavation. Where a structure is within a 1:1 plane projected up from the base of the excavation, shoring shall be designed for a maximum lateral deflection of ½ inch, or to a lower deflection determined by the consultant that does not present any potential hazard to the adjacent structure.**
19. **A shoring monitoring program shall be implemented to the satisfaction of the soils engineer.**
20. **All foundations shall derive entire support from native undisturbed soils and/or properly placed fill, as recommended and approved by the geologist and soils engineer by inspection.**
21. **Footings supported on approved compacted fill or expansive soil shall be reinforced with a minimum of four (4), ½-inch diameter (#4) deformed reinforcing bars. Two (2) bars shall be placed near the bottom and two (2) bars placed near the top of the footing.**

22. **The seismic design shall be based on a Site Class D, as recommended. All other seismic design parameters shall be reviewed by LADBS building plan check.**
23. **The seismic design parameters shown on Table 2 (page 20) of the 08/31/2020 report may be used in the design.**
24. **Retaining walls shall be designed for the lateral earth pressures specified on Figure 11 of the 08/31/2020 report. All surcharge loads shall be included into the design.**
25. **All retaining walls shall be provided with a standard surface backdrain system and all drainage shall be conducted in a non-erosive device to the street in an acceptable manner (7013.11).**
26. **With the exception of retaining walls designed for hydrostatic pressure, all retaining walls shall be provided with a subdrain system to prevent possible hydrostatic pressure behind the wall. Prior to issuance of any permit, the retaining wall subdrain system recommended in the soils report shall be incorporated into the foundation plan which shall be reviewed and approved by the soils engineer of record (1805.4).**
27. **Installation of the subdrain system shall be inspected and approved by the soils engineer of record and the City grading/building inspector (108.9).**
28. **Prefabricated drainage composites (Miradrain, Geotextiles) may be only used in addition to traditionally accepted methods of draining retained earth.**
29. **The infiltration facility design and construction shall comply with the minimum requirements specified in the Information Bulletin P/BC 2020-118.**
30. **The infiltration system shall be constructed at the location shown on the drawing attached to the current report.**
31. **The construction of the infiltration system shall be provided under the inspection and approval of the soils engineer.**
32. **An overflow outlet shall be provided to conduct water to the street in the event that the infiltration system capacity is exceeded. (P/BC 2020-118)**
33. **Approval for the proposed infiltration system from the Bureau of Sanitation, Department of Public Works shall be secured.**
34. **A minimum distance of 10 feet (in any direction) shall be provided from adjacent proposed/existing footings to the discharge of the proposed infiltration system. A minimum distance of 10 feet horizontally shall be provided from private property lines to the proposed infiltration system.**
35. **In the event dry wells are planned, then the dry well area between the blank casing and the surround soils shall be sealed to a minimum depth of 10 feet below the bottom of any adjacent foundation with bentonite slurry (or equivalent) to prevent unintended leakage or horizontal infiltration.**
36. **All concentrated drainage shall be conducted in an approved device and disposed of in a manner approved by the LADBS (7013.10).**

37. Any recommendations prepared by the geologist and/or the soils engineer for correction of geological hazards found during grading shall be submitted to the Grading Division of the Department for approval prior to use in the field (7008.2, 7008.3).
38. The geologist or soils engineer shall inspect all excavations to determine that conditions anticipated in the report have been encountered and to provide recommendations for the correction of hazards found during grading (7008, 1705.6 & 1705.8).
39. Prior to pouring concrete, a representative of the consulting soils engineer shall inspect and approve the footing excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the work inspected meets the conditions of the report. No concrete shall be poured until the LADBS Inspector has also inspected and approved the footing excavations. A written certification to this effect shall be filed with the Grading Division of the Department upon completion of the work. (108.9 & 7008.2)
40. Prior to excavation an initial inspection shall be called with the LADBS Inspector. During the initial inspection, the sequence of construction; shoring; protection fences; and, dust and traffic control will be scheduled (108.9.1).
41. Installation of shoring shall be performed under the inspection and approval of the soils engineer and deputy grading inspector (1705.6, 1705.8).
42. Prior to the placing of compacted fill, a representative of the soils engineer shall inspect and approve the bottom excavations. The representative shall post a notice on the job site for the LADBS Inspector and the Contractor stating that the soil inspected meets the conditions of the report. No fill shall be placed until the LADBS Inspector has also inspected and approved the bottom excavations. A written certification to this effect shall be included in the final compaction report filed with the Grading Division of the Department. All fill shall be placed under the inspection and approval of the soils engineer. A compaction report together with the approved soil report and Department approval letter shall be submitted to the Grading Division of the Department upon completion of the compaction. In addition, an Engineer's Certificate of Compliance with the legal description as indicated in the grading permit and the permit number shall be included (7011.3).
43. No footing/slab shall be poured until the compaction report is submitted and approved by the Grading Division of the Department.

Safe, Clean Water Program
Upper Los Angeles River WASC
900 South Fremont Avenue
Alhambra, California 91803

Dear SCW Program Administrators:

Subject: Strathern Park North Stormwater Capture Project Water Supply Benefits

The Strathern Park North Stormwater Capture Project (Project) is located north of Strathern Street and west of Whitsett Avenue in the Sun Valley Neighborhood of the San Fernando Valley. This Project will treat and capture stormwater runoff from a 485-acre tributary area in the upper Tujunga Wash Watershed and help recharge the San Fernando Groundwater Basin.

The Project is part of the Los Angeles Department of Water and Power's Stormwater Capture Program (Program), an important element to the overall long term plan to enhance the local water supply. The principle of the Program involves capturing precious rainfall and runoff from open space and urban lands for either direct use or infiltration to help improve the health of the groundwater basins.

The Project will capture and infiltrate stormwater through a diversion structure, catch basin, hydrodynamic separator, pump station, and an underground infiltration gallery to recharge the San Fernando Groundwater Basin. The Project's estimated annual capture volume was modeled using the EPA's Storm Water Management Model (SWMM 5.1) using 10-year historical rain data (1997-2007) from the City of Burbank's Valley Pumping Plant rain gage (COOP:041194). The simulation estimated a wet weather yield of 271 acre-feet per year (AFY), while dry weather runoff was estimated to be 23 AFY. This is based on low flow diversion monitoring data from 2012 to 2016, where the median value for dry weather runoff is approximately 84 gallons per day per impervious acre of land. The combined total estimated runoff is 294 AFY. SWMM results are attached in Section 2.4.

STORMWATER OBSERVATION REPORT FORM

(Residential ≥ 5 units & All other Development)

LOW IMPACT DEVELOPMENT

IN THE EVENT THAT THE APPROVED STORMWATER BMP CANNOT BE BUILT PER PLANS (OR ANY MODIFICATION), CONSULT WITH BUREAU OF SANITATION STAFF PRIOR TO ANY PLAN MODIFICATIONS. FAILURE TO DO SO MAY DELAY OBTAINING A FINAL APPROVAL AND CERTIFICATE OF OCCUPANCY (C OF O).

STORMWATER OBSERVATION *means the visual observation of the stormwater related Best Management Practices (BMPs) for conformance with the approved LID Plan at significant construction stages and at completion of the project. Stormwater observation does not include or waive the responsibility for the inspections required by Section 108 or other sections of the City of Los Angeles Building Code.*

STORMWATER OBSERVATION *must be performed by the engineer or architect responsible for the approved LID Plan or designated staff in their employment.* ***As part of the observation, provide photos of the BMPs taken during various construction phases.***

STORMWATER OBSERVATION REPORT *must be signed and stamped (see below) by the engineer or architect responsible for the approved LID Plan and submitted to the city prior to the issuance to the certificate of occupancy.* ***PRIOR TO CERTIFICATE OF OCCUPANCY (C of O), SOR FORM, PRINTED PHOTOS OF THE BMPS TAKEN DURING VARIOUS CONSTRUCTION PHASES AND APPROVED STAMPED PLANS BY THE BUREAU OF SANITATION MUST BE SUBMITTED TO THE PUBLIC COUNTER FOR STAFF APPROVAL.***

Project Address:	Building Permit No.:
8041 Whitsett Ave, North Hollywood, CA 91605	22030-10000-04538
Name of Engineer/Architect responsible for the approved LID Plan: Anthony S. Dellinger	Phone Number: (213) 792-4591

List all BMPs installed as part of the project: Coordinates of the most significant (or typical) BMPs:

Underground Infiltration Gallery BMP Type: 62,174 SF # of units: 1 Lat: 34.22939 ; Long: -118.40271	Hydrodynamic Separator BMP Type: 20' x 10' x 15' # of units: 1 Lat: 34.217765 ; Long: -118.40795
BMP Type: _____ # of units: ____ Lat: _____ ; Long: _____	BMP Type: _____ # of units: ____ Lat: _____ ; Long: _____

I DECLARE THAT THE FOLLOWING STATEMENTS ARE TRUE TO THE BEST OF MY KNOWLEDGE:

1. I am the engineer or architect responsible for the approved LID Plan, and;
2. I, or designated staff under my responsible charge, has preformed the required site visits at each significant construction stage and at the completion to verify that the Best Management Practices (BMPs) as shown on approved plans have been constructed and installed in accordance with the approved LID Plan.

Wet Stamp of Engineer or Architect

Signature Date

SCW Program Administrators
November 25, 2019
Page 2

The infiltration substructure was sized to retain the 85th percentile, 24 hour volume, using the Los Angeles County Department of Public Works HydroCalc Calculator software (version 1.0.3). The Project's peak inflow rate was estimated to be 28.9 cubic feet per second (cfs) and has a total 24 hour clear runoff volume of 22.4 acre-feet (AF). The Project will be designed to capture the 28.9 cfs inflow rate and 22.4 AF runoff volume parameters.

Fully endorsed by the Upper Los Angeles River Area (ULARA) Watermaster, projects such as the Strathern Park North Stormwater Capture Project are key to restoring and maintaining the health of the San Fernando Basin. This Project provides excellent capture, water supply, and other multi-benefits to help achieve the objectives of the Los Angeles County, as defined by the Safe, Clean Water Program Ordinance.

If you have any questions or require additional information, please contact me at (213) 367-1289.

Sincerely,

Rafael Villegas,
Manager of Water Rights and Groundwater Management

REVISION DATES (DESIGN STAGE ONLY)

SHEET VERSION 4.0.1 FILE PATH: C:\CDMEXT\VINODA\D0499408\GI002B.DWG PLOT DATE: 10/9/2024 3:58 PM SAVED: 10/7/2024 12:39 PM SAVED BY:PAVITHRAB

GENERAL NOTES

1. THESE IMPROVEMENTS CONSIST OF WORK CALLED FOR ONLY ON THIS PLAN. THE PLAN REFERS TO THE CONTRACT DRAWINGS, SPECIFICATIONS, AND SCHEDULE OF WORK INCLUDED HEREIN.
2. THE CONTRACTOR SHALL CONFORM TO THE GENERAL CONDITIONS AND GENERAL REQUIREMENTS, THE LATEST EDITION AND SUPPLEMENTS OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION, SSPWC PARTS 2-6, HEREINAFTER ADOPTED BY THE BOARD OF PUBLIC WORKS AND THE CITY OF LOS ANGELES INCLUDING THE CITY OF LOS ANGELES DEPARTMENT OF PUBLIC WORKS SSPWC ADDITIONS AND AMENDMENTS (BROWN BOOK), LATEST EDITION.
3. THE CONTRACTOR IS REQUIRED TO PARTICIPATE AT ALL PUBLIC RELATIONS AND COMMUNITY MEETINGS UNLESS EXCUSED BY THE CITY.
4. ALL CONSTRUCTION SHALL CONFORM TO THE 2020 CITY OF LOS ANGELES BUILDING CODE.
5. THE CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE ADA REQUIREMENTS FROM THE 2021 STANDARDS FOR ACCESSIBLE DESIGN.
6. ALIGNMENT AND LOCATION OF EXISTING STRUCTURES AND UTILITIES HAVE BEEN COMPILED WITH THE MOST ACCURATE INFORMATION AVAILABLE. ACTUAL DIMENSIONS, LOCATIONS, ELEVATIONS, ETC. MAY VARY. THE CONTRACTOR SHALL VERIFY EXISTING FIELD CONDITIONS AND BASE WORK ON ACTUAL ON-SITE CONDITIONS AND MEASUREMENTS. ANY DISCREPANCIES, OMISSIONS OR ERRORS ON THE DRAWINGS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER WITH 14 DAYS NOTICE OF CONSTRUCTION IN THAT LOCATION. THE CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY OF ALL REVISIONS DUE TO FAILURE TO GIVE SUCH NOTICE.
7. THE CONTRACTOR IS REQUIRED TO TAKE DUE PRECAUTIONARY MEASURES TO PROTECT THE UTILITY LINES SHOWN AND OTHER STRUCTURES NOT ON RECORD OR NOT SHOWN ON THESE PLANS. WHERE CONSTRUCTION, INCLUDING UTILITY LINES, CROSSES OR IS ADJACENT TO EXISTING UTILITY LINES (FUEL, WATER, SEWER, TELECOMMUNICATION, GAS, OR ELECTRIC), THE CONTRACTOR SHALL DIG TEST PITS AND CAREFULLY HAND EXCAVATE SO AS TO LOCATE, MARK, AND PROTECT THE UTILITY LINES AGAINST DISTURBANCE OR DAMAGE.
8. THE CONTRACTOR IS REQUIRED TO CONTACT UNDERGROUND SERVICE ALERT (USA) FOR UTILITY MARKINGS. CONTACTING USA AT 8-1-1 DOES NOT RELIEVE THE CONTRACTOR OF CONTACTING OWNERS OF NON-PRESSURE CONDUITS, WHO MAY NOT BE REQUIRED TO BE MEMBERS OF USA. THEREFORE, INDIVIDUAL CONTACTS TO SUCH OWNERS ARE REQUIRED.
9. THE CONTRACTOR SHALL GIVE A 30 DAY NOTICE TO PROPERTY OWNERS OR OCCUPANTS OF THE PROPOSED IMPROVEMENTS FRONTING THEIR PROPERTY. THE CONTRACTOR SHALL OBTAIN A CITY-APPROVED "NOTICE OF PROPOSED UTILITY WORK" FROM THE ENGINEER AND DISTRIBUTE COPIES NO LATER THAN 10 CALENDAR DAYS PRIOR TO COMMENCEMENT OF CONSTRUCTION IN ACCORDANCE WITH THE REQUIREMENTS OF THE PROJECT MANUAL. NOTICES ARE NOT TO BE PLACED IN OR ATTACHED TO MAIL BOXES.
10. FOR DESCRIPTION OF SUBSURFACE CONDITIONS, REFER TO THE FOLLOWING NINYO AND MOORE REPORT: GEOTECHNICAL EVALUATION LABOE TOS NO. 25 STORMWATER CAPTURE PARKS PROGRAM STRATHERN PARK NORTH, DATED AUGUST 31, 2020, IN THE SPECIFICATION APPENDIX.
11. THE CONTRACTOR SHALL CONTACT NINYO AND MOORE (949) 753-7070 AT LEAST TWO WORKING DAYS IN ADVANCE OF REQUIRED OBSERVATIONS OR INSPECTIONS BY THE GEOTECHNICAL ENGINEER.
12. UNLESS OTHERWISE SPECIFIED IN CONTRACT DOCUMENTS, ALL WORK SHALL CONFORM TO REQUIREMENTS OF THE SSPWC PARTS 2-6, THE BROWN BOOK (THE CITY'S SUPPLEMENT TO THE SSPWC), AND CITY STANDARD PLANS.
13. GEOTECHNICAL OBSERVATION AND TESTING OF MATERIALS SHALL BE DONE IN ACCORDANCE WITH SPECIFICATIONS SECTION 01453 SAMPLING, TESTING, AND FABRICATION AND SECTION 01712 SUBSURFACE CONDITIONS.
14. REFER TO GENERAL REQUIREMENTS SECTION 01452 OF THE SPECIFICATIONS FOR INSPECTION REQUIREMENTS.
15. IT IS EXPECTED THAT THE CONTRACTOR MUST PROVIDE SPECIAL PRECAUTIONS FOR WORKER PROTECTION. THESE DEVICES MAY INCLUDE BUT ARE NOT LIMITED TO PROTECTIVE CANOPIES AND SHORING.
16. THE CONTRACTOR SHALL BE RESPONSIBLE FOR ADEQUATELY BRACING AND PROTECTING ALL WORK DURING CONSTRUCTION AGAINST DAMAGE, BREAKAGE, COLLAPSE, DISTORTIONS AND OFF ALIGNMENTS ACCORDING TO CODES AND STANDARDS OF GOOD PRACTICE.
17. AT LEAST THIRTY (30) DAYS BEFORE THE START OF CONSTRUCTION, THE CONTRACTOR/ENGINEER SHALL CONTACT THE BUREAU OF STREET SERVICES, COORDINATING SECTION AT (213) 485-5691 TO VERIFY THAT THERE IS NO PROPOSED PROJECT IN THIS AREA.
18. SURVEY MONUMENT PRESERVATION IS REQUIRED AND SHALL INCLUDE SUBMITTAL OF PRE AND POST CONSTRUCTION SURVEY MONUMENT TIES TO THE ENGINEER AS SPECIFIED IN SPECIFICATION SECTION 01722.
19. THE CONTRACTOR MUST MAINTAIN FLOOD CAPACITY AT ALL TIMES DURING CONSTRUCTION. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE ACCEPTANCE AND CONTROL OF ALL SURFACE AND SUBSURFACE DRAINAGE AND GROUNDWATER ENTERING THE PROJECT AREA. REFER TO SECTION 02235 OF THE SPECIFICATIONS FOR DEWATERING REQUIREMENTS; AND GENERAL REQUIREMENTS SECTION 01112 FOR STORM DRAIN AND DRY WEATHER FLOWS.
20. THE CONTRACTOR SHALL CONDUCT ALL GRADING AND PLANTING OPERATIONS IN ACCORDANCE WITH ALL REQUIRED PERMITS. FOR A LIST OF THE PERMITS, REFER TO SPECIFICATIONS SECTION 01112.
21. CONTRACTOR IS RESPONSIBLE FOR STAKING THE LINE AND GRADE SHOWN ON THE DRAWINGS, PRIOR TO PROCEEDING WITH CONSTRUCTION. THIS WORK INCLUDES, BUT IS NOT LIMITED TO, LOCATION OF ALL PLANTING TYPES. ANY ERRORS OR OMISSIONS ON THE CONSTRUCTION DRAWINGS SHALL BE BROUGHT TO THE IMMEDIATE ATTENTION OF THE ENGINEER. FAILURE TO DO SO DOES NOT RELIEVE THE CONTRACTOR FROM COMPLETING THE WORK AS REQUIRED. ENGINEER WILL REVIEW AND APPROVE IN WRITING PLANTING LAYOUT IN THE FIELD.
22. THE PHYSICAL FEATURES WITHIN THE LIMITS OF THE MAPPING HAVE BEEN SHOWN BASED ON PHOTOGRAMMETRIC MAPPING PROCEDURES AND NATIONAL STANDARDS. DISCONTINUITIES IN CONTOURS ARE THE RESULT OF MAPPING PRODUCED AT DIFFERENT DATES AND USING ALTERNATIVE METHODS (FOR EXAMPLE, AERIAL PHOTOGRAPHY, GROUND SURVEYS, AND ONE (1) FOOT VERSUS FIVE (5) FOOT CONTOUR MAPPING ACCURACIES.)
23. THE CONTRACTOR SHALL BE RESPONSIBLE FOR RESETTING SURVEY CONTROL MONUMENTS DISTURBED BY CONSTRUCTION AS NECESSARY.
24. THE CONTRACTOR SHALL LIMIT CONSTRUCTION AND ANCILLARY ACTIVITIES TO THOSE AREAS WITHIN THE LIMITS OF GRADING AS INDICATED BY THE DAYLIGHT LINE SHOWN ON THE PLANS AND CROSS SECTIONS WITH THE EXCEPTION OF LANDSCAPE AND RESTORATION ACTIVITIES OUTSIDE LIMITS OF GRADING. ANY DISTURBANCE BEYOND THESE LIMITS SHALL BE RESTORED TO ORIGINAL CONDITION BY THE CONTRACTOR AT HIS EXPENSE.
25. PRIOR TO STARTING ANY CONSTRUCTION ACTIVITY, THE CONTRACTOR SHALL COORDINATE AND ATTEND A PRE-CONSTRUCTION MEETING. REFER TO SECTION 01312 IN THE SPECIFICATIONS FOR MEETING REQUIREMENTS.
26. THE TOP ELEVATION OF ALL EXISTING HANDHOLES, MANHOLES, CATCH BASINS, VALVE BOXES, AND FILL CAPS COVERS LOCATED WITHIN THE CONSTRUCTION AREA SHALL BE FLUSH WITH THE PROPOSED GRADE. IF ANY STRUCTURE IS TO BE RESET, CONTRACTOR TO NOTIFY THE ENGINEER IMMEDIATELY PRIOR TO RESETTING.
27. UNSUITABLE MATERIAL, REMOVED VEGETATION, CONSTRUCTION DEBRIS, ETC. SHALL BE PROPERLY REMOVED AND DISPOSED OF OFF-SITE IN ACCORDANCE WITH APPLICABLE FEDERAL, STATE AND LOCAL CODES, ORDINANCES, AND LAWS.
28. THE CONTRACTOR SHALL BE RESPONSIBLE FOR DETERMINING ADEQUATE METHODS AND MEANS OF COMPLETION OF THE WORK PRIOR TO THE COMMENCEMENT OF CONSTRUCTION AND NOTIFY THE ENGINEER IF A CONFLICT IS IDENTIFIED.
29. THE CONTRACTOR SHALL REPLACE ALL PAVING, STABILIZING EARTH, DRIVEWAYS, SIDEWALKS, CONCRETE CURB, ETC. WITH THE SAME TYPE OF MATERIAL THAT WAS DAMAGED DURING CONSTRUCTION OR AS DIRECTED BY THE ENGINEER.
30. ANY POTENTIAL PERMITS FOR DEWATERING ARE THE RESPONSIBILITY OF THE CONTRACTOR, INCLUDING THE PROPER USE AND DISCHARGE OF DEWATERING FLOWS TO MEET ALL WATER QUALITY REQUIREMENTS. THE CONTRACTOR MAY NOT DRAW DOWN GROUNDWATER LEVELS OFFSITE UNLESS PERMITTED BY THE APPLICABLE AGENCIES AND WITH PERMISSION OF THE AFFECTED LANDOWNERS. IF DEWATERING IS NEEDED, A DEWATERING PLAN SIGNED AND STAMPED BY A CALIFORNIA CERTIFIED HYDROGEOLOGIST SHALL BE REVIEWED BY THE BOE-GEOLOGIST. REFER TO SPECIFICATION SECTION 02235 FOR DEWATERING REQUIREMENTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR CONTROLLING, TREATMENT, AND DISPOSAL OF ALL GROUNDWATER ENCOUNTERED DURING CONSTRUCTION.
31. REFER TO SPECIFICATION SECTION 01562 FOR REQUIRED ENVIRONMENTAL MITIGATION MEASURES AND CONSTRUCTION CONSTRAINTS. MITIGATION MEASURES INCLUDE MEASURES TO REDUCE CONSTRUCTION IMPACT ON AIR QUALITY, BIOLOGICAL RESOURCES, CULTURAL RESOURCES; POTENTIAL HAZARDOUS MATERIAL IMPACTS; IMPACT OF DAYTIME CONSTRUCTION NOISE, AND TRAFFIC.
32. THE CONTRACTOR SHALL COMPLY WITH ALL APPLICABLE RULES AND REGULATIONS. SAFETY IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR.
33. ALL STRUCTURES SHALL COMPLY WITH FEDERAL EMERGENCY MANAGEMENT AGENCY (FEMA) TECHNICAL BULLETIN 2-08 FOR FLOOD PROOFING.
34. STANDARD SPECIFICATIONS: ALL WORK SHALL CONFORM TO THE LATEST EDITION AND SUPPLEMENTS OF THE STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION (SSPWC) ADOPTED BY THE BOARD PUBLIC WORKS OF THE CITY OF LOS ANGELES AS MODIFIED BY THE CORRESPONDING ISSUE OF THE LATEST STANDARD PLAN S-610, AND SPECIAL PROVISIONS, AND THE CURRENT LOS ANGELES BUILDING CODE (L.A.B.C.)
35. THE CONTRACTOR IS RESPONSIBLE FOR DESIGN, IMPLEMENTATION, MAINTENANCE, AND COST OF THE SHORING INCLUDING ITS PERMIT AND PERMIT PROCESS. CONTRACTOR SHALL SUBMIT THE SHORING DESIGN TO BOE FOR REVIEW AND APPROVAL.
36. THE CONTRACTOR IS RESPONSIBLE TO OBTAIN A HAULING PERMIT AS THE EXPORT AND IMPORT IS GREATER THAN 1,000 CY.
37. THE CONTRACTOR IS REQUIRED TO VIDEO TAPE AND PHOTOGRAPH EXISTING CONDITIONS THROUGHOUT THE NEIGHBORHOOD AND PARK PRIOR TO THE START OF WORK.
38. THE CONTRACTOR SHALL IMPLEMENT THE TREE PROTECTION AND OTHER REQUIREMENTS ON SHEETS LP03 AND LP04 FOR EVERY TREE WITHIN THE CONSTRUCTION SITE PRIOR TO STARTING WORK AT THE PARK.
39. THE CONTRACTOR IS RESPONSIBLE FOR POTHOLING ALONG THE AREAS OF WORK/ALIGNMENTS TO CLEAR ANY OBSTRUCTIONS AND VERIFY EXISTING CONDITIONS INCLUDING INVERT ELEVATIONS. THE CONTRACTOR SHALL PERFORM A MINIMUM OF 1 POTHOLE EVERY 20 FEET ALONG THE ALIGNMENT AND AT ALL CATCH BASINS.
40. ALL AREAS USED BY THE CONTRACTOR AS LAYDOWN AREAS SHALL BE RESTORED WITH NEW SOD.
41. THE CONTRACTOR IS RESPONSIBLE FOR DETOURING FOOT TRAFFIC AROUND THE CONSTRUCTION AND CAPTURE THIS IS THE TRAFFIC CONTROL PLANS.
42. AS A MINIMUM THE CONTRACTOR SHALL SUBMIT THE FOLLOWING DEFERRED SUBMITTALS: TEMPORARY SHORING (CONTRACTOR TO DESIGN AND BUILD), MODULAR BURIED STORMWATER INFILTRATION SYSTEM (CONTRACTOR SHALL DESIGN AND BUILD), SEDIMENTATION BASIN, HYDRODYNAMIC SEPARATORS, VENT STRUCTURES, AND INFILTRATION FILTER SYSTEMS.
43. STORMWATER MANAGEMENT DURING CONSTRUCTION SHALL BE IN ACCORDANCE WITH THE STORMWATER POLLUTION PREVENTION PLAN.
44. TOTAL ESTIMATED EXCAVATION AREA FOR THE PROJECT IS 1.8 ACRES. THIS QUANTITY IS FOR PERMITTING PURPOSES AND SHALL NOT BE USED FOR THE CONTRACTOR'S BID.
45. THE CONTRACTOR IS RESPONSIBLE FOR STAKING ALL PROPERTY LINES BY A LICENSED SURVEYOR.
46. OVERHEAD POWER LINES LOCATION SHOWN ON PLAN IS APPROXIMATED, CONTRACTOR TO FIELD VERITY ACTURAL LOCATION AND HEIGHT.
47. THE CONTRACTOR SHALL BE RESPONSIBLE FOR BARRICADING ITS WORK AREA TO PREVENT VEHICLES FROM PARKING IN THE PROPOSED LINE OF OPERATIONS. ANY DAMAGE TO PARKED VEHICLES CAUSED BY THE CONSTRUCTION OPERATIONS SHALL BE THE CONTRACTORS LIABILITY.ALL TRAFFIC CONTROLS IN THE WORK AREA SHALL CONFORM TO THE "WORK ARE TRAFFIC CONTROL HANDBOOK" (W.A.T.C.H) LATEST EDITION AND THE CALIFORNIA MUTCP.
48. BEFORE CONSTRUCTION IS STARTED, CONTRACTOR SHALL COORDINATE WITH THE OWNER OF EACH UTILITY AND DEFINE THE REQUIREMENTS AND METHODS TO ACCOMMODATE THE PROTECTION, TEMPORARY SUPPORT, ADJUSTMENT, OR RELOCATION OF ANY UTILITIES AFFECTED BY THE PROPOSED NEW WORK.
49. CONTRACTOR TO PROVIDE TEMPORARY COVER FOR TRENCH, MANHOLES, VAULTS ETC WITH TRENCH PLATES INSTALLATION PER GREENBOOK REQUIREMENTS AND USE THE APPROVED PRODUCTS BY THE CITY WITH COMPLIANCE TO THE CITY STANDARD PLAN S-601-3.
50. CONTRACTOR TO PROVIDE TREE PROTECTION FOR EVERY TREE WITHIN THE CONSTRUCTION SITE (EXCEPT THOSE BEING REMOVED) PRIOR TO THE START OF WORK AND FOLLOW THE RECREATION AND PARK REQUIREMENTS INCLUDED IN THE LANDSCAPE ARCHITECTURE DRAWINGS AND SPECIFICATIONS.
51. CONTRACTOR SHALL PROTECT EXISTING IMPROVEMENTS WITHIN PROJECT WORK AREA PER GREENBOOK SECTION 400 - PROTECTION AND RESTORATION. CONTRACTOR SHALL RESTORE EXISTING IMPROVEMENTS WITHIN PUBLIC RIGHT-OF-WAY NOT MARKED FOR REMOVAL WHICH ARE DAMAGED OR REMOVED AT CONTRACTOR'S OWN COST.
52. ALL STRUCTURES AND HATCHES SHALL BE AASHTO AND ACI HS-20 RATED. ALL HATCHES TO HAVE FALL PROTECTION GRATING.
53. CONTRACTOR SHALL PREPARE A CONSTRUCTION MANAGEMENT PLAN FOR ACCEPTANCE BY THE ENGINEER PRIOR TO THE START OF CONSTRUCTION ACTIVITIES ON THE SITE. THIS PLAN IS TO INCLUDE THE FOLLOWING ITEMS RELATED TO THE CONSTRUCTION ACTIVITIES:
    A. MITIGATION MEASURES AND CONSTRUCTION CONTROLS
    B. PUBLIC FEEDBACK MECHANISMS IN ACCORDANCE WITH CITY POLICIES
    C. TREE PROTECTION
    D. SOIL MANAGEMENT AND REUSE PLAN FOR TOP SOIL AND NATIVE SOILS THAT ARE EXCAVATED
    E. PUBLIC ACCESS AND SIGNAGE TO ADDRESS CLOSURE OF PARK AND MAINTAIN THE RECREATION CENTER OPEN WITH SAFE PUBLIC ACCESS
    F. SITE SECURITY FOR CONSTRUCTION WORKS
    G. TRAFFIC MANAGEMENT PLAN FOR THE RECREATION CENTER SITE
54. CONTRACTOR SHALL PREPARE A CULTURAL RESOURCES MANAGEMENT PLAN FOR ACCEPTANCE BY THE ENGINEER PRIOR TO THE START OF CONSTRUCTION ACTIVITIES ON THE SITE. THIS PLAN IS TO INCLUDE A DESCRIPTION OF HISTORICAL RESOURCES PRESENT WITHIN THE PROJECT AREA, AND DEFINED OPERATIONAL AND PRESERVATION GOALS AND PRIORITIES PLANNED DURING THE CONSTRUCTION.
55. CONTRACTOR SHALL DOCUMENT CONTROL, CONTAINMENT OR SUPPRESSION ACTIVITIES DURING CONSTRUCTION OF MAJOR INVASIVE PLANT INFESTATIONS.
56. HOURS OF CONSTRUCTION ACTIVITIES SHALL BE WITHIN THE ALLOWED HOURS OF 7:00 AM TO 5:00 PM MONDAY THROUGH FRIDAYS.
57. DRAINS FROM ALL ACCESS HATCHES TO BE DIRECTED TO A 3 FTx3FTx3FT SUBSURFACE VOLUME OF 3/4" CRUSHED STONE PROVIDED AND INSTALLED BY THE CONTRACTOR.
58. THE ENGINEER DOES NOT WARRANT THE ACCURACY OF THE SCALED DIMENSIONS. ALL DIMENSIONS SHALL BE AS DESIGNATED ON THE PLANS.
59. THE CONTRACTOR SHALL BRING TO THE ENGINEER'S ATTENTION ANY OMISSIONS OR CONFLICTS BETWEEN VARIOUS ELEMENTS OF THE DRAWINGS, NOTES AND DETAILS PRIOR TO PROCEEDING WITH THE WORK.
60. THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS AND CONDITIONS IN THE FIELD BEFORE STARTING WORK. NOTIFY THE ENGINEER IMMEDIATELY OF AND DISCREPANCIES.
61. THE CONTRACTOR SHALL PROTECT ALL PUBLIC AND PRIVATE PROPERTY INSOFAR AS IT MAY BE ENDANGERED BY HIS/HER OPERATIONS FOR THE PROJECT. THE CONTRACTOR SHALL TAKE EVERY NECESSARY PRECAUTION TO AVOID DAMAGE TO EXISTING STRUCTURES AND ENSURE THE SAFETY OF PEDESTRIANS IN THE PROXIMITY OF THE WORK. THE CONTRACTOR SHALL FURNISH AND INSTALL APPROPRIATE SIGNS AND ADEQUATE WARNING DEVICES TO ADVISE THE PUBLIC OF CONSTRUCTION HAZARDS, AND UPON COMPLETION OF THE WORK SHALL PROMPTLY REMOVE THEM. ANY DAMAGE TO THE EXISTING STRUCTURES CAUSED BY THE CONTRACTOR'S OPERATIONS SHALL BE REPAIRED TO THE SATISFACTION OF THE ENGINEER AT NO COST TO THE CITY.
62. THE CONTRACTOR SHALL EXERCISE CARE THAT NO EXCAVATED MATERIAL OR DEBRIS RESULTING FROM HIS OPERATION SHALL RUN DOWN THE EXISTING SLOPE AND STREET OR OTHER PROPERTIES. EXISTING TREES AND SHRUBBERY, WHEN NOT IN DIRECT CONFLICT WITH CONSTRUCTION ACTIVITIES, SHALL BE PROTECTED.
63. EXISTING ABANDONED IMPROVEMENTS AS INDICATED BY THE ENGINEER THAT INTERFERE WITH THE PROPOSED CONSTRUCTION SHALL BE REMOVED AND DISPOSED OF BY THE CONTRACTOR UNLESS OTHERWISE NOTED. ALL MATERIAL SUCH AS VEGETATION, TIMBER, ROCKS, CONCRETE AND ASPHALT.
64. ANY TRENCHING FOR SUBDRAIN SHALL BE PLACED PROGRESSIVELY IN 20 FOOT LENGTHS. TRENCH SHALL BE EXCAVATED IN 20 FOOT LENGTHS AND SHALL BE BACKFILLED PRIOR TO EXCAVATION OF NEXT 20 FOOT SECTION.
65. CONTRACTOR SHALL SUBMIT SITE SPECIFIC PLANS FOR PROPOSED LAYOUT OF TEMPORARY EROSION CONTROL. OBTAIN GRADING INSPECTORS AND DEPARTMENT OF PUBLIC WORKS APPROVAL OF PROPOSED PROCEDURES. (L.A.B.C. SECTION 91.7007.1).
66. THE CONTRACTOR SHALL MAINTAIN ROADWAY ACCESS TO NEIGHBORHOOD PRIVATE PROPERTIES DURING THE NORMAL WORKING HOURS FROM 7:00 AM TO 4:00 PM AND SHALL REMOVE ALL WORKING EQUIPMENT FROM ROADWAY ACCESS BETWEEN HOUR OF 4:00 PM TO 7:00 AM OF THE FOLLOWING MORNING.
67. AT LEAST 10 DAYS BEFORE START OF CONSTRUCTION, THE CONTRACTOR SHALL GIVE THE NOTICE TO THE OCCUPANTS OF ADJACENT PROPERTIES OF THE PROPOSED CONSTRUCTION DATE PER SECTION 7-10 IN BROWNBOOK 7TH EDITION (LATEST).
68. THE CONTRACTOR SHALL NOTIFY HOMEOWNERS, TENANTS, AND PUBLIC EMERGENCY SERVICES (FIRE DEPARTMENT, RECREATION AND PARKS, AND POLICE DEPARTMENT) AFFECTED BY THIS WORK AT LEAST ONE WEEK PRIOR TO MOBILIZATION.
69. THE PERMIT SET OF STAMPED PLANS APPROVED BY BUILDING AND SAFETY SHALL BE ON THE JOB SITE AT ALL TIMES.
70. FILL SLOPES SHALL BE OVER BUILT AT LEAST 2 TO TO 3 FEET AND TRIMMED BACK TO EXPOSE A FIRM COMPACTED SURFACE ON THE SLOPE FACE.
71. NO FILL TO BE PLACED UNTIL STRIPPING OF VEGETATION, REMOVAL OF UNSUITABLE SOILS AND INSTALLATION OF SUBDRAINS (IF ANY) HAS BEEN INSPECTED AND APPROVED BY THE GEO SOILS ENGINEER.
72. NO ROCK OR SIMILAR MATERIAL GREATER THAN 6" IN DIAMETER SHALL BE PLACED IN THE FILL UNLESS RECOMMENDATION FOR SUCH PLACEMENT HAVE BEEN SUBMITTED BY THE SOIL ENGINEER IN ADVANCE AND APPROVED.
73. UNDERGROUND SERVICE ALERT: BEFORE COMMENCING ANY EXCAVATION , THE CONTRACTOR SHALL OBTAIN AN UNDERGROUND SERVICE ALERT (USA) INQUIRY I.D. NUMBER BY CALLING (800) 227-2600. TWO WORKING DAYS SHALL BE ALLOWED AFTER THE I.D. NUMBER IS OBTAINED AND BEFORE THE CONTRACTOR STARTS THE EXCAVATION WORK SO THAT UTILITY OWNERS CAN BE NOTIFIED. IF THE UTILITY OWNER IS THE CITY OF LOS ANGELES, A CONFIRMATION NUMBER INDICATION THE CITY HAS BEEN NOTIFIES SHALL BE OBTAINED BY USA AND/OR THE CONTRACTOR FROM THE APPROPRIATE CITY DEPARTMENT. THE I.D. NUMBER TOGETHER WITH THE DATE ACQUIRED SHALL BE REPORTED TO THE BUREAU OF CONTRACT ADMINISTRATION WHEN CALLING FOR INSPECTION. I.D. NUMBERS WILL NOT BE GIVEN MORE THAT 10 DAYS BEFORE STARTING EXCAVATION WORK.
74. THE CONTRACTOR SHALL PREPARE AND SUBMIT STORM DRAIN BYPASS PLANS FOR THE EXISTING 45 INCH STORM DRAIN 30 DAYS PRIOR TO THE START OF CONSTRUCTION OF THE DIVERSION STRUCTURE.
75. CONTRACTOR SHALL COMPLY WITH THE STATE OF CALIFORNIA INTEGRATED REGIONAL WATER MANAGEMENT GRANT PROGRAM AND THE COUNTY OF LOS ANGELES SAFE, CLEAN WATER PROGRAM CONDITIONS AND REQUIREMENTS AS SPECIFIED IN THE GRANT AGREEMENTS IN THE SPECIFICATION APPENDIX ATTACHMENTS.
76. EACH HATCH PER THIS CONTRACT TO BE PROVIDED WITH A SAFETY GRATE.
77. WITHIN THREE WEEKS OF THE BID AWARD CONTRACTOR TO SURVEY AND CONFIRM ELEVATIONS OF EXISTING 45" RCP STORM DRAIN AT THE DIVERSION STRUCTURE AND PROVIDE THESE ELEVATIONS TO THE ENGINEER.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

SUBGRADE WASTE FOR REMOVAL AND DISPOSAL

THE STRATHERN SITE IN THE AREA OF THE FACILITIES FOR THIS PROJECT HAVE BEEN FOUND TO HAVE SUBSURFACE CONSTRUCTION AND BURNT WASTES THAT WILL NEED SPECIAL DISPOSAL FROM THE SITE. CONTRACTOR TO FOLLOW THE REMOVAL AND DISPOSAL REQUIREMENTS PER THE *ADDITIONAL PHASE II ENVIRONMENTAL SITE ASSESSMENT, LABOE TOS NO. 25, STORMWATER CAPTURE PROGRAM, PORTION OF STRATHERN PARK NORTH, JULY 30, 2021* PROVIDED IN THE APPENDICES OF THE SPECIFICATIONS.

SUBGRADE PREPARATION FOR DESILTING BASIN WITH INLET STRUCTURE AND INFILTRATION GALLERY

ALLUVIUM IS ANTICIPATED AT THE BOTTOM OF THE PLANNED INFILTRATION GALLERY, DESILTING BASIN INLET STRUCTURES AND DESILTING BASINS THAT SHOULD BE SUITABLE FOR SUPPORT OF THE STRUCTURES AND OVERLYING COMPACTED FILL. THE EXCAVATION BOTTOM SHOULD BE EVALUATED BY THE ENGINEER DURING THE EXCAVATION WORK. IN THE EVENT THAT UNSUITABLE MATERIAL IS ENCOUNTERED ALONG THE BOTTOM OF THE EXCAVATION, INCLUDING UNDOCUMENTED FILL AND/OR WASTE, THE UNSUITABLE MATERIAL ENCOUNTERED AT THE BOTTOM OF THE STRUCTURE EXCAVATION SHALL BE REMOVED AND REPLACED WITH LOOSELY-PACKED CLEAN SAND OR GRAVEL, SUCH AS ADDITIONAL CRUSHED STONE. THE DECISION FOR REMOVAL AND REPLACEMENT SHALL BE BASED ON THE ENGINEER FIELD OBSERVATIONS. UNLESS DIRECTED BY THE ENGINEER, NO COMPACTION IS TO BE PERFORMED ON THE EXPOSED SUBGRADE, MATERIALS USED TO REPLACE UNSUITABLE MATERIALS (IF NEEDED), AND AND/OR CRUSHED STONE PLACED BENEATH THE STRUCTURES. THE CRUSHED STONE BLANKET SHALL CONSIST OF OPEN-GRADED GRAVEL OF 3/4-INCH TO 1 1/2-INCH DIAMETER ROCK. THE CRUSHED STONE LAYERS SHALL BE FREE OF FINES, DEBRIS, TRASH, ETC. FOR ADDITIONAL INFORMATION SEE GEOTECHNICAL EVALUATION LABOE TOS NO.25 STORMWATER CAPTURE PARKS PROGRAM STRATHERN PARK NORTH BY NINYO & MOORE DATED AUGUST 31,2020.

SUBGRADE PREPARATION FOR ALL OTHER STRUCTURES

IN ORDER TO PROVIDE SUITABLE SUPPORT FOR PROPOSED BURIED AND/OR AT-GRADE STRUCTURES, OTHER THAN INFILTRATION GALLERY AND DESILTING BASINS WITH INLET STRUCTURES, THE EXISTING UNDOCUMENTED FILL AND UPPER LOOSE ALLUVIAL DEPOSITS SHALL BE REMOVED FROM BENEATH THE STRUCTURES. IN ADDITION, THE STRUCTURE FOUNDATIONS SHOULD BE FOUNDED ON 2 FEET OF NEWLY COMPACTED STRUCTURAL FILL MATERIAL. THE OVER EXCAVATION SHALL REMOVE UNDOCUMENTED FULL AND EXPOSE RELATIVELY DENSE ALLUVIAL DEPOSITS. ADDITIONAL OVER-EXCAVATION OF LOOSE, SOFT, AND/OR WET AREAS MAY BE APPROPRIATE. THE EXCAVATION BOTTOM SHALL BE EVALUATED BY THE ENGINEER DURING THE EXCAVATION WORK AND ADDITIONAL RECOMMENDATIONS, IF NEEDED, BE BASED ON FIELD OBSERVATIONS. THE LIMITS OF REMOVAL SHALL EXTEND APPROXIMATELY 2 FEET BEYOND THE FOOTPRINT OF THE FOUNDATIONS. PRIOR TO PLACING COMPACTED STRUCTURAL FILL AND/OR DRAINAGE ROCK, THE UPPER APPROXIMATELY 8 INCHES OF THE EXPOSED BOTTOM SHALL BE SCARIFIED, MOISTURE-CONDITIONED TO NEW OPTIMUM MOISTURE CONTENT, AND RECOMPACTED TO A RELATIVE COMPACTION OF 90 PERCENT AS EVALUATED BY ASTM D 1557. FOR ADDITIONAL INFORMATION SEE GEOTECHNICAL EVALUATION LABOE TOS NO.25 STORMWATER CAPTURE PARKS PROGRAM STRATHERN PARK NORTH BY NINYO & MOORE DATED AUGUST 31,2020.

FILL MATERIAL, FILL PLACEMENT AND COMPACTION

IN GENERAL, THE ON-SITE SOILS SHALL BE SUITABLE FOR REUSE AS STRUCTURAL FILL AND FILL MATERIALS, PROVIDED THEY ARE FREE OF TRASH, DEBRIS, OVERSIZE MATERIAL, OR OTHER DELETERIOUS MATERIALS. FILL SHALL BE FREE OF ROCKS OR LUMPS OF MATERIAL IN EXCESS OF 4 INCHES IN DIAMETER. ROCKS OR HARD LUMPS LARGER THAN APPROXIMATELY 4 INCHES IN DIAMETER SHALL BE BROKEN INTO SMALLER PIECES OR SHALL BE REMOVED FROM THE SITE.

IMPORTED FILL MATERIAL, AS NEEDED AND DIRECTED BY THE ENGINEER, SHALL ALSO CONSIST OF CLEAN, GRANULAR MATERIAL WITH A LOW EXPANSION POTENTIAL, CORRESPONDING TO AN EXPANSION INDEX OF 50 OR LESS. THE SOIL SHALL ALSO BE TESTED FOR CORROSIVE PROPERTIES PRIOR TO IMPORTING. THE IMPORTED MATERIALS SHALL SATISFY THE CALTRANS (2018) CRITERIA FOR NON-CORROSIVE SOILS (i.e., SOILS HAVING A CHLORIDE CONCENTRATION OF 500 PARTS PER MILLION [ppm] OR LESS, A SOLUBLE SULFATE CONTENT OF APPROXIMATELY 0.15 PERCENT (1,500 ppm) OR LESS, A pH VALUE OF 5.5 OR HIGHER, OR AN ELECTRICAL RESISTIVITY OF 1,100 OHM-CENTIMETERS OR MORE). MATERIALS FOR USE AS STRUCTURAL FILL AND FILL WILL BE EVALUATED BY THE ENGINEER PRIOR TO IMPORTING. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE UNIFORMITY OF IMPORT MATERIAL BROUGHT TO THE SITE.

FILL MATERIAL, INCLUDING STRUCTURAL FILL BENEATH STRUCTURES, BACKFILL AROUND THE PERIMETER AND ABOVE STRUCTURES, AND OTHER, SHALL BE MOISTURE-CONDITIONED AND COMPACTED IN HORIZONTAL LIFTS TO A RELATIVE COMPACTION OF 9 0 PERCENT OR MORE AS EVALUATED BY ASTM D 1557. FILL MATERIAL WITH LESS THAN 5 PERCENT FINES (PASSING NO.200 SIEVE) SHALL BE COMPACTED TO 95 PERCENT RELATIVE COMPACTION IN ACCORDANCE WITH CITY OF LOS ANGELES GUIDELINES AS EVALUATED BY ASTM D 1557. FILL MATERIAL SHALL BE MOISTURE-CONDITIONED TO SLIGHTLY ABOVE THE LABORATORY OPTIMUM MOISTURE CONTENT. THE LIFT THICKNESS SHALL NOT EXCEED 8 INCHES IN LOOSE THICKNESS. PLACEMENT AND COMPACTION OF THE FILL SOILS SHALL BE IN GENERAL ACCORDANCE WITH LOCAL GRADING ORDINANCES AND GOOD CONSTRUCTION PRACTICE.

CONTRACTOR SHALL FOLLOW THE REQUIREMENTS OF THE DESILTING BASIN AND INFILTRATION GALLERY SUPPLIERS FOR SOIL COMPACTION OPERATIONS REGARDING ANY MACHINERY LIMITATIONS, PROTECTIONS AND MONITORING, ETC. NEEDED TO PROPERLY PROTECT THE IN PLACE STRUCTURES. FOR ADDITIONAL INFORMATION SEE GEOTECHNICAL EVALUATION LABOE TOS NO.25 STORMWATER CAPTURE PARKS PROGRAM STRATHERN PARK NORTH BY NINYO & MOORE DATED AUGUST 31,2020.

STREET LIGHTING

THE CONTRACTOR SHALL PROTECT AND MAINTAIN ALL STREET LIGHTING FACILITIES WITHIN THE WORK AREA. SHOULD ANY DAMAGE TO THE EXISTING STREET LIGHTING SYSTEM OCCUR, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE BUREAU OF STREET LIGHTING, FIELD OPERATION DIVISION, BY TELEPHONING (323) 913-4743; OR AFTER 4:30 PM (3:30 PM ON FRIDAYS), CONTACT THE ELECTRIC TROUBLE BOARD OF DWP AT (800) 821-5278 WITHIN THE (213) AND (310) AREA CODES OF LOS ANGELES. THE CONTRACTOR SHALL ARRANGE FOR IMMEDIATE REPAIR AND RESTORATION TO SERVICE OF THE DAMAGED LIGHTING SYSTEM AT NO COST TO THE CITY. A LICENSED ELECTRICAL CONTRACTOR IS REQUIRED TO MAKE ALL REPAIRS. ALL STREET LIGHTING WORK SHOULD BE MADE IN ACCORDANCE WITH THE LATEST EDITION AND SUPPLEMENTS OF THE "STANDARD SPECIFICATION FOR PUBLIC WORKS CONSTRUCTION," ADOPTED BY THE CORRESPONDING ISSUE OF THE BROWN BOOK AND THE BUREAU OF STREET LIGHTING "SPECIAL SPECIFICATIONS" INCLUDING LATEST REVISIONS.

SIGNS AND MARKINGS MAINTENANCE

1. THE CONTRACTOR SHALL FOLLOW THE GREEN BOOK SECTION 400 PROTECTION AND RESTORATION AND MAKE ARRANGEMENTS FOR THE RESTORATION OF ALL OBLITERATED PAVEMENT MARKINGS AND FOR THE REINSTALLATION OF ALL MISSING OR DAMAGED SIGNS, CURB MARKINGS, STAMPED CROSSWALKS, PARKING METERS, ETC. IN SOME CASES, THE CONTRACTOR MAY BE REQUIRED TO INSTALL OBLITERATED AND RELATED PAVEMENT MARKINGS AS WELL AS MISSING, DAMAGED AND/OR RELATED SIGNS, TO THE SATISFACTION OF LADOT.
2. ALL STRIPING AND PAVEMENT MARKINGS SHALL BE INSTALLED UTILIZING THERMOPLASTIC MATERIALS PER LADOT SPECIFICATIONS. THE CONTRACTOR SHALL CONTACT LADOT'S WESTERN DISTRICT OFFICE AT (310) 575-8138 PRIOR TO COMMENCING ANY WORK THAT REQUIRES SIGN AND/OR MARKING MAINTENANCE.
3. IN ADDITION TO SIGNS REQUIRED BY THE REVISIONS OF THE "WORK AREA TRAFFIC CONTROL HANDBOOK" (WATCH), LATEST EDITION, FURNISH AND PLACE SIGNS FOR GIVING ADVANCE NOTICE TO MOTORISTS OF TRAFFIC DISRUPTION AS PART OF THIS PROJECT IN ACCORDANCE WITH SECTION 01581 OF THE SPECIFICATIONS. THE CONTRACTOR IS RESPONSIBLE TO DESIGN, OBTAIN, PAY AND IMPLEMENT A WORK SITE TRAFFIC CONTROL PLAN AND THE CONTRACTOR SHALL MAINTAIN/ADJUST THE PLAN AS IT IS NEEDED FOR THE WORK.

STANDARD CONDITIONS FOR CONSTRUCTION WITHIN LADWP ELECTRICAL EASEMENT

1. ENERGIZED TRANSMISSION LINES CAN PRODUCE ELECTRICAL EFFECTS INCLUDING, BUT NOT LIMITED TO, INDUCED VOLTAGES AND CURRENTS IN PERSONS AND OBJECTS. CONSENTEE HEREBY ACKNOWLEDGES A DUTY TO CONDUCT ACTIVITIES IN SUCH MANNER THAT WILL NOT EXPOSE PERSONS TO INJURY OR PROPERTY TO DAMAGE FROM SUCH EFFECTS.
2. THE LOS ANGELES DEPARTMENT OF WATER AND POWER (LADWP) PERSONNEL SHALL HAVE ACCESS TO THE RIGHT OF WAY AT ALL TIMES.
3. UNAUTHORIZED PARKING OF VEHICLES OR EQUIPMENT SHALL NO BE ALLOWED ON THE RIGHT OF WAY AT ANY TIME.
4. UNAUTHORIZED STORAGE OF EQUIPMENT OR MATERIAL SHALL NOT BE ALLOWED ON THE RIGHT OF WAY AT ANY TIME.
5. FUELING OF VEHICLES OR EQUIPMENT SHALL NOT BE ALLOWED ON THE RIGHT OF WAY AT ANY TIME.
6. PATROL ROADS AND/OR THE GROUND SURFACES OF THE RIGHT OF WAY SHALL BE RESTORED BY THE CONSENTEE TO ORIGINAL CONDITIONS, OR BETTER.
7. ALL TRASH, DEBRIS, WASTE, AND EXCESS EARTH SHALL BE REMOVED FROM THE RIGHT OF WAY UPON COMPLETION OF THE PROJECT, OR THE LADWP MAY DO SO AT THE SOLE RISK AND EXPENSE OF THE CONSENTEE.
8. ALL CUT AND FILL SLOPES WITHIN THE RIGHT OF WAY SHALL CONTAIN ADEQUATE BERMS, BENCHES, AND INTERCEPTOR TERRACES. REVEGETATION MEASURES SHALL ALSO BE PROVIDED FOR DUST AND EROSION CONTROL PROTECTION OF THE RIGHT OF WAY.
9. ALL PAVING, DRIVEWAYS, BRIDGES, CROSSINGS, AND SUBSTRUCTURES LOCATED WITHIN THE RIGHT OF WAY SHALL BE DESIGNED TO WITHSTAND THE AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS' VEHICULAR LOADING H20-44 OR HL-93. THE DESIGN SHALL ALSO COMPLY WITH APPLICABLE DESIGN STANDARDS.
10. GENERAL GROUNDING CONDITION
    ALL ABOVEGROUND METAL STRUCTURES INCLUDING, BUT NOT LIMITED TO, PIPES, DRAINAGE DEVICES, FENCES, AND BRIDGE STRUCTURES LOCATED WITHIN OR ADJOINING THE RIGHT OF WAY SHALL BE PROPERLY GROUNDED, AND SHALL BE INSULATED FROM ANY FENCING OR OTHER CONDUCTIVE MATERIALS LOCATED OUTSIDE OF THE RIGHT OF WAY. FOR SAFETY OF PERSONNEL AND EQUIPMENT, ALL EQUIPMENT AND STRUCTURES SHALL BE GROUNDED IN ACCORDANCE WITH STATE OF CALIFORNIA CODE OF REGULATION, TITLE 8, SECTION 2941, AND NATIONAL ELECTRIC CODE, ARTICLE 250.
11. CONSENTEE SHALL NEITHER HOLD THE LADWP LIABLE FOR NOR SEEK INDEMNITY FROM THE LADWP FOR ANY DAMAGE TO THE CONSENTEE'S PROJECT DUE TO THE FUTURE CONSTRUCTION OR RECONSTRUCTION BY THE LADWP WITHIN THE RIGHT OF WAY.
12. FIRES AND BURNING OF MATERIALS IS NOT ALLOWED ON THE RIGHT OF WAY.
13. CONSENTEE SHALL CONTROL DUST BY DUST-ABATEMENT PROCEDURES APPROVED BY THE LADWP, SUCH AS THE APPLICATION OF A DUST PALLIATIVE OR WATER.
14. THE RIGHT OF WAY CONTAINS HIGH-VOLTAGE ELECTRICAL CONDUCTORS; THEREFORE, THE CONSENTEE SHALL UTILIZE ONLY SUCH EQUIPMENT, MATERIAL, AND CONSTRUCTION TECHNIQUES THAT ARE PERMITTED UNDER APPLICABLE SAFETY ORDINANCES AND STATUTES, INCLUDING THE FOLLOWING: STATE OF CALIFORNIA CODE OF REGULATIONS, TITLE 8, INDUSTRIAL RELATIONS, CHAPTER 4, DIVISION OF INDUSTRIAL SAFETY, SUBCHAPTER 5, ELECTRICAL SAFETY ORDERS; AND CALIFORNIA PUBLIC UTILITIES COMMISSION, GENERAL ORDER NO. 95, RULES FOR OVERHEAD ELECTRIC LINE CONSTRUCTION.
15. CONSENTEE IS HEREBY NOTIFIED THAT GROUNDING WIRES MAY BE BURIED IN THE RIGHT OF WAY; THEREFORE, THE CONSENTEE SHALL NOTIFY THE LADWP'S TRANSMISSION CONSTRUCTION AND MAINTENANCE BUSINESS GROUP AT (818) 771-5014, OR (818) 771-5076, AT LEAST 48 HOURS PRIOR TO THE START OF ANY CONSTRUCTION ACTIVITIES IN THE RIGHT OF WAY.
16. VEHICLE PARKING
    AN AREA WITHIN 50 FEET AROUND THE BASE OF EACH TOWER MUST REMAIN OPEN AND UNOBSTRUCTED FOR MAINTENANCE AND EMERGENCIES, INCLUDING PERIODIC WASHING OF INSULATORS BY HIGH-PRESSURE WATER SPRAY. CLEARANCES OF 100 FEET MAY BE REQUIRED UNDER CIRCUMSTANCES WHERE ACCESS IS LIMITED.
17. DETAILED PLANS FOR ANY GRADING, PAVING, AND CONSTRUCTION WORK WITHIN THE RIGHT OF WAY SHALL BE SUBMITTED FOR APPROVAL TO THE REAL ESTATE SERVICES, 221 N. FIGUEROA ST., SUITE 1600, LOS ANGELES, CALIFORNIA 90012, NO LATER THAN 45 DAYS PRIOR TO THE START OF ANY GRADING, PAVING, OR CONSTRUCTION WORK. NOTWITHSTANDING ANY OTHER NOTICES GIVEN BY CONSENTEE REQUIRED HEREIN, CONSENTEE SHALL NOTIFY THE LADWP'S TRANSMISSION CONSTRUCTION AND MAINTENANCE BUSINESS GROUP AT (818) 771-5014, OR (818) 771-5076, NO EARLIER THAN 14 DAYS AND NO LATER THAN TWO DAYS PRIOR TO THE START OF ANY GRADING, PAVING, OR CONSTRUCTION WORK.
18. IN THE EVENT THAT CONSTRUCTION WITHIN THE RIGHT OF WAY IS DETERMINED UPON INSPECTION BY THE LADWP TO BE UNSAFE OR HAZARDOUS TO THE LADWP FACILITIES, THE LADWP MAY ASSIGN A LINE PATROL MECHANIC AT THE CONSENTEE'S EXPENSE.
19. IF THE LADWP DETERMINES AT ANY TIME DURING CONSTRUCTION THAT THE CONSENTEE'S EFFORTS ARE HAZARDOUS OR DETRIMENTAL TO THE LADWP FACILITIES, THE LADWP SHALL HAVE THE RIGHT TO IMMEDIATELY TERMINATE SAID CONSTRUCTION.
20. ALL CONCENTRATED SURFACE WATER WHICH IS DRAINING AWAY FROM THE CONSENTEE'S ACTIVITY SHALL BE DIRECTED TO AN APPROVED STORM DRAIN SYSTEM WHERE ACCESSIBLE, OR OTHERWISE RESTORED TO SHEET FLOW BEFORE BEING RELEASED WITHIN OR FROM THE RIGHT OF WAY.
21. DRAINAGE FROM THE PAVED PORTIONS OF THE RIGHT OF WAY SHALL NOT ENTER THE UNPAVED AREA UNDER THE TOWERS. DRAINAGE DIVERSIONS SUCH AS CURBS SHALL BE USED ON THREE SIDES OF EACH TOWER. THE OPEN SIDE OF EACH TOWER SHALL BE THE LOWEST ELEVATION SIDE TO ALLOW STORM WATER WHICH FALLS UNDER THE TOWER TO DRAIN. THE AREA UNDER THE TOWERS SHALL BE MANUALLY GRADED TO SHEET FLOW OUT FROM UNDER THE TOWERS.
22. PONDING OR FLOODING CONDITIONS WITHIN THE RIGHT OF WAY SHALL NOT BE ALLOWED, ESPECIALLY AROUND THE TRANSMISSION TOWERS. ALL DRAINAGE SHALL FLOW OFF OF THE RIGHT OF WAY.
23. CONSENTEE SHALL COMPLY WITH ALL LOS ANGELES COUNTY MUNICIPAL STORM WATER PERMIT ND STANDARD URBAN STORM WATER MITIGATION PLAN REQUIREMENTS.
24. FILLS, INCLUDING BACKFILLS, SHALL BE IN HORIZONTAL, UNIFORM LAYERS NOT TO EXCEED SIX INCHES IN THICKNESS BEFORE COMPACTION, THEN COMPACTED TO 90 PERCENT RELATIVE COMPACTION IN ACCORDANCE WITH THE AMERICAN SOCIETY FOR TESTING AND MATERIALS D1557.
25. THE TOP TWO INCHES TO SIX INCHES OF THE CONCRETE FOOTINGS OF THE TOWERS SHALL REMAIN EXPOSED AND NOT COVERED OVER BY ANY FILL FROM GRADING OPERATIONS.
26. THE CONSENTEE SHALL OBTAIN AND PAY FOR ALL PERMITS AND LICENSES REQUIRED FOR PERFORMANCE OF THE WORK AND SHALL COMPLY WITH ALL LAWS, ORDINANCES, RULES, ORDERS, OR REGULATIONS INCLUDING, BUT NOT LIMITED TO, THOSE OF ANY AGENCIES, DEPARTMENTS, DISTRICTS, OR COMMISSIONS OF THE STATE, COUNTY, OR CITY HAVING JURISDICTION THEREOVER.
27. CONSENTEE SHALL INSTALL K-RAILS AT A DISTANCE OF TEN FEET FROM EACH SIDE OF THE TOWER BASE FOR PROTECTION OF TOWERS. A DISTANCE OF FIVE FEET FROM THE TOWER BASE MAY BE ACCEPTABLE IN LOCATIONS WHERE THE PATROL ROADS WOULD BE OBSTRUCTED.
28. CONSENTEE SHALL INSTALL REMOVABLE PIPE BOLLARDS, SPACED FOUR FEET APART, AND AT A DISTANCE OF TEN FEET FROM EACH SIDE OF THE TOWER BASE FOR PROTECTION OF TOWERS. A DISTANCE OF FIVE FEET FROM THE TOWER BASE MAY BE ACCEPTABLE IN LOCATIONS WHERE THE PATROL ROADS WOULD BE OBSTRUCTED.
29. CONSENTEE SHALL PROVIDE AND MAINTAIN A MINIMUM 20-FOOT WIDE TRANSITION RAMP FOR THE PATROL ROADS FROM THE PAVEMENT TO THE GROUND SURFACE. THE RAMP SHALL NOT EXCEED A SLOPE OF TEN PERCENT.
30. CONSENTEE SHALL PROVIDE AND MAINTAIN A MINIMUM 20-FOOT WIDE DRIVEWAY AND GATE AT ALL LOCATIONS WHERE THE (ROAD/STREET) CROSSES THE LADWP'S PATROL ROADS. THE DESIGNED GATES MUST BE CAPABLE OF BEING INTERLOCKED WITH AN LADWP PADLOCK TO ALLOW ACCESS TO THE RIGHT OF WAY BY THE LADWP.
31. CONSENTEE SHALL POST A SIGN ON THE ENTRANCE GATE TO THE RIGHT OF WAY, OR IN A VISIBLE LOCATION INSIDE THE ENTRANCE GATE, IDENTIFYING THE CONTACT PERSON'S NAME AND TELEPHONE NUMBER FOR THE PROMPT MOVING OF (VEHICLES/TRUCKS/TRAILERS/CONTAINERS) AT TIMES OF LADWP MAINTENANCE OR EMERGENCY ACTIVITIES, OR ANY OTHER EVENT THAT (VEHICLES/TRUCKS/TRAILERS/CONTAINERS) MUST BE MOVED. IN EMERGENCY CONDITIONS, THE LADWP RESERVES ALL RIGHTS AT ANY TIME TO MOVE OR TOW (VEHICLES/TRUCKS/TRAILERS/ CONTAINERS) OUT OF SPECIFIC AREAS FOR ANY TRANSMISSION OPERATION OR MAINTENANCE PURPOSES.

CUT AND FILL ESTIMATES
TOTAL CUT VOLUME OF 80,000 CY
TOTAL FILL VOLUME OF 25,000 CY

NOTE: THESE QUANTITIES ARE ROUGH ESTIMATES FOR PERMITTING PURPOSES AND SHALL NOT BE USED FOR THE CONTRACTOR'S BID

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

NOTES

1. **GRADING/RETAINING WALL/SHORING PLAN CORRECTION SHEETS (2017 LABC)** ITEM **C-5.**
   a. ALL GRADING SLOPES SHALL BE PLANTED AND SPRINKLERED. (7012.1).
   b. STANDARD 12 INCH HIGH BERM IS REQUIRED AT TOP OF ALL GRADED SLOPES. (7013.3).
   c. NO FILL TO BE PLACED, UNTIL THE CITY GRADING INSPECTOR HAS INSPECTED AND APPROVED THE BOTTOM EXCAVATION.
   d. MAN-MADE FILL SHALL BE COMPACTED TO A MINIMUM RELATIVE COMPACTION OF 90% MAX. DRY DENSITY WITHIN 40 FEET BELOW FINISH GRADE AND 93% OF MAX. DRY DENSITY DEEPER THAN 40 FEET BELOW FINISH GRADE, UNLESS A LOWER RELATIVE COMPACTION (NOT LESS THAN 90% OF MAX. DRY DENSITY) IS JUSTIFIED BY THE SOILS ENGINEER.
   e. TEMPORARY EROSION CONTROL TO BE INSTALLED DURING THE WET SEASON (BETWEEN OCTOBER 1 AND APRIL 15). OBTAIN GRADING INSPECTOR'S AND DEPARTMENT OF PUBLIC WORKS APPROVAL OF PROPOSED PROCEDURES. [>200 CY] (7007.1).
2. INSTALL GATE PER STANDARD 600-4. FIELD VERIFY HEIGHT AND MATCH. APPROXIMATE HEIGHT IS 8 FT.
3. FIELD VERIFY JOINS.

INFILTRATION GALLERY PLAN

1" = 20'

NOTES:

1. OVERALL DIMENSIONS ARE APPROXIMATE. FINAL DIMENSIONS SHALL BE DETERMINED BASED ON SUPPLIER SHOP DRAWING SUBMITTALS.
2. FINISHED GRADE NOT SHOWN FOR CLARITY.
3. INFILTRATION DESIGN CRITERIA TO BE BE MET BY INFILTRATION GALLERY SUPPLIER:

   MINIMUM TOTAL VOLUME OF STORAGE WITH 1 FT OF FREEBOARD= 663,000 CF

   MINIMUM TOTAL VOLUME OF STORAGE WITH NO FREEBOARD= 712,000 CF

   MINIMUM AREA OF INFILTRATION BENEATH THE GALLERY INCLUDING STONE BLANKET 2 FT BEYOND PERIMETER = 64,000 SF

   PEAK INFLUENT FLOW RATES THROUGH SLIDE GATE VAULT IS 31 CFS

   PROVIDE INTERIOR ACCESS THROUGH MECHANIZED/ELECTRIC VEHICLE (BY OTHERS) WITH A MINIMUM TRAVEL WIDTH OF 4 FEET THAT ALLOWS THE VEHICLE TO CONTINUALLY ACCESS ALL PRECAST UNITS WITH A MAXIMUM OF 32 FEET VEHICLE BACKUP DISTANCE TO EXIT A DEAD END LOCATION. SEE DETAIL BELOW FOR AN ALTERNATE INTERIOR TURN-AROUND ARRANGEMENT.

   PROVIDE ALL ACCESS HATCHES AND MANHOLE ACCESS IN SIZES AND LOCATIONS ON PLAN.

   ALL UNITS OF THE INFILTRATION GALLERY SHALL BE DESIGNED FOR HS-20 LOADING.
4. DESILTING BASINS TO BE PROVIDED AS SHOWN ON THE DRAWINGS AND SHALL BE DESIGNED FOR HS-20 LOADING.

4'-0" MAINTENANCE TRAVEL WAY ISOMETRIC VIEW

SHEET 32 OF 85 SHEETS

BASEBALL FIELD NO. 5 PLAN
FIELD SIZE 60' AND 70' BASE DISTANCE

CONSTRUCTION LEGEND

1. INSTALL 4" - 6" LAYER OF "PRO-GOLD SOFTBALL MIX" PER PLANS AND SPECIFICATIONS, OR APPROVED EQUAL. SUPPLIED BY GAIL MATERIALS: 951-667-6106, WWW.GAILMATERIALS.NET.
2. INSTALL 8' HIGH CHAIN LINK FENCE DUGOUT WITH ALUMINUM ROOF PER DETAIL 901, SHEET LS09.
3. INSTALL 10' HIGH CHAIN LINK SIDE LINE FENCE WITH CONCRETE MOW STRIP PER DETAIL 701, SHEET LS07.
4. INSTALL BACKSTOP: MODEL LA1644T (4-1/2" POSTS, FRONT 23'6" HIGH X 44' WIDE; REAR 16' HIGH X 30' WIDE; SIDES 16' HIGH X 10' WIDE, 7'6" DEEP). FROM LA STEELCRAFT. CONTACT: 866-210-5316. INSTALL PER MANUFACTURER'S INSTRUCTIONS. REFER TO DETAIL 1101, SHEET LS11 FOR ADDITIONAL INFORMATION.
5. INSTALL (2) 12' PLAYERS BENCHES, PER DUGOUT. MODEL # PE-12, AVAILABLE FROM NATIONAL RECREATION SYSTEMS, CONTACT: NATE YOUNKER (858) 344-0445, INSTALL PER MANUFACTURER'S INSTRUCTIONS.
6. INSTALL (2) 30', 5-TIER BLEACHERS WITH WHEELCHAIR CUTOUTS, MODEL # NA-0530-ADA-VP, AVAILABLE FROM NATIONAL RECREATION SYSTEMS, CONTACT: NATE YOUNKER (858) 344-0445, INSTALL PER MANUFACTURER'S INSTRUCTIONS.
7. INSTALL (1) BAT RACK PER DUGOUT (2) TOTAL PER FIELD, MODEL # BR-8, AVAILABLE FROM L.A. STEELCRAFT, AVAILABLE FROM NATIONAL RECREATION SYSTEMS, CONTACT: NATE YOUNKER (858) 344-0445, INSTALL PER MANUFACTURER'S INSTRUCTIONS.
8. INFIELD STORAGE BOX, PER DETAIL 706, SHEET LS07.
9. INSTALL BOLCO STEP-DOWN' PITCHERS RUBBER, YOUTH SIZE 4" X 18" SKU# 1236392, AVAILABLE FROM: BSNSPORTS.COM, (800) 856-3488. INSTALL PER MANUFACTURER'S INSTRUCTIONS. FURNISH (1) PITCHER'S RUBBER FOR FIELD NO. 5.
10. INSTALL CONCRETE PAVING PER DETAIL 401 & 402, SHEET LS04.
11. INSTALL 'HOLLYWOOD IMPACT' BASE (SKU# 1236439) WITH GROUND ANCHORS (SKU# 1236507) AND BASE PLUGS (SKU# BBRPLUGS), AVAILABLE FROM: BSNSPORTS.COM, (800) 856-3488. INSTALL PER MANUFACTURER'S INSTRUCTIONS. FURNISH (1) SET OF BASES FOR FIELD NO. 6. INSTALL AT DISTANCES SHOWN ON PLANS.
12. INSTALL 'HOLLYWOOD' HOME PLATE, SKU# 1236477,AVAILABLE FROM: BSNSPORTS.COM, (800) 856-3488. INSTALL PER MANUFACTURER'S INSTRUCTIONS. FURNISH (1) HOME PLATE FOR FIELD NO. 6.
13. INSTALL OUTFIELD TURF PER PLANTING PLAN AND SPECIFICATIONS.
14. INSTALL MURDOCK HI-LO DRINKING FOUNTAIN PER DETAIL 1001, SHEET LS10.
15. INSTALL 4' WIDE SINGLE CHAIN LINK GATES WHERE INDICATED. PER DETAIL 702, SHEET LS07.
16. INSTALL (2) 20' HIGH FOUL POLES. MODEL# FLP-20 IN-GROUND MOUNT. AVAILABLE FROM L.A. STEELCRAFT, AVAILABLE FROM NATIONAL RECREATION SYSTEMS, CONTACT: NATE YOUNKER (858) 344-0445, INSTALL PER MANUFACTURER'S INSTRUCTIONS.
17. INSTALL 16' HIGH CHAIN LINK SIDE LINE FENCE WITH CONCRETE MOW STRIP PER DETAIL 501, SHEET LS05.
18. INSTALL 10' HIGH X 10' WIDE DOUBLE CHAIN LINK GATE., PER DETAIL 705, SHEET LS07.
19. INSTALL 6' HIGH CHAIN LINK OUTFIELD FENCE WITH FENCE CAP AND CONCRETE MOW STRIP PER DETAIL 704, SHEET LS07.
20. INSTALL BULLPEN WITH 8' HIGH CHAIN LINK FENCE ON A 12" CONCRETE MOWSTRIP WITH A 4' PEDESTRIAN GATE, DECOMPOSED GRANITE PAVING, ONE HOMEPLATE AND ONE PITCHER'S RUBBER FOR EACH BULLPEN PER DETAIL 901, SHEET LS09.
21. PROVIDE (1) SURFACE MOUNT HELMET RACK PER DUGOUT, (2) TOTAL PER FIELD. SKU# 1238464. AVAILABLE FROM: BSNSPORTS.COM, (800) 856-3488. INSTALL PER MANUFACTURER'S INSTRUCTIONS.
22. ANNOUNCERS AREA. PROVIDE 12VAC ELECTRICAL SERVICE WITH EXTERIOR RECEPTABLE AND LOCKING COVER.
23. INSTALL PITCHER'S MOUND PER DETAIL 401, SHEET LS04.
24. FURNISH AND INSTALL KEYSTONE RIDGE RE3D-55 "READING" ROUND LITTER RECEPTACLE WITH LOCKABLE TABS, SIDE ACCESS DOOR, SURFACE MOUNT WITH FLAT LID-NO LINER. SURFACE MOUNT-INSTALL PER MANUFACTURER'S INSTRUCTIONS. COLOR: TBD

EJ — CONCRETE PAVING EXPANSION JOINT. REFER TO DETAIL 401, SHEET LS04.

CONCRETE PAVING TOOLED SCORELINE. REFER TO DETAIL 401, SHEET LS04.

NOTE:
ALL FENCING ADJACENT TO PAVING SHALL HAVE PAVING EXTEND BENEATH THE FENCE. ALL OTHER FENCING SHALL HAVE CONCRETE MOW STRIP.

SHEET NAME
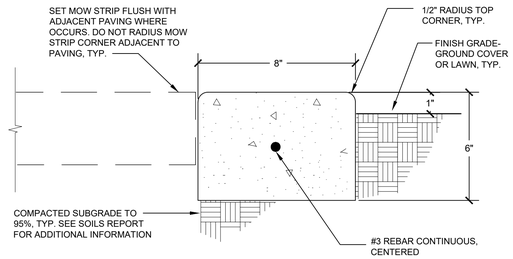
LS03
SHEET 34 OF 85 SHEETS

PLAN VIEW: LAYOUT

SECTION A

NOTES:

1.) LOCATE THE PITCHING PLATFORM EXTENTS (ASSURE EXACT MEASUREMENTS: THE INSIDE EDGE SHOULD BE POSITIONED 6 INCHES IN FRONT OF THE RUBBER, 24 INCHES IN THE BACK OF THE RUBBER AND 18 INCHES ON EACH SIDE OF THE RUBBER.)

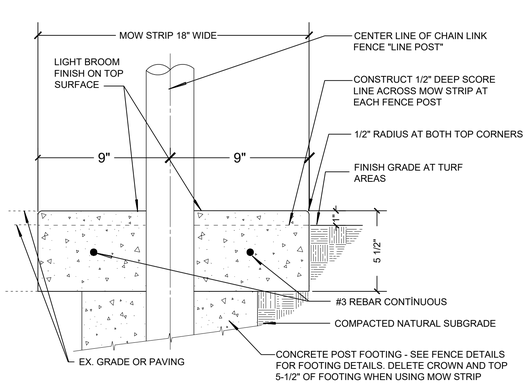


2.) LOOSEN AND REMOVE EXISTING SOIL WITHIN THE OUTLINE TO THE APPROPRIATE DEPTH.ÊTHE MOUND CLAYÊSHOULD BEÊMINIMUM 6 INCHESÊTHICK - SEE LAYOUT ABOVE. LOOSEN OR SCARIFY THE SOIL AT THE BASE OF THE HOLE. ONCE OUTLINE IS IN PLACE, ADD MOUND CLAY (BY TURFACE OR APPROVED EQUAL.

3.) ADD MOUND CLAY IN 1" LIFTS AND TAMP FIRM (OR USE A VIBRATING COMPACTOR). SCRATCH UP THE EXISTING SOIL AND MIX WITH THE FIRST INCH OF MOUND CLAY TO ASSURE A GOOD BOND. LIGHTLY WATER AND TAMP EACH 1-INCH LAYER UNTIL REACHING THE REQUIRED HEIGHT.

4.) INSTALL PITCHING RUBBER AT APPROPRIATE DEPTH AND CONTINUE MOUND CLAY TO 1" BELOW FINAL GRADE.

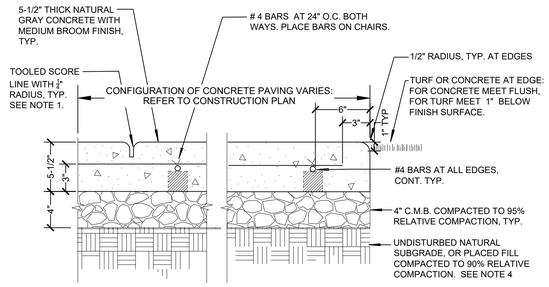
5.) AFTER THE MOUND CLAY BASE IS COMPLETELY CONSTRUCTED, BACKFILL AROUND BASE WITH INFIELD MATERIAL PER LANDSCAPE CONSTRUCTION NOTES, AND SLOPE TO CORRECT GRADE PER DETAIL ABOVE. RAKE A 1" COATING OF INFIELD MIX AVER COMPACTED COMPLETED MOUND BASE, AND GRADE TO FINISH LEVEL.



405	PITCHING MOUND LAYOUT AND CONSTRUCTION	
N.T.S.		RP DETAIL 5450

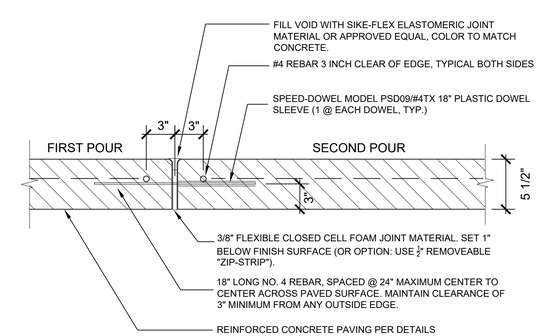
SECTION

NOTES:
1. SCORE MOW STRIP AT 10' O.C. MAX. AND AT ALL CHANGES IN DIRECTION SIMILAR TO CONCRETE PAVING DETAIL.
2. WHEN MOW STRIP IS INSTALLED ADJACENT TO EXISTING A.C. PAVING, THE EXISTING A.C. PAVING SHALL BE SAW-CUT 12" FROM THE EDGE OF THE MOW STRIP AND NEW ASPHALT CONCRETE PLACED AFTER MOW STRIP IS IN PLACE.



403	CONCRETE MOW STRIP	
N.T.S.	BOE VERSION Feb/08 - RF,SD	RP DETAIL L3200

NOTES:
1. PLACE PLASTIC CONTROL JOINTS AT ALL CHANGES IN DIRECTION.
2. WHEN MOW STRIP IS INSTALLED ADJACENT TO EXISTING A.C. PAVING,THE EXISTING A.C. PAVING SHALL BE SAW CUT 12" FROM THE EDGE OF THE MOW STRIP AND NEW ASPHALT CONCRETE PLACED AFTER MOW STRIP IS IN PLACE.
3. CONCRETE SHALL BE NATURAL COLOR UNLESS OTHERWISE NOTED.



RP VERSION 12-09-04, SLG

404	CONCRETE MOW STRIP AT CHAINLINK FENCE	
N.T.S.		RP DETAIL 321

NOTES:
1. PROVIDE TOOLED SCORE LINES, 1" DEEP, AT LOCATIONS SHOWN ON CONSTRUCTION PLAN. SAW-CUT SCORE LINES MAY BE APPROVED AS AN ALTERNATE METHOD AT THE DISCRETION OF THE PROJECT MANAGER.
2. EXPANSION JOINTS SHALL BE CONSTRUCTED PER DETAIL AT LOCATIONS SHOWN ON PLAN.
3. PROVIDE ISOLATION JOINT PER DETAIL AGAINST PREVIOUSLY CONSTRUCTED FIXED ELEMENTS.
4. END OF POUR JOINTS - SEE LANDSCAPE CONSTRUCTION NOTES.

401	CONC. PAVING W/CM BASE, NO THICK. EDGE	
N.T.S	RP REVISED 7-2-13 RWF	RP DETAIL L3020

SECTION

NOTE:
1. MAINTAIN LINE AND GRADE AT EXPANSION JOINTS.
2. EXPANSION JOINT SHALL BE PLACE AT MAX. SPACING OF EVERY 20' UNLESS OTHERWISE SPECIFIED ON THE CONSTRUCTION PLAN.

402	DOWELED EXPANSION JOINT	
N.T.S.		RP DETAIL L3070

CONSTRUCTION DETAIL NOTES

1. THE FOLLOWING NOTES APPLY TO ALL DETAILS AS SHOWN IN THIS SET OF DOCUMENTS, UNLESS OTHERWISE NOTED.
2. FOR ADDITIONAL INFORMATION REFER TO CONSTRUCTION NOTES.
3. REFER TO CONSTRUCTION LEGEND FOR INFORMATION RELATIVE TO COLOR, TYPE AND FINISH.
4. UNLESS OTHERWISE NOTED, NEW FINISH SURFACE SHALL BE FLUSH WITH ADJACENT EXISTING SURFACES.
5. FINISH GRADE SHALL BE 1" BELOW FINISH SURFACE AT ALL PLANTER OR TURF AREAS.
6. FINAL LOCATION OF CONSTRUCTION ELEMENTS, DRAINAGE DEVICES, SITE AMENITIES, IRRIGATION EQUIPMENT, AND PLANT MATERIAL MAY REQUIRE ADJUSTMENT DUE TO FIELD CONDITIONS AND SHALL BE APPROVED PRIOR TO CONSTRUCTION.
7. CONTRACTOR SHALL VERIFY ALL MATCHING MATERIALS AND COLORS PRIOR TO INSTALLATION. CONTRACTOR SHALL NOTIFY LANDSCAPE ARCHITECT OF ANY DISCREPANCIES PRIOR TO INSTALLATION.
8. CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

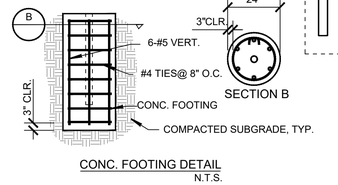
SHEET NAME LS04



SHEET 35 OF 85 SHEETS

ELEVATION

NOTE:
CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

REFER TO SHEET LS04 FOR ADDITIONAL FENCING DETAILS.

CONC. FOOTING DETAIL
N.T.S.

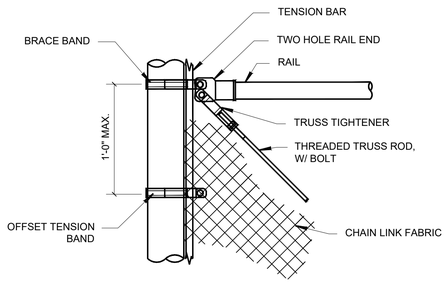
FENCE CONSTRUCTION NOTES

REFER TO THE SPECIFICATIONS SECTION FOR CHAIN LINK FENCING AND INSTALLATION OF CHAIN LINK FENCE FABRIC PER SSPWC 206-6, 304-3 FOR CHAIN LINK FENCE CONSTRUCTION.

CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

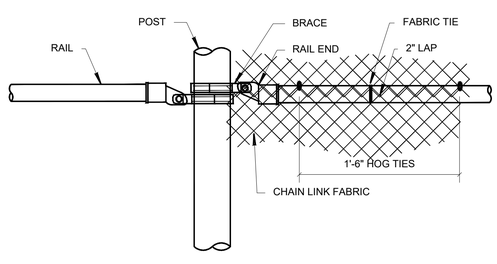
MATERIALS:
1. BRACE BANDS & OFFSET TENSION BANDS: 1/8" X 1" HEAVY W/ 3/8" CARRIAGE BOLTS.
2. THREADED TRUSS RODS: 3/8" DIAMETER ASTM A36 STEEL, 6" LONG THREAD BOTH ENDS. DOUBLE NUT EACH END. NO SPLICES ALLOWED.
3. TRUSS TIGHTENER: 5 3/4" X 1" X 5/16" INDUSTRIAL, 0.59 LB./EACH. (BOTH ENDS OF TRUSS ROD)
4. LINE PANEL RAIL END: 1 7/8" OD 1-HOLE OFFSET, PRESSED STEEL, 0.39 LB./EACH.
5. SHEAR PANEL RAIL END: 1 7/8" OD 2-HOLE PRESSED STEEL, 0.59 LB./EACH.
6. CAPS: CAST IRON, 4 1/2" OD = 2.25 LB.
7. POST & RAIL FABRIC TIES, HOG RINGS: 9 GA. STEEL.
8. TENSION BARS: 1/4" X 3/4" 132" CONTINUOUS.
9. CHAIN LINK FABRIC: SEE ELEVATION.
10. POST AND RAILS: ASTM A120, SCH. 40 CLASS 1 OR ASTM F1083
11. ALL 20' FENCE MATERIALS, FABRIC, POSTS ETC. SHALL BE GALVANIZED FINISH, TYP.

CONCRETE:
1. FOOTING CONCRETE DESIGN FC'=2000 PSI: FOR DURABILITY THE CONTRACTOR SHALL PROVIDE 520-C-2500, 4" SLUMP CONCRETE. PORTLAND CEMENT SHALL BE TYPE II PER SSPWC 201-1.2; COMBINED AGGREGATE GRADING SHALL CONFORM WITH SSPW 201-1.3.2.
2. PRIOR TO PROCEEDING WITH INSTALLATION OF FENCE FRAME AND FABRIC, THE CONTRACTOR SHALL ALLOW 7 DAYS FOR THE FOOTING CONCRETE TO CURE.
3. SUBMITTAL - EACH TRUCKLOAD SHALL BE ACCOMPANIED BY A DELIVERY RECEIPT SHOWING SUPPLIER, LOAD WEIGHT, AND MIX COMPOSITION BY WEIGHT. PRIOR TO PLACING CONCRETE, THE CONTRACTOR SHALL PROVIDE THE PROJECT INSPECTOR WITH A COPY OF THE DELIVERY RECEIPT.



DESIGN SOIL STRENGTH VALUES:
LATERAL BEARING: 100 PSF/FT TO 1500 PSF MAX. FOR DESIGN OF ISOLATED POLES, THE ALLOWABLE LATERAL BEARING HAS BEEN INCREASED BY 100 PERCENT.

CHAIN LINK FABRIC FIELD INSTALLATION:
1. FABRIC SHALL BE CONTINUOUS IN THE LONGITUDINAL DIRECTION BY WEAVING CLOSURE TIES, OF THE SAME MATERIAL AS THE FENCE FABRIC, THROUGH BOTH VERTICAL ENDS.
2. FABRIC SHALL BE FASTENED TO THE RAILS AND LINE POSTS WITH TIE WIRES AT 1'-6" ON CENTER.
3. THE HORIZONTAL SEAM (BETWEEN THE TOP & BOTTOM PANEL) SHALL HAVE A 2" LAP AND SHALL BE FASTENED TOGETHER WITH HOG RINGS 1'-6" OC SPACED EVENLY BETWEEN RAIL TIES.
4. FABRIC SHALL BE STRETCHED TIGHTLY AND KNUCKELED TOP AND BOTTOM.
5. FABRIC SHALL BE PLACED 1" ABOVE THE FINISHED SURFACE.



FENCE FRAME FIELD INSTALLATION
1. * POSTS AND RAILS SHALL BE FABRICATED FROM CONTINUOUS PIPE, EXCEPT FOR POST FIELD SPLICE AS SHOWN ON THE PLAN.
2. * FITTINGS SHALL BE FABRICATED FROM A36 STEEL EXCEPT AS OTHERWISE INDICATED HEREIN. ALL POSTS SHALL BE INSTALLED IN A VERTICAL POSITION,
3. * THE BOTTOM RAIL SHALL BE INSTALLED ON A STRAIGHT GRADE BETWEEN POSTS BY EXCAVATING THE HIGH POINTS OF GROUND TO PROVIDE A UNIFORM 2" CLEARANCE .

CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

5. SHEAR PANEL RAIL END: 1 7/8" OD 2-HOLE PRESSED STEEL, 0.59 LB./EACH.
6. CAPS: CAST IRON, 4 1/2" OD = 2.25 LB.
7. POST & RAIL FABRIC TIES, HOG RINGS: 9 GA. STEEL.
8. TENSION BARS: 1/4" X 3/4" 132" CONTINUOUS.
9. CHAIN LINK FABRIC: SEE ELEVATION.
10. POST AND RAILS: ASTM A120, SCH. 40 CLASS 1 OR ASTM F1083
11. ALL 20' FENCE MATERIALS, FABRIC, POSTS ETC. SHALL BE GALVANIZED FINISH, TYP.

CONCRETE:

1. FOOTING CONCRETE DESIGN FC'=2000 PSI: FOR DURABILITY THE CONTRACTOR SHALL PROVIDE 520-C-2500, 4" SLUMP CONCRETE. PORTLAND CEMENT SHALL BE TYPE II PER SSPWC 201-1.2; COMBINED AGGREGATE GRADING SHALL CONFORM WITH SSPW 201-1.3.2.
2. PRIOR TO PROCEEDING WITH INSTALLATION OF FENCE FRAME AND FABRIC, THE CONTRACTOR SHALL ALLOW 7 DAYS FOR THE FOOTING CONCRETE TO CURE.
3. SUBMITTAL - EACH TRUCKLOAD SHALL BE ACCOMPANIED BY A DELIVERY RECEIPT SHOWING SUPPLIER, LOAD WEIGHT, AND MIX COMPOSITION BY WEIGHT. PRIOR TO PLACING CONCRETE, THE CONTRACTOR SHALL PROVIDE THE PROJECT INSPECTOR WITH A COPY OF THE DELIVERY RECEIPT.

DESIGN SOIL STRENGTH VALUES:

LATERAL BEARING: 100 PSF/FT TO 1500 PSF MAX. FOR DESIGN OF ISOLATED POLES, THE ALLOWABLE LATERAL BEARING HAS BEEN INCREASED BY 100 PERCENT.

CHAIN LINK FABRIC FIELD INSTALLATION:

1. FABRIC SHALL BE CONTINUOUS IN THE LONGITUDINAL DIRECTION BY WEAVING CLOSURE TIES, OF THE SAME MATERIAL AS THE FENCE FABRIC, THROUGH BOTH VERTICAL ENDS.
2. FABRIC SHALL BE FASTENED TO THE RAILS AND LINE POSTS WITH TIE WIRES AT 1'-6" ON CENTER.
3. THE HORIZONTAL SEAM (BETWEEN THE TOP & BOTTOM PANEL) SHALL HAVE A 2" LAP AND SHALL BE FASTENED TOGETHER WITH HOG RINGS 1'-6" OC SPACED EVENLY BETWEEN RAIL TIES.
4. FABRIC SHALL BE STRETCHED TIGHTLY AND KNUCKELED TOP AND BOTTOM.
5. FABRIC SHALL BE PLACED 1" ABOVE THE FINISHED SURFACE.

FENCE FRAME FIELD INSTALLATION

1. * POSTS AND RAILS SHALL BE FABRICATED FROM CONTINUOUS PIPE, EXCEPT FOR POST FIELD SPLICE AS SHOWN ON THE PLAN.
2. * FITTINGS SHALL BE FABRICATED FROM A36 STEEL EXCEPT AS OTHERWISE INDICATED HEREIN. ALL POSTS SHALL BE INSTALLED IN A VERTICAL POSITION,
3. * THE BOTTOM RAIL SHALL BE INSTALLED ON A STRAIGHT GRADE BETWEEN POSTS BY EXCAVATING THE HIGH POINTS OF GROUND TO PROVIDE A UNIFORM 2" CLEARANCE .

CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

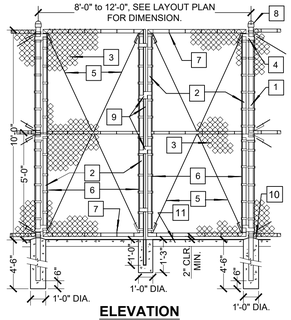
SHEET NAME
LS06

SHEET 37 OF 85 SHEETS

705 10' HIGH X 10' WIDE CHAIN LINK ACCESS GATES



N.T.S. | RP DETAIL 5220

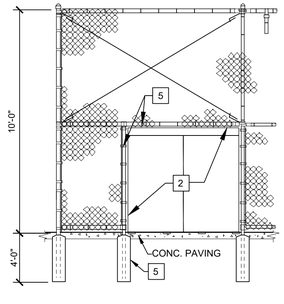
OPTIONS (OPTIONS CHECKED SHALL PREVAIL)

☐ VINYL COATED CHAIN LINK FABRIC SHALL BE AS SPECIFIED IN THE SPECIFICATIONS. ALL FENCE MATERIALS SHALL BE AS INDICATED HEREON AND PAINTED PER SPECIFICATIONS TO MATCH FABRIC COLOR. THE COLOR SHALL BE BLACK.

☒ ALL FENCING SHALL HAVE A STANDARD GALVANIZED FINISH.

☒ INSTALL CONCRETE MOW STRIP UNDER FENCE.

ELEVATION



GATE MATERIALS

1. POSTS: POSTS 3-1/2" O.D. WITH 1' DIA. x 4'-6" DEEP FOOTINGS.
2. GATE FRAMES: TOP, BOTTOM AND SIDE MEMBERS 2-3/8" O.D., MID RAIL 1 5/8" O.D. MITER GATE FRAME CORNERS WELD AND GRIND SMOOTH.
3. FABRIC: 9 GAUGE, 2" MESH, KNUCKLE TOP AND BOTTOM, PLACE ON ACTIVITY OR LAWN SIDE OF GATES.
4. HINGES: INDUSTRIAL BULLDOG HINGE (180¼ SWING), 2 HINGES PER GATE, ONE AT TOP AND BOTTOM.
5. TRUSS ROD: 3/8" DIAM. THREADED AT BOTH ENDS AND TENSIONED WITH TWO INDUSTRIAL TRUSS TIGHTENERS SECURED TO GATE FRAME.
6. STRETCHER BAR: 3/16" X 3/4" WITH 1/8 " x 1" TENSION BANDS AT 1'-0" O.C.
7. TIE WIRES: 11 GAUGE AT 1'-6" O.C. AT GATE FRAME TOP, BOTTOM AND MID RAILS.
8. POST CAPS SHALL BE MALLEABLE IRON OR PRESSED STEEL.
9. CAST ALUMINUM FORK LATCH.
10. PROVIDE A 1" CROWN AT TOP OF ALL POST FOOTINGS. (MODIFY FOR MOW STRIP OPTION).
11. INSTALL CONCRETE MOW STRIP TO MATCH ADJACENT FENCING IF SPECIFIED.

NOTES:
1. CHAIN LINK FENCE MATERIALS SHALL CONFORM TO THE CHAIN LINK FENCING SECTION OF THE SPECIFICATIONS.
2. CONCRETE FOOTINGS SHALL BE ALLOWED TO SET FOR SEVEN DAYS PRIOR TO INSTALLATION OF GATES.

706 BASEBALL INFIELD STORAGE BOX

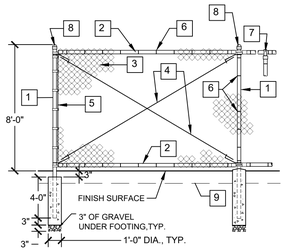
N.T.S. | RP DETAIL 542

ELEVATION

NOTES:

1. FOR FENCE MATERIALS AND METHODS OF CONSTRUCTION, SEE DETAIL E9/L402.
2. INSTALL INFIELD STORAGE BOX. CAPITOL ENTERPRISES (626-357-3768) "BALL BOX" MODEL # IS 7256 OR APPROVED EQUAL. COLOR: GREEN. INCLUDE ESCAPE LATCH LOCKING DEVICE.
3. STORAGE BOX SHALL BE INSTALLED PER THE MANUFACTURER'S RECOMMENDATION. THE FRONT OF THE BOX SHALL OPEN TOWARDS THE INFIELD AND SHALL BE FLUSH WITH THE FENCE.
4. LOCATE STORAGE BOX ADJACENT TO THE LINE POST. ALL FENCE FABRIC SHALL BE INSTALLED AS TIGHTLY TO THE BOX AS POSSIBLE.
5. INSTALL ADDITIONAL POST, FOOTING, STRETCHER BAR, TENSION BANDS, AND TIE WIRES.
6. INSTALL A 5" THICK CONCRETE PAD, 7' LONG X 5' WIDE, IF STORAGE BOX IS TO BE PLACED IN TURF AREA. SLOPE CONCRETE PAD TOWARD INFIELD @ 2%.

RP VERSION 9/29/94 BSL ; REV. RWF 9/19/06



703 EIGHT FOOT CHAINLINK FENCE

N.T.S. | RP DETAIL 5030

OPTIONS (OPTIONS CHECKED SHALL PREVAIL)

☐ VINYL COATED CHAIN LINK FABRIC SHALL BE PER SPECIFICATIONS. ALL FENCE MATERIALS SHALL BE AS INDICATED HEREON AND PAINTED PER SPECIFICATIONS TO MATCH THE FABRIC COLOR. THE COLOR SHALL BE: BLACK.

☒ ALL FENCING SHALL HAVE A GALVANIZED FINISH.

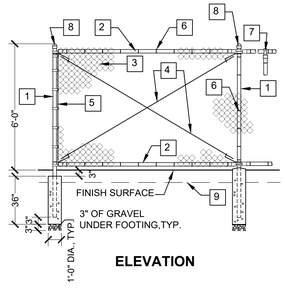
ELEVATION

FENCING MATERIALS

1. POSTS: END, CORNER AND SLOPE POSTS 2-7/8 IN. O.D., LINE POSTS 2-3/8 IN. O.D. POST SPACING TO BE 10'-0" MAX.
2. RAILS: TOP AND BOTTOM RAILS 1-5/8 IN. O.D.
3. FABRIC: 9 GAUGE, 2 IN. MESH, KNUCKLE TOP AND BOTTOM, PLACE ON PATH OR EXTERIOR SIDE OF POSTS.
4. TRUSS ROD: 3/8 IN. DIAM. THREADED AT BOTH ENDS AND TENSIONED WITH TWO INDUSTRIAL TRUSS TIGHTENERS SECURED TO RAIL ENDS. TRUSS PANEL SHALL BE LOCATED AT END AND CORNER PANELS OF 30" OR GREATER TURN AND AT INTERVALS NOT TO EXCEED 100' . HOG RING FABRIC TO RODS AT MAX. 3'-0" O.C.
5. STRETCHER BAR: 3/16" X ¾" WITH ⅛" X 1" TENSION BANDS AT 1'-0" O.C.
6. TIE WIRES: 11 GAUGE AT 1'-6" O.C. AT TOP, BOTTOM AND LINE POSTS.
7. LINE POST EYE TOPS & RAIL ENDS SHALL BE MALLEABLE IRON OR PRESSED STEEL. SECURE RAIL ENDS TO POSTS WITH ⅛" X 1" BRACE BANDS.
8. POST CAPS SHALL BE MALLEABLE IRON OR PRESSED STEEL.
9. REQUIRED MOW-STRIP IN TURF AREAS.

NOTES:

1. SEE SPECIFICATIONS SECTION FOR CHAIN LINK FENCE CONSTRUCTION FOR ADDITONAL INFORMATION.
2. CONCRETE FOOTINGS SHALL BE ALLOWED TO SET FOR SEVEN (7) DAYS PRIOR TO INSTALLATION OF FABRIC OR HARDWARE.
3. THE BOTTOM OF THE FABRIC SHALL BE POSITIONED ONE INCH ABOVE FINISH GRADE.
4. IN PAVED AREAS TOP OF CONC. FTG. TO BE 3" BELOW FINISH SURFACE TO ALLOW FOR PAVING ABOVE.
5. IN LANDSCAPED AREAS, TOP OF FOOTING SHALL BE 1" ABOVE FINISH GRADE WITH A 1" CROWN ON TOP OF FTG.
6. INSIDE OR ADJACENT TO TURF AREAS, ALL FENCES SHALL HAVE A 12" WIDE X 6" DEEP CONCRETE MOW-STRIP WITH #4 REBAR CENTERED, TYP. MOW STRIP SHALL BE CENTERED ON FENCE.
7. CONC. FTG. TO BE 2500 PSI @ 28 DAYS. PROVIDE 3" OF GRAVEL UNDER CONC. FTG., TYP.



704 SIX FOOT CHAINLINK FENCE

N.T.S. | RP DETAIL 5020

OPTIONS (OPTIONS CHECKED SHALL PREVAIL)

☐ VINYL COATED CHAIN LINK FABRIC SHALL BE INDICATED IN SPECIFICATIONS. ALL FENCE MATERIALS SHALL BE AS INDICATED HEREON AND PAINTED PER LANDSCAPE CONSTRUCTION NOTES (LCN) TO MATCH THE FABRIC COLOR. THE COLOR SHALL BE - MATCH EXISTING.

☒ ALL FENCING SHALL HAVE A GALVANIZED FINISH.

ELEVATION

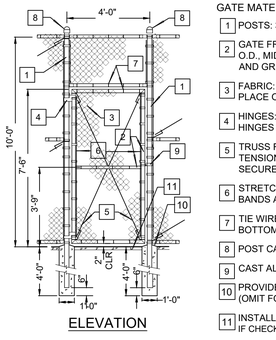
FENCING MATERIALS

1. POSTS: END, CORNER AND SLOPE POSTS 2-7/8 IN. O.D., LINE POSTS 2-3/8 IN. O.D. POST SPACING TO BE 10'-0" MAX.
2. RAILS: TOP AND BOTTOM RAILS 1-5/8 IN. O.D.
3. FABRIC: 9 GAUGE, 2 IN. MESH, KNUCKLE TOP AND BOTTOM, PLACE ON PATH OR EXTERIOR SIDE OF POSTS.
4. TRUSS ROD: 3/8 IN. DIAM. THREADED AT BOTH ENDS AND TENSIONED WITH TWO INDUSTRIAL TRUSS TIGHTENERS SECURED TO RAIL ENDS. TRUSS PANEL SHALL BE LOCATED AT END AND CORNER PANELS OF 30° OR GREATER TURN AND AT INTERVALS NOT TO EXCEED 100'. HOG RING FABRIC TO RODS AT MAX. 3'-0" O.C.
5. STRETCHER BAR: 3/16" X ¾" WITH ⅛" X 1" TENSION BANDS AT 1'-0" O.C.
6. TIE WIRES: 11 GAUGE AT 1'-6" O.C. AT TOP, BOTTOM AND LINE POSTS.
7. LINE POST EYE TOPS & RAIL ENDS SHALL BE MALLEABLE IRON OR PRESSED STEEL. SECURE RAIL ENDS TO POSTS WITH ⅛" X 1" BRACE BANDS.
8. POST CAPS SHALL BE MALLEABLE IRON OR PRESSED STEEL.
9. REQUIRED MOW-STRIP IN TURF AREAS.

NOTES:

1. SEE SPECIFICATIONS SECTION FOR CHAIN LINK FENCE CONSTRUCTION FOR ADDITONAL INFORMATION.
2. CONCRETE FOOTINGS SHALL BE ALLOWED TO SET FOR SEVEN (7) DAYS PRIOR TO INSTALLATION OF FABRIC OR HARDWARE.
3. THE BOTTOM OF THE FABRIC SHALL BE POSITIONED ONE INCH ABOVE FINISH GRADE.
4. IN PAVED AREAS TOP OF CONC. FTG. TO BE 3" BELOW FINISH SURFACE TO ALLOW FOR PAVING ABOVE.
5. IN LANDSCAPED AREAS, TOP OF FOOTING SHALL BE 1" ABOVE FINISH GRADE WITH A 1" CROWN ON TOP OF FTG.
6. INSIDE OR ADJACENT TO TURF AREAS, ALL FENCES SHALL HAVE A 12" WIDE X 6" DEEP CONCRETE MOW-STRIP WITH #4 REBAR CENTERED, TYP. MOW STRIP SHALL BE CENTERED ON FENCE.
7. CONC. FTG. TO BE 2500 PSI @ 28 DAYS. PROVIDE 3" OF GRAVEL UNDER CONC. FTG., TYP.

702 10' HIGH CHAIN LINK FENCE PEDESTRIAN GATE



N.T.S. | RP DETAIL 5210

OPTIONS (OPTIONS CHECKED SHALL PREVAIL)

☐ VINYL COATED CHAIN LINK FABRIC SHALL BE AS SPECIFIED IN THE SPECIFICATIONS. ALL FENCE MATERIALS SHALL BE AS INDICATED HEREON AND PAINTED PER SPECIFICATIONS TO MATCH FABRIC COLOR. THE COLOR SHALL BE BLACK.

☒ ALL FENCING SHALL HAVE A STANDARD GALVANIZED FINISH.

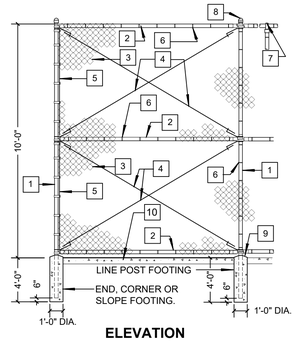
☐ INSTALL CONCRETE MOW STRIP UNDER FENCE.

ELEVATION

GATE MATERIALS

1. POSTS: 3-1/2 IN. O.D. WITH 1 FT. DIA. x 4'-0" DEEP FTGS.
2. GATE FRAMES: TOP, BOTTOM AND SIDE MEMBERS 2-3/8 IN. O.D., MID RAIL 1 5/8" O.D. MITER GATEFRAMECORNERS WELD AND GRIND SMOOTH.
3. FABRIC: 9 GAUGE, 2 IN. MESH, KNUCKLE TOP AND BOTTOM, PLACE ON ACTIVITY ON LAWN SIDE OF GATES.
4. HINGES: INDUSTRIAL BULLDOG HINGE (180¡ SWING), 2 HINGES PER GATE, ONE AT TOP AND BOTTOM.
5. TRUSS ROD: 3/8 IN. DIAM. THREADED AT BOTH ENDS AND TENSIONED WITH TWO INDUSTRIAL TRUSS TIGHTENERS SECURED TO GATE FRAME.
6. STRETCHER BAR: 3/16 X 3/4 IN. WITH 1/8 x 1 IN. TENSION BANDS AT 1'-0" O.C.
7. TIE WIRES: 11 GAUGE AT 1'-6" O.C. AT GATE FRAME TOP, BOTTOM AND MID RAILS.
8. POST CAPS: MALLEABLE IRON OR PRESSED STEEL.
9. CAST ALUMINUM FORK LATCH.
10. PROVIDE A 1 IN. CROWN AT TOP OF ALL POST FOOTINGS. (OMIT FOR MOW STRIP OPTION).
11. INSTALL CONCRETE MOW STRIP TO MATCH ADJACENT FENCING IF CHECKED UNDER OPTIONS ABOVE.

NOTES:
1. CHAIN LINK FENCE MATERIALS SHALL CONFORM TO THE CHAIN LINK FENCE SPECITICATIONS.
2. CONCRETE FOOTINGS SHALL BE ALLOWED TO SET FOR SEVEN DAYS PRIOR TO INSTALLATION OF GATES.



701 10' TALL CHAIN LINK FENCE

N.T.S. | RP DETAIL 5040

OPTIONS (OPTIONS CHECKED SHALL PREVAIL)

☐ VINYL COATED CHAIN LINK FABRIC SHALL BE AS SPEC'S. ALL FENCE MATERIALS SHALL BE AS INDICATED HEREON AND PAINTED PER SPEC'S TO MATCH FABRIC COLOR. COLOR SHALL BE BLACK.

☒ ALL FENCING SHALL HAVE A STANDARD GALV. FINISH.

ELEVATION

FENCING MATERIALS

1. POSTS: END, CORNER AND SLOPE POSTS 2-7/8" O.D., LINE POSTS 2-3/8" O.D. POST SPACING TO BE 10'-0" MAX.
2. RAILS: TOP ,MID AND BOTTOM RAILS 1-5/8" O.D.
3. FABRIC: 9 GAUGE, 2" MESH, KNUCKLE TOP AND BOTTOM. PLACE ON ACTIVITY OR LAWN SIDE OF POSTS.
4. TRUSS ROD: 3/8" DIA. THREADED AT BOTH ENDS AND TENSIONED WITH TWO INDUSTRIAL TRUSS TIGHTENERS SECURED TO RAIL ENDS. TRUSS PANEL SHALL BE LOCATED AT END AND CORNER PANELS OF 30° OR GREATER TURN AND AT INTERVALS NOT TO EXCEED 100'. HOG RING FABRIC TO RODS AT MAX. 3'-0" O.C.
5. STRETCHER BAR: 3/16" X 3/4" WITH 1/8" X 1" TENSION BANDS AT 1'-0" O.C.
6. TIE WIRES: 11 GAUGE AT 1'-6" O.C. AT TOP, MID, BOTTOM RAILS AND LINE POSTS.
7. LINE POST EYE TOPS & RAIL ENDS SHALL BE MALLEABLE IRON OR PRESSED STEEL.SECURE RAIL ENDS TO POSTS WITH 1/8" X 1" BRACE BANDS.
8. POST CAPS SHALL BE MALLEABLE IRON OR PRESSED STEEL.
9. PROVIDE A 1" CROWN AT TOP OF ALL POST FOOTINGS. (MODIFY FOR MOW STRIP OPTION).
10. INSTALL 12" WIDE X 6" DEEP CONCRETE MOW STRIP WITH #4 REBAR CONT. IF REQUIRED. SEE NOTES.

NOTES:

1. SEE SPECIFICATIONS SECTION FOR CHAIN LINK FENCE CONSTRUCTION FOR ADDITONAL INFORMATION.
2. CONCRETE FOOTINGS SHALL BE ALLOWED TO SET FOR SEVEN (7) DAYS PRIOR TO INSTALLATION OF FABRIC OR HARDWARE.
3. THE BOTTOM OF THE FABRIC SHALL BE POSITIONED ONE INCH ABOVE FINISH GRADE.
4. IN PAVED AREAS TOP OF CONC. FTG. TO BE 3" BELOW FINISH SURFACE TO ALLOW FOR PAVING ABOVE.
5. IN LANDSCAPED AREAS, TOP OF FOOTING SHALL BE 1" ABOVE FINISH GRADE WITH A 1" CROWN ON TOP OF FTG.
6. INSIDE OR ADJACENT TO TURF AREAS, ALL FENCES SHALL HAVE A 12" WIDE X 6" DEEP CONCRETE MOW-STRIP WITH #4 REBAR CENTERED, TYP. MOW STRIP SHALL BE CENTERED ON FENCE.
7. CONC. FTG. TO BE 2500 PSI @ 28 DAYS. PROVIDE 3" OF GRAVEL UNDER CONC. FTG., TYP.

CONSTRUCTION DETAIL NOTES

1. THE FOLLOWING NOTES APPLY TO ALL DETAILS AS SHOWN IN THIS SET OF DOCUMENTS, UNLESS OTHERWISE NOTED.
2. FOR ADDITIONAL INFORMATION REFER TO CONSTRUCTION NOTES.
3. REFER TO CONSTRUCTION LEGEND FOR INFORMATION RELATIVE TO COLOR, TYPE AND FINISH.
4. UNLESS OTHERWISE NOTED, NEW FINISH SURFACE SHALL BE FLUSH WITH ADJACENT EXISTING SURFACES.
5. FINISH GRADE SHALL BE 1" BELOW FINISH SURFACE AT ALL PLANTER OR TURF AREAS.
6. FINAL LOCATION OF CONSTRUCTION ELEMENTS, DRAINAGE DEVICES, SITE AMENITIES, IRRIGATION EQUIPMENT, AND PLANT MATERIAL MAY REQUIRE ADJUSTMENT DUE TO FIELD CONDITIONS AND SHALL BE APPROVED PRIOR TO CONSTRUCTION.
7. CONTRACTOR SHALL VERIFY ALL MATCHING MATERIALS AND COLORS PRIOR TO INSTALLATION. CONTRACTOR SHALL NOTIFY LANDSCAPE ARCHITECT OF ANY DISCREPANCIES PRIOR TO INSTALLATION.
8. CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

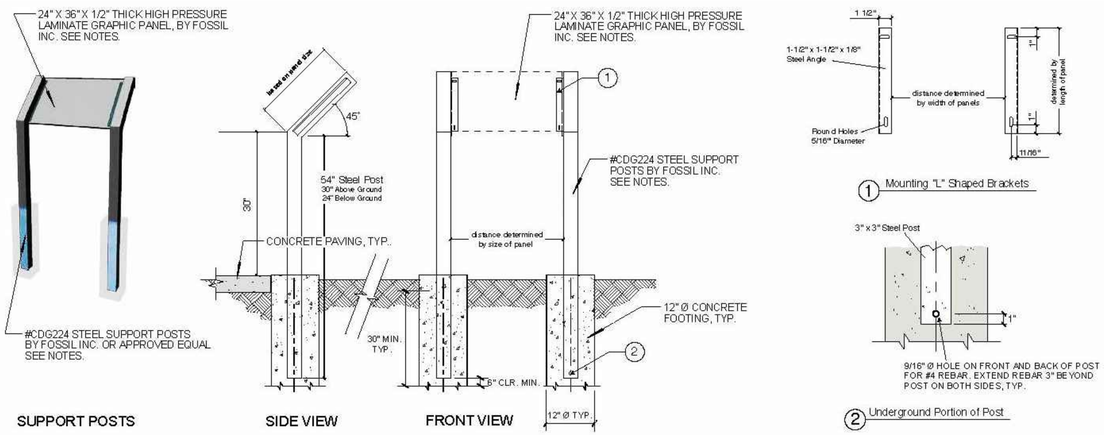
	ACCESSIBLE DRINKING FOUNTAIN	
N.T.S.	BOE Version Feb/22	RP DETAIL L1732

PLAN VIEW - LAYOUT
NOT TO SCALE

OPTIONAL PET FOUNTAIN
SIDE VIEW - SECTION
NOT TO SCALE



NOTES:

1.) INSTALL PER DETAIL. REFER TO MANUFACTURER'S INSTRUCTION FOR PLUMBING AND MOUNTING DRINKING FOUNTAIN UNIT.

2.) CONTRACTOR SHALL SUBMIT LOCATION FOR SUMP AND OVERFLOW DRAINAGE LAYOUT FOR APPROVAL BY PROJECT MANAGER PRIOR TO BEGINNING EXCAVATION.

DOMESTIC LINE STERILIZATION PROCEDURE:

1.) FLUSH DOMESTIC WATER LINES COMPLETELY.
2.) USING A PROPORTIONING PUMP, INJECT SODIUM HYPOCHLORITE LIQUID DISINFECTANT INTO THE DOMESTIC LINE THROUGH A ¾" SERVICE COCK AT A POINT AS CLOSE TO THE WATER METER AS POSSIBLE.
3.) OPEN BUBBLERS ON ALL D.F. UNITS INSTALLED TO DISTRIBUTE DISINFECTANT THROUGHOUT THE DOMESTIC LINE SYSTEM.
4.) VERIFY BY TESTING THAT A MINIMUM CONCENTRATION OF 50 PPM OF DISINFECTANT IS ACHIEVED AT EACH D.F. UNIT.
5.) DISINFECTANT SHALL REMAIN IN THE SYSTEM FOR 24 HOURS MINIMUM.
6.) AT THE END OF THE 24 HOUR PERIOD, THE RESIDUAL LEVEL OF DISINFECTANT SHALL NOT BE LESS THAN 10 PPM.
7.) ALL LINES SHALL BE FLUSHED THOROUGHLY AFTER DISINFECTION IS COMPLETED.
8.) A WATER SAMPLE AT EACH D.F. UNIT SHALL BE TESTED BY AN APPROVED TESTING LABORATORY. REQUIRED RESULTS ARE:
- COLIFORM-AEROGENES ORGANISMS: NEGATIVE
- TOTAL BACTERIA PLATE COUNT: LESS THAN 100 PER CUBIC CENTIMETER
- WATER POTABILITY: SAFE TO USE
IF THE REQUIRED RESULTS ARE NOT MET, STERILIZATION PROCESS LISTED ABOVE SHALL BE REPEATED UNTIL THE REQUIRED TEST RESULTS ARE MET.

INTERPRETIVE PANEL NOTES:

1.) CONTRACTOR SHALL PROVIDE AND INSTALL (2) INDIVIDUAL INTERPRETIVE SIGN PANELS AND SUPPORTS PER PLAN AND DETAIL. FINAL LOCATION OF EACH PANEL SHALL BE APPROVED BY ENGINEER PRIOR TO INSTALLATION.

2.) 24" X 36" X 1/2" THICK SIGN PANELS MUST BE MANUFACTURED AS DIGITAL HIGH PRESSURE LAMINATE (DHPL) COMPOSED OF SEVERAL LAYERS OF PHENOLIC RESIN IMPREGNATED KRAFT FILLER PAPER, A DIGITALLY IMAGED EMBEDDED GRAPHIC, A LAYER OF MELAMINE RESIN, AND SURFACED BY A LAYER OF TRANSLUCENT EXTERIOR UV / GRAFFITI-RESISTANT OVERLAY PROTECTION AS SUPPLIED BY FOSSIL INDUSTRIES, INC., (631) 245-4172, WWW.FOSSILGRAPHICS.COM, OR APPROVED EQUAL.

3.) THE ENTIRE PANEL, INCLUDING EXTERIOR OVERLAY, MUST BE BONDED UNDER HEAT AND EXTREME PRESSURE TO FORM A COMPOSITE PANEL. THE FINISH MUST BE SMOOTHLY TEXTURED WITH REFLECTIVITY OF 30 +OR (5) GLOSS UNITS. THE DHPL GRAPHICS MUST BE WARRANTED FOR A MINIMUM OF 10 YEARS AGAINST FADING, DE-LAMINATION AND WEATHER DETERIORATION.

4.) EMBEDDED GRAPHICS MUST BE MADE USING A 12-COLOR HIGH-DEFINITION PRINT AT 200 DPI.

5.) GRAPHIC IMAGE FILES AS NECESSARY FOR PRODUCTION OF EACH INDIVIDUAL SIGN PANEL SPECIFIED WILL BE SUPPLIED BY THE PROJECT MANAGER AT THE TIME OF FABRICATION.

6.) SIGN PANEL MANUFACTURER SHALL PROVIDE A PRODUCTION QUALITY SAMPLE FROM A SUPPLIED GRAPHIC FILE FOR APPROVAL PRIOR TO FINAL FABRICATION AND DELIVERY.

1002	INTERPRETIVE SIGN PANEL
N.T.S.	

NOTES:

1. GRANT FUNDS SIGN:
   ONE (1) SIGN SHALL BE PROVIDED FOR GRANT FUNDS. GRANT FUNDS SIGN SHALL INCLUDE COLOR LOGO AND DISCLOSURE STATEMENT FROM COUNTY OF LOS ANGELES SAFE, CLEAN WATER PROGRAM. COLOR LOGO AND DISCLOSURE STATEMENT SHALL BE EQUALLY PROMINENT ON THE SIGN. THE SIGN SHALL BE PREPARED IN A PROFESSIONAL MATTER. THE CONTRACTOR SHALL CREATE A GRANT FUNDS SIGN AT LEAST TWO (2) FEET TALL BY THREE (3) FEET WIDE MADE OF 3/4" THICK EXTERIOR GRADE PLYWOOD OR OTHER APPROVED MATERIAL IN A PROMINENT LOCATION ON THE PROJECT SITE AND SHALL MAINTAIN THE SIGN IN GOOD CONDITION FOR THE DURATION OF THE CONSTRUCTION PERIOD. THE CONTRACTOR SHALL SUBMIT A SHOP DRAWING OF THE GRANT FUNDS SIGN FOR APPROVAL. THE CONTENTS OF THE SIGN WILL INCLUDE: "FUNDING FOR THIS PROJECT HAS BEEN PROVIDED IN FULL OR IN PART FROM THE LOS ANGELES COUNTY FLOOD CONTROL DISTRICT'S SAFE, CLEAN WATER PROGRAM."
2. CONTRACTOR SHALL INSTALL EDUCATIONAL SIGNS PER 2019 CALIFORNIA BUILDING CODE SECTION 11B-216, 11B-302, AND 11B-703, IF APPLICABLE. CONTRACTOR SHALL SUBMIT SHOP DRAWINGS FOR REVIEW AND APPROVAL BY THE ENGINEER PRIOR TO INSTALLATION PER SPECIFICATION SECTION 01330 SHOP DRAWINGS/SUBMITTALS OF THE GENERAL REQUIREMENTS.
3. GRAPHIC IMAGE FOR THE SIGN SHALL BE PROVIDED BY THE ENGINEER. SIGN GRAPHIC BELOW IS A DRAFT PLACEHOLDER, FINAL GRAPHIC IMAGE SHALL BE PROVIDED BY THE ENGINEER.

CONSTRUCTION DETAIL NOTES

1. THE FOLLOWING NOTES APPLY TO ALL DETAILS AS SHOWN IN THIS SET OF DOCUMENTS, UNLESS OTHERWISE NOTED.
2. FOR ADDITIONAL INFORMATION REFER TO CONSTRUCTION NOTES.
3. REFER TO CONSTRUCTION LEGEND FOR INFORMATION RELATIVE TO COLOR, TYPE AND FINISH.
4. UNLESS OTHERWISE NOTED, NEW FINISH SURFACE SHALL BE FLUSH WITH ADJACENT EXISTING SURFACES.
5. FINISH GRADE SHALL BE 1" BELOW FINISH SURFACE AT ALL PLANTER OR TURF AREAS.
6. FINAL LOCATION OF CONSTRUCTION ELEMENTS, DRAINAGE DEVICES, SITE AMENITIES, IRRIGATION EQUIPMENT, AND PLANT MATERIAL MAY REQUIRE ADJUSTMENT DUE TO FIELD CONDITIONS AND SHALL BE APPROVED PRIOR TO CONSTRUCTION.
7. CONTRACTOR SHALL VERIFY ALL MATCHING MATERIALS AND COLORS PRIOR TO INSTALLATION. CONTRACTOR SHALL NOTIFY LANDSCAPE ARCHITECT OF ANY DISCREPANCIES PRIOR TO INSTALLATION.
8. CONTRACTOR SHALL SUBMIT AND OBTAIN BUILDING PERMIT FOR ALL FENCING OVER 10' HIGH. CONTRACTOR SHALL PROVIDE ALL REQUIRED ENGINEERING AND CALCULATIONS FOR FOOTINGS.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

ASSEMBY INSTRUCTIONS

1. Dig six (6) holes @ 60" deep and 24" diam as shown on the plan view.
2. Place the four 2-7/8" od back posts (A) in the four back holes.
3. Place the two 2-7/8" od end posts (B) in the end holes with lugs parallel to the front opening.
4. Each post shall be 16'-0" above ground and 19'-0" on center. Place a horizontal brace (C) on the ground between each of the posts. Place a rail end fitting on each end of these braces. Place a brace band over each post adjacent to each rail end fitting. Bolt rail end fitting to the corresponding brace band. Make sure the horizontal brace fits into the rail end fittings at least 1". If they don't, adjust the posts accordingly.
   **NOTE: All carriage bolt heads are facing the playing field.
5. With the proper spacing assured, plumb all posts and pour the concrete footings. Allow 24 hrs. for concrete to set and then proceed as follows.
6. Attach four angle fittings (H) to back posts (A).
7. Hood Post Erection: Insert the four hood support posts (D) into open end of the four angle fittings (H) on back posts, with bent portion toward the playing field.
8. Tighten set screws holding hood posts in place.
9. Install mid (C) and front (E) horizontal tie members, using four "T" fitting (i). Attach triangle supports (F).
10. Install horizontal braces (C) between the posts above ground. These braces can be installed in a manner similar to directions in item 4. Larger size bands are furnished for use on the angle fittings.
11. Unroll the 9 ga wire (J) from end of roll. Stretch the wire for measuring and open the knuckle on each side of the roll at 9'-7" and weave out one strand of wire.
12. Weave a tension bar (T) through the last bars on the un-knuckled sides. Place this wire against playing field side of one of the wing panels with the tension bars parallel to the uprights.
13. Stretch wire on the wing panels. Slip 6 tension bands (N) over each post adjacent to the tension bars. The tension bars must be offset so that the wire will be stretched on the playing field side (inside) of the backstop. Equally space the 6 tension band up and down the posts on each side of the wire panel and bolt into position.

    **NOTE: If the wire is too loose, remove a strand of wire as in item 11 above or, if the wire is too tight to fasten into position, reweave into panel, the strand of wire removed in item 11 above.
14. Stretch Wire Back Panel The back two panels will be stretched in one piece between outside back posts (A). The length of the wire needed should be 3" shorter than the distance between the inside of the two corner posts (A). (Make sure wire is stretched when measuring)
15. Place this wire against the playing field side of the backstop with the tension bars parallel and adjacent to posts (A). Stretch and secure into position with 6 tension bands on each post.
16. Install and stretch wire in the opposite wing as described in items 12 and 13 above.
17. Stretch Wire - Hood Panels Install wire on hood, one panel at a time. Measure out the 11 ga chain link (J) wire as in item 12 above. and install as in item 13.
    **NOTE: Wire goes on the outside (top) of hood.
18. Stretch Wire - Corner Panels Install wire on corner panels using 11 ga chain link (K) wire. Cut off extra wire where necessary. Tie at 12" along top side panels.
19. Use tie wire (O) and tie all chain link to the adjacent horizontal braces at approx. 18" apart.
20. Tighten all set screws and bolts & nuts.

WORK ORDER EW4008F

SHEET NAME LP01

SHEET 43 OF 85 SHEETS

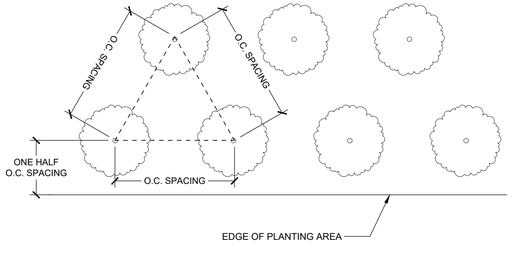
NOTE: TURF AREAS

THE CONSTRUCTION SHALL CONSIST OF TWO PRIMARY STAGES.

STAGE 1: CIVIL CONSTRUCTION OF ALL THE STORM WATER RELATED ELEMTNES AND THE SITE IMPROVEMENTS SHOWN INSIDE THE PRIMARY LIMITS OF WORK. (I.E. CONSTRUCTION FENCING).

A. DURING THIS STAGE, ALL EXISTING TURF AND LANDSCAPING TO REMAIN OUTSIDE THE PRIMARY CONSTRUCTION AREA (I.E. CONSTRUCTION FENCING) SHALL REMAIN ACCESSIBLE TO THE PUBLIC AND WILL BE MAINTAINED BY THE PARKS DEPARTMENT STAFF. DURING THIS PERIOD, THE CONTRACTOR SHALL NOT INTERRUPT THE EXISTING IRRIGATION WATER SUPPLY TO THESE AREAS AND SHALL ASSURE THE EXISTING CONTROL SYSTEM REMAINS IN OPERATION. ANY DISRUPTION TO IRRIGATION IN THESE AREAS THAT CAUSES DAMAGE TO THE EXISTING TURF HEALTH OR COVERAGE WILL BE REPAIRED AT THE CONTRACTOR'S EXPENSE BY OVERSEEDING WITH A SEED MIX OF SIMILAR COMPOSITION AS THE TURF TO BE REPAIRED/REPLACED AND FERTILIZED WITH A BALANCED LONG-RELEASE TURF FERTILIZER.

B. THE NEW IRRIGATION AND PLANTING WORK INSIDE THE PRIMARY WORK AREA MAY BE INCLUDED IN THIS STAGE AT THE CONTRACTOR'S DISCRETION.



C. INSIDE THE PRIMARY LIMITS OF WORK, AREAS OF EXISTING TURF TO BE RETAINED DURING CONSTRUCTION SHALL BE IRRIGATED AND MAINTAINED BY THE CONTRACTOR AS NEEDED. AFTER THE COMPLETION OF PRIMARY CONSTRUCTION, ANY EXISTING TURF AREAS WHICH ARE DEAD OR DAMAGED BY CONSTRUCTION ACTIVITY (INCLUDING ANY AREAS USED FOR PARKING, STORAGE, LAYDOWN, IRRIGATION TRENCHING ETC.) MUST BE REPLACED WITH THE SOD SPECIFIED AFTER THE AREA HAS BEEN DE-COMPACTED TO THE SATISFACTION OF THE ENGINEER AND AMENDED PER THE LANDSCAPE PLANTING SPECIFICATIONS. ANY AREAS OF EXISTING TURF REMAINING WITH BARE AREAS LARGER THAN 12" X12" SHALL BE REPAIRED BY OVERSEEDING. DEAD OR BARE AREAS LARGER THAN 36" X36" SHALL BE REPAIRED WITH SOD. AT COMPLETION OF THE MAINTENANCE AND ESTABLISHMENT PERIOD (SEE LANDSCAPE PLANTING SPECIFICATIONS), A FULL HEALTHY AND CONTINUOUS COVER OF TURF IS EXPECTED.

D. ALL TURF AREAS DAMAGED OR REMOVED BY CONSTRUCTION ACTIVITY SHALL BE DE-COMPACTED (IF OUTSIDE OF EXCAVATION LIMITS) AND AMENDED PER THE LANDSCAPE PLANTING SPECIFICATIONS, THEN PLANTED WITH SOD AS SPECIFIED IN THE PLANTING LEGEND.

STAGE 2: DURING THIS STAGE (AFTER SUBSTANTIAL COMPLETION OF STAGE 1), ADDITIONAL SITE AND IRRIGATION IMPROVEMENTS OUTSIDE THE PRIMARY LIMITS OF WORK (SEE IRRIGATION PLANS) SHALL BE COMPLETED IN THE REMAINDER OF THE PARK AREAS AS INDICATED ON THE PLANS. ANY AREAS OF EXISTING TURF DAMAGED BY CONSTRUCTION OR IRRIGATION TRENCHING SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE BY OVERSEEDING WITH A SEED MIX OF SIMILAR COMPOSITION AS THE TURF TO BE REPLACED AND FERTILIZED WITH A BALANCED LONG-RELEASE TURF FERTILIZER.

WORK ORDER EW4008F

SHEET NAME LP02

SHEET 44 OF 85 SHEETS

TREE PROTECTION – EXISTING TREES
All trees to remain in place shall be protected using the following guidelines:

TREE PROTECTION SPECIFICATIONS
These tree protection specifications shall be followed to protect all trees whose dripline is encroached upon either directly or indirectly by construction within City parks.

ANY FAILURE BY THE CONTRACTOR TO ADHERE TO THE REQUIREMENTS SPECIFIED BELOW WILL RESULT IN THE SUSPENSION OF ALL CONSTRUCTION ACTIVITIES, TO BE DONE AT THE CONTRACTOR'S EXPENSE. THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPLACEMENT OF OR PAYMENT FOR ANY TREES DAMAGED THROUGH NON-COMPLIANCE WITH THESE SPECIFICATIONS. THE MONETARY OR REPLACEMENT VALUE OF IMPACTED TREES WILL BE DETERMINED BY A RECREATION AND PARKS (RAP) ARBORIST OR BY A RAP APPROVED ISA CERTIFIED ARBORIST.

A Recreation and Parks Arborist shall be invited to the Job Start Meeting and also notified 48-hours prior to construction. Contact Steve Dunlap (213) 485-4826.

All trees that occur within the area of work, as shown on the plans, and *NOT* specifically designated for removal, shall be protected by the following means:

1. **Defining the Tree Protection Zone (TPZ)** - The **radius** (not the diameter) of the TPZ, measured from the outside of the tree trunk, shall be calculated according to the following:
   (a) **Single trunk trees -** multiply the trunk diameter in inches, measured 4.5' above grade, by 1.5 feet.
   (b) **Multi trunk trees -** multiply the sum of the diameters of all trunks in inches, measured 4.5' above grade, by 1.5 feet.
   (c) **Palm trees -** 5' from the base of the trunk.
   (d) **If a TPZ is delineated on the plans, the size and shape shown on the plans shall supercede the above requirements.**

2. The contractor shall install a 5' high temporary chain link fence with one pedestrian access gate along the boundary of the TPZ. See detail for temporary chain link fence on detail sheet.

3. The contractor shall provide one sign per each 20 lineal ft. of fence surrounding the TPZ indicating that fencing shall not be removed. See TPZ sign detail.

4. No work is permitted within the TPZ without the approval of: 1) the project Landscape Architect, 2) the Project Manager, and 3) RAP Forestry staff. Any work authorized by RAP Forestry staff within the TPZ must be done in accordance with the recommendations of RAP Forestry and under the supervision of a Monitoring Arborist. The Monitoring Arborist shall be supplied by the Contractor at his own expense, and be an ISA Certified Arborist or a Registered Consulting Arborist with verifiable experience in protecting trees. The Monitoring Arborist must be approved by RAP Forestry prior to commencement of work.

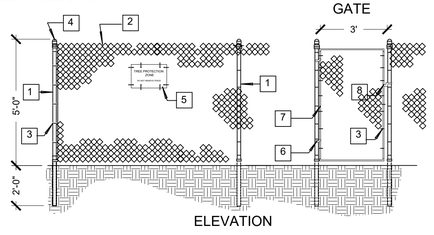
5. Within the TPZ, the contractor shall adhere to the following requirements, including, but not limited to:
   (a) No stockpiling or storage of any material, debris, or soil.
   (b) No storage of any construction equipment.
   (c) No vehicular access.
   (d) No un-approved trenching, excavation or disturbance of soil will be allowed.
   (e) No objects of any kind shall be attached to tree trunks.
   (f) For any approved excavation or trenching, no cutting of roots over 2" diameter will be allowed. Contractor shall use a pneumatic drill (a.k.a. "air spade") to excavate under woody roots larger than 2" in diameter. If any roots are unintentionally severed, remedial cuts are to be made under the supervision the Monitoring arborist, and soil backfilled immediately.

6. Within the boundaries of the construction zone (including the TPZ), the contractor shall be responsible for mitigating construction-related dust accumulation on all trees by spraying the trunks, limbs, and foliage with water to a maximum height of 30 feet during the months of April through November, at monthly intervals.

7. Beyond the TPZ, the contractor shall also be responsible for protecting all existing trees to remain in place within the boundaries of the construction zone, including vehicular access areas, lay down areas, and any other areas impacted by construction activities. Any damage to trees in these areas shall also be subject to the same monetary or replacement requirements specified below. Any necessary root cutting in this area must be approved in advance by either RAP Forestry or by a RAP approved ISA certified arborist employed by the Contractor. See also the General Conditions for any damage done by the contractor to landscaping or other park amenities that fall outside the boundaries of the construction zone.

8. Irrigation to all existing trees NOT specifically designated for removal shall be kept in operation for the duration of the project. Contractor shall be responsible for hand watering all impacted trees if necessitated by temporary shutdowns to or demolition of existing irrigation systems. Trees are to be irrigated deeply and as often as required such that soil moisture is detectable at a minimum depth of 18" using a soil probe.

9. Upon completion of all trenching, grading, excavation and soil preparation work, contractor shall remove all items installed to protect trees during the construction process with approval of the Project Manager.



10. Any of the following Southern California native tree species fall under Ordinance No. 177404 of the Los Angeles Municipal Code:
    (a) Oaks, including Valley Oak (*Quercus lobata)*, California Live Oak (*Quercus agrifolia)*, or any other tree of the oak genus indigenous to California but excluding Scrub Oak *(Quercus dumosa/Q. berberidifolia);*
    (b) Southern California Black Walnut *(Juglans californica* var. *californica);*
    (c) Western Sycamore *(Platanus racemosa);*
    (d) California Bay *(Umbellularia californica).*

Contractor shall comply with the requirements of the ordinance found at: http://cityplanning.lacity.org/Code_Studies/Other/ProtectedTreeOrd.pdf.

DAMAGES
If a tree that is designated to remain is removed or caused to be irreversibly damaged as determined by the Recreation and Parks Arborist, install a replacement tree matching in size, quality and variety using an installer designated by the Recreation and Parks Arborist. If an acceptable replacement tree is not available, pay damages to the City for the value of the damaged tree as assessed by the tree value formula in the ISA Guide for Establishing Value of Trees and Other Plants.

FENCING MATERIALS

1. POSTS: O.D., LINE POSTS 2-3/8 IN. O.D. POST SPACING TO BE 10'-0" MAX. POSTS TO BE DRIVEN 2' BELOW RELATIVE GRADE.
2. FABRIC: 9 GAUGE, 2 IN. MESH, KNUCKLE TOP AND BOTTOM, PLACE ON OUTER SIDE OF POST.
3. TIE WIRES: 11 GAUGE AT 12" O.C.
4. POST TOPS MALLEABLE IRON OR PRESSED STEEL.
5. 24"x18" SIGN. ATTACH WITH TIE WIRES. SIGN TO BE PROVIDED BY RAP.
6. HINGES: INDUSTRIAL BULLDOG HINGE (180 SWING) 2 HINGES PER GATE, ONE TOP AND ONE BOTTOM.
7. GATE FRAME: SIDES, 2-3/8" DIA
8. LOCKABLE CAST ALUMINUM FORK LATCH POST TOPS MALLEABLE IRON OR PRESSED STEEL.

NOTES:
1. THE BOTTOM OF THE FABRIC SHALL BE POSITIONED ONE INCH ABOVE FINISH GRADE.
2. PROVIDE FOR ONE 3' WIDE GATE PER ENCLOSURE.
3. ALL FENCING TO HAVE A STANDARD GALVANIZED FINISH.

Valve Callout

NO SYMBOL	AS APPROVED	1-1/4" SCH. 40 PVC, GRAY ELECTRICAL CONDUIT FOR FLOW SENSOR / MASTER VALVE WIRES OR CENTRAL CONTROL COMMUNICATION CABLE, PROVIDE PULL BOX AT A MAXIMUM OF 200 FEET ON CENTER FOR A 3 FOOT WIRE LOOP OR ANY SPLICES. INSTALL INSIDE A STANDARD RECTANGULAR VALVE BOX.
NO SYMBOL	PAIGE OR EQUAL	INSULTED CONDUCTORS FOR A 2-WIRE SYSTEM. REFER TO IRRIGATION SYSTEM PROJECT SPECIFICATION MANUAL FOR MORE INFORMATION.
NO SYMBOL	RAIN MASTER	TW-SPLICE-14 14-GUAGE WATER TIGHT CONNECTOR
NO SYMBOL	RAIN BIRD	ALL VALVE BOXES SHALL BE PER DETAILS AND IRRIGATION SYSTEM PROJECT SPECIFICATION MANUAL. FOR USE IN NON-VEHICULAR TRAFFIC SITUATIONS ONLY. DO NOT INSTALL IN CONCRETE OR ASPHALT. ALL BOXES INSTALLED IN PLANTER AREAS.
NO SYMBOL	AS APPROVED	ALL SOLVENT WELD MAINLINES ABOVE 2" IN SIZE SHALL HAVE CONCRETE THRUST BLOCKING INSTALLED AT ALL DIRECTIONAL CHANGES INCLUDING ELBOWS (45° AND 90°) AND TEES. MAINLINE PIPES UNDER 2" SIZE AND ALL LATERAL LINES DO NOT REQUIRE THRUST BLOCKING. SEE THRUST BLOCK DETAIL 504/LI05.
NO SYMBOL	AS APPROVED	VALVE BOX BASE FILL 0.75" CRUSHED GRAVEL
NO SYMBOL	CHRISTY'S OR EQUAL	MODEL STND IDENTIFICATION TAGS
NO SYMBOL	HARCO	EPOXY COATED DUCTILE IRON FITTINGS WITH STAINLESS STEEL HARDWARE. REFER TO SPECIFICATIONS

POINT OF CONNECTION NOTE 1:

POINT OF CONNECTION SHALL BE EXISTING WATER METER AT APPROXIMATE LOCATION SHOWN. VERIFY THE ACTUAL LOCATION, SIZE AND WATER PRESSURE IN THE FIELD PRIOR TO STARTING WORK. IF ANY OF THE POC INFORMATION SHOWN ON THESE DRAWINGS IS FOUND TO BE DIFFERENT THAN THE ACTUAL POC INFORMATION GATHERED IN THE FIELD, IMMEDIATELY NOTIFY THE ENGINEER. SHOULD THE CONTRACTOR FAIL TO VERIFY THE POC INFORMATION ANY CHANGES REQUIRED BY LOW PRESSURE OR VOLUME SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

CONTROLLER NOTE 2:

REMOVE EXISTING CONTROLLER AND INSTALL NEW CONTROLLER PER IRRIGATION LEGEND AND DETAIL. REFER TO MANUFACTURER'S RECOMMENDATIONS. CONTACT OWNER'S AUTHORIZED REPRESENTATIVE FOR LOCATION APPROVAL PRIOR TO INSTALLATION. CONNECT TO EXISTING 120 VAC POWER SUPPLY

NOTE:
THE IRRIGATION SYSTEM WAS DESIGNED FOR A STATIC WATER PRESSURE OF 71 PSI MINIMUM. CONTRACTOR SHALL VERIFY EXISTING STATIC WATER PRESSURE PRIOR TO COMMENCING WORK. IF STATIC WATER PRESSURE IS LESS THAN 73 PSI, THEN CONTRACTOR SHALL NOTIFY THE ENGINEER IMMEDIATELY FOR DIRECTION ON HOW TO PROCEED. FAILURE TO NOTIFY ENGINEER SHALL PLACE ALL REQUIRED REPAIRS/EQUIPMENT AND OTHER RELATED COST AS THE FULL RESPONSIBILITY OF THE IRRIGATION CONTRACTOR.

IRRIGATION NOTES

1. IRRIGATION SYSTEM COMPONENTS ARE SHOWN DIAGRAMMATICALLY. CONTRACTOR SHALL MARK MAINLINE ROUTING AND MANIFOLD LOCATIONS IN THE FIELD FOR REVIEW AND APPROVAL BY ENGINEER. LATERAL LINE LOCATIONS SHALL BE ROUTED WHEN POSSIBLE TO AVOID TREE PROTECTION ZONES. SEE TREE PROTECTION SPECIFICATIONS FOR TRENCHING REQUIREMENTS INSIDE TPZ'S.

2. AT ALL TIMES DURING CONSTRUCTION, CONTRACTOR SHALL MAINTAIN TEMPORARY WATER SUPPLY AND CONTROLLER CONNECTED TO AREAS WITH PLANT MATERIAL TO REMAIN, OR PROVIDE ALTERNATE METHOD OF IRRIGATION. SEE TURF PROTECTION NOTES AND TREE PROTECTION REQUIREMENTS..

3. ANY EXISTING IRRIGATION SYSTEM COMPONENTS DEPICTED HEREIN ARE BASED UPON AS-BUILT RECORD DRAWINGS, AND ARE SHOWN HERE FOR INFORMATIONAL PURPOSES ONLY. CONTRACTOR SHALL VERIFY THE LOCATION OF ALL EXISTING SYSTEM COMPONENTS TO REMAIN PRIOR TO ENGAGING IN CONSTRUCTION ACTIVITIES. CONTRACTOR SHALL IMMEDIATELY NOTIFY PROJECT MANAGER OF ANY DISCREPANCIES BETWEEN AS-BUILT AND EXISTING CONDITIONS.

4. THE CONTRACTOR SHALL VERIFY THE LOCATIONS OF ALL EXISTING UTILITIES, STRUCTURES AND SERVICES BEFORE COMMENCING WORK. THE LOCATIONS OF ANY UTILITIES, STRUCTURES AND SERVICES SHOWN IN THESE PLANS ARE APPROXIMATE ONLY. ANY DISCREPANCIES BETWEEN THESE PLANS AND ACTUAL FIELD CONDITIONS SHALL BE REPORTED TO THE PROJECT MANAGER IMMEDIATELY. THE CONTRACTOR SHALL PROMPTLY REPAIR OR REPLACE ANY EXISTING OR NEWLY CONSTRUCTED UTILITIES OR SITE FEATURES DAMAGED BY THEIR WORK AT THEIR OWN EXPENSE.

5. THE CONTRACTOR SHALL NOT WILLFULLY INSTALL ANY EQUIPMENT AS SHOWN ON THE PLANS WHEN IT IS OBVIOUS IN THE FIELD THAT CONDITIONS OR OBSTRUCTIONS EXIST THAT WERE UNKNOWN AT THE TIME THESE PLANS WERE PREPARED. CONTRACTOR SHALL IMMEDIATELY NOTIFY THE PROJECT MANAGER OF ANY SUCH CONDITIONS PRIOR TO PERFORMING ANY AFFECTED WORK. IN THE EVENT THAT THIS NOTIFICATION IS NOT GIVEN, THE CONTRACTOR SHALL ASSUME FULL RESPONSIBILITY FOR ANY NECESSARY MODIFICATIONS TO COMPLETED WORK.

6. CONTRACTOR SHALL COORDINATE THEIR WORK WITH OTHER CONTRACTORS FOR THE LOCATION AND INSTALLATION OF PIPE SLEEVES AND LATERALS UNDER PAVING IN A TIMELY MANNER. SEE TRENCHING DETAIL FOR SLEEVING REQUIREMENTS. PLACE SLEEVES IN ACCORDANCE WITH APPLICABLE CODES. IRRIGATION CONTRACTOR SHALL BE RESPONSIBLE FOR COORDINATING THE INSTALLATION OF SLEEVES AND CONDUITS OF SUFFICIENT SIZE WITHIN ALL PAVED AREAS IN ADDITION TO SLEEVES AND CONDUITS SHOWN ON THE DRAWINGS.

7. THE CONTRACTOR SHALL FLUSH AND PRESSURE TEST ALL MAINLINES PER LANDSCAPE CONSTRUCTION NOTES. CONTRACTOR SHALL FLUSH ALL LATERAL LINES AND IRRIGATION HEADS PER THE LANDSCAPE CONSTRUCTION NOTES.

8. THE INTENT OF THESE IRRIGATION PLANS IS TO PROVIDE HEAD-TO-HEAD COVERAGE TO ALL TURF AREAS. **WHERE NEW IRRIGATION SYSTEMS INTERFACE WITH EXISTING HEADS TO REMAIN, ACTUAL LOCATIONS OF EXISTING HEADS SHALL BE VERIFIED IN THE FIELD. IF REQUIRED, HEAD LAYOUT IN NEW CONSTRUCTION AREAS WILL BE ADJUSTED IN THE FIELD UNDER THE DIRECTION OF THE ENGINEER AS NEEDED TO ACHIEVE THE REQUIRED COVERAGE**. AS PART OF THE SCOPE OF WORK, THE CONTRACTOR SHALL PROVIDE ANY ADDITIONAL HEADS AND/OR ALTERNATE NOZZLES REQUIRED TO ACHIEVE PROPER COVERAGE WITH A MINIMUM OF OVERSPRAY AT NO ADDITIONAL COST TO THE CITY.

9. UPON COMPLETION OF INSTALLATION, CONTRACTOR SHALL CONDUCT A COVERAGE TEST PER IRRIGATION SPECIFICATIONS. CONTRACTOR SHALL NOTIFY PROJECT MANAGER TO REQUEST THE TEST, WHICH WILL BE SCHEDULED AT THE SOONEST DATE POSSIBLE PER AVAILABILITY OF RAP AND LADWP STAFF.

10. REFER TO IRRIGATION SYSTEMS SPECIFICATIONS FOR ADDITIONAL INFORMATION REGARDING THIS SECTION OF WORK.

11. NOTIFY PROJECT MANAGER OF ANY ASPECTS OF LAYOUT THAT WILL PROVIDE INCOMPLETE OR INSUFFICIENT WATER COVERAGE OF PLANT MATERIAL AND DO NOT PROCEED UNTIL THEIR INSTRUCTIONS ARE OBTAINED.

12. EQUIPMENT SHOWN IN HARDSCAPE AREAS ARE FOR DESIGN CLARIFICATION ONLY AND SHALL BE INSTALLED WHENEVER POSSIBLE WITHIN PLANTED AREAS A REASONABLE, REACHABLE DISTANCE FROM HARDSCAPE OR TURF AREAS.
LOCATION OF MAINLINE ROUTING, MANIFOLDS AND CONTROL WIRE CONDUIT & PULL BOXES SHALL BE LAID OUT BY CONTRACTOR FOR APPROVAL OF RAP STAFF AND PROJECT ENGINEER PRIOR TO EXCAVATION. CONTRACTOR MAY BE REQUIRED TO MODIFY PROPOSED ROUTING AND LOCATIONS AT NO ADDITIONAL COST TO CITY.

13. DUE TO THE SCALE OF THE DRAWINGS, IT IS NOT POSSIBLE TO INDICATE ALL OFFSETS, FITTINGS, SLEEVES, ETC., WHICH MAY BE REQUIRED. CAREFULLY INVESTIGATE THE STRUCTURAL AND FINISHED CONDITIONS AFFECTING ALL WORK AND PLAN WORK ACCORDINGLY, FURNISHING SUCH FITTINGS, ETC., AS MAY BE REQUIRED TO MEET SUCH CONDITIONS. THE WORK SHALL BE INSTALLED IN SUCH A MANNER AS TO AVOID CONFLICTS BETWEEN IRRIGATION SYSTEMS, PLANTING, AND ARCHITECTURAL FEATURES.

14. LOCATION OF TREE PLANTING AND ASSOCIATED IRRIGATION HEADS MAY BE MODIFIED BY THE CITY AT THE TIME OF LAYOUT AT NO ADDITIONAL COST TO THE CITY. MAXIMUM CHANGE IN LOCATION SHALL BE LESS THAN 25'.

TRENCHING NOTES:

1. SEE TREE PROTECTION REQUIREMENTS SHEET LP03 FOR TRENCHING IN TREE PROTECTION ZONES.

2. SPECIAL TRENCHING METHODS INCLUDING BUT NOT LIMITED TO HAND-EXCAVATION MAY BE REQUIRED INSIDE TREE PROTECTION ZONES INCLUDING HAND TRENCHING AT THE DISCRETION OF RAP FORESTRY AND/OR CONTRACTORS' MONITORING ARBORIST.

SHEET 50 OF 85 SHEETS

1. PLASTIC PIPE SHALL BE INSTALLED PER IRRIGATION INSTALLATION NOTES AND TRENCHING DETAIL.
2. THE PORTLAND CEMENT CONCRETE USED FOR THRUST BLOCKS SHALL BE MIN. 470-B-2000 CONC.
3. ALL ANCHOR RODS SHALL BE GALVANIZED STEEL MIN. 1/2" INCH IN DIAMETER.
4. SIZE OF THRUST BLK.: 4" PIPE = 4 CU. FT. CONC., 6" PIPE = 6 CU. FT., 8" PIPE = 8 CU. FT.
5. WRAP ALL FITTINGS WITH SIX MIL PLASTIC BEFORE POURING THRUST BLOCKS.
6. POOR SOIL CONDITIONS : USE THRUST BLOCKS FOR 3" PIPE AT SIZE SHOWN FOR 4" PIPE.
7. ALL THRUST BLOCKS SHALL BEAR AGAINST UNDISTURBED SOIL.

RAP VERSION 3/1/92 RCM, JPH

504	THRUST BLOCK INSTALLATION	
N.T.S.	BOE VERSION Sep/07	RP DETAIL L1340

WIRED RAIN SENSOR IN SS SENSOR ENCLOSURE MOUNTED TO SIDE OF CONTROLLER ENCLOSURE. INSTALL PER MFR. INSTRUCTIONS

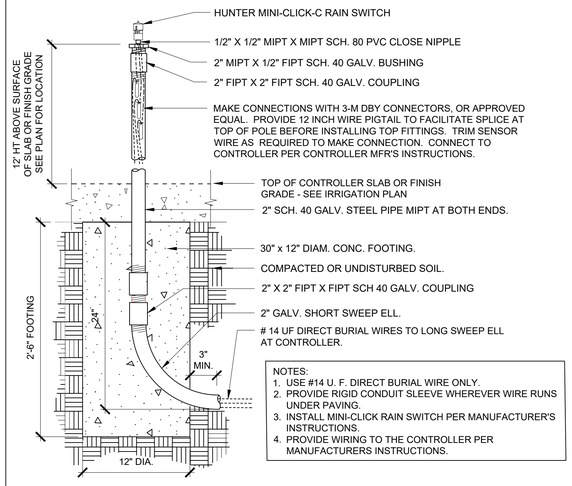
LEMEUR/SAFEGUARD MODEL SG/A-SS
STRONG BOX MODEL SB-24SS
CONTROLLER ENCLOSURE SHALL HAVE A PROTECTED LOCKING HASP SUITABLE FOR A PADLOCK. (KEYED CYLINDER LOCK NOT PERMITTED.) ENCLOSURE OPTIONS TO INCLUDE: STAINLESS STEEL BACKING BOARD, 36 STATION TERMINAL STRIP WITH PLASTIC LABELS, WATER-PROOF 4"X4" BOX WITH SHUTOFF SWITCH TO CONTROLLER AND 1 GFI OUTLET.

CONTROLLER POWER SWITCH AND 110V GFI ELECTRICAL OUTLET.

STAINLESS STEEL BACKING BOARD

SECURE ENCLOSURE TO CONCRETE SLAB WITH 4-3/8" GALVANIZED ANCHOR BOLTS, 1 AT EACH CORNER. UTILIZE MANUFACTURER'S STEEL TEMPLATE SET IN CONCRETE.

GROUNDING ROD PER CONTROLLER MANUFACTURER'S INSTRUCTIONS. SEE IRRIGATION SPECIFICATIONS.



WIRE AND CONDUIT SIZING FROM CONTROLLER TO ELECTRICAL PANEL			
CIRCUIT VOLTAGE	LENGTH OF RUN	CONDUIT & WIRE SIZE	EQUIPMENT GROUND WIRE SIZE
120 V	600' MAX.	3/4"C - 2#12 & 1#12 THWN CU	
	BET. 601' & 885'	3/4"C - 2#10 & 1#12 THWN CU	
WIRE AND CONDUIT REQUIREMENTS BASED ON TOTAL LOAD OF 235 WATTS			

NOTE:
SEE DETAIL FOR 2-WIRE CABLE AND CONDUIT INSTALLATION.

3/4" PVC COATED RIGID CONDUIT FOR ELECTRICAL SERVICE

1.5" DIA. SCH. 80 PVC 2-WIRE CONDUIT .

503	CONTROLLER AND ENCLOSURE	
N.T.S.	BOE VERSION Feb/18	RAP DETAIL L1470

HUNTER MINI-CLICK-C RAIN SWITCH

1/2" X 1/2" MIPT X MIPT SCH. 80 PVC CLOSE NIPPLE

2" MIPT X 1/2" FIPT SCH. 40 GALV. BUSHING

2" FIPT X 2" FIPT SCH. 40 GALV. COUPLING

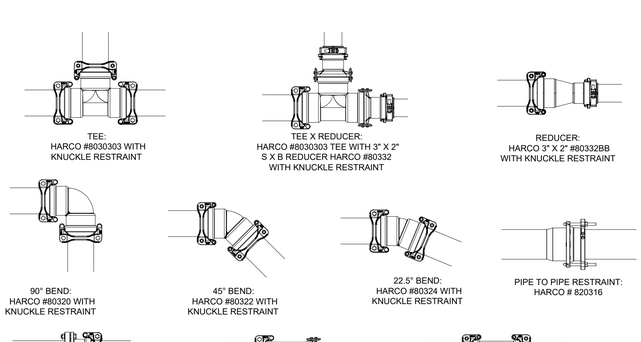
MAKE CONNECTIONS WITH 3-M DBY CONNECTORS, OR APPROVED EQUAL. PROVIDE 12 INCH WIRE PIGTAIL TO FACILITATE SPLICE AT TOP OF POLE BEFORE INSTALLING TOP FITTINGS. TRIM SENSOR WIRE AS REQUIRED TO MAKE CONNECTION. CONNECT TO CONTROLLER PER CONTROLLER MFR'S INSTRUCTIONS.

TOP OF CONTROLLER SLAB OR FINISH GRADE - SEE IRRIGATION PLAN

2" SCH. 40 GALV. STEEL PIPE MIPT AT BOTH ENDS.

30" x 12" DIAM. CONC. FOOTING.

COMPACTED OR UNDISTURBED SOIL.



2" X 2" FIPT X FIPT SCH 40 GALV. COUPLING

2" GALV. SHORT SWEEP ELL.

14 UF DIRECT BURIAL WIRES TO LONG SWEEP ELL AT CONTROLLER.

NOTES:
1. USE #14 U. F. DIRECT BURIAL WIRE ONLY.
2. PROVIDE RIGID CONDUIT SLEEVE WHEREVER WIRE RUNS UNDER PAVING.
3. INSTALL MINI-CLICK RAIN SWITCH PER MANUFACTURER'S INSTRUCTIONS.
4. PROVIDE WIRING TO THE CONTROLLER PER MANUFACTURERS INSTRUCTIONS.

501	POLE MOUNTED RAIN SWITCH	
N.T.S.	BOE VERSION DEC/21	RP DETAIL L1460

NOTE: ADDITIONAL PIPE & FITTING CONFIGURATIONS MAY BE NECESSARY TO COMPLETE WORK SHOWN ON PLANS DUE TO UNFORSEEN SITE CONDITIONS. CONSULT MANUFACTURER FOR ADDITIONAL INFORMATION. USE #60-100-03 KNUCKLE RESTRAINT ON FITTINGS WHERE DESIGNATED.

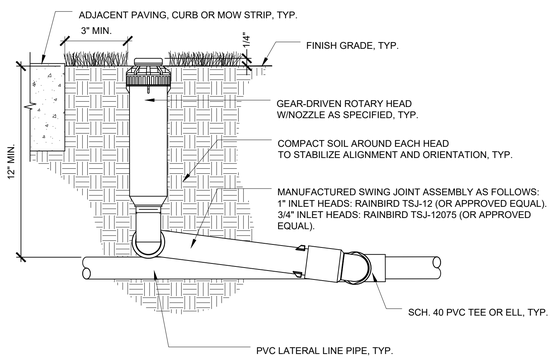
505	RESTRAINED FITTINGS FOR 3" MAINLINE	
N.T.S.	BOE VERSION DEC/08 - RF	RP DETAIL 1312

MAINLINE PIPE FITTINGS:

1.) DUCTILE IRON FITTINGS WILL BE REQUIRED FOR ALL MAINLINE PIPE CONNECTIONS (CONSTANT PRESSURE) FOR 3" OR LARGER PIPE UNDER THE FOLLOWING CONDITIONS:

A. AS SHOWN ON OTHER DETAILS INCLUDED WITHIN IN THESE PLANS AND SPECIFICATIONS.

B. AT ALL DIRECTIONAL FITTINGS SUCH AS TEES, ELBOWS, ETC., AND REDUCERS, ADAPTERS AND COUPLINGS AS NOTED OR DETAILED.



2.) DUCTILE IRON FITTINGS SHALL BE A "PUSH-ON" TYPE FOR IPS SIZED PVC PIPE BY HARCO FITTINGS (www.harcofittings.com) OR APPROVED EQUAL.

3.) ALL GASKETED PVC PIPE JOINTS WITHIN 25' OF DUCTILE IRON DIRECTIONAL FITTINGS SHALL BE RESTRAINED USING PIPE TO PIPE RESTRAINT SHOWN. FOR END CAPS AND TERMINAL GATE VALVES, ALL GASKETED PVC PIPE JOINTS WITHIN 40' SHALL BE RESTRAINED USING PIPE TO PIPE RESTRAINT SHOWN. REFER TO MANUFACTURERS FITTING RESTRAINT GUIDE FOR ADDITIONAL INFORMATION.

4.) ALL BOLTS ON FITTING RESTRAINTS SHALL BE TIGHTENED USING A TORQUE WRENCH ONLY FOLLOWING THE MANUFACTURER'S SPECIFICATIONS. THE CONTRACTOR SHALL BE PREPARED TO VERIFY THE TORQUE OF THE BOLTS WITH A TORQUE WRENCH IN THE PRESENCE OF THE BOA INSPECTOR AND SHALL HAVE A TORQUE WRENCH AVAILABLE ON SITE UNTIL JOB ACCEPTANCE.

5.) GLUED JOINTS **SHALL NOT BE** USED IN ANY MAINLINE PVC FITTINGS OR PIPE 3" OR LARGER IN DIAMETER UNLESS SPECIFICALLY DENOTED ON PLANS OR DETAILS INCLUDED IN THIS DRAWING SET.

6.) THRUST BLOCKS **SHALL ONLY BE** USED FOR MAINLINE FITTINGS WHERE SPECIFICALLY DESIGNATED IN PLANS OR DETAILS.

FINISH GRADE, TYP.

GEAR-DRIVEN ROTARY HEAD W/NOZZLE AS SPECIFIED, TYP.

COMPACT SOIL AROUND EACH HEAD TO STABILIZE ALIGNMENT AND ORIENTATION, TYP.

MANUFACTURED SWING JOINT ASSEMBLY AS FOLLOWS:
1" INLET HEADS: RAINBIRD TSJ-12 (OR APPROVED EQUAL).
3/4" INLET HEADS: RAINBIRD TSJ-12075 (OR APPROVED EQUAL).

NOTES:
1. PLACE ALL HEADS 1/4" ABOVE FINISH GRADE AT INITIAL INSTALLATION. SET HEADS 3" AWAY FROM WALKS, CURBS, OR MOW STRIPS.
2. INSTALL ALL HEADS PERPENDICULAR TO FINISH GRADE.
3. THOROUGHLY FLUSH ALL LATERAL LINE PIPES TO REMOVE DIRT AND DEBRIS BEFORE INSTALLATION OF NOZZLES.
4. ADJUST ALL HEADS TO PROPER ARC AND RADIUS AS NECESSARY TO ACHIEVE PROPER COVERAGE AND UNIFORMITY. IF PROPER COVERAGE AND UNIFORMITY IS NOT ACHIEVED WITH THE SPECIFIED NOZZLE, CONTRACTOR SHALL CHANGE NOZZLE AS NEEDED IN CONSULTATION WITH LANDSCAPE ARCHITECT UNTIL DESIRED PERFORMANCE IS ACHIEVED.

REVISED: 6/14/06 RWF/SLG

502	GEAR-DRIVEN ROTOR HEAD INSTALLATION

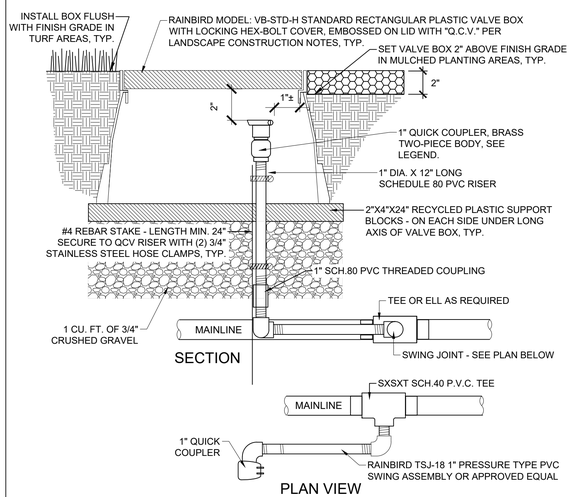
SHEET 51 OF 85 SHEETS

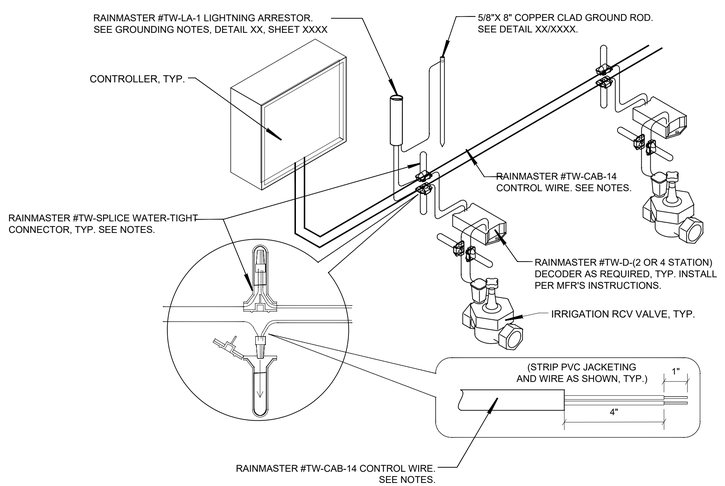
NOTES:



1. ALL TWO-WIRE COMPONENTS (WIRE, DECODERS, SURGE PROTECTORS, ETC.) SHALL BE PROVIDED BY RAINBIRD, 800-724-6247.
2. SEE DETAIL RELATED DETAILS FOR WIRING AND GROUNDING CONNECTIONS.

WIRE CONFIGURATION

WIRE GAUGE	Total WireLength (feet)	Max Distance from Decoder to Solenoid
MAXI-Cable 14-2UF	8,700	456
Maximum 500 feet between line surge protectors		



602 2-WIRE SYSTEM LAYOUT

N.T.S. B.O.E. 02/16/18 L1372

601 QUICK COUPLER INSTALLATION (2" MAINLINE OR SMALLER)

N.T.S. BOE VERSION Dec/08 RF RP DETAIL L1200

WIRING NOTES:
1.) CONTROL WIRE SHALL BE RAINMASTER #TW-CAB-14 OR APPROVED EQUAL: POLYETHYLENE DOUBLE-JACKETED OR UF-B UL PVC DOUBLE-JACKETED TWO-CONDUCTOR SOLID CORE DESIGNED FOR DIRECT BURIAL WITH INSULATION 3/16 INCH (.060Ó) THICK, HIGH DENSITY, SUNLIGHT RESISTANT INCASED IN AN OUTER JACKET OF POLYETHYLENE OR PVC CONFORMING TO ICEA S-GL-402 OR NEMA WC5, HAVING A MINIMUM WALL THICKNESS OF .045 INCHES. (TWO-WIRE POLYETHYLENE "TWISTED" CABLE OR SINGLE STRAND 14-GAUGE PVC IRRIGATION WIRE DOES NOT CONFORM TO THESE SPECIFICATIONS AND WILL NOT BE ACCEPTED).

2.) ALL WIRE INSULATION SHALL BE INTACT AND FREE OF NICKS AND CUTS

3.) ATTACHING DECODERS:

- TWIST WIRES TO PROVIDE A SOLID MECHANICAL CONNECTION BEFORE SECURING THE ATTACHMENT BY ADDING THE WIRE NUT.
- RAINMASTER #TW-SPLICE-14 OR APPROVED EQUAL (SURESPLICE, TRADEMARKED) GEL FILLED CONNECTORS (OR SIMILAR) SHALL BE USED ON ALL CONNECTIONS.
- GREASE FILLED WIRE NUTS WILL NOT BE ACCEPTED.
- TEST ALL CONNECTIONS BEFORE IMMERSING THE WIRE NUT IN THE GEL-FILLED CAP.
- ADHERE TO ALL LOCAL AND NATIONAL BUILDING AND ELECTRICAL CODES.
- CONTRACTOR SHALL GUARANTEE ALL WIRE CONNECTIONS TO BE ABSOLUTELY WATER TIGHT.

4.) ALL EQUIPMENT SHALL BE INSTALLED PER THE MANUFACTURER'S SPECIFICATIONS.

603 2-WIRE IRRIGATION SYSTEM WIRING (RAINMASTER OR EQUAL)

WORK ORDER EW4008F

SHEET NAME LI06

SHEET 52 OF 85 SHEETS

PULL BOX

TERMINAL OR MANIFOLD BOX

701	2-WIRE CABLE INSTALLATION AND GROUNDING	
N.T.S.		RP DETAIL L1430

NOTES:

1. ALL CONDUIT AND FITTINGS SHALL BE SCHEDULE 80 PVC. CHANGES IN DIRECTION OF CONDUIT PATH SHALL NOT EXCEED 360 DEG. FOR EACH SECTION BETWEEN PULL BOXES.
2. MAXIMUM DISTANCE BETWEEN PULL BOXES SHALL BE 200 FEET.
3. MAXIMUM LENGTH OF SECONDARY WIRE PATH (14 AWG) FROM FIELD DECODER TO SOLENOID IS 450 FEET.
4. PROVIDE A COIL OF MIN. 24" OF 2-WIRE CABLE AT EACH SPLICE OR DECODER CONNECTION POINT.

TWO-WIRE SYSTEM GROUNDING REQUIREMENTS:

SURGE PROTECTION USING PROPER GROUNDING RODS IS REQUIRED FOR PROTECTION AGAINST SURGE DAMAGE DUE TO LIGHTNING OR OTHER ELECTRICAL SURGE EVENTS. CONFORMANCE TO THIS SURGE SUPPRESSION SPECIFICATION IS NECESSARY TO RETAIN WARRANTY PROTECTION UNDER MANUFACTURER'S WARRANTY TERMS.

THE INSTALLATION SHALL CONFORM TO MANUFACTURER'S INSTRUCTIONS, AND MUST MEET OR EXCEED THE AMERICAN SOCIETY OF IRRIGATION CONSULTANTS (ASIC) EARTH GROUNDING GUIDELINE 100-2002.
HTTP://WWW.ASIC.ORG/UPLOADS/ASSETS/011007_121320_ASIC_GROUNDING_GUIDELINES.DOC

GROUND RODS AS REFERRED TO IN THIS SPECIFICATION SHALL CONFORM TO THE FOLLOWING STANDARDS:

1.) ALL GROUNDING RODS SHALL BE BARE COPPER OF 5/8" DIAMETER OR GREATER, AND 8' LENGTH OR GREATER.

2.) A MEASURED RESISTANCE READING OF NO MORE THAN 10 OHMS IS NECESSARY AT EACH LIGHTNING ARRESTOR. ASIC SPEC: SECTION 7.0 - MEASURING RESISTANCE, ITEM A.

GROUND RODS SHALL BE LOCATED AT A MINIMUM DISTANCE TO ASSURE THAT THE TWO-WIRE PATH IS OUTSIDE OF THE ELECTRODE SPHERE OF INFLUENCE FOR THE GROUNDING ROD: THE GROUND ROD MUST BE CONNECTED AT LEAST 8' AWAY FROM THE TWO-WIRE PATH, AT A RIGHT ANGLE TO THE TWO-WIRE PATH.

UNDER NO CIRCUMSTANCES SHOULD A GROUND ROD BE INSTALLED IN OR UNDER A VALVE BOX, METER BOX OR ELECTRICAL BOX.

CONNECTIONS TO GROUNDING RODS:
ALL CONNECTIONS TO GROUND RODS SHALL CONFORM TO ASIC EARTH GROUNDING GUIDELINE 100-2002, AND SHALL CONSIST OF A SCREW CLAMP TYPE OF CONNECTION.

ANY WIRE EXTENSIONS REQUIRED TO CONNECT FROM A GROUND ROD TO A LIGHTNING ARRESTOR OR ENCLOSURE GROUND LUG SHALL BE BARE COPPER, AND SHALL NOT HAVE ANY SHARP BENDS OR KINKS. WIRE EXTENSIONS CONNECTED TO LIGHTNING ARRESTORS SHALL USE A CADWELD TYPE OR SCREW CLAMP TYPE CONNECTION WHERE THE BARE COPPER GROUND WIRE MEETS THE GREEN GROUNDING WIRE FROM THE LIGHTNING ARRESTOR.

WATER CONSERVATION NOTES

1. THE IRRIGATION IS SUPPLIED BY A POTABLE WATER CONNECTIONS.
2. LOCKS SHALL BE INSTALLED ON ALL PUBLICLY ACCESSIBLE EXTERIOR FAUCETS AND HOSE BIBS.
3. A FINAL REPORT FOR THE TESTING AND ADJUSTING OF ALL NEW SYSTEMS SHALL BE COMPLETED PRIOR TO FINAL APPROVAL BY THE FIELD INSPECTOR. THIS REPORT SHALL BE SIGNED BY THE INDIVIDUAL RESPONSIBLE FOR PERFORMING THESE SERVICES.
4. THERE IS NO SPECIAL LANDSCAPE AREA (SLA) AS PART OF THESE PLANS
5. RECIRCULATING WATER SYSTEMS SHALL BE USED FOR WATER FEATURES.
6. PRESSURE REGULATING DEVICES ARE REQUIRED IF WATER PRESSURE IS BELOW OR EXCEEDS THE RECOMMENDED PRESSURE OF THE SPECIFIED IRRIGATION DEVICES.
7. CHECK VALVES OR ANTI-DRAIN VALVES ARE REQUIRED ON ALL SPRINKLER HEADS WHERE LOW POINT DRAINAGE COULD OCCUR.
8. A DIAGRAM OF THE IRRIGATION PLAN SHOWING HYDROZONES SHALL BE KEPT WITH THE IRRIGATION CONTROLLER FOR SUBSEQUENT MANAGEMENT PURPOSES.
9. A CERTIFICATE OF COMPLETION SHALL BE FILLED OUT AND CERTIFIED BY EITHER THE SIGNER OF THE LANDSCAPE PLANS, THE SIGNER OF THE IRRIGATION PLANS, OR THE LICENSED LANDSCAPE CONTRACTOR FOR THE PROJECT.
10. AN IRRIGATION AUDIT REPORT SHALL BE COMPLETED AT THE TIME OF FINAL INSPECTION.
11. AT THE TIME OF FINAL INSPECTION, THE PERMIT APPLICANT MUST PROVIDE THE OWNER OF THE PROPERTY WITH A CERTIFICATE OF COMPLETION, CERTIFICATE OF INSTALLATION, IRRIGATION SCHEDULE AND A SCHEDULE OF LANDSCAPE AND IRRIGATION MAINTENANCE.
12. A FINAL REPORT FOR THE TESTING AND ADJUSTING OF ALL NEW SYSTEMS SHALL BE COMPLETED PRIOR TO FINAL APPROVAL BY THE FIELD INSPECTOR. THIS REPORT SHALL BE SIGNED BY THE INDIVIDUAL RESPONSIBLE FOR PREFORMING THESE SERVICES.
13. AN OPERATIONS AND SYSTEMS MANUAL SHALL BE PROVIDED TO THE OWNER OR REPRESENTATIVE AND TO THE FIELD INSPECTOR AT THE TIME OF FINAL INSPECTION.

THE PORTIONS OF THE PLANS REGARDING IRRIGATION DESIGN ASPECTS OF THE PROJECT HAVE BEEN REVIEWED AND APPEAR TO BE IN SUBSTANTIAL CONFORMANCE WITH THE RECOMMENDATIONS CONTAINED IN THE CURRENT CITY OF TUSTIN AND STATE MODEL WATER EFFICIENT LANDSCAPE ORDINANCE. WE MAKE NO REPRESENTATIONS OF THE ACCURACY OF THE DIMENSIONS, MEASUREMENTS, CALCULATIONS OR ANY PORTION OF THE DESIGN.

"I HAVE COMPLIED WITH THE CRITERIA OF THE ORDINANCE AND APPLIED THEM ACCORDINGLY FOR THE EFFICIENT USE OF WATER IN THE IRRIGATION DESIGN PLAN."

BY: NUVIS — DATE: 11/18/2022
RLA # 3943
EXP. 10/31/23

I AGREE TO COMPLY WITH THE REQUIREMENTS OF THE WATER EFFICIENT LANDSCAPE ORDINANCE AND SUBMIT A COMPLETE LANDSCAPE DOCUMENT PACKAGE.

BY: NUVIS — DATE: 11/18/2022

DESIGN CRITERIA:

CODES:
CBC-2019 (CALIFORNIA BUILDING CODE 2019)

ACI 318-14 (BUILDING CODE REQUIREMENTS FOR STRUCTURAL CONCRETE)

ACI 350-06 (CODE REQUIREMENTS FOR ENVIRONMENTAL ENGINEERING CONCRETE STRUCTURES)

DESIGN LOADS:

DEAD LOADS:
INCLUDE WEIGHT OF ALL MATERIALS OF CONSTRUCTION

LIVE LOADS:
TOP SLABS 200 PSF (NON-REDUCIBLE)

RISK CATEGORY III

WIND DESIGN DATA:

BASIC WIND SPEED V_{ULT} 101 MPH (ULTIMATE)
V_{ASD} 78 MPH (NOMINAL)

EXPOSURE CATEGORY C

SEISMIC DESIGN DATA:

SOIL SITE CLASS D
MAPPED SPECTRAL RESPONSE ACCELERATIONS
SHORT PERIOD Ss = 1.935g
ONE SECOND PERIOD S1 = 0.658g
SPECTRAL RESPONSE COEFFICIENTS
SHORT PERIOD Sds = 1.455g
ONE SECOND PERIOD Sd1 = 1.180g
SEISMIC DESIGN CATEGORY D
SEISMIC IMPORTANCE FACTOR Ie = 1.25

SNOW:

GROUND SNOW LOAD Pg 0 PSF (NON-REDUCIBLE)

FOUNDATIONS:

FOR GEOTECHNICAL INFORMATION, REFER TO "STORMWATER CAPTURE PARKS PROGRAM – STRATHERN PARK NORTH GEOTECHNICAL INVESTIGATION" DATED AUGUST 31ST, 2020 BY NINYO & MOORE IRVINE, CA

ALLOWABLE BEARING PRESSURE = 4000 PSF (MAT FOUNDATION)
1/3 INCREASE IN BEARING PRESSURE FOR SHORT TERM LOADING IS ALLOWED

ALL EXTERIOR FOUNDATIONS SHALL EXTEND TO A DEPTH = 18"

LATERAL SOIL PRESSURES:
AT-REST = 57 PSF
PASSIVE = 300 PSF
SEISMIC = 46*H PSF (TRIANGULAR - WHERE H IS HEIGHT OF SOIL)
SURCHARGE COEFFICIENT = 0.47
STRUCTURAL FILL COMPACTION = 90% (ASTM D1557)

FOUNDATION PREPARATION:

FOUNDATION SHALL BE PLACED ON A MINIMUM OF 2 FT OF NEW STRUCTURAL FILL.
SEE CIVIL DRAWINGS FOR STRUCTURAL FILL AND OVER EXCAVATION REQUIREMENTS.

SEISMIC REQUIREMENTS - NON-STRUCTURAL COMPONENTS:

IN ACCORDANCE WITH THE REQUIREMENTS OF THE CBC AND BY REFERENCE ASCE 7-16, ALL MECHANICAL, ELECTRICAL AND NON-STRUCTURAL COMPONENTS AND EQUIPMENT AND ANCHORAGES SHALL BE DESIGNED IN ACCORDANCE WITH THE REQUIREMENTS OF SECTION 13 OF ASCE 7 WITH A COMPONENT IMPORTANCE FACTOR Ip=1.0

FOR THIS PURPOSE, ALL COMPONENTS AND EQUIPMENT SHALL BE CONSIDERED TO HAVE THE SAME SEISMIC DESIGN CATEGORY AS THAT OF THE STRUCTURE THEY OCCUPY.

GENERAL CONDITIONS:

ALL STRUCTURAL DRAWINGS SHALL BE USED IN CONJUNCTION WITH THE OTHER PROJECT DRAWINGS AND SPECIFICATIONS.

SEE MECHANICAL, ELECTRICAL, AND CIVIL DRAWINGS FOR ANCHORS, PIPE SLEEVES, CONDUITS OR OTHER ITEMS TO BE EMBEDDED IN OR PASS THROUGH THE STRUCTURE MEMBERS. IN GENERAL, EMBEDMENTS AND PENETRATIONS LESS THAN 12 INCHES IN DIAMETER ARE NOT SHOWN ON STRUCTURAL DRAWINGS.

STANDARD DETAILS SHALL BE USED AT ALL APPLICABLE LOCATIONS, UNLESS NOTED OTHERWISE ON DRAWINGS.

SEE CIVIL SITE PLANS FOR STRUCTURE LOCATION COORDINATES.

FIELD VERIFY ALL EXISTING DIMENSIONS PRIOR TO CONSTRUCTION.

WRITTEN DIMENSIONS SHALL TAKE PRECEDENCE OVER SCALED SIZES.

CONSTRUCTION NOTES:

TEMPORARY SHORING SHALL NOT BE REMOVED UNTIL THE FULL STRENGTH (f'c) ACHIEVED.

PRIOR TO INSTALLATION OF EQUIPMENT COORDINATE AND CONFIRM THE ANCHORAGE REQUIREMENTS WITH THE MANUFACTURER. THE ANCHORAGE SYSTEM SHALL NOT DAMAGE THE CONCRETE.

CONTRACTOR SHALL VERIFY ALL DIMENSIONS IN THE FIELD. THE ENGINEER SHALL BE NOTIFIED OF ANY DISCREPANCY BETWEEN DRAWINGS IMMEDIATELY UPON DISCOVERY.

CAST-IN-PLACE CONCRETE:

REINFORCED CONCRETE SHALL CONFORM TO ACI 318, ACI 350, ACI 301 & ACI 350.5.

REINFORCING STEEL FABRICATION SHALL BE IN ACCORDANCE WITH THE LATEST EDITION OF THE CRSI MANUAL OF STANDARD PRACTICE.

ALL EXPOSED CORNERS OF CONCRETE SHALL HAVE 3/4" CHAMFER, UNLESS OTHERWISE NOTED.

WALL REINFORCEMENT AT CORNERS OR JUNCTIONS OF WALLS SHALL BE CONTINUOUS, LAPPED, OR TERMINATED IN AN ACI STANDARD 90 DEGREE STANDARD HOOK DETAIL. LAP SPLICES SHALL CONFORM WITH THE TABLE ON THE STANDARD DETAIL SHEETS.

UNLESS OTHERWISE INDICATED ON THE DRAWINGS, BARS SHALL BE DOWELED. DOWELS SHALL BE THE SAME SIZE AND SPACING AS THE REINFORCEMENT WHICH IS SPLICED UNLESS OTHERWISE NOTED.

SLAB, BEAM, AND COLUMN REINFORCING BARS SHALL HAVE A MINIMUM EXTENSION OR ANCHORAGE INTO SUPPORTS IN ACCORDANCE WITH ACI 318 AND ACI 350.

STIRRUP SUPPORT BARS SHALL BE PROVIDED AS REQUIRED TO SECURE TOP BARS AGAINST DISPLACEMENT.

UNLESS OTHERWISE INDICATED ON THE DRAWINGS, CONCRETE COVER OVER #11 AND SMALLER REINF BARS SHALL BE AS FOLLOWS:

SLABS:
FORMED CONCRETE SURFACES AND UNFORMED TOP SURFACES FOR DRY CONDITIONS.....2"
FORMED CONCRETE SURFACES AND UNFORMED TOP SURFACES EXPOSED TO WEATHER, IN CONTACT WITH SOIL OR FLUIDS, OR LOCATED OVER FLUIDS.....2"
AT UNFORMED CONCRETE SURFACES CAST AGAINST THE SOIL OR CONCRETE WORK MATS..... 3"
BEAMS:
FORMED CONCRETE SURFACES FOR DRY CONDITIONS:
STIRRUPS, SPIRALS AND TIES.....2"
PRINCIPAL REINFORCEMENT.....2 1/2"
FORMED CONCRETE SURFACES EXPOSED TO WEATHER, IN CONTACT WITH SOIL OR FLUIDS, OR BEAMS LOCATED OVER FLUIDS:
STIRRUPS AND TIES.....2"
PRINCIPAL REINFORCEMENT.....2 1/2"
WALLS:
FORMED CONCRETE SURFACES FOR DRY CONDITIONS..... 2"
FORMED CONCRETE SURFACES EXPOSED TO WEATHER OR IN CONTACT WITH SOIL OR FLUIDS.....2"

CONCRETE COVER IS THE LEAST DISTANCE BETWEEN EMBEDDED REINFORCEMENT AND THE SURFACE OF THE CONCRETE. THE SURFACE OF THE CONCRETE IS THE BOTTOM OF RUSTICATION OR REVEAL STRIPS WHEN USED.

NO BACKFILL SHALL BE PLACED AGAINST WALLS UNTIL CONCRETE HAS REACHED THE SPECIFIED STRENGTH AND ALL CONNECTING SLABS AND BEAMS PROVIDING SUPPORT TO THE WALLS HAVE BEEN CAST AND HAVE REACHED THE SPECIFIED STRENGTH. BACKFILL MATERIALS AND TECHNIQUE SHALL FOLLOW THE GEOTECHNICAL REPORT RECOMMENDATIONS.

CONCRETE ANCHORS AND POST-INSTALLED REBAR:

CONTRACTOR SHALL LOCATE EXISTING REINFORCING USING NON-DESTRUCTIVE METHODS PRIOR TO DRILLING HOLES FOR ADHESIVE AND EXPANSION ANCHORS. ADJUST SPACING OF ANCHORS TO MISS REINFORCING, AND SUBMIT FOR APPROVAL OF THE ENGINEER.

ADHESIVE FOR EMBEDDED DOWELS AND ANCHORS IN CONCRETE SHALL BE HILTI HIT-HY-200 (ICC EVALUATION REPORT 3187), OR APPROVED EQUAL. ALL DRILLED HOLES SHALL BE SIZED ACCORDING TO MANUFACTURER'S RECOMMENDATIONS.

EXPANSION ANCHORS IN CONCRETE SHALL BE HILTI KWIK BOLT TZ, (ICC EVALUATION REPORT 1917) OR APPROVED EQUAL.

CONCRETE JOINTS:

CONSTRUCTION JOINTS SHALL NOT BE PLACED AT LOCATIONS OTHER THAN THOSE SHOWN ON THE DRAWINGS WITHOUT THE PRIOR WRITTEN APPROVAL OF THE ENGINEER.

CONSTRUCTION JOINTS AND SURFACES SHALL BE PREPARED IN ACCORDANCE WITH SPECIFICATIONS.

MISCELLANEOUS METALS:

ANCHORS AND FASTENERS FOR ALUMINUM CONSTRUCTION SHALL BE TYPE 316 STAINLESS STEEL UNLESS NOTES OTHERWISE.

ALL ANGLE FRAMES ARE TO BE MITERED AND WELDED OR MOLDED AT CORNERS.

HOT-DIP GALVANIZING, SHOP PAINTING AND FIELD PAINTING, WHERE REQUIRED, SHALL BE IN ACCORDANCE WITH THE SPECIFICATIONS.

PROVIDE ANTI-SEIZE COMPOUND FOR STAINLESS STEEL OR ALUMINUM HARDWARE.

TYPICAL STRUCTURAL MATERIALS:

SEE PROJECT SPECIFICATIONS AND NOTES ON DRAWINGS FOR INDIVIDUAL STRUCTURES FOR DETAILED OR SPECIAL REQUIREMENTS.

CONCRETE
STRUCTURAL CONCRETE: f'c = 4500 PSI
SITE WORK CONCRETE, INCLUDING FILL DUCT ENCASEMENT AND MISC. CIVIL STRUCTURES, WHERE NOTED: f'c = 3000 PSI
REINFORCING STEEL: ASTM A615, GRADE 60 (Fy = 60,000 PSI)
CEMENT: ASTM C150, TYPE II

STRUCTURAL STEEL:
MISC PLATES AND BARS - ASTM A36
ANCHOR RODS: ASTM F1554, 3/4" MINIMUM UNO (Fy 36 KSI)
WELDING ELECTRODES: E70XX (Ft = 70 KSI)

STRUCTURAL ALUMINUM:
ALLOY: 6061-T6
SHAPES: ASTM B308
SHEET: ASTM B209
BOLTS, NUTS AND WASHERS: TYPE 316 STAINLESS STEEL OR TYPE 2024-T4
WELDING FILLER MATERIAL: 5356

ABBREVIATIONS:

ABBREVIATIONS AND DESIGNATIONS FOR STEEL MEMBERS MAY BE FOUND IN THE CURRENT MANUAL OF STEEL CONSTRUCTION MANUAL BY AISC.

ABBREVIATIONS OF TECHNICAL SOCIETIES AND TRADE ASSOCIATIONS MAY BE FOUND IN THE SPECIFICATIONS.

WELDING SYMBOLS AND ABBREVIATIONS MAY BE FOUND IN AWS 2.4.

DEFERRED DESIGN

THE FOLLOWING PORTIONS OF THE PROJECT ARE DEFERRED DESIGN ITEMS AND HAVE NOT BEEN DESIGNED BY THE ENGINEER OF RECORD:

a. PRECAST STRUCTURES AND CONNECTIONS
b. PIPE SUPPORTS AND ANCHORAGE
c. EQUIPMENT AND ELECTRICAL GEAR ANCHORAGE
d. METAL STAIRS
e. METAL RAILINGS

DEFERRED DESIGN ITEMS SHALL BE SUBMITTED TO THE ENGINEER FOR REVIEW DURING THE CONSTRUCTION PHASE OF THE PROJECT.

DEFERRED DESIGN ITEMS SHALL BE STAMPED AND SEALED BY A REGISTERED CALIFORNIA CIVIL OR STRUCTURAL ENGINEER.

DEFERRED DESIGN ITEMS SHALL NOT BE ERECTED OR INSTALLED UNTIL ENGINEER OF RECORD HAS REVIEWED THE SUBMITTAL DOCUMENTS AND INDICATED THAT THEY HAVE BEEN FOUND TO BE IN GENERAL CONFORMANCE WITH THE DESIGN OF THE STRUCTURE.

LEAK TEST FOR LIQUID CONTAINING STRUCTURES

LEAK TESTING SHALL BE PREFORMED ON LIQUID CONTAINING CONCRETE BASINS IN ACCORDANCE WITH ACI 350.1. LEAK TEST SHALL BE PERFORMED PRIOR TO BACKFILLING AND WITH ROOF SLAB INSTALLED. WATER LEVEL FOR TESTING SHALL BE TO THE FOLLOWING ELEVATIONS:

a. GATE STRUCTURE = EL 809.10
b. DIVERSION STRUCTURE = EL 806.55
c. INLET STRUCTURE = NOT REQUIRED

STRUCTURAL OBSERVATION:

STRUCTURAL OBSERVATIONS SHALL BE CONDUCTED IN ACCORDANCE WITH THE REQUIREMENTS SET FORTH IN CHAPTER 17 OF THE CBC.

IN ACCORDANCE WITH THE REQUIREMENTS OF CHAPTER 1704 OF THE CBC, THE OWNER SHALL EMPLOY A REGISTERED DESIGN PROFESSIONAL TO PERFORM STRUCTURAL OBSERVATIONS FOR SEISMIC RESISTANCE. SITE VISITS SHALL BE MADE TO OBSERVE GENERAL COMPLIANCE WITH THE APPROVED STRUCTURAL PLANS, SPECIFICATIONS AND CHANGE ORDERS. THE REGISTERED DESIGN PROFESSIONAL SHALL SUBMIT A STATEMENT IN WRITING TO THE BUILDING OFFICIAL AND OWNER STATING THAT THE SITE VISITS HAVE BEEN MADE AND IDENTIFY ANY REPORTED DEFICIENCIES THAT, TO THE BEST OF THE STRUCTURAL OBSERVER'S KNOWLEDGE, HAVE NOT BEEN RESOLVED. STRUCTURAL OBSERVATIONS DO NOT INCLUDE OR WAIVE THE INSPECTIONS REQUIRED BY SECTIONS 109, 1705 OR OTHER SECTIONS OF THE CODE.

PER CBC 1704.6, ALL CAST-IN-PLACE CONCRETE STRUCTURES ARE SUBJECT TO STRUCTURAL OBSERVATION AT A FREQUENCY OF ONCE PER STRUCTURE PER ELEMENT DURING REINFORCMENT INSTALLATION FOR EACH OF THE FOLLOWING ELEMENTS: FOUNDATIONS, WALLS, AND TOP SLABS.

SCHEDULE OF SPECIAL INSPECTIONS

1. THIS DRAWING IS PROVIDED TO OUTLINE THE MINIMUM LEVEL OF SPECIAL INSPECTIONS DURING CONSTRUCTION TO ENSURE CONFORMANCE TO THE REQUIREMENTS OF THE CONTRACT DOCUMENTS. A STATEMENT OF SPECIAL INSPECTIONS WILL BE PREPARED BY A REGISTERED DESIGN PROFESSIONAL AND SUBMITTED WITH THE BUILDING PERMIT APPLICATION.

2. SPECIAL INSPECTIONS WILL BE CONDUCTED IN ACCORDANCE WITH THE REQUIREMENTS SET FORTH IN CHAPTER 17 OF THE CALIFORNIA BUILDING CODE (CBC).

3. IN ACCORDANCE WITH THE REQUIREMENTS OF CHAPTER 17 OF THE CALIFORNIA BUILDING CODE, THE OWNER WILL PROVIDE A SPECIAL INSPECTOR (AN APPROVED AGENCY OR AGENCIES, INDEPENDENT FROM THE CONTRACTOR AND EMPLOYING QUALIFIED PERSONNEL) TO PERFORM SPECIAL INSPECTIONS IDENTIFIED IN THE STATEMENT OF SPECIAL INSPECTIONS. THE SPECIAL INSPECTOR WILL FURNISH INSPECTION REPORTS TO THE ENGINEER AND BUILDING OFFICIAL.

4. SPECIAL INSPECTIONS SHALL NOT RELIEVE THE CONTRACTOR OF RESPONSIBILITY FOR QUALITY CONTROL OF THE WORK OR FOR CONFORMANCE TO THE REQUIREMENTS OF THE CONTRACT DOCUMENTS. DETECTION, OR FAILURE TO DETECT, DEFECTS IN THE WORK SHALL NOT RELIEVE THE CONTRACTOR OF RESPONSIBILITY TO CORRECT ALL DEFECTS IN THE WORK, WHETHER DETECTED OR NOT, AND OF RESPONSIBILITY FOR CONFORMANCE TO THE REQUIREMENTS OF THE CONTRACT DOCUMENTS.

5. REMOVE AND REPLACE, OR REPAIR, DEFECTS IN THE WORK AND WORK NOT IN CONFORMANCE WITH THE REQUIREMENTS OF THE CONTRACT DOCUMENTS AT NO ADDITIONAL COST TO THE OWNER. CONTRACTOR SHALL BEAR THE COSTS FOR THE INSPECTION OF ANY REPLACED OR REPAIRED PORTIONS OF THE WORK.

6. CONTRACTOR SHALL COOPERATE WITH SPECIAL INSPECTIONS BY PROVIDING SUFFICIENT NOTICE FOR THE SCHEDULING OF PERSONNEL AND BY ALLOWING FREE AND SAFE ACCESS TO THE WORK FOR OBSERVATION, VERIFICATION, SAMPLING AND INSPECTION. PROVIDE AND PERMIT THE USE OF LADDERS, SCAFFOLDING, INCIDENTAL EQUIPMENT, AND SAFETY EQUIPMENT AS MAY BE REQUIRED TO CONDUCT SPECIAL INSPECTIONS. ALL SUCH PROVISIONS FOR FREE AND SAFE ACCESS AND EQUIPMENT SHALL BE SAFE, IN GOOD WORKING CONDITION, AND ERECTED, MAINTAINED, AND HANDLED BY QUALIFIED PERSONNEL.

7. SPECIAL INSPECTIONS DO NOT APPLY TO CONTRACTOR'S EQUIPMENT, TEMPORARY STRUCTURES USED FOR CONSTRUCTION, MEANS AND METHODS OF CONSTRUCTION, OR SITE SAFETY. CONTRACTOR SHALL REMAIN RESPONSIBLE FOR ADEQUACY AND SAFETY OF EQUIPMENT, TEMPORARY STRUCTURES USED FOR CONSTRUCTION, MEANS AND METHODS OF CONSTRUCTION AND SITE SAFETY.

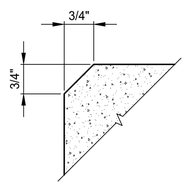
J1	SLAB/WALL CONSTRUCTION JOINT (CJ)
SCALE:NTS	-

END WALL INTERMEDIATE WALL

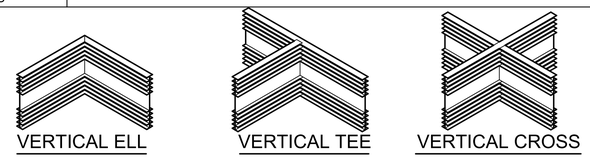
NOTES:
1. STARTER WALL MAY BE ELIMINATED AT JOINTS WITHOUT WATERSTOP.
2. SEE INTERMEDIATE WALL FOR INFORMATION NOT GIVEN FOR END WALL.
3. PROVIDE ADDITIONAL REINFORCEMENT EF IN BOT 3'-0" OF WALL WHERE NOTED ON DRAWINGS. BARS SHALL BE SAME SIZE AS AND LOCATED HALFWAY BETWEEN TYPICAL HORIZ REINFORCEMENT.

J5	WALL CONSTRUCTION JOINT AT BASE SLAB
SCALE:NTS	-



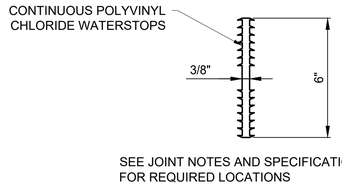
END WALL INTERMEDIATE WALL

J10	WALL CONSTRUCTION JOINT AT TOP SLAB
SCALE:NTS	-



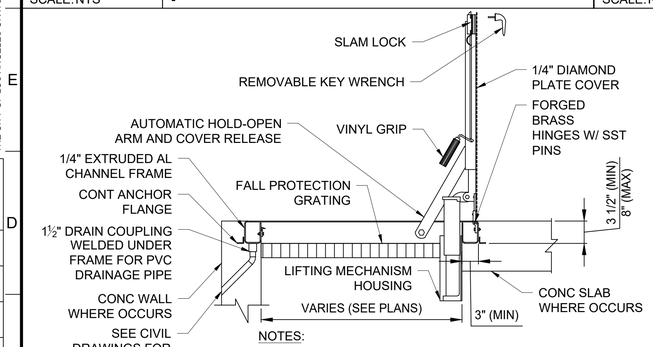
GENERAL NOTES FOR METAL STAIRS AND RAILINGS:

1. ALL CONSTRUCTION IS ALUMINUM PER SPECIFICATIONS, UNLESS NOTED OTHERWISE.
2. RISERS: 7" MAXIMUM, UNLESS NOTED OTHERWISE. TREADS: 11" MAXIMUM, PLUS 1" NOSING UNLESS NOTED OTHERWISE.
3. TYPICAL STAIR WIDTH IS 3'-0" UNLESS NOTED OTHERWISE.
4. STRINGER LENGTH IS LESS THAN 10'-0".
5. ALUMINUM EMBEDDED IN CONCRETE MUST BE PAINTED WITH ONE SHOP COAT OF HEAVY BITUMASTIC.
6. MINIMUM MEMBERS SIZES ARE AS FOLLOWS. FOR ALUMINUM STAIRS, USE C12x8.64 STRINGERS AND 3" SQUARE x 1/4" ALUMINUM POST.
7. ASTM F593 SS BOLTS SHALL BE USED WHERE CONNECTING AL MEMBERS.
8. MEMBER SIZES INDICATED IN PLANS ARE MINIMUM. FINAL SIZES TO BE DETERMINED BY STAIR ENGINEER. ALL CLIP ANGLES SHALL BE 3 1/2" x 3 1/2" x 3/8" MINIMUM, UNO.



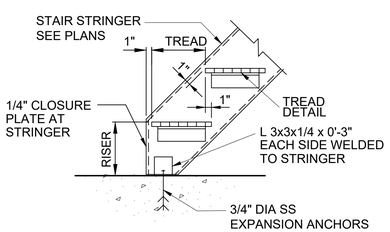
NOTES:
1. SEE CAST-IN-PLACE CONCRETE NOTES.
2. NO CHAMFER REQUIRED WHERE FLUSH EXTERIOR CMU OR BRICK MASONRY ABOVE.

F1	CHAMFER
SCALE:NTS	-



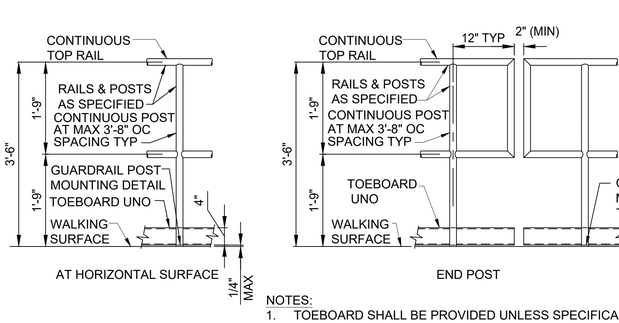
NOTES:
1. PVC WATERSTOPS SHOWN, SIMILAR FOR STAINLESS STEEL AND THERMOPLASTIC ELASTOMERIC RUBBER WATERSTOPS.
2. ALL FITTINGS SHALL BE FACTORY MADE OR SHOP WELDED IN ACCORDANCE WITH MANUFACTURERS RECOMMENDATIONS.
3. ONLY STRAIGHT BUTT SPLICES MAY BE MADE IN FIELD.

F5	WATERSTOP FITTINGS
SCALE:NTS	-



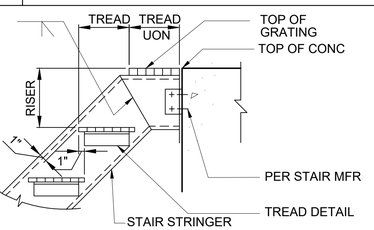
SEE JOINT NOTES AND SPECIFICATIONS FOR REQUIRED LOCATIONS

F10	PVC JOINT WATERSTOP
SCALE:NTS	-



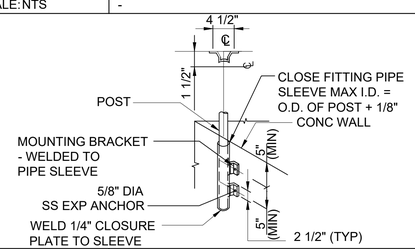
NOTES:
1. SINGLE LEAF MODEL SHOWN, SIZE INDICATED ON PLANS, MAY BE SINGLE OR DOUBLE LEAF.

C1	ALUMINUM ACCESS HATCH
SCALE:NTS	-



NOTES:
1. ALL ALUMINUM CONSTRUCTION.
2. STAIR TREADS SHALL BE A MINIMUM OF 11" AND STAIR RISERS SHALL BE A MAXIMUM OF 7".
3. DETAIL IS ILLUSTRATIVE AND REQUIRES CONFIRMATION FROM STAIR MFR.

C5	STRINGER CONNECTION AT CONCRETE
SCALE:NTS	-



NOTES:
1. TOEBOARD SHALL BE PROVIDED UNLESS SPECIFICALLY NOTED OTHERWISE ON PLANS OR IN SPECS. TOEBOARD NOT REQUIRED WHEN CONCRETE CURBS 4" OR HIGHER ARE PROVIDED.

C9	GUARDRAIL
SCALE:NTS	-

A1	STRINGER CONNECTION AT CONCRETE WALL/SLAB
SCALE:NTS	-

A5	REMOVABLE SIDE MOUNTED GUARDRAIL

GENERAL NOTES

RACEWAYS

1. CONDUIT RUNS WHERE SHOWN ARE DIAGRAMMATIC, AND SHOULD BE RUN TO SUIT SITE CONDITIONS EXCEPT WHERE SHOWN DIMENSIONED ON THE DRAWINGS. THE RACEWAY SYSTEM SHALL COMPLY WITH ALL CODES, INCLUDING BUT NOT LIMITED TO:
   a. NEC.
   b. CITY OF LA ELECTRICAL CODES AND PLAN CHECK REQUIREMENTS.
   c. GROUNDING PER NEC ARTICLE 250.
2. CONTRACTOR SHALL PROVIDE AND INSTALL ALL NECESSARY CONDUITS, FITTINGS, JUNCTION BOXES AND ALL NECESSARY COMPONENTS WHETHER SHOWN OR NOT ON THE DRAWINGS. TO MAKE ELECTRICAL INSTALLATION COMPLETE AND OPERATIONAL.
3. ALL ELECTRICAL CONDUITS ARE SHOWN DIAGRAMMATICALLY AND PANEL AND EQUIPMENT LOCATIONS SHALL BE PLACED TO SUIT FIELD CONDITIONS.
4. ELECTRICAL CONTRACTOR TO LIMIT THE NUMBER OF 90° BENDS BETWEEN PULL POINTS TO COMPLY WITH THE REQUIREMENTS OF THE CALIFORNIA ELECTRICAL SAFETY ORDERS, THE NATIONAL ELECTRICAL CODE AND THE LOS ANGELES CITY ELECTRICAL CODE.
5. PROVIDE 30" (MAXIMUM) LENGTH OF FLEXIBLE CONDUIT WHERE RIGID CONDUIT TERMINATES AT EQUIPMENT SUBJECT TO MOVEMENT FROM VIBRATION, EXPANSION AND CONTRACTION.
6. ELECTRICAL CONTRACTOR SHALL PROVIDE GALVANIZE STEEL SUPPORTS FOR ALL ELECTRICAL WORK (CONDUIT, PANELS, BOXES ETC.)
7. CONDUITS TERMINATED AT MOTOR CONTROL CENTER, SWITCHGEAR CONTROL CABINETS, ETC, SHALL BE EQUIPPED WITH GROUNDING BUSHINGS AND SHALL BE EFFECTIVELY BONDED TO GROUNDING BUSES.
8. ALL OUTDOOR ELECTRICAL DEVICES AND ENCLOSURES SHALL BE WEATHERPROOF AND CORROSION RESISTANT (NEMA 4X OR 3R) ALL INDOOR DEVICES AND ENCLOSURES SHALL BE NEMA 12.
9. SWITCHGEAR, MOTOR CONTROL CENTERS, AND ALL OUTDOOR FREE STANDING CABINETS/PANELS SHALL BE SET ON A 4" HIGH MINIMUM CONCRETE PAD.
10. ALL SWITCHES, PULL BOXES, ETC. SHALL BE MOUNTED 48" ABOVE FLOOR SURFACES UNLESS NOTED OTHERWISE.
11. ALL BENDS IN CABLES SHALL BE MADE SO THAT THE PROTECTIVE COVERING OF THE CABLE WILL NOT BE INJURED. NO BEND SHALL HAVE A RADIUS LESS THAN THE MINIMUM RECOMMENDED BY THE CABLE MANUFACTURER.
12. THE MINIMUM SIZE OF CONDUIT INSTALLED ABOVE GRADE SHALL BE 3/4" UNLESS OTHERWISE NOTED.
13. INSTALLATIONS SHALL BE IN ACCORDANCE WITH ALL CODES AND STANDARDS. ALL LIGHTING AND RECEPTACLE CIRCUITS SHALL INCLUDE 1#12 GROUND WIRE.
14. ALL ABOVE GRADE CONDUITS AND FITTINGS SHALL BE RIGID GALVANIZED STEEL. USE RIGID STEEL CONDUIT, INCLUDING BUSHINGS, COUPLINGS, ELBOWS, NIPPLES, AND OTHER FITTINGS, GALVANIZED BY HOT-DIPPING, AND MEETING THE REQUIREMENTS OF ANSI C80.1, ANSI C80.4, UL, AND THE LAEC. DO NOT USE SETSCREW TYPE COUPLINGS, BUSHINGS, BENDS, NIPPLES, AND OTHER FITTINGS, UNLESS APPROVED BY THE ENGINEER OR THE INSPECTOR. FACTORY BENDS ARE NOT PERMITTED UNLESS APPROVED BY THE ENGINEER OR THE INSPECTOR.
15. REQUIRE ALL INSTALLED UNDERGROUND CONDUITS, ENCASED IN CONCRETE SHALL BE PVC SCHEDULE 40 AS A MINIMUM. ALL UNDERGROUND CONDUIT SHALL BE BURIED A MINIMUM OF 24 INCHES BELOW GRADE WITH TRACEABLE WARNING TAPE 12" ABOVE CONDUIT. SEE TYPICAL CONDUIT PLACEMENT IN TRENCH DETAIL (SEE SHEET EP07, DETAIL E-16).

CONDUCTORS

1. PROVIDE CONDUCTORS WITH TYPE THW OR TYPE THHWN INSULATION, EXCEPT FOR SIZES NO. 6 AND LARGER SHALL HAVE WITH XHHW INSULATION.
2. ALL POWER AND CONTROL CABLES SHALL BE COPPER. NETWORK CABLES SHALL BE FIBER OPTIC CABLE WHERE SPECIFIED.
3. PROVIDE CABLE THAT IS UL LISTED TYPE TC AND CONFORMS TO THE REQUIREMENTS OF UL 1277 AND NEC ARTICLE 340, OR UL LISTED POWER LIMITED CIRCUIT CABLE THAT CONFORMS TO THE REQUIREMENTS OF ARTICLE 725 OF THE LAEC. PROVIDE CABLES PERMANENTLY AND LEGIBLY MARKED WITH THE MANUFACTURER'S NAME, THE MAXIMUM WORKING VOLTAGE FOR WHICH THE CABLE WAS TESTED, THE TYPE OF CABLE, AND LABELED UL (OR SUBMIT EVIDENCE OF UL LISTING).
4. ACCEPTABLE MANUFACTURERS: SOUTHWIRE, HOUSTON WIRE AND CABLE COMPANY, BELDEN ALPHA WIRE COMPANY, GENERAL CABLE OR EQUAL.

TYPE 1 (600-VOLT MULTI-CONDUCTOR CONTROL CABLE, TYPE TC)

1. MULTI-CONDUCTOR CONTROL CIRCUIT INTERCONNECTION CABLE WITH GROUND. SUITABLE FOR INSTALLATION IN OPEN AIR, IN CABLE TRAYS, CONDUIT, OR OTHER APPROVED RACEWAYS. MAXIMUM CABLE TEMPERATURE RATING 90 DEGREES C DRY LOCATIONS, 75 DEGREES C WET LOCATIONS. PASSES VERTICAL TRAY FLAME TEST.

TYPE 2 (600-VOLT NO. 16 AWG TWISTED, SHIELDED PAIR INSTRUMENTATION CABLE, TYPE TC)

1. SINGLE PAIR INSTRUMENTATION CABLE DESIGNED FOR NOISE REJECTION FOR PROCESS CONTROL, COMPUTER, OR DATA LOG APPLICATIONS. SUITABLE FOR INSTALLATION IN CABLE TRAYS, CONDUIT, OR OTHER APPROVED RACEWAYS. MAXIMUM CABLE TEMPERATURE RATING SHALL BE 90 DEGREES C DRY LOCATIONS, 75 DEGREES C WET LOCATIONS.
2. INDIVIDUAL CONDUCTORS: BARE SOFT ANNEALED COPPER, CLASS B, 7-STRAND CONCENTRIC PER ASTM B 8; 20 AWG, 7-STRAND TINNED COPPER DRAIN WIRE.

TYPE 3 (600-VOLT MULTI-CONDUCTOR POWER CABLE, TYPE TC):

1. 3 OR 4 -CONDUCTOR, WITH GROUND AND OVERALL JACKET. SUITABLE FOR INSTALLATION IN OPEN AIR, IN CABLE TRAYS, CONDUIT, OR OTHER APPROVED RACEWAYS. MAXIMUM CABLE TEMPERATURE RATING 90 DEGREES C DRY LOCATIONS, 75 DEGREES C WET LOCATIONS.
2. INDIVIDUAL CONDUCTORS: CLASS B STRANDED, COATED, OR UNCOATED COPPER.

TYPE 4 (600-VOLT NO. 16 TWISTED, SHIELDED TRIAD INSTRUMENTATION CABLE, TYPE TC):

1. SINGLE TRIAD INSTRUMENTATION CABLE DESIGNED FOR NOISE REJECTION FOR PROCESS CONTROL, COMPUTER, OR DATA LOG APPLICATIONS. SUITABLE FOR INSTALLATION IN CABLE TRAY, CONDUIT, OR OTHER APPROVED RACEWAYS. MAXIMUM CABLE TEMPERATURE RATING SHALL BE 90 DEGREES C DRY LOCATIONS, 75 DEGREES C WET LOCATIONS.
2. CONDUCTORS: BARE SOFT ANNEALED COPPER, CLASS B, 7-STRAND CONCENTRIC PER ASTM B 8; 20 AWG, 7-STRAND, TINNED COPPER DRAIN WIRE.

TYPE 5 (600-VOLT NO. 18 AWG, MULTI-TWISTED SHIELDED PAIRS WITH A COMMON OVERALL SHIELD INSTRUMENTATION CABLE, TYPE TC):

1. TWISTED, SHIELDED PAIRS OF INSTRUMENT CABLES, GROUPED IN A SINGLE CABLE, DESIGNED FOR USE AS INSTRUMENTATION, PROCESS CONTROL, AND COMPUTER CABLE. SUITABLE FOR INSTALLATION IN CABLE TRAY, CONDUIT, OR OTHER APPROVED RACEWAYS. MAXIMUM CABLE TEMPERATURE RATING SHALL BE 90 DEGREES C DRY LOCATIONS, 75 DEGREES C WET LOCATIONS.
2. BARE SOFT ANNEALED COPPER, CLASS B, 7-STRAND, CONCENTRIC PER ASTM B 8. TINNED COPPER DRAIN WIRES. PAIR DRAIN WIRE SIZE AWG 20, GROUP DRAIN WIRE SIZE AWG 18.

GROUNDING

1. ALL METALLIC STRUCTURES AND EQUIPMENT SUCH AS STRUCTURAL STEEL, GENERATOR AND MOTOR FRAMES, ENCLOSURES, CABINETS FOR SWITCHGEAR AND OTHER ELECTRIC EQUIPMENT, METALLIC CONDUITS, CABLE TRAYS, STAIRS, FENCES AND HANDRAILS SHALL BE PERMANENTLY AND EFFECTIVELY GROUNDED. THE GROUND CONNECTION SHALL BE MADE TO THE PLANT GROUND GRID. REFER TO STANDARD DETAILS.
2. ALL GROUNDING CONDUCTORS SHALL BE BARE STRANDED SOFT DRAWN COPPER, CLASS B, UNLESS OTHERWISE NOTED.
3. THE GROUND CABLE SHALL BE INSTALLED, WHERE POSSIBLE, BENEATH SLABS, ATTACHED TO BUILDING STEEL OR RUN IN RACEWAYS AS SHOWN.
4. BURIED GROUND CABLES SHALL BE A MINIMUM OF 18" BELOW GRADE EXCEPT UNDER BUILDINGS WHERE THEY SHALL BE A MINIMUM OF 6" BELOW BOTTOM OF SLAB.
5. CONDUIT RUNS SHALL BE BONDED TOGETHER TO FORM A CONTINUOUS ELECTRICAL CONDUCTOR.
6. WHERE SEAL-TIGHT FLEXIBLE CONDUIT FOR MOTOR CONNECTION IS USED, PROVIDE GROUNDING JUMPER BETWEEN THE RIGID STEEL CONDUIT (MOTOR FEEDER) AND THE MOTOR BOX OR FRAME.
7. GENERATOR CASINGS, EXCITERS, SWITCHGEARS, MOTOR CONTROL CENTERS, LARGE METAL TANKS, TRANSFORMER CORES, AND MOTOR FRAMES LARGER THAN 150HP SHALL BE GROUNDED AT TWO POINTS.
8. THE FRAMES OF MOTORS SMALLER THAN 150HP SHALL BE GROUNDED DIRECTLY TO THE GROUND GRID OR TO THE STEEL COLUMN CONNECTED TO THE GROUND LOOP WITH COPPER WIRE OF SIZE AS REQUIRED BY THE LOS ANGELES CITY ELECTRICAL CODE.
9. ALL EQUIPMENT GROUND TERMINAL LUGS SHALL BE OF THE MECHANICAL TYPE.
10. BENDS IN GROUND CABLE SHALL BE GREATER THAN 12 TIMES THE CABLE OUTSIDE DIAMETER.
11. GROUNDING CONDUCTOR PIGTAIL AND INSERT LOCATIONS ARE APPROXIMATE ONLY. CONTRACTOR SHALL VERIFY IN THE FIELD AND LOCATE THEM CLOSE TO MOTOR, EQUIPMENT, GENERATOR, OR METAL STRUCTURE SERVED.
12. GROUNDING PIGTAIL SHALL BE THE SAME SIZE AS THE PHASE WIRE BUT NO LESS THAN NUMBER 8 AWG.
13. WHERE BARE GROUND CONDUCTORS ARE EXPOSED, CONTRACTOR SHALL PROVIDE PVC SCHEDULE 80 CONDUITS WITH ULTRA-VIOLET LIGHT PROTECTION.
14. ALL FLEXIBLE MOTOR CONDUITS SHALL HAVE OUTER GROUND CONDUCTOR.

EQUIPMENT AND DEVICES

1. ALL EQUIPMENT DIMENSIONS SHOWN ON PLANS AND ELEVATIONS ARE APPROXIMATE ONLY. THE CONTRACTOR SHALL USE THE SHOP DRAWINGS FOR PROPER FOUNDATION AND PAD LAYOUT, ETC. FOR FINAL INSTALLATION WITHOUT ANY ADDITIONAL COST TO THE CITY.
2. IT IS INCUMBENT UPON THE CONTRACTOR TO COORDINATE WITH HIS SUBCONTRACTORS TO MAKE SURE THAT EQUIPMENT SUPPLIERS PROVIDE ALL NECESSARY ELECTRICAL INFORMATION TO THE ELECTRICAL SUBCONTRACTOR FOR INCLUSION OF COSTS IN BID PACKAGE. ALL NECESSARY MATERIALS AND LABOR TO COMPLETE ELECTRICAL INSTALLATION SHALL BE PROVIDED WHETHER SHOWN OR NOT SHOWN ON THE DRAWINGS. ALL ELECTRICAL WORK SHALL BE IN ACCORDANCE WITH ALL CODES AND STANDARDS PER SPECIFICATION.
3. SWITCHGEARS, SWITCHBOARDS, MOTOR CONTROL CENTERS AND ALL FREE STANDING PANELS SHALL BE SET WITH LEVELING CHANNELS UNLESS OTHERWISE NOTED.
4. CONTRACTOR TO PROVIDE DESIGNS AND DETAILS FOR ALL MOUNTING AND ANCHORAGE OF EQUIPMENT IN ACCORDANCE WITH CHAPTER 23 OF THE LATEST EDITION OF THE UNIFORM BUILDING CODE AND LOS ANGELES BUILDING CODE.

MISCELLANEOUS

1. THE CONTRACTOR TO CONFIRM EXISTING CONDITIONS INCLUDING CONDUIT RUNS. ELECTRICAL DESIGN UPGRADE IS BASED ON CITY-PROVIDED, EXISTING "AS-BUILT" DRAWINGS WHICH MAY NOT BE ENTIRELY ACCURATE.
2. IN CASE OF INTERFERENCE BETWEEN ELECTRICAL EQUIPMENT AND OTHER EQUIPMENT THE CONTRACTOR SHALL NOTIFY THE ENGINEER IN WRITING AND THE ENGINEER SHALL REVIEW PROPOSED CHANGES BEFORE THEY ARE MADE.
3. ALL RECEPTACLES SHALL BE MOUNTED 18" ABOVE FLOOR SURFACE, UNLESS OTHERWISE NOTED ON THE DRAWINGS.
4. ALL RECEPTACLES IN OUTDOOR AND ANTICIPATED WET AREAS SHALL BE GROUND FAULT INTERRUPTER TYPE RECEPTACLES WITH WEATHER PROOF COVER PLATES.
5. PROVIDE MAINTENANCE HOLES OR PULL BOXES WHEREVER THEY ARE REQUIRED TO MAKE A WORKABLE INSTALLATION.
6. CIRCUITS OF DIFFERENT SERVICE VOLTAGE RANGES SHALL BE INSTALLED IN SEPARATE RACEWAYS, PULLBOXES AND JUNCTION BOXES. THE VOLTAGE AND SERVICE LEVELS ARE:
   (1) 120V-480VOLT
   (2) INSTRUMENTATION AND CONTROL LESS THAN 50VDC
      a) ANALOG
      b) SIGNAL
   (3) TELEPHONE AND COMMUNICATIONS.
   (4) FIBER OPTICS
7. RECEPTACLES, LIGHTING AND CONTROL CIRCUITS SHALL BE TYPE THHN/THWN WIRE.
8. ALL ELECTRICAL EQUIPMENT AND DEVICES SHALL BE UL APPROVED OR OTHER INDEPENDENT AGENCIES APPROVED BY THE CITY OF LOS ANGELES.
9. NO PIPING, DUCTS OR FOREIGN EQUIPMENT SHALL BE PERMITTED TO BE LOCATED WITHIN THE DEDICATED SPACE ABOVE THE ELECTRICAL EQUIPMENT.

MINIMUM SUBMITTAL REQUIREMENTS FOR SCHEMATIC DIAGRAMS:

1. ALL CONTROLS SHOWN DE-ENERGIZED.
2. CONTRACTOR SHALL INCORPORATE NECESSARY FUNCTIONS FOR PROPER OPERATIONS AND PROTECTION OF SYSTEMS.
3. SLAVE OR INTERPOSING RELAYS SHALL BE ADDED WHERE REQUIRED TO PROVIDE ALL NECESSARY CONTACTS REQUIRED FOR THE SCHEMATIC DIAGRAM SHOWN.
4. ALL DEVICES SHOWN ON MOTOR STARTER SCHEMATIC DIAGRAMS SHALL BE MOUNTED IN MOTOR STARTER CUBICLES, UNLESS OTHERWISE NOTED.

ELECTRICAL STUDIES

1. CONTRACTOR IS RESPONSIBLE FOR PREPARING A POWER SYSTEM ANALYSIS REPORT INCLUDING SHORT CIRCUIT CALCULATIONS, A PROTECTIVE DEVICE COORDINATION STUDY, ARC-FLASH STUDY, AND A HARMONIC ANALYSIS. THE STUDY SHALL BEGIN WITH THE UTILITY COMPANY'S FEEDER PROTECTIVE DEVICE AND INCLUDE ALL OF THE ELECTRICAL DISTRIBUTION EQUIPMENT DOWN TO AND INCLUDING LOW VOLTAGE MOTOR CONTROL CENTERS, POWER DISTRIBUTION PANEL BOARDS AND LIGHTING PANELS AND TRANSFORMERS.
2. ALL INFORMATION REQUIRED TO PERFORM THE STUDY SHALL BE OBTAINED BY THE ENTITY PERFORMING THE STUDY. ALL COSTS FOR THIS WORK INCLUDING FIELD SETTINGS OF DEVICES, ADJUSTMENTS, AND MODIFICATIONS TO EQUIPMENT THAT ARE REQUIRED FOR CONFORMANCE WITH THE APPROVED STUDY SHALL BE INCLUDED IN THE CONTRACTOR BID PROPOSAL AND IS NOT REIMBURSABLE BY THE CITY.
3. PROVIDE AND INSTALL ARC-FLASH AWARENESS WARNING LABELS ON EACH ELECTRICAL EQUIPMENT PANEL AS REQUIRED.

ELECTRIC MOTORS

1. UNLESS OTHERWISE SPECIFIED, ALL 3-PHASE MOTORS SHALL BE TEFC, SQUIRREL-CAGE INDUCTION, CONSTANT SPEED, HAVE ANTI-FRICTION BEARINGS AND CLASS F INSULATION, AND BE IN ACCORDANCE WITH ALL NEMA STANDARDS. MOTORS SHALL HAVE A MINIMUM SERVICE FACTOR OF 1.15 AT 40°C AMBIENT, AND STAINLESS STEEL AUTOMATIC BREATHER-DRAINS AT THE LOWEST POINT OF THE MOTOR ENCLOSURE.
2. ALL SINGLE-PHASE MOTORS, UNLESS OTHERWISE SPECIFIED, SHALL MEET ALL NEMA STANDARDS, BE TEFC, WITH ANTI-FRICTION BEARINGS, CLASS F INSULATION, AND HAVE A 1.15 SERVICE FACTOR AT 40°C AMBIENT.
3. ALL MOTORS LARGER THAN 3 HORSEPOWER SHALL BE PREMIUM EFFICIENCY, CAST IRON, CORROSIVE RESISTANT, HOSTILE ENVIRONMENT DESIGN, BALDOR "ECP", RELIANCE "XE", U. S. MOTORS "CORRO-DUTY", OR EQUAL. MOTORS LESS THAN 3 HORSEPOWER SHALL BE OF CAST IRON, STEEL OR ALUMINUM CONSTRUCTION, PREMIUM EFFICIENCY, AND CORROSIVE RESISTANT, HOSTILE ENVIRONMENT DESIGN.
4. MOTORS AND CONTROLS SHALL BE ADEQUATELY SIZED SO THE NAMEPLATE RATING WILL NOT BE EXCEEDED UNDER THE MAXIMUM DESIGN CAPACITY OF THE EQUIPMENT SUPPLIED.
5. ALL MOTOR NAMEPLATES SHALL BE STAINLESS STEEL, PERMANENTLY SECURED TO THE MOTOR, AND PROVIDE THE FOLLOWING INFORMATION: (1) NEMA DESIGN LETTER, (2) VOLTAGE, (3) PHASES, (4) FREQUENCY, (5) HORSEPOWER, (6) FULL LOAD CURRENT, (7) CLASS OF INSULATION, (8) FULL LOAD RPM, (9) AMBIENT TEMPERATURE/SERVICE FACTOR, (10) TIME RATING, (11) KVA CODE, (12) FRAME SIZE, (13) MFG. TYPE OR MODEL, (14) MFG. CATALOG NUMBER WITH DATE CODE, AND (15) SERIAL NUMBER.

SCOPE OF WORK

1. ADDITION OF 480V, 3 PHASE, ELECTRICAL SERVICE TRANSFORMER TO THE SITE.
2. ADDITION OF ELECTRICAL SERVICE AND DISTRIBUTION PANELS.
3. POWER AND CONTROL WIRING FOR STORMWATER DIVERSION EQUIPMENT.
4. POWER AND CONTROL WIRING FOR SPORT LIGHTING SYSTEMS.
5. SUPERVISORY CONTROL AND DATA ACQUISITION (SCADA) CONTROL PANEL FOR STORMWATER DIVERSION PROGRAMMABLE CONTROLLER, AND FOR RADIO COMMUNICATION EQUIPMENT.

THE CITY OF LOS ANGELES OR ITS OFFICERS OR AGENTS SHALL NOT BE RESPONSIBLE FOR THE ACCURACY OR COMPLETENESS OF ELECTRONIC COPIES OF THIS PLAN SHEET.

ELECTRICAL POWER AND INSTRUMENTATION PLAN

SCALE: 1" = 30'-0"

30' 0 30' 60'
1" = 30'

LEGEND

TRE_12" — TREE DIAMETER
TREE CANOPY
TREE TO BE PROTECTED
TREE PROTECTION ZONE (EVERY 1" OF TREE DIAMETER EQUALS 1.5' OF PROTECTION ZONE)

ELECTRICAL NOTES:

1. TREE PROTECTION ZONES ARE IDENTIFIED HEREIN ON THE PLANS WITH CIRCLES AROUND EXISTING TREES. CONTRACTOR SHALL AVOID CONSTRUCTION WITHIN TREE PROTECTION ZONES AS MUCH AS PRACTICAL, AND ASSIST THE CITY IN PROTECTING EXISTING TREES. CONDUIT ROUTING SHOWN HEREIN IS DIAGRAMMATIC, AND CONTRACTOR SHALL PREPARE DETAILED CONDUIT AND EQUIPMENT LOCATION PLANS FOR CITY REVIEW, INCLUDING PROPOSED CONDUIT ROUTING THAT PROTECTS TREES. WHERE REQUIRED TO ROUTE CONDUITS OUTSIDE TREE PROTECTION ZONES, CONTRACTOR SHALL PROVIDE UP TO 10 ADDED BURIED ELECTRICAL PULLBOXES, IN ADDITION TO THOSE SHOWN ON THE PLANS HEREIN, AT NO ADDED COST TO THE CITY.
2. CONTRACTOR SHALL COORDINATE FLOW METER INSTALLATION ARRANGEMENTS AND DETAILS WITH FLOW METER MANUFACTURER, AND SUBMIT MANUFACTURER'S CERTIFICATION IN WRITING THAT INSTALLATION ARRANGEMENTS ARE HYDRAULICALLY ACCEPTABLE FOR ALL FLOW METERS. MANUFACTURER SHALL PROVIDE UP TO ONE DAY OF FIELD INSTALLATION AND SUPPORT AS NEEDED TO REFINE FLOW METER INSTALLATION AND TUNING.
3. PROVIDE JUNCTION BOX INSIDE BASIN ABOVE WATER LEVEL & ACCESSIBLE FROM HATCH FOR BOTH INTRUSION SWITCH & LEVEL TRANSMITTER. SECURE LEVEL TX VENT TUBE IN JUNCTION BOX AS MANUFACTURERS INSTRUCTIONS.
4. PROVIDE JUNCTION BOX FOR FLOAT SWITCH INSIDE BASIN.
5. PROVIDE JUNCTION BOX INSIDE FLOW METER VAULT. CABLE AS SPECIFIED BY MANUFACTURER. SEE SHEET CI20 DETAIL A9 FOR FLOW METER MOUNTING DETAIL.
6. BURIED ELECTRICAL PULLBOXES AND HANDHOLES SHALL BE PRECAST CONCRETE WITH CAST IRON OR CORROSION RESISTANT STEEL LIDS ON METAL FRAMES, SUCH THAT THEY CAN BE WELDED SHUT AND COMPLY WITH NEC 314.30, AND BE UL LISTED. LID SHALL BE MARKED AS "POWER" OR "SIGNAL" AS APPROPRIATE AND TOP OF LID TO BE FLUSH WITH FINISHED GRADE. PROVIDE ALL PULLBOXES AND HANDHOLES MINIMUM SIZES AT 10" x17"x30" DEEP. PROVIDE LIDS WITH H20 TRAFFIC RATING. PULLBOXES AND HANDHOLES SHALL BE BY CHRISTY, OLDCASTLE, AND JENSEN OR EQUAL.

HANDHOLE ID	VENDOR	PART NUMBER

ELECTRICAL POWER AND INSTRUMENTATION DETAIL PLAN (A)

SCALE: 1" = 10'-0"

ELECTRICAL POWER AND INSTRUMENTATION DETAIL PLAN (B)

SCALE: 1" = 10'-0"

KEY NOTES

1. 2-4" CONDUIT TO BE COORDINATED WITH LADWP REQUIREMENTS (480V, POWER FROM EXISTING 4.8KV LADWP TRANSFORMER TO NEW 480V, 3 PHASE, 400A LADWP TRANSFORMER LOCATED INSIDE FENCE ENCLOSURE). PROVIDE 2" CONDUIT FOR INTERNET SERVICE PROVIDER TO CONNECT CELLULAR MODEM AT LCP-01 PANEL.
2. 2-5" CONDUITS TO BE COORDINATED WITH LADWP REQUIREMENTS (480V, POWER FROM NEW PAD MOUNTED LADWP TRANSFORMER TO UTILITY METERING CABINET, UMC-1). PROVIDE 2"C FOR ISP CONNECTION TO LCP-01.
3. 2-5"C, 4C#3/0, 1C#4 GND (480V, POWER FROM UTILITY METERING CABINET, UMC-1 TO SWITCHBOARD, SB-1).
4. 1"C, 1-5C#14 (120VAC, PLC SIGNALS FROM LCP-01 TO SG-1 CP AT SB-1-4B).
   1"C, 1-8C#16 (24VDC, GATE STATUS FROM LCP-01 TO SG-1 CP AT SB-1-4B).
5. 1"C, 1-2C#12, 1C#12 GND (120V, POWER FROM DP-2 AT SB-1-4M TO LCP-01).
6. 1"C, 1-3C#8, 1C#10 GND (480V, POWER) FROM SG-1 CP AT SB-1-4B TO SLIDE GATE ACTUATOR AT DRY VAULT.
7. 1"C, 1-12C#12,(120V, CMD & STATUS SIGNALS) FROM SG-1 CP AT SB-1-4B TO SLIDE GATE ACTUATOR AT DRY VAULT.
8. PROVIDE 2-2" CONDUIT FOR FUTURE INSTALLATION OF SPORT LIGHTING FIXTURES FOR EXISTING SPORT FIELDS.
9. 3"C, 1 MANUFACTURER'S CABLE (FLOW METER SIGNAL) 2-4TSP #16 (4-20MA, 2 LEVEL + 2 FLOAT SIGNALS), 3-2TSP #16 (4-20MA, 3 LEVEL SIGNALS).
10. 2"C, 7-4C#12 (24V, 7 INTRUSION ALARMS).
11. 1"C, 1-4TSP #16 (4-20MA, 1 LEVEL + 1 FLOAT SIGNALS),
12. 1"C, 1-4C#14 (24VDC, 1 INTRUSION ALARM)
13. 1"C, 1-2TSP#16 (4-20MA, 1 LEVEL SIGNAL).
14. 3"C, 1 MANUFACTURER'S CABLE (FLOW METER SIGNAL) 1-4TSP #16 (4-20MA, 2 LEVEL + 2 FLOAT SIGNALS), 2-2TSP #16 (4-20MA, 3 LEVEL SIGNALS).
15. 1.5"C, 5-4C#12 (24V, 5 INTRUSION ALARMS).
16. 1"C, 1-4TSP #16 (4-20MA, 1 LEVEL + 1 FLOAT SIGNALS),
17. 1.5"C, 2-4C#12 (24V, 2 INTRUSION ALARM).
18. 1"C, 1 MANUFACTURER'S CABLE FROM FLOW METER MH NO.1 TO LCP-01. FLOW SENSOR TO BE INSTALLED BY MANUFACTURER'S RECOMMENDATION.

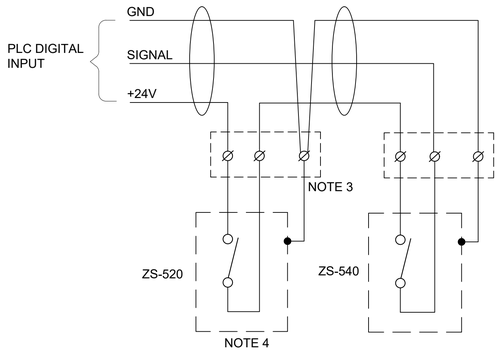
PLAN

* VERIFY ALL DIMENSIONS

SECTION A-A

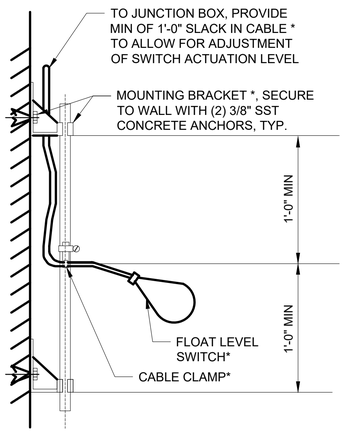


* VERIFY TYPICAL FRAME DIMENSIONS

NOTES:

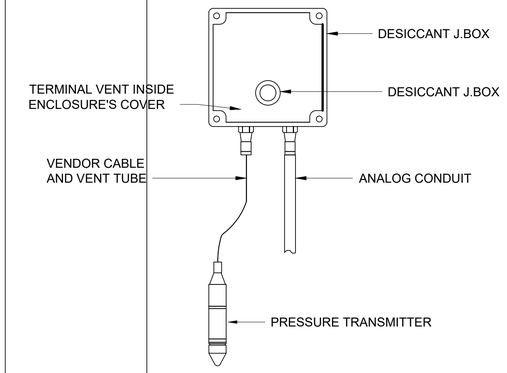
1. PROVIDE SERIES II (SQUARE BODY) TOPWORX GO SWITCH BY EMERSON OR EQUAL (CLASS I, DIV 2). PROVIDE AMP3 TARGET MAGNET, NEMA 4X SST BODY, AND MINI QUICK DISCONNECT. INSTALL PER MANUFACTURER'S RECOMMENDATIONS.
2. FASTEN TARGET TO UNDERSIDE OF ACCESS HATCH. PROVIDE MOUNTING BRACKETS WHERE REQUIRED TO PLACE TARGET WITHIN RANGE OF SENSING AREA. MECHANICALLY FASTEN MOUNTING BRACKET TO HATCH COVER, AND SWITCH TO VAULT STRUCTURE.
3. ALL MOUNTING HARDWARE SHALL BE TYPE 316 SST. PROVIDE MIN. 1/4" DIA. BOLTS FOR ATTACHMENTS.
4. ADJUST DETAIL AS REQUIRED FOR FIELD INSTALLATION ARRANGEMENT
5. PROVIDE SEPARATION BETWEEN DISSIMILAR METALS TO PREVENT GALVANIC CORROSION.

DETAIL - VAULT HATCH COVER | E-11



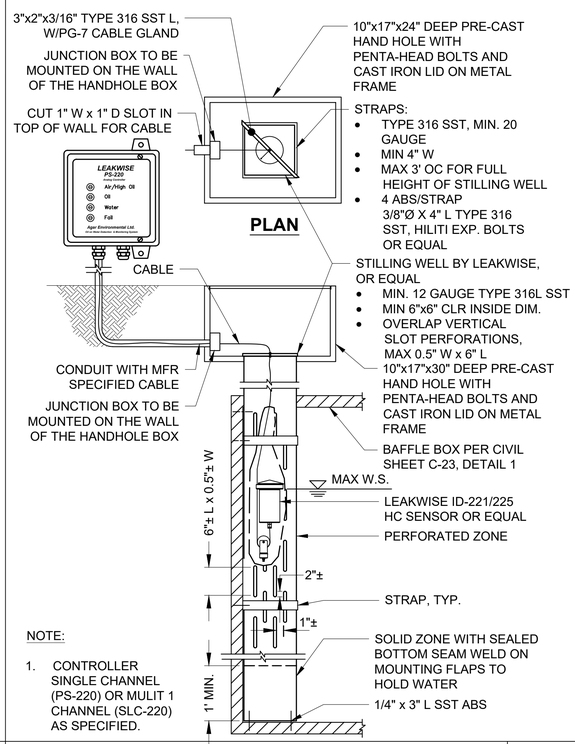
SWITCH LOCATION	TAG
DIVERSION STRUCT	ZS-110
BAFFLE BOX	ZS-200
INFILTR BASIN	ZS-520 ZS-540

NOTES:



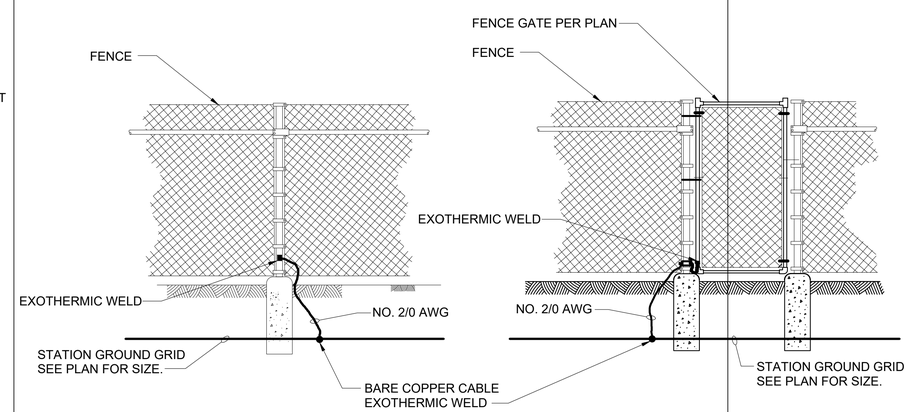
1. SEE PROXIMITY SWITCH INSTALLATION DETAIL E-11.
2. PROVIDE SEPARATE PLC DIGITAL INPUTS FOR DIVERSION STRUCTURE, BAFFLE BOX & INFILTRATION BASIN.
3. PROVIDE NEMA 4X, SS JUNCTION BOX LOCATED INSIDE BASIN/ BOX
4. INTRUSION SWITCH CONTACT CLOSED WHEN HATCH CLOSED.

DETAIL - HATCH INTRUSION ALARM TYPICAL WIRING DIAGRAM (WIRING FOR BASIN SHOWN) | E-08



NOTE:
1. COMPONENTS DESIGNATED BY * ARE SUPPLIED BY INSTRUMENT MANUFACTURER.

TYPICAL FLOAT TYPE LEVEL SWITCH INSTALLATION | E-09



DROP-IN PRESSURE TRANSMITTER DESICCANT J-BOX DETAIL | E-10

NOTE:
1. CONTROLLER SINGLE CHANNEL (PS-220) OR MULIT 1 CHANNEL (SLC-220) AS SPECIFIED.

HC SENSOR WITH STILLER DETAIL | E-12

FENCE GROUNDING

FENCE GROUNDING WITH GATE

NOTE:
1. PROVIDE GROUNDING FOR 20 FT W ROLLING FENCE GATE USING FESTOON-TYPE SYSTEM (HUBBELL MODEL BCR05302, OR EQUAL).

FENCE GROUNDING WITH GATE | E-13

INSPECTION

1. FULL INSPECTION AND APPROVAL BY A DEPARTMENT OF WATER AND POWER (DWP) ELECTRIC SERVICE REPRESENTATIVE IS REQUIRED PRIOR TO THE INSTALLATION OF CABLE AND EQUIPMENT.
2. NOTIFY THE DWP ELECTRIC SERVICE REPRESENTATIVE FOR AREA 112 TELEPHONE NUMBER (818) 771-4032, FIVE (5) NORMAL WORKING DAYS IN ADVANCE OF CONSTRUCTION.
3. THE CUSTOMER SHALL ARRANGE FOR ELECTRICAL INSPECTION BY THE LOS ANGELES DEPARTMENT OF BUILDING AND SAFETY FOR HIS ELECTRICAL WORK. THE SERVICE WILL NOT BE ENERGIZED UNTIL NOTIFICATION OF APPROVAL HAS BEEN RECEIVED BY THE DWP.

GENERAL

1. ALL FACILITIES MUST BE PROVIDED AND INSTALLED IN ACCORDANCE WITH THE DWP'S ELECTRIC SERVICE REQUIREMENTS.
2. CONDUITS AND STRUCTURES SHALL BE INSTALLED PER DWP'S UNDERGROUND SPECIFICATION 104 AND APPENDIX I AS LAST REVISED.

SCHEDULE

1. IN ORDER TO AVOID SCHEDULING DELAYS IN THE INSTALLATION OF DWP EQUIPMENT FOR YOUR PROJECT, THE CUSTOMER MUST COMPLETE THE INSTALLATION AND DWP'S INSPECTION OF THE CONDUIT, TRANSFORMER PAD AND SWITCHBOARD A MINIMUM OF SIX (6) WEEKS PRIOR TO THE RELEASE FROM THE DEPARTMENT OF BUILDING AND SAFETY.
2. DWP WILL INSTALL ELECTRICAL METERS AND ENERGIZE THE ELECTRICAL SERVICE TYPICALLY WITHIN TEN (10) WORKING DAYS, AFTER ALL RELEASES HAVE BEEN OBTAINED FROM BOTH DWP AND THE DEPARTMENT OF BUILDING AND SAFETY.

CONDUIT

1. PRIMARY CONDUITS: 2-4" PLASTIC ENCASED BURIED TYPE (EB-35) CONDUITS ENCASED IN 3" OF CONCRETE. MINIMUM COVER FROM TOP OF CONCRETE ENVELOPE TO FINISHED GRADE, EXCEPT AT TRANSFORMER PAD, SHALL BE 30 INCHES IN PAVED AREAS AND 36 INCHES IN LANDSCAPED AREAS. WHEN TERMINATING CONDUIT FOR SUBSEQUENT CONNECTION BY THE DWP, THE DEPTH AT THE PROPERTY LINE MUST BE A MINIMUM OF 30 INCHES IN AREAS SUPPLIED FROM UNDERGROUND DISTRIBUTION FACILITIES OR 36 INCHES IN AREAS SUPPLIED FROM OVERHEAD DISTRIBUTION FACILITIES. DEPTH MEASUREMENTS AT PROPERTY LINE ARE TO BE TAKEN FROM GUTTER GRADE.
2. SECONDARY CONDUITS: 2-5" PLASTIC DIRECT BURIED TYPE (DB-120) CONDUITS. CONDUITS SHALL HAVE A MINIMUM COVER OF 24 INCHES.
3. WHEN THE PRIMARY CONDUITS ARE BEING INSTALLED ON FILLED GROUND, FOUR #4 REINFORCING BARS SHALL BE INSTALLED IN THE CONCRETE ENVELOPE.
4. ALL PLASTIC CONDUITS SHALL BE IN ACCORDANCE WITH RECOGNIZED STANDARDS. FOR PVC THE STANDARD IS ASTM F-512 AS LAST REVISED. CONDUIT MAY BE SUBJECTED TO TESTING BY THE DWP AT THE REQUEST OF THE DWP ELECTRIC SERVICE REPRESENTATIVE.
5. CONDUIT SHALL BE MANDRELLED WITH A MANDREL PROVIDED BY THE DWP. INSTALL A FLAT, WOVEN MULTI-FIBER POLYESTER RIBBON, MINIMUM 3/8-INCH NOMINAL WIDTH AND 1250 POUND MINIMUM TENSILE STRENGTH PULLING TAPE IN ALL DUCTS. THE PULLING TAPE SHALL BE PRINTED WITH THE RATED TENSILE STRENGTH AND SEQUENTIAL FOOTAGE MARKINGS WITH LEGIBLE AND STABLE PRINT. THE TAPE SHALL BE IN ONE CONTINUOUS LENGTH THROUGH EACH DUCT WITH NO CUTS, SPLICES OR TIES ALLOWED.

STRUCTURE

1. PROVIDE AND INSTALL ONE 8'X 8' TRANSFORMER PAD WITH HANDHOLE AND PROTECTIVE BARRIERS IN ACCORDANCE WITH DWP DRAWINGS P721-00-00.8) AND UB721-03 GROUP I AS LAST REVISED.
2. THE CONDUIT, STRUCTURE AND SERVICE POINT SHALL BE LOCATED AS SHOWN UNLESS CHANGES ARE APPROVED BY THE DWP DESIGN ENGINEER AND CONFIRMED BY THE CUSTOMER.

FAULT CURRENT

THE MAXIMUM AVAILABLE SYMMETRICAL FAULT CURRENT AT THE SERVICE POINT WILL BE:

SERVICE	AMPS	VOLTAGE	PHASE	WIRE	FAULT CURRENT
PS	400A	480/277V	3φ	4W	18,000A

CUSTOMER CHARGES

1. THE DWP WILL BILL THE CUSTOMER $_____.00 FOR TRANSFORMER DEPOSIT FEE. DEPOSIT FEE ELIGIBLE FOR REFUND AFTER FIVE YEARS PER DWP RULE 16-E, ELECTRIC SYSTEM OF THE RULES GOVERNING WATER AND ELECTRIC SERVICE.
2. THE DWP WILL BILL THE CUSTOMER $_____.00 FOR EXCESS PRIMARY CABLE.

PROPERTY AND EASEMENT LINES

PROPERTY LINES ARE TO BE LOCATED BY THE CUSTOMER'S SURVEYOR.

NOTE:
THIS DRAWING PRESENTS LADWP'S PRELIMINARY DESIGN FOR ELECTRICAL SERVICES TO THE SITE, WHICH WILL BE UPDATED WITH THE LATEST BASE THAT DOES NOT INCLUDE PARKING LOT ON LADWP EASEMENT.

LIGHTING PLAN

Scale: 1" = 30'-0"

GENERAL NOTES

1. PROVIDE LIGHTING SYSTEMS IN ACCORDANCE WITH SPEC SECTION 16360. SPORTS LIGHTING POLES AND POLE BASES SHALL BE INSTALLED PER CITY DBS PLAN-CHECK APPROVED DESIGNS. CONTRACTOR SHALL PREPARE AND SUBMIT POLE AND POLE BASE DESIGN CALCULATIONS AND DETAILS SIGNED AND STAMPED BY CA REGISTERED SE, AND OBTAIN PLAN CHECK APPROVAL, PRIOR TO SUBMITTING FOR ENGINEER APPROVAL. TYPICAL SPORTS LIGHTING POLE AND POLE BASE DETAILS ARE INCLUDED AS ATTACHMENT TO SPEC SECTION 16360.

2. REFER TO ES AND EP DRAWINGS FOR ELECTRICAL DETAILS AND NOTES, AND FOR ARRANGEMENT OF LIGHTING CONTROL PANEL.

3. BURIED ELECTRICAL PULLBOXES AND HANDHOLES SHALL BE PRECAST CONCRETE WITH CAST IRON OR CORROSION RESISTANT STEEL LIDS ON METAL FRAMES, SUCH THAT THEY CAN BE WELDED SHUT AND COMPLY WITH NEC 314.30, AND BE UL LISTED. LID SHALL BE MARKED AS "POWER" OR "SIGNAL" AS APPROPRIATE AND TOP OF LID TO BE FLUSH WITH FINISHED GRADE. PROVIDE ALL PULLBOXES AND HANDHOLES MINIMUM SIZES AT 10" X17"X30" DEEP AND PENTA-HEAD BOLTS. PROVIDE LIDS WITH H20 TRAFFIC RATING. PULLBOXES AND HANDHOLES SHALL BE BY CHRISTY, OLDCASTLE, AND JENSEN OR EQUAL.
